SSR	Soviet Socialist Republic	ww	woodwind
St	Saint, Sint, Szent		
Staffs.	Staffordshire (GB)	xyl	xylophone
Ste	Sainte		
str	string(s)	Yorks.	Yorkshire (GB)
sum.	summer		
Sup	superius		
suppl.	supplement, supplementary		
Swed.	Swedish		
sym.	symphony, symphonic		
synth	synthesizer		Zimmerman catalogue [Purcell]

Bibliographical Abbreviations

All bibliographical abbreviations used in this dictionary are listed below, following the typography used in the text of the dictionary. Broadly, *italic* type is used for periodicals and for reference works; roman type is used for anthologies, series etc (titles of individual volumes are italicized)

Full bibliographical information is not normally supplied in the list below if it is available elsewhere in the dictionary. Its availability is indicated as follows: D - in the article 'Dictionaries and encyclopedias of music'; E - in the article 'Editions, historical', and P - in the list forming §III of the article 'Periodicals' (in this case the number in that list of the periodical concerned is added, in brackets). For other items, in particular national (non-musical) bibliographical dictionaries, basic bibliographical information is given here; and in some cases extra information is supplied to clarify the abbreviation used.

Festschriften and congress reports are not, in general, covered in this list. Although Festschrift titles are usually shortened in the dictionary, sufficient information is always given for unambiguous identification (dedicatee; occasion, if the same person is dedicatee of more than one Festschrift; place and date of publication, and where the dedicatee has an entry the editor's name may be found), for fuller information on musical Festschriften up to 1967 see W Gerbth *An Index to Musical Festschriften and Similar Publications* (New York, 1969). The only congress report series listed below are those of the international and the German musicological associations; for others cited in the dictionary, sufficient information is always given for identification (society or topic; place, date of occurrence), full information may be found in J Tyrrell and R Wise. *A Guide to International Congress Reports in Music, 1900-1975* (London, 1979).

Library Sigla

The system of library sigla in this dictionary follows that used in its publications (Series A) by Répertoire International des Sources Musicales, Kassel, by permission. Below are listed the sigla to be found; a few of them are additional to those in the published RISM lists, but have been established in consultation with the RISM organization. Some original RISM sigla that have now been changed are retained here.

In the dictionary, sigla are always printed in *italic*. In any listing of sources a national sigillum applies without repetition until it is contradicted. For German sigla, the intermediate *brd* and *ddr* are excluded; the list below shows in which part of Germany or Berlin each library is located.

Within each national list, entries are alphabetized by sigillum, first by capital letters (showing the city or town) and then by lower-case ones (showing the institution or collection).

A AUSTRIA

Volume Five

Couraud—Edlund

A Note on the Use of the Dictionary

This note is intended as a short guide to the basic procedures and organization of the dictionary. A fuller account will be found in the Introduction, vol. I, pp. xi–xx.

Abbreviations in general use in the dictionary are listed on pp. vii–x; bibliographical ones (periodicals, reference works, editions etc) are listed on pp. xi–xiii.

Alphabetization of headings is based on the principle that words are read continuously, ignoring spaces, hyphens, accents, bracketed matter etc, up to the first comma; the same principle applies thereafter. ‘Mc’ and ‘M’ are listed as ‘Mac’, ‘St’ as ‘Saint’

Bibliographies are arranged chronologically (within section, where divided), in order of year of first publication, and alphabetically by author within years.

Cross-references are shown in small capitals, with a large capital at the beginning of the first word of the entry referred to. Thus ‘The instrument is related to the BASS TUBA’ would mean that the entry referred to is not ‘**Bass tuba**’ but ‘**Tuba, bass**’.

Work-lists are normally arranged chronologically (within section, where divided). Italic symbols used in them (like *D-Dlb* or *GB-Lhm*) refer to the libraries holding sources, and are explained on pp. xiv–xxx; each national sigillum stands until contradicted.

C

CONTINUED

Couraud, Marcel (b. Limoges, 20 Oct. 1912) French conductor. He studied the organ with André Marchal, followed courses in harmony, counterpoint and fugue at the École Normale, Paris, until 1939, and attended Nadia Boulanger's composition classes. He also studied conducting with Charles Munch. He made his debut in 1945 on French radio, and in the same year founded the Marcel Couraud Vocal Ensemble which made several recordings before being disbanded in 1954. He then concentrated his activities on choir and oratorio work and received many conducting invitations, especially from Germany and Italy. In 1967 he was appointed artistic director of the ORTF choirs, which he divided into three distinct and specialized groups: a large choir, a chamber choir, and a third group of 12 soloists to whom he devoted the greater part of his time. This group was intended as a new instrument rather than a conventional choir or vocal ensemble. It has performed Classical works, but concentrates on avant-garde music for 12 solo voices, often specially composed for it: for example *Nuits* by Xenakis. The fine quality of the voices, the originality of the group's composition and repertory, and the high technical and musical standard achieved by its conductor, account for the international reputation it has won. Couraud also edits *Merveilles de l'art vocal*, a useful series for amateur choirs.

CHRISTIANE SPIETH-WISSINBACH

Courbes [first name(s) unknown], Sieur de (fl. 1622) French public servant and amateur composer and poet. All we know about him is that he called himself 'elected member and *lieutenant particulier*' on the title-page of his only known collection of music: *Cantiques spirituels* (Paris, 1622, one piece in D. Launay, ed. *Anthologie du motet latin polyphonique en France, 1609-1661*, Paris, 1963; three in D. Launay, ed. *Le psaume français polyphonique au XVII^e siècle*, Paris, 1974). This volume is interesting for two reasons. The first is the appearance of bilingual texts at a time when the church prohibited the use of languages other than Latin for liturgical use. The pieces include settings of six psalms in the French verse translation by Desportes, two other French sacred pieces to words by Courbes himself and a series of Latin liturgical pieces (hymns, sequences, antiphons, responds). In this last group, the Latin text is printed under the highest voice part, while the other voices have Courbes' own French verse translation. Performers could thus choose between the two languages according to whether they were singing in a service or not. The other interesting feature is that the

collection shows Courbes to have been a late follower of the humanist ideas of Baif and Mauduit. Most of his pieces are four-part homophonic, syllabic settings, sometimes employing short note values. He stresses that they are *en mesure d'air*, that is the note values match the quantity of the syllables of the verse (in a few pieces he even added the words 'avec l'accent observé'). The collection closes with pieces for from five to eight voices, of which one for double choir: *Vis tu sanus fieri* (edn. in Launay, 1963) is clearly influenced by the double-choir motets of Du Caurroy. As a conscientious, learned follower of the humanists Courbes also indulged in various kinds of poetic and musical ingenuity: he twice used masculine lines only suggested that longs and shorts be reversed and posed problems such as canons to be solved (adding 'qui potest invenire inveniet').

DENISE LAUNAY

Courbois, Philippe (fl. 1705-30) French composer. He was at one time *maître de musique* in the household of the Duchess of Maine, whose home in Sceaux became an important musical centre during the closing years of Louis XIV's reign and the beginning of the Regency. Musicians associated with it included Bernier, Bourgeois, Collin de Blamont and Mouret. It was just before the period of *Les nuits de Sceaux* (1714-15), the lavish nocturnal diversissements devised for the Duchess of Maine, that Courbois published his book of cantatas. The seven cantatas were dedicated to the duchess and were to texts by Louis Fuzelier (1674-1752) who later provided the libretto of Rameau's *Les Indes galantes*. These works, which reveal Courbois as a composer adept in both French and Italian styles, are typical examples of the French cantata of the period. Yet despite the stylistic variety displayed in them, Courbois' fondness for picturesque tone-painting, melodic simplicity, and movements in which aria, arioso and recitative sometimes merge into each other, mark the composer's French bias. His *Dom Quichotte* is the masterpiece of the collection and a valuable contribution to the cantata repertory.

WORKS

Cantatas (1710) Apollon et Daphné, Zéphire et Flore, l'amant timide, Orphée, Ariane, Jason et Médée, Dom Quichotte.
Recueil d'airs sérieux et à boire (1730), separate airs in Ballard's Recueils (1705-9, 1713-14).
Motets, Messe du Roi et de la Reine, lost.

Couroupos, George (b Athens, 1 Jan 1942) Greek composer. After graduating in the piano (1965) from the Athens Conservatory and mathematics (1967) from Athens University, he studied under Messiaen at the Paris Conservatoire (1968-72), where in 1971 he was appointed assistant for the propagation of contemporary music. He took the first prize for composition in 1972. Often suggested by ancient Greek subjects, his music is dramatic, and calls on a wide range of means including clusters, insistent rhythms, drones, brief melodic motifs that may be chromatic or even diatonic natural sounds and folksong.

WORKS

(selective list)

- Antiphonies (Pss vi, xxi, xlvii), Bar, female chorus, lpd, op. 1, 1967
Homériques I (Odyssey viii, 43-4), S., pl., perc., op. 4, 1969
Homériques II (Odyssey xii, 184), Bar, fl., pl., perc., op. 5, 1970
Hermès and Prometheus (Aeschylus, Prometheus Bound 944-1033, trans. Couroupos), 2 actors, 9 mists, op. 10, 1971
Lai (troubadours), S. T., lute, op. 14, 1971
Fantômes d'avant-garde, 2 ondes martenot, perc., op. 18, 1972
Les enfants du sable (musical tragedy, M. Fabre), collab. G. Robard, op. 19, 1974
3 Pièces, vc, pl., op. 20, 1974
Abstract, 13 mists, op. 21, 1974
Dieu le veut (musical spectacle), collab. J.-M. Ribes and Y. Kokkos, op. 22, 1975
Le tricot rouge (textless), male v., pl., op. 23, 1976

GEORGI S. LEOTSAKOS

Courses (Fr. *choeurs, rangs*, Ger. *Chore, Chorsaiten*, It. *corti*). The term by which ranks of strings on plucked instruments were known from the 16th century to the 18th. Thus one would speak of a 'ten-course' lute meaning one with ten sets of strings. A course may consist of one, two or even three strings, the lute usually has the first course single and the rest double, and continental citterns often have triple third and fourth courses.

Although most commonly tuned to the same note, the strings comprising a course may be an octave apart. This was certainly a feature of lutes in the 15th and 16th centuries, though no less an authority than John Dowland condemned it as 'irregular to the rules of Musike'. The reason for octave courses was almost certainly the unsatisfactory tone of thick gut strings in the lowest registers, which tend to sound solid and heavy. Some of the missing upper harmonics are provided by the higher octave string, but it must be very carefully chosen if it is not to overpower the lower string, and should be at considerably lower tension. The need for octave courses disappeared in the 17th century, when overspun strings first appeared.

Generally speaking, the use of paired or triple courses coincided with lightly-built instruments and low-tension strings. When thicker strings at higher tensions became usual in the 19th century they were employed singly and

there was no longer any need for a special term to describe them.

Courtauld-Sargent Concerts. London concert series founded in 1928, see LONDON, §VI, 4(m)

Courtaut. An instrument resembling a SORDUN, described by Mersenne (1636) as a shortened BASSOON. The name is related to both CURTAL and KORTHOIT.

Courteville, Raphael [Ralph] (i) (fl. 1687 c1735) Organist and composer, son of the singer Raphael Courteville (d. 28 Dec 1675). He was appointed organist of St James's, Piccadilly, on 7 September 1691 on the recommendation of the Earl of Burlington at a salary of £20 a year. Many of his songs are to be found in late 17th-century songbooks printed in London, although there was apparently a John Courteville, those ascribed simply to 'Mr Courteville' are very probably by this Raphael. More than two dozen are unambiguously attributed to him in such collections as *Comes Amoris* (1687-94), *Unculum societatis* (1688-91), *The Banquet of Musick* (1692), *The Gentleman's Journal* (1692-4), *Thesaurus musicus* (1693-5) and *Deliciae musicae* (1695-6). Many were strongly influenced by Purcell and have considerable merit. There are settings in both the florid expressive style and in the simple tuneful idiom of the time. Plays for which he provided songs include Tate's *A Duke and no Duke* (1684), Southerne's *Oroonoko* (1695) and D'Urfley's *Don Quixote*, part iii (1695). Instrumental pieces by him are in *The Self-Instructor on the Violin* (1695) and *The Second Book of the Harpsichord Master* (1700). His hymn tune 'St James' is in *Select psalms and hymns for the use of the parish-church of St James, Westminster* (London, 1697). He also published *Sonatas of two parts for two flutes* (London, c1701) and *Six Sonatas for 2 violins* (London, c1702). The composer RAPHAEL COURTEVILLE (ii) was his son.

IAN SPINK

Courteville, Raphael (ii) (d. London, buried 10 June 1772) English organist, composer and political pamphleteer, son of RAPHAEL COURTEVILLE (i). He succeeded to his father's post as organist of St James's at an unspecified date. He was also well known as a political pamphleteer and propagandist for Sir Robert Walpole, which earned him from the opposition the nickname 'Court-evil'. He seems to have neglected his organist's duties and incurred the displeasure of the church authorities during the last 20 years of his life. Some tunes by him are included in *An Abridgement of the New Version of the Psalms: With Proper Tunes Adapted to Each Psalm* (London, 1777).

IAN SPINK

Courtois [Courtoys, Cortois, Mourtois], **Jean** (fl. 1530-45) ?Franco-Flemish composer. He was *maître de chapelle* at Cambrai Cathedral in 1540. The welcome given by Cambrai on 20 January 1540 to Charles V on his way to Ghent with his troops included the performance, by 34 singers, of Courtois's four-voice motet

Vente populi terrae, specially composed for the occasion Guicciardini, in his *Descrittione di tutti Paesi Bassi* (1567), considered Courtois to have been one of the true masters of music in the Low Countries, and, in his list of dead composers, grouped Courtois with such illustrious men as Josquin, Obrecht, Willaert and Gombert.

Although Courtois is only known to have been associated with the south Netherlands, his works appear chiefly in French and German sources. The chansons can be separated into three styles. His four-voice chansons show the Parisian patterns which were by then traditional: on the one hand, those to courtly texts have clearly profiled melodies, cadential clichés, homophonic passages, brevity and consistent use of exact repetition, while the others on popular texts employ an imitative patter style and exact repetition for the refrain. Courtois's chansons for five and six voices found in German and a few Flemish sources show a Franco-Flemish line of descent from Josquin, they maintain extended imitation, overlapping cadences and canon techniques, and they lack exact repetition. At least one motet besides *Vente populi terrae* is an occasional piece. *O pastor eterne* celebrated the installation of a Bishop Nicolaus

WORKS

- Missa: *Domine quis habitabit* 4vv. F-C 4.125.8
 Missa: *Hoc in templo* 4vv. C 4.3
 14 motets: 3 6vv. in 1532¹⁰, 1532¹⁰, 1534¹, 1538¹, 1540¹, 1542¹⁰, 1543¹, 1543¹⁰, 1545¹, 1547¹, 1554¹⁰, 3 ed. A. Smijers and A. J. Meritt: *Les livres de motets parus chez Pierre Attaignant en 1534 et* (Paris and Monaco, 1934-64), in iv.
 9 chansons: 4 6vv., 3 9¹, 1534¹, 1534¹⁰, 1538¹⁰, 1538¹⁰, 1539¹⁰, 1540¹, 1545¹⁰ (attrib. both Courtois and Benedictus [Ducis]) *D. Mss. Mus. 1508, GB. Lib. Add. 11582.1 Br. Q26.1* ed. in *MMRF* v (1897). 2 ed. in *PAMw* xxiii (1899).

COURTNEY S. ADAMS

Courtois [Courtoys, Curtoris], **Lambert** (b. France, ?1520, // Italy, 1542-85). French composer, working mainly in Italy. His presence in Italy is suggested by the appearance in Italian prints of 1542 and 1543 of two motets attributed simply to 'Courtois', which could refer to either Jean or Lambert Courtois, and two madrigals by 'Lamberto', whom Fritzer believed to be Pierre Lambert. In 1550 'Lamberto Cortese et compagni cantori' performed during Easter week for the Arciconfraternita del Ss Crocifisso, in S. Marcello, Rome. In 1553 Nasco approved the choice of Courtois for his former post with the Verona Accademia Filarmonica, writing to the academicians on 9 February: 'I am pleased that you have chosen messer Lamberto, as he is a good man and knows music very well. I came to Venice expressly to get him to come in time for the whole Carnival season'. Courtois served at Verona in 1553 and 1554, subsequently becoming *maestro di cappella* at the cathedral of Ragusa (now Dubrovnik) and subsequently at the cathedrals of Udine (1570-74), Treviso (1574-9) and Vicenza (1582-5).

Courtois dedicated his *Madrigali a cinque voci* (RISM 1580¹⁰) to three gentlemen of Ragusa. The book includes a piece by Henry Courtois, possibly his son, Antonfrancesco Doni, in his *Libreria* (Venice, 1550/51), attributed madrigals for four voices to Courtois, but no collection of such pieces is known.

 THOMAS W. BRIDGES

Courville [Courville], **Joachim Thibault de** (d. Paris, 8 Sept. 1581). French singer, lutenist, lyre player and composer. He was co-founder, with Jean-Antoine de Baif, of the Académie de Poésie et Musique in 1570. Baif acknowledged him as the 'maître de l'art de bien chanter' who instigated the invention of French *Vers mesurés* about 1567, some of the melodies Courville composed for Baif's new translation of the psalms into measured verse were performed for Charles IX (see Travers). Courville's official post at court was 'joueur de lyre', the instrument being a curious 11-string version of the Greek model constructed by Antoine Potin and designed to be bowed.

True to the Académie's ideals of secrecy, Courville published none of his music, but some idea of his style may be gained from a few pieces printed in collections of compositions by his colleagues. The four-voice *Airs nus en musique* (Paris, 1576¹) by his pupil Caréan include three strophic pieces treated in free homorhythmic fashion fastidiously following the textual rhythm, two of these, *Lorsque mouray* (a rhymed poem by Baif) and *J'en ayme deux* (constructed in quantitative verse without rhyme), were later reset with exactly the same rhythms by Claude Le Jeune, who also used the third, *Arme arm*, as the *rechant* for *La guerre* (*Airs*, 1608, ed. D. P. Walker, Rome, 1951-9, nos 10, 24 and 104). Five more of Courville's pieces (two using poems by Desportes) survive as monodic pieces for voice and lute published posthumously in Bataille's fifth and sixth books of *Airs* (Paris, 1614¹⁰, 1615¹¹); one of these (*Si je languis*) has exceptionally long melismatic diminutions quite unlike anything in Caréan's 1576 book.

 FRANK DOBBINS

Courvoisier, Walter (b. Riehen, canton of Basle, 7 Feb. 1875, d. Locarno, 27 Dec. 1931). Swiss composer. His father was professor of surgery at Basle University, and he studied medicine in Basle and Strasbourg (1893-9). He qualified in 1900, but in 1902 he abandoned his medical career and went to Munich to study privately with Thuille and at the university with Sandberger (music history). In 1907 he was made co-conductor of the Kaim Orchestra popular concerts, at the same time giving private lessons. Mottl appointed him music theory teacher at the Munich Academy in 1910, and in 1919 he succeeded Klose as professor of composition. As a composer he belonged to the 'Munich School'. The music drama *Lancelot und Elaine* is pervasively

Cousin, Jean

influenced by *Tristan*, and, since Courvoisier's gift was more lyrical than dramatic, he is better represented by his lieder. Most important are the later children's pieces and sacred songs, marked by very transparent accompaniments and a closeness to folk music. His only significant instrumental work is the set of suites for solo violin.

WORKS (selective list)

- Stage: Lancelot und Elaine, op 25 (music drama, 4, W. Berpl), Munich 1917, Die Krähen, op 30 (comedy, A. Wohlgemuth), Munich, 1921, Der Sünde Zauberei (opera, after Eichendorff, after Calderon) unpubd.
Choral: Gruppe aus dem Tartarus, op 5 (Schiller), chorus, orch, perf. 1905, Der Dmustrum, op 11 (W. Hertz), chorus, orch, perf. 1907, Das Schlachtschiff Jenerare, op 12 (D. von Liliencron), male vv., orch, perf. 1908, Auferstehung (Totenfeier), op 26 (oratorio, A. Bertholet), 4 solo vv., chorus, boys' chorus, orch, org, perf. 1917, Männerchöre, op 33, 5 Gesänge, op 34 (1931).
Vocal orch: Die Muse, op 4 (H. Leuthold), Bar, orch, perf. 1904.
Lieder: 6 Lieder, op 1, 7 Lieder, op 2, 8 Gedichte, op 3 (A. Ritter), 6 Lieder, op 6, 5 Lieder, op 7, 7 Gedichte, op 8 (Cornelius), 6 Gedichte, op 9 (Storm), 2 Gedichte (Storm), 4 Gedichte (K. Groth), op 13, 5 Gedichte, op 14 (W. Hertz), 3 Gedichte, op 15 (H. Geibel), 5 Gedichte, op 16 (Hebbel), 5 Gedichte, op 17 (Cornelius), 3 Sonette, op 18 (Michelangelo, old Ital.), 7 Gedichte, op 19 (Geibel), 7 Gedichte, op 23 (old Ger.), Lieder, op 24, Geistliche Lieder, op 27, 5 vols., Kleine Lieder zu Kinderreimen, op 28, 4 vols., Lieder, op 29 (old Ger.), 4 vols. (1935).
Inst.: Olympischer Frühling, sym. prologue, op 10, perf. 1906, Passacaglia und Fuge, b, op 20, pl., Variationen und Fuge über ein eigenes Thema, op 21, pl. (1910), Variationen über ein eigenes Thema, D, op 22, pl., 6 Suiten, op 31, vn (1924-5), Langsamer Satz, op. posth., str. qt. (1935).

PETER ROSS

Cousin, Jean [Escatefer] (fl. 1446-75). French composer. A contemporary of Ockeghem, Cousin served in the chapel of Duke Charles of Bourbon from 1446-8 and in the royal chapel from 1461-75. His only surviving work is a *Missa tube* found in *L-IR* 90 and 93 (see Schenk). The name is derived from the melodic style of the tenor and contratenor which are written in the manner of trumpet music and which may have been intended for performance by slide trumpets. The mass is for three voices, except at the end of the Gloria, Sanctus, Osanna and Agnus I where a fourth voice is added, probably by someone other than the composer. Tinctoris cited a *Missa nigrarum* ('Nigra sum'), now lost, in his *Proportionale*.

TOM R. WARD

Cousineau. French family of harp makers and harpists. Georges Cousineau (b. Meschani, Vendée, 1733; d. c.1800) published music in Paris in 1766 and in 1769 was a member of the instrument makers guild. His shop, originally opposite the Louvre, stocked a variety of string instruments, including his own pedal harps. He was among the first to import English pianos, in 1773. In 1775 his son Jacques-Georges Cousineau (b. Paris,

13 Jan 1760, d. Paris, 1824) joined the business, and the title of Luthier-in-Ordinary to the Queen was given them both. From about 1780 to 1811 the son was harpist at the Paris Opéra. He also composed and published sonatas, airs and variations, as well as a *Méthode* for harp (1784).

A Pierre Joseph Cousineau, mentioned by Fétis, may have been a member of this family, alternatively the name may have resulted from an error: a confusion of the name of Georges Cousineau with Pierre Joseph Nadermann.

Now best remembered for their pedal harps (see illustration), the Cousineaus made several improvements in the mechanism of the instrument. Their 'crutch' system was superior to the earlier hook as a device for shortening

Pedal harp (with 'crutch' device) by Georges Cousineau, Paris, late 18th century (Victoria and Albert Museum, London)

ing the strings. They developed a slide for the bridge pin in 1799, and reorganized the connecting levers in the harp neck.

In 1882, according to a memoir presented to the Académie des Sciences by the Abbé Roussier, the Cousineaus developed a harp which could be tuned in C \flat (rather than E \flat) and played in all keys. However, the instrument had 14 pedals, arranged in a double row. One of these harps has been preserved by the Erard company of Paris. More conventional seven-pedal Cousineau harps, usually handsomely carved, painted and gilded in the Rococo style, are in most major museum collections; the examples in the Victoria and Albert Museum, London, are particularly notable. Empress Josephine's harp at Malmaison is also a Cousineau instrument.

ROSLYN REINCH

Cousin, Jacques. See BÉLÉROY DE RIGNY, LOUIS-ABI

Coussemaker, Charles-Edmond-Henri de (b. Bailloul, 19 April 1805, d. Lille, 10 Jan. 1876). French musicologist. He showed great musical ability as a child, particularly as a singer and pianist, but his professional career was in law. He studied law in Paris from 1825 to 1830, during which time he participated in the active musical life of that city, attending concerts and private salons, and studying singing with Félix Pellegrini and composition with Jérôme Payer and Reicha. Upon receiving his degree, Coussemaker became a barrister at Douai, where he also studied counterpoint with Victor Leleuvre, produced several compositions and began his musicological studies. He later held various jobs in the legal profession, moving to Bailloul, Bergues, Hazebrouck and Dunkirk with occasional promotions, and finally becoming a judge at Lille in 1858.

In spite of his busy professional career, he devoted much of his life to musicology. He was one of the first scholars to investigate the music of the Middle Ages, and his numerous books opened paths into the topics of Gregorian chant, neumatic notation and mensural notation, and medieval instruments, theory and polyphony (which he called 'harmonie'). His publications are frequently contrasted with those of Fétis, though Coussemaker apparently did not have Fétis's broad knowledge and ability to synthesize large quantities of information into abstract theories; his approach was more precise, more scientific and less speculative. Using primary sources (many of which he had discovered), he presented little more than plain facts and descriptions based upon careful observations; he has been criticized for this approach by those who think him a good collector of data but an inadequate historian. He demonstrated the value of presenting facsimiles of manuscripts, but also provided his own transcriptions into modern notation. His most important work is probably the *Scriptorium de musica*, a four-volume compilation of the writings (all of which are in Latin) of several early music theorists, intended to supplement Gerbert's *Scriptores ecclesiastici de musica*. He made scholarly editions of early music, including medieval liturgical dramas and

the works of Adam de la Halle, and collected and edited Flemish folksongs. His publications contain numerous errors, some of which are evidently typographical and many of which were almost inevitable in the work of an innovator at a time when the science of musical palaeography was just beginning; nevertheless, his books introduced much music which was previously unknown, led the way to successful research in this field, and remain valuable references.

Coussemaker's library contained over 1600 items, among which were many early manuscripts and instruments. His compositions include dramatic scenes, masses and other religious works, which were not published; only some romances and dances are known. He also left unpublished treatises on counterpoint and fugue and on harmony. He was a Chevalier of the Légion d'honneur and, as a result of his deep interest in law, history and archaeology as well as music, a member of several scholarly societies.

Cousser, Jean Sigismond. See KUSSER, JOHANN SIGISMUND

Cousu, Antoine de [du]. See DU COUSU, ANTOINE

Coutinho, Francisco José (b Lisbon, 21 Oct 1680, d Paris, 13 Feb 1724) Portuguese composer. He came from a rich and aristocratic family. In deference to his social status, he was usually asked to compose the first villancico in nine published sets of instrumentally accompanied villancicos sung at various Lisbon festivities between 1719 and 1723. Late in 1723 he went to Paris for medical treatment, and he died there.

He impressed his contemporaries with such poly-choral works as an eight-choir *Te Deum* sung in S Roque Church, Lisbon, on 31 December 1722, and a four-choir *Missa 'Scala Aeterna'* accompanied by trumpets, timpani and strings that vied with Vall's hexachord mass. His extant works are of more modest dimensions: a solo aria *Este dezassosiego* (*P-In* Pom. balina 82) and a duo still performed as late as 1761 at Guatemala Cathedral.

ROBERT STEVENSON

Coutreman (fl 1430-40) French composer. His sole surviving work is a three-voice rondeau *Faylle que vaille il faut au mois de may* which is found only in *GB-Ob* 213. It is one of the latest works in the MS, and was thus probably composed between 1430 and 1440. It emphasizes the triad harmonically and melodically, using 8-5 sonority only at the central and final cadences. Elsewhere, the 4th is treated as a dissonance: a feature which, if intentional, may anticipate the so-called non-quartal style of the period after 1460.

TOM R WARD

Couture, Guillaume (b Montreal, 23 Oct 1851, d Montreal, 15 Jan 1915) Canadian composer. An astonishingly precocious musician, he became choir-master at Ste Brigid when he was 13. In 1873 he went to France to pursue his studies; he was the first Canadian to be admitted to the Paris Conservatoire and its first Canadian graduate. He worked under

Théodore Dubois, whose teaching was traditional and academic, and studied singing under Romain Bussine, founder and president of the Société Nationale de Musique de Paris. Couture was a guest at the Soirées du Lundi. He was an ardent defender of Wagner and debated with Faure, Massenet, d'Indy, Saint-Saëns and others. In 1875 Couture was accepted by the jury of the Société Nationale, and his *Memorare* op.1, was performed. This work reveals his command of counterpoint and his innate sense of sacred style. The same society later performed his *Réverie* op.2. In 1876 Couture was appointed choir-master of Ste Clotilde, where Franck was organist. A Grande fugue for organ, dedicated to Dubois, was his next work. In 1876 Couture's Quatuor-fugue had its premiere at the Société Nationale, with Ysaye as one of the performers. But for his Canadian nationality Couture would have competed for the Prix de Rome: his cantata *Atala* may have been written for this purpose.

In 1877 Couture returned to Canada. His activities in Montreal as a teacher, critic and conductor no doubt explain why he became less active as a composer. Between 1880 and 1896 he founded three concert societies in Montreal, and the public became more familiar with the great choral and symphonic repertory. His own compositional abilities are revealed in two important late works, a requiem and the oratorio *Jean le Précurseur*, which is in three sections. The first, *La nativité*, is pastoral in character, and is based on a liturgical theme; the second, *La prédication*, opens with the liturgical theme *Attende*; the third is titled *La mort*. The contrapuntal writing is impressive, and the choruses exhibit both verve and drama, but in general the work lacks firm structure and concise expression. Yet Couture's work commands respect despite its traditional and academic aspects.

Both as a composer and as a teacher, Couture was an ardent proponent of a Canadian music that would reflect French origins, as some Ontario composers looked to English or Austro-German models. If his compositions may be said to mark the end of an epoch, his teaching activities pointed towards a new era of enriched diversity in Canadian music. Many of his letters are at the Quebec Seminary.

WORKS

(printed works all published in Paris)

- Memorare, op.1, solo v., 4vv (c.1875)
 Réverie, op.2, orch. (c.1875)
 Quatuor-fugue, str. qt., 1876
 Grande fugue, org. (c.1876)
 Atala, cantata, c.1876
 Salut pour les double majeur et mineur, op.5, 3 chorals, 4vv, org. acc. (c.1876)
 Salut de la Fête-Dieu, op.6, 3 plain-chant traites en contre-point fleuri 4vv, org. acc. (c.1876)
 Requiem, 4vv, orch., 1906
 Jean le Précurseur (oratorio, A. Lozeau, A. Lebel), c.1907-11, perf. Montreal, 6 Feb 1923 (Paris, 1914)

ANDRÉE DESAUTELS

Covell, Roger D(avid) (b Sydney, 1 Feb 1931) Australian critic, educationist and conductor. He graduated from the University of Queensland (BA 1964) and became the chief music critic of the *Sydney Morning Herald* in 1960. In 1967 the University of New South Wales introduced music as a subject for academic studies and asked him to develop a progressive course; he was appointed associate professor there in 1974, taking the doctorate in 1977 with a dissertation on Monteverdi's *L'incoronazione di Poppea*. Among his many promotional activities he has directed several Australian first performances of operas, including *L'incoronazione di Poppea*, *Il ritorno d'Ulisse*, Britten's *A Midsummer Night's Dream* and Rossini's *L'italiana in Algeri*, and has made translations of operas by Monteverdi, Alessandro Scarlatti, Handel, Rossini and Verdi. His book on Australian music was the first serious attempt to outline and summarize the part music played in helping to develop a distinct society on the Australian continent. In his second book he advised the main sponsoring body, the Australian Council for the Arts, on a policy for future development. His later studies include intensive research on nationalism in 19th-century music.

Covent Garden. London opera house, also known as the Royal Opera House, see LONDON, §IV, 3.

Covent Garden English Opera Company. Title of the BRITISH NATIONAL OPERA COMPANY from 1928, when it was taken over by the Royal Opera House, until 1931, when it ceased to exist.

Coventry & Hollier. London music sellers and publishers, active from about 1833 to 1849. They published a number of important works, many from plates taken over when they succeeded PRISTON & SON, including many of Handel's works originally issued by Walsh, Randall and others. Some of these plates were acquired by J. Alfred Novello (see NOVELLO & CO.) in 1849, after John Hollier left the partnership. Among their original publications were four books of Bach's chorale preludes, edited by Mendelssohn, and Mendelssohn's own six organ sonatas op. 65. From 1849 to 1851 Charles Coventry continued alone, and at the sale of his trade stock in 1851 Novello purchased another 4780 plates of sacred works, and subsequently reissued from some of them.

WILLIAM C. SMITH/PETER WARD JONES

Cover record. A term used in the popular music industry for a record of a particular song by performers other than those responsible for the original recorded version.

Coward, Sir Henry (b Liverpool, 26 Nov 1849, d Sheffield, 10 June 1944) English chorus master and conductor. Apprenticed to a cutler at the age of nine, he was almost entirely self-educated, acquiring sufficient musical skill through Tonic Sol-fa classes to form one of his own (when he was 17), which gave some public concerts. He became a pupil-teacher, advanced rapidly to the headmastership of an elementary school, and continued choral activities which brought about his formation of the Sheffield Tonic Sol-fa Association in 1876, this developed into a choral society of wide repute, the Sheffield Musical Union. From 1887 Coward concentrated on music and in 1888 took the degree of BMus at Oxford (later gaining the DMus), becoming chorus master under August Manns of the newly formed Sheffield Musical Festival in 1895. In this capacity he soon won a high reputation for his choir and himself, leading to tours of the Rhineland cities in 1906 and 1910, and Canada in 1908, in 1911 he made a world tour lasting six months. His choirs on these occasions were drawn primarily from Sheffield and Leeds, but he also worked for many years with other choral societies in the north of England and in Glasgow. He was in great demand as an adjudicator in choral competitions, and had much influence as a lecturer and writer. He published *Choral Technique and Interpretation* (London, 1914) – but his own choral works were regarded as agreeable rather than distinguished. He was knighted in 1926.

 HERBERT ANTICIFFER

Coward, Sir Noël (Pierce) (b Teddington, Middlesex, 16 Dec 1899, d Blue Harbour, Jamaica, 26 March 1973) English composer, writer, actor and producer. Born into a family of amateur musicians, his early talents as a singer and entertainer were actively encouraged. His career as a professional actor began in 1911 and he wrote his first effective song, *Forbidden Fruit*, in 1916. His first play, *I'll Leave it to You*, was produced in 1920, and from then he met with almost unbroken success as an actor, dramatist and composer. Sophisticated comedies, such as *Fallen Angels* (1925) and *Hay Fever* (1925), were matched by realistic dramas, beginning with *The Vortex* (1924) and *The Rat Trap* (1924), and by sparkling revues, such as *On With the Dance* (1925) and *This Year of Grace* (1928). He produced his first fully integrated musical score, the operetta *Bitter Sweet*, in 1929, by which time he was regarded on both sides of the Atlantic as an important spokesman of his generation. Remarkably prolific, he continued to pour out plays, revues, musicals, songs, poetry, short stories, novels and autobiography. Two comedies are outstanding: *Private Lives* (1930) and *Blithe Spirit* (1942). The war years saw a further extension of his activities as a film director and writer, while the 1950s brought additional success as a cabaret entertainer. In 1959 he broke new ground with the scenario and music for a ballet *London Morning*. A further ballet, in which one of the dancers played Coward, appeared in 1971 as *The Grand Tour*. He was knighted in 1970.

Almost wholly self-taught as a composer, Coward depended on the services of an amanuensis for the proper notation of his scores (though not for their com-

position), and upon professional orchestrators for their final presentation. Inevitably this limited his capacity for large-scale musical organization, but this deficiency is more than offset by outstanding melodic gifts and a very fresh way of handling the harmonic and rhythmic clichés of popular music. The waltz and military march are obvious influences, as are music-hall songs and the operettas of Gilbert and Sullivan. The best Coward tunes are closely wedded to their words and match verbal dexterity with unexpected turns of phrase which, though never compromising the instantly memorable melodic shape, lift them out of the ordinary. Their intrinsic worth is such that they have withstood many varied and often inappropriate kinds of arrangement and orchestration. A latterday Gilbert and Sullivan, he is the only English composer able to stand on equal terms with his great American contemporaries in this field. His songs epitomize their period.

Cowbells (Fr *sonnette, cloches à vache*, Ger *Kuhglocke, Kuhschelle*, It *camero*) Clapper bells suspended from the necks of cows and other herd animals. They are of great antiquity and continue in various forms: (1) those made by folding and riveting or otherwise joining metal plates, (2) wooden bells, (3) cast campaniform bronze bells. The metal variety includes a number of well-known shapes, the open end varying from rectangular to oval, and the height frequently greater than the diameter. Wooden specimens take spectacular shapes and large proportions, e.g. the Javanese *gregreomboengan* with a width of 76.2 cm.

Cowbells are particularly associated with the Alps where, in addition to the tintinnabulation of small bells, the deeper sound of the large bell worn by the champion milk-yielder can be heard. Sounds of this description are captured in orchestral works, notably Mahler's Sixth Symphony (*Heerdenglocken* to be shaken intermittently) and Richard Strauss's *Alpensinfonie*. A small clapperless cowbell is specified by Constant Lambert in *Rio Grande*.

A chromatic series of cowbells has entered the percussion section of the orchestra. In Peter Schat's *Signalement* (1961) a compass of three and a half octaves is required. Messiaen wrote for three groups of tuned cowbells in *Et exspecto resurrectionem* (1964). A series of five is specified in Brito's *Circles* (1960). Clapperless cowbells form important accoutrements in Latin American dance orchestras and Western rhythm bands.

JAMES BLADES

Cowboy song. A type of song describing cowboys and their life. Such songs began to appear in popular newspapers, magazines and songbooks in the late 19th century, they later became increasingly romanticized. They are in a simple, sentimental style and are normally accompanied by guitar or accordion. The first significant collections were N. H. Thorp's *Songs of the Cowboy* (1908) and J. A. Tomax's *Cowboy Songs and other Frontier Ballads* (1910, rev., enlarged 2/1938/R1965). The union of cowboy song and COUNTRY MUSIC came after 1934, when Gene Autry (b. Tioga, Texas, 1907) began his career as a singing cowboy in Hollywood films. He inspired many country singers and others to take up the style, popularized such songs as *Back in the saddle again* and *Riding down the canyon*, and did much to implant the romantic image of the cowboy in country music.

BILL C. MALONI

Cowell, Henry (Dixon) (b. Menlo Park, Calif., 11 March 1897, d. Shady, NY, 10 Dec. 1965). American composer, pianist and writer on music. His enthusiasm, experimental open-mindedness and energetic activity did much during the first part of the 20th century to promote novel techniques, and the ramifications of his prophetic compositional discoveries have continued to permeate European and American musical practice.

1. **LIFE.** The son of an Irish immigrant father and a native mother, he was born in a tiny cottage in the Californian foothills which was to be his home until 1936. He began violin lessons at the age of five, and for three years his parents encouraged him towards a career as a child prodigy, but the strain was too much for his health: lessons were ordered to be stopped, and he decided to become a composer. His father drifted away in 1902 and his parents were divorced the following year. Cowell and his mother spent the years 1907–10 visiting relatives in Iowa, Kansas and Oklahoma, while his mother also pursued a professional writing career in Des Moines and New York until her death in 1916. It was in New York in 1908 that Cowell wrote his first piece, a long monodic setting of Longfellow's *Golden Legend*. It remained unfinished, and survives only as the second theme of the piano piece *Antimony* (1914).

Returning to California in 1910, Cowell bought his first piano with money earned from odd jobs. He studied with various local piano teachers and composed constantly, still unencumbered by systematic training in composition or, indeed, by any formal schooling. Encouraged by his parents' educational philosophy of complete freedom and by the traditional Californian attitude of independent thinking, he readily accepted as valid musical material the many sounds around him. Important and lasting influences were the sounds of nature and the noises of man, his mother's Midwestern folk tunes and the oriental musical cultures of the San Francisco Bay area. Cowell owed his lifelong interest in Irish songs and dances not to his father, who was not musical, but to Midwestern relatives of Irish descent and to the poet John Varian, who had become a father figure to the composer. Varian's versions of Irish legend inspired such characteristic early pieces as *The Tides of Manaunaun* (?1912). To portray the immense waves set in motion by the Irish god, Cowell played huge clusters in the low register of the piano, first with the hand, then with the entire forearm. Above this was a sweeping

modal melody. Without a second thought, he had combined atonal noise elements with a folkslike tune. Left to his own devices, he had by the time of his debut as a composer pianist (San Francisco, 5 March 1914) written over 100 pieces in various styles. His basic musical personality, that of the enthusiastic, spontaneous and fluent trail-blazer, was firmly established.

Cowell's formal training began in 1914 with Charles Seeger, then at the University of California, Berkeley. Seeger arranged for him to acquire a solid technical foundation by studying harmony and counterpoint with F. G. Stricklen, Wallace Sabin and the organist Uda Waldrop. At the same time he was to pursue free composition. In 1916 he registered at the Institute of Musical Art in New York, but, impatient with its stultifying academicism, he returned to California after one term. He resumed his exchange of ideas with Seeger and studied English with Samuel Seward at Stanford University. At Seeger's insistence he worked out a systematic technique for the new materials he had already explored, with Seward he learnt to express his ideas in words. The result was the book *New Musical Resources*, written between 1916 and 1919 and revised somewhat before its publication in 1930. This remarkable treatise describes, systematizes and suggests new notations for Cowell's new-found procedures, including clusters, free dissonant counterpoint, polytriadic harmony, counter-rhythms, shifting accents and a complex method for relating rhythm and pitch according to overtone ratios.

In February 1918 Cowell enlisted in the army and served until May 1919. For most of this time he was a member of military bands at the army posts in Allentown, Pennsylvania and Oswego, New York. Around the same time he began to achieve notoriety as a performer of his own works and as a persistent advocate of the avant garde. In the mid-1920s he extended his innovative piano techniques with banging on the keys, and stopping, strumming, scraping, plucking and playing harmonics on the strings. He made his formal debut playing his own works in Carnegie Hall on 4 February 1924. His annual concert-lecture tours of the USA met with scandal and brilliant success, his five tours of Europe between 1923 and 1933 made him an international figure, and he came to know well most of the major composers in Europe. Bartok wrote to him for permission to use his 'invention' (the cluster (the letter is lost)), Schoenberg asked him to play for his master classes in Berlin in 1932, and the same year Webern conducted his *Sinfonietta* in Vienna. In 1929 Cowell became the first American composer invited to visit the USSR. His sensational performances alarmed the authorities but excited his audiences, and the state publishing house printed two piano pieces, *Lilt of the Reel* (1925) and *Tiger* (?1928).

Since the early 1920s Cowell had been writing extensively to promote modern music. He contributed a number of essays to the volume he edited, *American Composers on American Music* (1933), which suggests to what extent he valued composers' views on the music of their own time. In 1927 he published the music itself when he single-handedly launched the New Music Edition, which disseminated modern works for nearly 25 years. The inaugural issue was of Ruggles's *Men and Mountains*. Members of the North and South American modernist school predominated, though the New Music Edition also published music by Europeans, including

Schoenberg (op 33b), Webern (op 17 no 2) and Varèse (*Density 215* and *Ionisation*). Music by Ives, whom Cowell had met in 1927, appeared regularly, indeed, such important works as *The Fourth of July*, *Washington's Birthday* and the second movement of the Fourth Symphony were first published by the organization. Cowell soon became Ives's most important link with the larger musical world. In addition to aiding the New Music Edition, Ives offered support for the concerts of American orchestral music that Cowell organized in four European cities in his role as director of the North American sector of the Pan American Association of Composers (founded by Varese, Salzedo, Chavez and Cowell in 1928). Cowell took every opportunity to discuss Ives's work in lecture-concerts and in print throughout his life. *Charles Ives and his Music* (1955), which he wrote with his wife, remains the definitive biography and Cowell's many years of effort and later editorial decisions played a major role in the publication, first complete performance and recording of Ives's Fourth Symphony.

Cowell turned in the mid-1920s to the serious study of the non-European musics which had always interested him. In 1931 he worked with the comparative musicologist Erich von Hornbostel, with Professor Sambamurthy of Madras and with Raden Mas Iodjhana of Java, all in Berlin, under a Guggenheim Foundation grant. His preoccupation with new sounds now shifted to an unending quest for new ethnic contagions. Cowell began a deliberate attempt to synthesize the 'ultramodern style' with the totality of world music. The spirit of internationalism implied by this shift in orientation coincided with the wave of populist thought which touched so many other important American musical figures during the 1930s. It might account for the increasingly conservative idioms Cowell embraced. His writings of this period indicate a desire to compose 'useful music' in a 'neo-primitive' vein. Music could assist in the education of children as well, and could serve other arts such as film and dance, without dominating them. These thoughts led to Cowell's most explosive notion, 'elastic form'. In a series of articles on dance (1934-41) he suggested that performers themselves choose the order of various segments of music provided by the composer: the music was to adapt to the dancers' forms. The concept implied at least a partial relinquishing by the composer of the total control over the finished product which had been basic to Western musical thought.

In both musical and personal matters Cowell was kind, trusting and almost childlike. This perhaps explains why he initially deemed the presence of a defence attorney unnecessary when he was brought to court on a morals charge in 1936. Sentenced to imprisonment, he was sent to San Quentin penitentiary until pressure from many different sources, including fellow composers, led to his parole in 1940. He moved to New York, spent a year as secretary to Percy Grainger, and in 1941 married Sidney Hawkins Robertson, a writer, folksong collector and photographer. In 1942 the governor of California pardoned Cowell at the request of the prosecuting attorney, who had come to the conclusion that the composer was innocent.

During the war Cowell served as senior music editor of the overseas division of the Office of War Information, having been engaged for his wide knowledge of the traditional musics of several continents. In

1941 he resumed his teaching career at the New School of Social Research in New York, he lectured there about music of the world's peoples and was in charge of musical activities until he resigned in 1963. Cowell also held posts at the Peabody Conservatory (1951-6) and at Columbia University (1949-65), and he lectured at over 50 conservatories and universities throughout the USA, Europe and Asia. Cage, Harrison and Gershwin were among his pupils. Cowell received many awards, grants, and honorary degrees, he was elected to the National Institute of Arts and Letters in 1951 and served as president of the American Composers Alliance from 1951 to 1955. His last years were extraordinarily productive. From 1946 until his death he wrote over 100 compositions and published over 100 essays on music. Especially important among these is his series of 40 reviews of contemporary music for the *Musical Quarterly* (1947-58). A culmination of his constant search for the new was his world tour during 1956 and 1957. The sponsorship of the Rockefeller Foundation and the US Information Agency enabled him to listen first-hand to the music of many cultures in their natural surroundings. A widely acknowledged international musical statesman, he represented the USA at the International Music Conference in Teheran and at the East-West Music Encounter in Tokyo (1961). He continued to compose throughout a series of debilitating illnesses from 1957 until his death in 1965.

2. **WORKS** Cowell was an indefatigable musical explorer, discoverer and inventor, his vast output might be characterized by an enthusiastic statement he made in 1955: 'I want to live in the *whole world* of music!' His work reflects a bold but ingenuous openness towards many sound materials, novel compositional procedures and ethnic influences. He has been described (by Weisgall) as temperamentally incapable of excluding from his work any idea which interested him, and his ecumenical, though sometimes uncritical, approach helped provide the 'open sesame' for new music in America, to quote Cage. His work shows no consistent line of development. Composition was for him not the result of long and deliberate consideration, but a spontaneous response to some musical experience he had just undergone. Three general periods of his life's work can, however, be discerned, each reflecting an overriding focus of attention, not a new stylistic direction. The first (1911-36) is characterized chiefly by experiment and innovation, the second (1936-50) by various kinds of folk models, and the third (1950-65) by an attempt to synthesize both.

Many of Cowell's early innovations were derived from the latent possibilities of the grand piano. He coined the word 'tone-clusters' (see **NOTATION**, fig. 58) from their look on the printed page. They could be played with fingers, fists or forearm, and were used at first primarily for programmatic effect (Cowell always considered these sounds as 'chords'). *Advertisement* (1914) uses both diatonic and semitonal clusters, *Tiger* (?1928) integrates a greater variety of clusters with free dissonance and more pronounced melodic writing. Clusters appear in Cowell's orchestral music as early as 1916 (in *Some More Music*) and are exploited to the hilt in the Piano Concerto (1929). Another early invention was what he termed the 'string piano'. In *Aeolian Harp* (1923) the piano strings are to be strummed while certain keys are depressed silently, and some strings are to

Henry Cowell

be plucked, in *Smister Resonance* (?1930) strings are stopped and harmonics produced, and *The Banshee* (1925) is to be played entirely on the strings while an assistant holds down the damper pedal. Cowell also originated the idea of introducing various objects inside the piano to produce new timbres, an innovation developed by his pupil Cage into the prepared piano.

Besides inventing unusual piano sounds, Cowell explored exotic instruments and percussion. Three south-west American Indian thundersticks (bullroarers) accompany two movements of *Ensemble* for five strings (1924). Cowell used graphic notation at the beginning of the thunderstick parts, then gave instructions for the performers to improvise through to the end. In 1931 he collaborated with Léon Théremin to develop what he called the 'rhythmicon', an electronic machine which could play complicated polyrhythms. To prove that any sounds, even these mechanical ones, could be organized into music, he wrote the concerto *Rhythmicana* (1931) for a performance in Paris, which, however, did not take place. (In 1971 Leland Smith realized the solo part on a computer, and Sandor Salgo with the Stanford Orchestra gave the first performance under the title 'Concerto for Rhythmicon and Orchestra'.) Cowell often made elaborate use of percussion, his *Ostinato pianissimo* (1934) remains a standard repertoire work for percussion ensemble, but his Percussion Concerto (1958-9) owes more to ethnic influences than to the percussion music of the 1930s (that of Cage and Harrison, for example) which the earlier work had initiated.

Among Cowell's most forward-looking ideas was his 'rhythm-harmony' system, in which interval ratios from the overtone series are translated into corresponding rhythms. In the *Quartet Romantic* (1915-17) and the

Quartet Euphometric (1916-19) the rhythms of four independent melodic strands are derived from a simple four-part substructure which Cowell called the 'theme'. Though harmonic resting points taken from the theme provide some sense of harmonic direction, the pitches in the quartets are chosen freely. The attractiveness of the sounds attests to the sensitivity of Cowell's ear. Long considered unplayable, large sections from the two quartets were finally performed in New York in 1964 and 1965. The indeterminacy implicit in the free thunderstick parts of *Ensemble* had to some extent always been present in Cowell's improvisatory manner of performing his piano works. It became explicit in his *Mosaic Quartet* (for String Quartet no 3, 1935). Cowell's note in the score instructs that 'The Mosaic Quartet is to be played, alternating the movements at the desire of the performers, treating each movement as a unit to build the mosaic pattern of the form'. The teaching piece *Amerind Suite* for piano (1939) which permits students at various levels of proficiency to play simultaneously, leaves similar choices to the performers. *Ritournelle* for piano (1939) perhaps most closely realizes Cowell's theory of 'elastic form' and in one of his last pieces, 26 *Simultaneous Mosaics* for five players (1964), musical bits of totally different characters may be played at random. The principle, its original relation to dance, and the composer's oriental concerns point directly to the work of Cage.

At the time when he formulated his concept of indeterminacy, Cowell's tonal materials were becoming increasingly conservative. Three string quartets written in successive years (1934-6) indicate the change in focus that led to his second period. The Movement for String Quartet (String Quartet no 2, 1934) is among Cowell's most convincing and consistent examples of 'dissonant counterpoint'. The *Mosaic Quartet* (1935), simplifies the internal structure within its short movements. Separate strands of material tend towards diatonicism, while the composite sound alternates between 'wrong note' harmony and free dissonance. The *United Quartet* (String Quartet no 4, 1936) is one of Cowell's earliest 'attempts at a more universal music style' as he put it in a kind of apologia prefacing the original edition of the work. The drones, modal scales, unchanging harmonic areas and frequent stretches of pizzicato most strongly recall eastern European folk music.

From 1936 onwards Cowell more often wrote tonally, and his rhythms became increasingly regular, with an ever stronger basis in traditional folk idioms. During the 1940s Eastern exoticism waned. The Irish jig, which he always favoured, was to provide a 'scherzo' in innumerable works, and the rugged diatonicism of early American hymnody, which he knew from William Walker's shape-note collection *The Southern Harmony* (1835), led to such works as *Old American Country Set* for orchestra (1937-9) and the series of 18 Hymns and Fuguing Tunes for various instrumental combinations (1943-64). Their bisectational form, which Cowell described as 'something slow followed by something fast', offered him a concise, down-to-earth form which suited his prolific and expeditious compositional habits. The streamlined style of this 'American music', of his functional music for brass ensembles and for band, and of his SATB arrangements for the United Nations seem part of a general search for wider appeal. He was later to justify the pervasive tonality in his

works by pointing out that tonality, not atonality, was common to most musical cultures.

Cowell's work during his third period (1950-65) amalgamated previous innovative styles, especially those using clusters, with new ethnic influences from his trips abroad. In works such as the Percussion Concerto and the Symphony no 11 'The Seven Rituals of Music' (1953-4), clusters act as melodic conglomerates within a tonal context, the symphony is something like a compendium of his practice, each movement being in a different style. Cowell continued to refashion previous works into new ones, somewhat in the tradition of 18th-century composers. It will take many years before an adequate appraisal of Cowell as a composer can be made, because of the abundance of his work (he wrote possibly as many as 700 compositions) and its non-linear evolution. His place in the history of contemporary music is assured, however, by his seminal influence as a composer and as a person.

WORKS (selective list)

ORCHESTRAL (symphonies)

No 1, b, 1915-16, unpubd, no 2 'Anthropos', 1938-9, no 3 'Gadic', 1942, no 4 (Short Sym.), 1946, no 5, 1948, no 6, 1950-55, no 7, 1952, no 8 'Choral', SATB, orch, 1952, unpubd, no 9, 1952-3, no 10, 1952-3, no 11 'The Seven Rituals of Music', 1953-4, no 12, 1955-6, no 13 'Madras', tablas, gita-tarang, orch, 1957-8, no 14, 1959-60, no 15 'Thesis', 1960, no 16 'Icelandic', 1962, no 17 Lancaster, 1962, no 18, 1964, no 19, 1964, no 20, 1964-5, no 21, 1963-5 inc. unpubd.

BRUCE SAYLOR

Cowen, Sir Frederic Hymen [Hymen Frederick] (b Kingston, Jamaica, 29 Jan 1852, d London, 6 Oct 1935). English pianist, conductor and composer. He was taken to England at the age of four. A precocious child, he composed an operetta to a libretto by his elder sister at the age of eight. In November 1860 he began lessons with Goss and Benedict, and made sufficient progress to play Mendelssohn's D minor Concerto in a concert at Dudley House in 1864 (the boy's father was private secretary to the Earl of Dudley). In 1865 his Trio in A major was played at Dudley House by Joachim, Pezze and the young composer. The same year Cowen won the Mendelssohn Scholarship but relinquished it because his parents would not give up their control of him. In 1865 and 1866 he studied under

Plaidy, Moscheles, Reinecke, Richter and Hauptmann in Leipzig, but the war between Prussia and Austria obliged him to return to England. In 1867 he entered the Stern Conservatory at Berlin where he studied under Tausig and Kiel and gained experience as a conductor. He visited Liszt at Weimar and also went to Vienna where he met Brahms, Richter and Hanslick.

On his return to London in 1868, Cowen made several appearances as a pianist and won recognition as a composer with his *Symphony in C minor* and *Piano Concerto in A minor*, which were performed in St James's Hall on 9 December 1869. At 19 he joined Mapleson's Italian Opera Company as an accompanist and also worked as assistant accompanist at Her Majesty's Theatre under Costa. His reputation as a composer was firmly established with the performance in 1880 of his *Scandinavian Symphony*, written after a tour of Scandinavia as accompanist to Trebelli. Skilful formal construction, attractive lyricism, technically assured and imaginative orchestration and colourful descriptive passages prompted *The Times* to hail the work as 'the most important English symphony for many years'. It received numerous performances in England, on the Continent and in the USA.

In 1884 Cowen conducted five concerts for the Philharmonic Society. He was appointed permanent conductor in 1888, but resigned four years later after a disagreement with the society's directors. He was reappointed in 1900 and held the post until 1907, during his two periods as conductor he raised the standard of orchestral playing and introduced several important new works to London audiences. He was permanent conductor of the Hallé Orchestra (1896-9), the Liverpool Philharmonic Society (1896-1913), the Bradford Festival Choral Society and subscription concerts (from 1897), the Bradford Permanent Orchestra (1899-1902), the Scottish Orchestra (1900-10), the Cardiff Festival (1902-10) and the Handel Festival (1903-33). He made frequent appearances elsewhere as a guest conductor.

Although Bernard Shaw was critical of Cowen's lack of vivacity in conducting, Elgar commended him as 'a conductor who never imposed his own personality on the music but strove to let the composer deliver his message in his own way'. Cowen's long and industrious career in this field did much to dispel the idea prevalent in his day that conducting the orchestra was the job of a foreigner. He received an honorary MusD from Cambridge in 1900 and from Edinburgh in 1910. He was knighted in 1911. After World War I he devoted much of his time to editorial and educational work.

Cowen regarded himself primarily as a symphonist, but he was most successful in lighter orchestral pieces where his gifts for graceful melody and colourful orchestration are shown to best advantage. Much of his more serious music is worthy rather than inspired and lacks vitality and emotional depth, his *Ode to the Passions*, however, has a rare vigour and strength. His aims as a composer were high but he was prepared to cater for public taste. He wrote many songs of a high standard (in 1898 he was described as 'the English Schubert') but, to his embarrassment, in later years he was remembered chiefly as a composer of popular ballads. Although he was not the most distinguished composer of his generation, the success of his music, though temporary, contributed much to restore his country's musical reputation.

WORKS

(all printed works published in London unless otherwise indicated)

STAGE

(all publications are vocal scores)

- Garibaldi, or The Rival Patriots (operetta, 2, R. Cowen), 1860 (1860)
 The Maid of Orleans (incidental music), 1871

JENNIFER SPENCER

Cow horn. A bovine horn with the tip removed for blowing, used since antiquity by herdsmen and for sounding alarms and assemblies, and also in warfare. Remains exist of gold-mounted horns, and also of gold horns in the arcuate shape of a large ox horn, from Bronze Age north Europe. Wagner required one (*Ster-horn*, 'ox horn') to be sounded off-stage in *Der Ring des Nibelungen*, thus in *Die Walküre*, Act 2, written *c*, in *Gotterdammerung*, Acts 2 and 3, three *Sterhorne* written *c'*, *ds'* and *d'*, but played an octave lower. A set of three special instruments is made for this. They are straight tubes of brass (the C horn is 104 cm long) with an exact conical bore which expands from a socket for a trombone mouthpiece at one end to an orifice 6 cm across at the other; there is no bell flare. Their fundamentals are sounded *fortissimo* by three trombonists in the wings. Wagner also used the cow horn for the night watchman in *Die Meistersinger*.

In the finale of his *Spring Symphony* (1949) Britten required a cow horn in *c'* which was to sound grace notes from the 4th above and below, in addition to its fundamental, to produce this. Boosey & Hawkes fitted two keys to a brass horn, which was sounded with a modern trumpet mouthpiece.

ANTHONY C. BAINES

Cowie, Edward (b Birmingham, 17 Aug. 1943) English composer. He studied at Trinity College of Music and the universities of Southampton and Leeds, his teachers including Fricker, Goehr and Lutosławski. In 1973 he was appointed lecturer and composer-in-residence at the University of Lancaster. His music may sometimes be cast in firm symmetrical forms, but it is of intricate and rarefied facture, full of fragile and beautiful ideas. This is particularly so in *Leighton Moss*, a work of natural observation which may be compared with Messiaen's studies of habitats, though the style is quite different, more fleeting and atonal. Cowie's paintings, which share certain qualities with his music, have won recognition in Britain and abroad.

Cowper, John. See COPRARIO, JOHN

Cowper [Cooper, Coupar, Couper], **Robert** (b c1474, d between 1535 and 1540) English composer. He was a clerk at King's College, Cambridge, from 1493 to 1495, and obtained the degrees of MusB and MusD at that university in 1493 and 1507. He was ordained a priest in 1498, and was rector of the free chapel of Snodhill Herefordshire, from that year (vacated by 1514), and rector of Lydiard Tregoze, Gloucestershire, from 1499 to 1513. In 1516 he was granted two benefices from the Archbishop of Canterbury: East Horsley in Surrey and Latchingdon in Essex. He was rector of Snargate in Kent from 1526 to his death. According to Thomas Whythorne he was also 'of the Abbey at St Edmundsbury'. In a letter dated 5 June 1525 William Cowper, dean of Bridenorth, requested a benefice from Thomas Cromwell for his brother Robert, saying that he was 'well-disposed and virtuous and a good choirman' (see Brewer). This may have been the composer, wills of persons of this name were proved in 1541 and 1549.

Although the list of his extant works is small, he was admired by two later 16th-century writers: Thomas Morley mentioned him in his *Plaine and Easie Introduction* (London, 1597), and Francis Meres in his *Palladis Tama* (London, 1598) listed him among the 'excellent musicians' of England. An inventory of 'Pryke Song' books belonging to King's College, Cambridge, in 1529 has an entry '4 smaller books covered with leather having Cornyshe and Copers Masses'. It has also been suggested that Cowper may have provided the music for the song 'Time to pass' in Rastell's interlude of the *Four Elements*; like Cowper, the surviving copy of the interlude seems to have had Bridenorth connections.

DAVID GREER

Cox, Arthur. See CARRON, ARTHUR

Cox, David (Vassall) (b Broadstairs, 4 Feb 1916) English composer and writer on music. He studied with Howells and Benjamin at the RCM (1937-9) and also attended Oxford University (1937-40, MA, BMus), where he was organ scholar at Worcester College and then assistant organist at Christ Church Cathedral. After war service he worked mainly for the BBC, notably as external services music organizer (1956-76) with responsibility for all music broadcasts on the overseas services. As a writer and broadcaster he is best known for his sympathetic understanding of 20th-century French and English music; he has written many articles and contributions to symposia as well as a BBC music guide, *Debussy: Orchestral Music* (London, 1974).

Cox, Jean (b Gadsden, Alabama, 14 Jan 1922) American tenor. He studied at the University of Alabama, the New England Conservatory of Music and in Rome with Luigi Ricci and Bertelli. He made his debut with the New England Opera Theatre as Lensky, and his European debut as Rodolfo at the Teatro Sperimentale, Spoleto, in 1954. After engagements at Kiel (1953-4) and Brunswick (1955-9), he was engaged by the Mannheim Opera, which became his base. He first sang at Bayreuth in 1956 as the Steersman, and returned in 1967 as Lohengrin, 1968 as Parsifal, 1969 as Walther, and 1970-75 as Siegfried, a role he has sung at La Scala and in 1975-6 at Covent Garden. As Siegfried he looks and moves well, but lacks the full stamina and vocal resources for the part. Cox has made occasional appearances in the USA, notably in Chicago as Bacchus (1964), Erik (1970) and Siegfried (1973). His repertoire also includes Don Carlos, Othello, Samson, Steva in *Jenůfa*, Apollo in *Daphne*, Sergey in *Katerina Izmailova* and the Cardinal in *Mathis der Maler*. With his American colleagues James King and Jess Thomas, Cox is among the most convincing Heldentenor of the post-war period.

HAROLD ROSENTHAL

Cox, Richard [Cocks, Cockx, Riquardus] (fl mid-15th century) Composer, probably English, known only in the ascription of the mass discussed below. No evidence has been found positively to identify him.

A three-voice mass attributed to 'Riquardus Cockx' occurs in a group of English masses in an MS associated with the Burgundian court and compiled between about

1463 and 1477 (*B-B* 5557). It includes a Kyrie with the Sarum trope *Deus Creator*. In this work Cox developed the techniques standardized by Leonel Power and John Dunstable. Fully-scored sections, with the tenor and contratenor sharing the same clef and range a 5th below the top voice, alternate with lengthy duets written mainly for the top voice and contratenor. Like his contemporaries Walter Frye and John Plummer, Cox distributed the rhythmic and melodic interest more equally between the voices than the previous generation of English composers had done, and almost eliminated unmotivated dissonance. There is little sign, however, of the profuse decorative elaboration evident in the Eton Choirbook repertory.

The mass is unified by a tenor motto stated several times in each movement, and by the recurrence of short two-voice and three-voice motifs. As in John Bedyngham's Mass *Ducl' angoussieux* and Guillaume Faugues' Mass *Le serviteur*, the method of organization includes elements of both cantus firmus and parody, and Richard Cox's mass may well be based on an untraced polyphonic model.

NICHOLAS SANDON

Coxe, William (b London, 7 March 1747, d Bemerton, 16 June 1828) English divine and historian. He was the son of William Coxe, physician to the household of George II. After his father's death, his mother married the musician John Christopher Smith, who, with Benjamin Stillingfleet, guided the Coxe children's education. Coxe was a pupil of Joah Bates at King's College, Cambridge, he held various appointments in the Church of England, residing chiefly at Salisbury. He acted as tutor or companion to several people, travelling with them to Russia, the Continent and in England, and later published writings based on material gathered during his travels.

Coxe deserves notice for having written *Anecdotes of George Frederick Handel, and John Christopher Smith* (London, 1799), published anonymously, and *Literary Life and Select Works of Benjamin Stillingfleet* (London, 1811). Both books present data from first-hand sources that would otherwise have been lost. Coxe was a subscriber to the Literary Fund and a fellow of many societies. On 14 April 1828 he was awarded one of two gold medals given annually to writers by the Royal Society of Literature.

JAMIE CROY KASSLER

Coxsun [Coxson], Robert (b 1489 or 1490; d after 1548) English composer. He was a member of the choir of St Nicholas, Wallingford (Berkshire), in 1548, in

which year he was aged 58. The presence of two organ works for the Latin liturgy in the earliest section of *GB-Lbm* Add 29996 suggests that he was active as a composer in London during the early 1540s. Both works are offertories. The first, *Lactamini in Domino* (EFCM, x, no 24), is in the style of Redford. The second, *Veritas mea* (EECM, x, no 28), is much more individual. The cantus firmus (uniquely in organ settings of Mass chants) is a faburden, slow-moving but richly embellished. Above it the right hand provides a florid counterpoint enlivened with ingenious cross-rhythms.

JOHN CALDWELL

Coya, Simone (b Gravina, nr Naples, fl 1679) Italian composer. In 1679 he was living in Milan and published there in that year as his op 1 a volume of cantatas and serenatas, *L'amante impazzito* (which is the title of one of the pieces), they are for one and two voices, violins and continuo. MS copies survive (at *F-Pn*) of motets that he is said to have published at Milan in 1681.

Coypeau, Charles. See DASSOUCY, CHARLES

Coyssard, Michel (b Besse-en-Chandesse, 1547, d Lyons, 1623) French Jesuit, poet and writer on music. He became rector of the college of Besançon in 1575. Through his teaching commitments he became actively involved in the religious instruction of children, particularly in the colleges of his order. He was in contact with composers, including Virgile le Blanc and Anthoine de Bertrand, and also, apparently, with religious circles including Jesuits and Fathers of the Christian Doctrine, who were then revising their teachings according to the instructions of the Council of Trent. Their aim was to interest pupils by introducing vernacular religious songs into the curriculum, to this end Coyssard compiled a volume of sacred verses, some original and others translations of Latin liturgical texts. The first edition of the *Paraphrase des hymnes et cantiques spirituels* (Lyons, 1592) included anonymous four-part settings of the verses. Seven reprints, with and without music, and with variant title-pages, appeared, the last in 1655, the collection was obviously very popular. Some of the first musical settings were justifiably criticised for their poor quality, and substitutes for some of these were provided by Virgile le Blanc in 1600, further modifications were made, probably by le Père d'Ambleville, in 1623.

Coyssard's attempts to provide a kind of French chant drew repeated criticisms from some conservative Catholics, and in 1608 a defence of his work was published in which he was at pains to deny the accusations of heresy that had been levelled against him: this was the *Traicté du profit que toute personne tire de chanter en la doctrine chrestienne, & ailleurs, les hymnes et chansons spirituelles en vulgaire*. Sommervogel attributed to Coyssard the *Discours de l'utilité que toute personne tire de chanter, en la doctrine chrestienne, & ailleurs, les hymnes et chansons spirituelles en vulgaire*, bearing the date 8 September 1597 and published at Avignon, which is now lost, this could well have been a first edition of the *Traicté*.

DEFENSE LAUNAY

Cozette, François. See COSSET, FRANÇOIS

Cozio di Salabue, Count Ignazio Alessandro (b Casale Monferrato, 14 March 1755, d Salabue, 15 Dec 1840) Collector of violins of the Cremonese school. Of noble birth, and endowed with both a natural curiosity about violins and the means to satisfy it, Cozio's first great opportunity came in 1775 when he acquired from Paolo Stradivari ten of his father's violins, together with tools, patterns and all that remained of Stradivari's violin-making equipment (now owned by the city of Cremona). For the next 50 years Cozio avidly traced and where possible purchased fine Italian violins, scrupulously noting down their details in his *Carteggio* (ed. G. Triglia, Milan, 1950). He also gave much assistance and encouragement to the ageing violin maker Giovanni Battista Guadagnini in Turin, from whom he obtained some information about the Cremonese school.

Much of Cozio's collection was eventually acquired by another energetic enthusiast, Luigi Tarisio. The instruments included the famous unused Stradivari of 1716 (later known as the 'Messiah'), sold to Tarisio in 1827 and donated by Hills to the Ashmolean Museum, Oxford.

CHARLES BEARI

Cozzella, Damiano (b São Paulo, 1930) Brazilian composer. At first self-taught in composition, he studied under Koellreutter after 1950 and in 1961 attended the Darmstadt summer courses. He belonged in the late 1950s and early 1960s to the São Paulo Música Nova Group, which called for total adherence to new aesthetics and techniques. From 1964 to 1970 he taught at the Escola Livre de Música, São Paulo, of which he had been a co-founder, and in 1971 he was appointed professor of music at the University of Brasília. His output is very small. In works such as *Musica I-IV* for various instrumental ensembles (1954-62) and the piano works *Catalogo* (1962) and *Discontinuo* (1963) he followed serial methods, but after about 1965 he turned to popular music as a composer and arranger.

GERARD BÉHAGUI

Cozzi, Carlo (b Parabiago, nr Milan, d Milan, c1658) Italian composer. He was at first a barber and seems to have come to music later in life. In 1649, according to the title pages of his two publications, he was organist and choirmaster of S. Simpliciano, Milan, he dedicated the first of them to Queen Maria Anna of Spain (the duchy of Milan was under Spanish rule). Both consist of mass and office music rather than motets. Op 1 shows the conservative double-choir idiom still frequently adopted for such functional music, each choir has its own organ continuo. The other collection, a set of compline music, is for a more modest medium but has an optional fifth voice part. Most of the pieces are in triple time – a characteristic of mid-17th-century Italian music – but there is much rhythmic variety. Only the *Salve regina* antiphon is largely in 4/4, and it is also more motet-like in its declamatory vocal writing, good bass line and fairly predictable word-painting and chromaticism.

 Psalm, 4vv, insts. *D-Dl*

IEROMI ROCHI

Cozzolani, Chiara Margarita (b Milan, d Milan, c1653)
 Italian composer and singer. She was known as a singer before 1620, when she entered the Benedictine convent of S Radegonda, Milan. In her later years she published a good deal of church music for varying forces, some of it no doubt intended for performance in her convent, some of it probably for other ecclesiastical institutions in Milan.

WORKS

Primavera di fiori musicali concertati nell'organo, 1 4vv, op 1 (M 1640) lost
 Concerti sacri, 1 4vv, con una messa, 4vv, op 2 (Venice 1642)

 f motet in 1649⁶

Crabbé, Armand (Charles) [Morin, Charles] (b Brussels, 23 April 1883, d Brussels, 24 July 1947)
 Belgian baritone. He studied in Brussels with Gilles and Desire Demest, and in Milan with Cottone, and made his debut at La Monnaie in 1904 as the Nightwatchman in *Die Meistersinger*. From 1906 to 1914 he sang each summer at Covent Garden, where his roles included Valentin, Alfo, Silvio and Lord, and from 1909, whenever he appeared in such minor roles as Count Ceprano in *Rigoletto*, or D'Obigny in *La traviata*, he used the name Charles Morin. He returned to Covent Garden in 1937 as Gianni Schicchi. At La Scala he appeared in 1915 as Rigoletto, in 1916 as Marcello, and between 1928 and 1931 as Beckmesser, Lescart and in the title role of Giordano's *Il re*, which he created. In 1907 he joined Hammerstein's Manhattan Opera, New York, he appeared at Chicago, 1910-14, and at the Teatro Colon, Buenos Aires, in the 1920s. One of his most successful roles was Marouf in Rabaud's opera, which Rabaud had transposed for him from tenor to baritone. Crabbé continued to appear in Belgium during the 1930s and early 1940s, mainly in Antwerp, where he sang Beckmesser and Schicchi in Flemish. After he retired he taught singing in Brussels, where his opera studio had a private miniature theatre. He published two books, *Conseils sur l'art du chant* (Brussels, 1931) and *L'art d'Orphée* (Brussels, 1933), and with Auguste Maurage wrote an opera *Les noces d'or*.

Craen, Nicolaus (fl c1500) Flemish composer. According to Vander Straeten, he was born in 's-Hertogenbosch. He was a singer at S. Donatian, Bruges in 1504. All his surviving works are sacred and seem to have been popular, particularly in Germany, two were intabulated for lute by Hans Neusiedler. His *Salve regina* was apparently also copied into one of the choirbooks, now lost, for the royal chapel in Madrid. The pieces are fairly florid for the early years of the century, with much rhythmic flexibility and independence between the voices, and with occasional homophonic sections. Gilrean, quoting the motet *Ecce video* in his *Dodekachordon* (RISM 1547¹, ed. in MSD, vi, 1965), regarded him with some favour. The motet which appears both as *Si ascendero* and as *Diva palestina* was probably composed to the first text, for it opens with a rising scale.

STANLEY BOORMAN

Crafft. See KRAFFT family.

Crafft, Georg Andreas von. KRAFT, GEORG ANDRIAS.

Craft, Robert (b Kingston, New York, 20 Oct 1923)
 American conductor and writer on music. He graduated from the Juilliard School (BA 1946), and conducted the Chamber Art Society in New York (1947-50). From 1950 to 1968 he was a conductor of the Evenings-on-the-Roof and the Monday Evening Concerts in Los Angeles and also appeared at the Ojai Festival. His main repertory interests were older music (e.g. Monteverdi, Schutz, Bach and Haydn) and contemporary music (e.g. the Second Viennese School, Stockhausen, Varèse and Boulez). His interest in the music of Gesualdo led to recordings which brought that composer to popular attention. He also directed the first recordings of the complete works of Webern and most of Schoenberg's music, for CBS. He conducted the first performance of Varèse's *Nocturnal* and, with the Santa Fe Opera, the American premieres of Berg's *Lulu* and Hindemith's *Cardillac*.

From 1948 Craft was closely allied with Igor Stravinsky, first as assistant, later in a closer, almost filial relationship. Over 23 years he shared more than 150 concerts with Stravinsky, collaborated on seven books, and conducted the world premieres of a number of Stravinsky's later works, notably *In Memoriam Dylan Thomas* and *Requiem Canticles*. Besides his Stravinsky collaborations Craft has written extensively on music and literature, as both a critic and an essayist, mainly for the *New York Review of Books*. To his writing Craft has brought an individual style and a highly literate, if specialized, intelligence. After Stravinsky's death he worked on a three-volume biography of the composer. Craft's works include *Chronicle of a Friendship* (New York, 1972), which includes sections, some reworked, from the collabora-

tions, *Stravinsky in Photographs and Documents* (London, 1976), and the collections of criticism *Prejudices in Disguise* (New York, 1974) and *Current Convictions* (New York, 1976). In 1976 Craft received an American Academy of Arts and Letters award for his criticism

PATRICK J. SMITH

Craig, Charles (James) (b London, 3 Dec 1920) English tenor. The youngest in a family of 15, he acquired enough facility as a young singer to tour military bases with an orchestra as part of his war service. In 1947 he joined the Covent Garden Opera chorus, where he came to the attention of Beecham, who financed his training for two years. He made his début in London concerts with Beecham in 1952, and the next year he joined the touring Carl Rosa Opera as a principal tenor, making his début in *La bohème*. He moved to the Sadler's Wells Opera in 1956, and first sang at Covent Garden as a principal in 1959 (*Madama Butterfly*). He has been a guest principal at many of the major opera houses in Europe and North and South America. His singing developed a typically Italianate fervour and a true sense of operatic style in a repertory of nearly 50 roles.

NOEL GOODWIN

Craig, Edward (Henry) Gordon (b Stevenage, 16 Jan 1872, d Vence, France, 29 July 1966) English theatre designer, producer and actor. He was the son of the architect and designer E. W. Godwin and the actress Ellen Terry, and is best known for his revolutionary theories and scene projects which have influenced virtually all 20th-century theatrical art. Like Adolphe Appia, he was among the first to design neutral, non-specific settings – screens 'painted' with light to meet the symbolic, poetic requirements of each moment – and in his 'Über-Marionette' theory he was the originator of the concept of the actor as a controlled instrument without egoism, the ideal tool of a higher directorial purpose.

His earliest and arguably most artistically successful realized productions were those he directed from 1900 to 1903 for the Purcell Operatic Society, including Purcell's *Dido and Aeneas* and *The Masque of Love* (an adaptation of *Dioclesian*), and Handel's *Acis and Galatea*. These productions, which marked the beginning of the contemporary revival of English opera, aroused great interest. For *Dido and Aeneas* he created a proscenium of unusual proportions and, by abandoning wings and borders and using only a vast sky-cloth which disappeared out of view of the audience, gave the illusion for the first time of vast scale and space appropriate to the staging of lyric drama. In *Acis and Galatea* the giant was effectively suggested by a shadow projected by an offstage actor, moving in front of a naked electric light. Colour schemes and textures in the costumes and also uses of coloured light heralded reforms to be seen in opera in the next quarter century. In all these productions, both soloists and chorus eschewed 19th-century conventions and were produced to act and move in a style consonant with the mood of the piece.

Craig was also partly responsible for improving the standard of music chosen by Isadora Duncan for her dances; it was through his influence that Martin Shaw served as Duncan's musical director from 1903 to 1908. Shaw, on the other hand, inspired one of Craig's most remarkable projects, an unrealized plan to stage

Bach's *St Matthew Passion*, an idea that consumed Craig's interest for over 14 years. He even constructed a model of the playing area, unsuited to any conventional theatre, with towering flights of steps, platforms and chambers on which the epic could be enacted with stylized movement and changes of light.

PAUL SHEREN

Craighead, David (b Strasburg, Penn., 24 Jan 1924) American organist. He studied privately in Los Angeles, then graduated in 1946 from the Curtis Institute of Music, Philadelphia, where he was a pupil of Alexander McCurdy. A brilliant and technically secure recitalist, he began touring in 1944 and has played at national conventions of the American Guild of Organists. He has held important church and teaching posts, being organist of the Bryn Mawr Presbyterian Church (1942–6), the Pasadena Presbyterian Church (1946–55) and St Paul's Episcopal Church in Rochester, NY (from 1955); he has been a faculty member at Westminster Choir College, Princeton (1945–6) and at Occidental College, Los Angeles (1948–55), and chairman of the organ department at Eastman School of Music in Rochester from 1955. He gave the first performances of Samuel Adler's *Organ Concerto* (1971) and Persichetti's *Parable* (1972). In 1948 he married Marian Reiff, a professional organist.

VERNON GOIWALS

Cramer. German family of musicians who settled in England.

(1) **Wilhelm Cramer** (b Mannheim, baptized 2 June 1746, d London, 5 Oct 1799) German violinist of Silesian descent. The son of a Mannheim violinist, Jakob Cramer (1705–70), he was a precocious violin pupil. He studied with Johann Stamitz, Domenico Basconi and Christian Cannabich, and joined the Mannheim orchestra in about 1752, where he became known as one of the finest violinists of his day. He left Mannheim to work for the Duke of Württemberg in Stuttgart, and he soon obtained permission to travel to Paris and London. He appeared at the Concert Spirituel in Paris in 1769 and by 1772 he had arrived in London, where his success, and the encouragement of J. C. Bach, led him to decide to remain permanently in England. Subsequently he became chamber musician to the king and leader of the opera orchestra at the Pantheon, of the Antient Concerts, and of the Professional Concerts. In the meantime he continued to perform as a soloist both in London and in the provinces. One of his greatest

honours was his being selected to lead the Handel Commemoration Concerts in Westminster Abbey in 1784 and 1787, until the appearance of Salomon and Viotti he was considered England's foremost violinist. He composed 11 violin concertos and a number of chamber works for string instruments, but was little noted as a composer.

(2) **Johann [John] Baptist Cramer** (b Mannheim, 24 Feb 1771, d London, 16 April 1858). Composer, pianist and publisher, the eldest son of (1) Wilhelm Cramer and the most outstanding member of the family. As one of the most renowned piano performers of his day, he contributed directly to the formulation of an idiomatic piano style through his playing and his compositions. When he was about three years old he was taken to London by his mother to join his father, who had decided to establish himself in England. Wilhelm taught his son the violin from a very early age, but the child showed distinct precocity at the piano and at the age of seven was placed under the direction of J. D. Benser. He continued his studies with J. S. Schroeter from 1780 to 1783, when he was entrusted to Muzio Clementi. Although he studied with Clementi for only one year, the lessons were decisive in forming his artistic character. His formal training was completed with lessons in theory (from 1785) under C. F. Abel, through whom Cramer first came to know the writings of Kirnberger and Marpurg. His early training acquainted him with the works of the greatest keyboard composers of the century, and by the mid-1780s he had studied works of Clementi, Schroeter, J. C. Bach, C. P. E. Bach, Domenico Scarlatti, Muthel, Paradise, Haydn and Mozart. He may have been introduced to *Das wohltemperierte Clavier* as early as 1787, and he developed a lifelong fascination for Bach. By the time Clementi left England for the Continent and Cramer's formal piano lessons were abruptly ended, he had already attracted attention as a performer in London. He made his formal debut on 5 April 1781, appearing in his father's annual benefit concert. He performed occasionally during the next few years, at one concert (in 1784) playing a duet for two pianos with Clementi.

In 1788 Cramer undertook his first foreign tour and visited the major cities of France and Germany, including Paris and Berlin. While in France he was given a number of J. S. Bach's MSS. His earliest compositions were also published during his stay in France. On his return to England in 1791 he immediately began an active performing career, and during the next nine seasons established himself as England's most remarkable young pianist, capable of providing stiff competition for the older virtuosos. He participated as a soloist in both major series, the Professional Concerts and the Salomon Concerts, as well as appearing in numerous benefit concerts. He made the acquaintance of all the eminent artists who appeared in London during that decade, including Haydn, and he began to gain recognition as a composer and teacher.

Cramer left London in 1799 for a second journey that included the Netherlands, Germany and Austria. He met Beethoven in Vienna, initiating a warm and mutually rewarding relationship, and he renewed his friendly association with Haydn. On his return to England in 1800 he married almost immediately. The activities of his first 30 years had brought him into contact with nearly all the most prominent musicians

of Europe, including Hummel, Dussek, Weber, Kalkbrenner, Cherubini and Wolff, in addition to those already mentioned. In later years he came to know Ries, Czerny, Moscheles, Mendelssohn, Liszt and Berlioz. He championed with characteristic vigour the works of composers whom he admired; his performances of Bach and Mozart, in particular, created great excitement, and he helped to introduce Beethoven's sonatas to English audiences. His impact as a popularizer of music by other composers seems to have been felt as much by his playing at private gatherings as by his concert appearances, for he preferred private music-making, even when travelling abroad.

After 1800 Cramer's public career was centred almost entirely on England. He taught privately at least into the 1820s, commanding the top fee of one guinea per lesson. But he travelled again from 1816 to 1818, visiting Amsterdam and Mannheim. While abroad he continued to renew and expand his associations, but his public performances were apparently rare. His mature years in London were marked by many signs of high regard. To admiring English audiences he was their 'Glorious John', and his appearances continued to stir excitement until his formal retirement. He was one of the founders of the Philharmonic Society in 1813, and he was appointed to the board of the RAM on its foundation in 1822.

Following the very successful example of Clementi, Cramer entered the music publishing business. His earliest ventures included a partnership known as Cramer & Keys in 1805, and another partnership with Samuel Chappell (later of CHAPPELL & Co. Ltd) from 1810 to 1819. A more lasting firm was established in 1824 (when Cramer joined Robert Addison and T. F. Beale) at a later date known as J. B. CRAMER & Co. Ltd, which flourished from its first days and still exists.

Cramer married for the second time in 1829, and he retired officially from public life after a gala farewell concert in 1835. His next decade included visits to Munich and Vienna and a long residence in Paris, but he returned again to England in 1845 and remained there for the rest of his life. He died at his house in Kensington and was buried in the Brompton Cemetery.

The large volume of Cramer's compositions is only part of his musical achievement. His playing left a permanent impression on several generations of early 19th-century pianists. He received almost universal admiration for his playing, even Beethoven considered him the finest pianist of the day, according to Ries. His expressive legato touch, which later became a stylistic norm among pianists, was especially admired in Moscheles's words, his legato 'almost transforms a Mozart Andante into a vocal piece'. His refinement in improvisation and the remarkable independence of his fingers were equally renowned, they are also evidence of his Classical ideals and distinguish him from more dramatically inclined later generations. By the end of his long career his playing may have become somewhat outmoded. Certainly Wilhelm von Lenz found his playing in the 1840s dry and harsh, though at the same time August Gathy contradicted Lenz's judgment. Cramer himself noted the changing fashions when he described earlier playing as 'fort bien' ('very good') and the newer style as 'bien fort' ('very strong').

Many aspects of Cramer's compositional style are strikingly conservative. He apparently liked to view himself as a latter-day Mozartian, preserving Mozart's

Johann Baptist Cramer: pastel portrait (1844) by Firmin Salabert (Royal College of Music, London)

grace, elegance and clarity. His music is generally less dramatic than Clementi's, less rich than Dussek's, less sentimental than Field's. The originality of his genius appears principally in his combination of a conservative bias with the most advanced, idiomatically pianistic passage-work. Although there is an inconsistency in the quality of his works that was observed even by critics of his day, his music is nearly always skilful, pleasant and sophisticated, and his ingenuity in passage-work expanded the vocabulary of colourful and evocative sonorities available to the piano.

Cramer's affinity for certain Classical ideas did not prevent him from assimilating the newer musical forms that became popular in the early 19th century, and his own work accurately reflects the changing tastes of the period. Nearly all his 124 sonatas, for example, were written before 1820, and his production of didactic works, capriccios, fantasias and small pieces based on popular tunes increased markedly after 1810. He supplied so much music for the dilettante that by the end of the century his name was used in France as a pseudonym for musical trifles.

Of all Cramer's works, the one that has had the greatest enduring value is his celebrated set of 84 studies for the piano, published in two sets of 42 each in 1804 and 1810 as *Studio per il pianoforte*. This collection has long been considered a cornerstone of pianistic technique and is the only work of Cramer's that is generally known today. Clementi claimed for himself the idea of such a comprehensive technical volume, accusing Cramer of having stolen the idea and title for the *Studio*. Cramer's work inspired many similar efforts, some being mere imitations. Soon after its appearance, Steibelt and Wölfl produced sets of studies, and

Clementi eventually published his *Gradus ad Parnassum*. Nevertheless Cramer's *Studio* was the most widely used and admired collection in the early 19th century. Beethoven annotated 21 of the studies for his nephew's use (published in an edition by J. S. Shedlock in 1893) and considered them 'the best preparation for his own works'. Schumann described the *Studio* as the finest training 'for head and hand'. The studies are structurally simple, each is based on a characteristic pattern or mechanical problem, and although the shadows of Bach and Domenico Scarlatti are often apparent, the harmonic colouring and figural variety in the *Studio* are eminently modern and entirely suited to the piano. The success of the studies led Cramer to produce many more methods, including the *Anweisung das Pianoforte zu spielen*, which includes rules for fingering and the use of the pedals. Some of the later studies were given individual descriptive titles, in keeping with the fashion, but none of them matched the *Studio* in usefulness and artistic merit.

The scope and seriousness of Cramer's compositions often varies widely within a single category, even among the sonatas and concertos the range is considerable. The best of the shorter pieces anticipate the general features of the character piece in form and expressiveness, while many works were plainly directed to the unsophisticated amateur. The sonatas, in spite of their diminishing numbers in Cramer's later years, contain some of his most impressive achievements. There is some evidence that Beethoven occasionally borrowed from Cramer's sonatas, and Schumann considered Cramer and Moscheles the only outstanding sonata composers of their generation.

The accompanied sonatas, which comprise less than half the total number, are generally lighter and more popular in character than the solo sonatas. After 1800 Cramer showed a clear preference for solo works, although some of the later solo sonatas still have some popular features, such as the inclusion of 'favourite airs'. The sonatas written after 1810 are more consistently serious and contain more prominent Romantic characteristics. Several have descriptive titles (*Il mezzo*, *Le retour a Londres*) and a highly flexible, dramatic approach to the use of compass and texture. In harmonic daring they show the impact of Beethoven, and they abound in sweeping, colouristic accompanimental patterns. Cramer's late sonatas were occasionally reprinted in the 19th century, but they have passed into obscurity in more recent times.

(3) **Franz** [François] **Cramer** (b Schwetzingen, nr Mannheim, 1772, d London, 1 Aug 1848) Violinist, son of (1) Wilhelm Cramer and brother of (2) Johann Baptist Cramer. His family moved to London when he was about two years old, and he was taught the violin primarily by his father. After 1790 he frequently appeared in concerts with his father, his brother, or both. He enjoyed singular success as an orchestral musician, becoming the leading violinist of the Ancient Concerts and the Philharmonic Concerts, as well as leading the orchestra at many provincial festivals. In 1837 he was appointed Master of the King's Musick, a post he held until the end of his life. He was not noted as a composer, though he may have composed some vocal music. Only one of his works is known, an *Album Leaf* for violin.

 IFRALD C GRAUE

Cramer, Carl Friedrich (b Quedlinburg, 7 March 1752, d Paris, 8 Dec 1807) German linguist, publisher, writer on music and composers. He was the eldest son of Johann Andreas Cramer, a noted professor of theology and later chancellor at Kiel University, and in 1775 became professor of Greek and oriental languages at the same university. His sympathies with French Republican forces led to his removal from this office in 1794. He stayed briefly in Hamburg, then in late 1795 emigrated to Paris and was a printer and bookseller there by 1797.

From the 1770s Cramer was in close contact with various musicians of the North German school, especially C P E Bach. Beginning in 1782 he edited a series of vocal scores, first advertised (at Leipzig and Dessau) under the collective title *Polyhymnia*, these include Salieri's *Armida* (1783), Naumann's *Orpheus und Euridice* (1787), J A P Schulz's *Aline reine de Golconde* (1790) and F L A Kunzen's *Holger Danske* (1790). Cramer also edited and published *Flora* (Kiel, 1787), a collection of songs and keyboard pieces by C P E Bach, Gluck, Gräven, A and F L A Kunzen, Reichardt and Schwanenberger. Perhaps his greatest importance to music lies in his periodical *Magazin der Musik* (Hamburg, 1783-6, continued as *Musik*, Copenhagen, 1789), in addition to lists of new publications by genre, criticism of concerts and essays on music theory, it provided descriptions of concert programmes and performers at various European cities as well as the personnel in several contemporary orchestras (Bentheim-Steinfurt, Bonn, Kassel, Dresden). 41 of his German translations of psalms were set by C P E Bach in 1774, and in 1801 his translation into French of Rochlitz's 'Verbürgte Anekdoten aus Wolfgang Gottlieb Mozart's Leben' (*AMZ*, 1, 1798 9) appeared in Paris. He especially admired the music of Bach, Mozart and Haydn, and the writings of Klopstock. His original works include a *Kurze Übersicht der Geschichte der französischen Musik* (Berlin, 1786) and various keyboard pieces and songs mostly written for the *Magazin der Musik*.

SHEILLY DAVIS

Cramer, Caspar (b Themar, nr Meiningen; d ?Mühlhausen, probably in the 1650s) German schoolmaster, composer, poet and anthologist. About 1640 he was a deputy headmaster at Langensalza and later a headmaster at Mühlhausen. The only known work by him is the collection *Animae sauciatae medela, das ist Kraftiges Talsal einer betrubten Seele von siebenzig geistlicher schöner und trostreicher Fest-Buss- und Begräbnis-Lieder theils aus vornehmen Autoribus colligirt, theils selbstens in 4 Stimmen contrapunctweise der lieben Schulpugend und anderen Gottseligen Heitzzen zu Saltza zu krafftigen Trost und gedeylichen Nutzen gesetzt* (Erfurt, 1641⁴). This is one of numerous sacred collections produced in central Germany in the first half of the 17th century, consisting mainly of simple songs (contrapunctweise means 'note-against-note'), which were intended for educational purposes in schools as well as for use during services. Half of the 70 pieces in Cramer's volume are for burial services. As many as 18 pieces come from Schein's *Cantional* of 1627, and Melchior Franck, Bartholomäus Gesius, and Schutz are other well-known composers represented in it. Cramer himself is represented by 20 signed pieces, whose melodies too he evidently wrote, and the volume may also include a few anonymous pieces by him. Most of the songs are for four voices, but a few are for five, all are with continuo. The book served as a model for similar collections, in particular the celebrated *Cantionale sacrum* first published at Gotha in 1646-8.

WALTER BLANKENBURG

Cramer, David (b?1590-95, d probably at Hamburg, before 1666) German violinist and composer. Rist, writing in 1666, referred to him as dead and mentioned that he had been an assistant to William Brade at Hamburg, which might mean that he had also been Brade's pupil, since Brade was in the service of the city of Hamburg from 1608 to 1610 and from 1613 to 1615. Cramer was associated with him presumably during those years. Nothing is known of his later activities, though as a skilful violinist, and able composer he seems to have belonged to the Hamburg school of violinists and composers founded by Brade and continued by such men as Nicolaus Bruhns, Johann Schop (i) and Nathanael Schnittelbach. He published a volume of four-part pieces for strings, *Allerhand musicalische Stücke von Pavanen, Couranten, Intraden, Balletten auff 3 Discant Violon und ein Violagamba* (Hamburg, 1631), the last surviving copy of which was lost in World War II. Apart from suites, it included a number of pieces with such titles as *Melancholia*, *Patientia*, *Inconstantia*, *Avaritia*, *Gaudium* and *Tristitia*, which suggest that they were used for allegorical ballets. Rist

stated he published 'fine pieces to accompany comedies and tragedies'. It is not possible to confirm whether this was indeed so, especially since, according to the dedication, the 1631 collection was intended 'to exercise the beginner', but from its title, *Herodis Auszug* ('Herod's March'), another piece in it, could have been written for a tragedy. It and *Avaritia* (both in *MMg*, vii (1875), appx. 130) are lively pieces, with varying rhythms and changes of time. Moser mentioned an *Intrada moriomis* that included diminutions on the melody of the song *Von den zarten Jungfrawlein*. In it Cramer used double stopping in 3rds, and in no 21, *Speculator*, he had double and triple stopping in all the violins simultaneously.

GEORGE KARSTADT

Cramer, J. B. London firm of music publishers and, formerly, piano manufacturers. The firm was founded as Cramer, Addison & Beale in 1824 when the pianist and composer J. B. Cramer (see CRAMER, §2) joined the partnership of Robert Addison and Thomas Frederick Beale (b ?1804 or 1805, d Chislehurst, 26 June 1863). With the addition of Cramer's name the publication of piano music became the firm's chief interest, and in 1830 it bought many of the plates of the Royal Harmonic Institution, which gave it works by Beethoven, Clementi, Dussek, Haydn, Hummel, Mozart, Steibelt and others. Italian songs and duets and English operas by composers such as Balfe and Benedict were soon added to the catalogue.

In 1844 Addison retired and was succeeded by William Chappell (see CHAPPELL) and the firm then became known as Cramer, Beale & Chappell, or Cramer, Beale & Co. In 1847 Beale also became the manager and director of the Royal Italian Opera at the rebuilt Covent Garden Theatre. After the death of Cramer in 1858 and Chappell's retirement in 1861 George Wood (b ?1812 or 1813, d Hove, 22 Feb 1893), who was related to the Scottish music publishers, became Beale's partner, the firm then traded as Cramer, Beale & Wood, and also began the manufacture of pianos. After Beale's death Wood continued the business as Cramer & Co. (later Cramer, Wood & Co., and J. B. Cramer & Co.), and the piano making side of the firm became predominant. His nephews, John Wood and George Muir Wood, succeeded to the business on his death. The firm was turned into a limited company in 1897. Many successful ballads appeared under the firm's imprint at the end of the century, and a series of ballad concerts was run by L. J. Saville from 1912 until World War II. The publishing firm of MITZLER was acquired in 1931. In the 20th century publishing became the firm's main activity once again, the piano business passed to Kemble & Co. in 1964. Choral, piano and organ music are their specialties, with an emphasis on educational music.

 CHARLES H. PURDAY-WILLIAM C. SMITH:
 PETER WARD JONES

Crane, William (d. ?1545) English musician, actor and businessman. Some time before 1509 he was appointed a Gentleman of the Chapel Royal, and in 1523 succeeded Cornysh as Master of the Children of the Chapel, a post he held for 22 years. There is no evidence that he composed. While he was a member of the chapel he was much concerned with theatrical presentations. During the early years of Henry VIII's reign he was one of the chief actors in many pageants and disguisings, including *The Gollydn Arber* (1511), *Le fortresse dan gerus* (1512) and the *Pavillon in the plas parlos* (1514). Later, after his appointment as Master of the Children, Crane and his charges were regularly rewarded for playing before the king each Christmas season. Whether Crane, like Cornysh, composed any of the material performed by the children is not known.

Crane was also an active businessman, holding such posts as comptroller of the petty customs of the port of London from 1512 to 1530, when he became cellarer of wine for the king. In 1525 he was made a freeman of the Mercers' Company. His business dealings were on so grand a scale that in 1528 he was able to have furnished three ships and three galleys, and he had a house in Greenwich.

His will (PCU F 7 Alen) is dated 6 July 1545 and was proved on 6 April 1546. He was buried in the chancel of St Helen's, Bishopsgate.

 JOHN M. WARD

Cranesteyn, Gasparo. See GRUA family.

Cranford, Thomas. English church musician, possibly related to WILLIAM CRANFORD.

Cranford [Cranforth], **William** (b. late 16th century, d. ?c1650-75) English composer and singer. He was, according to Wood, a lay vicar at St Paul's Cathedral in the time of Charles I, and he may have been closely associated with the composer Simon Ives (i), for two three-voice catches – *Boy go down* and *Boy come back* – the one by Ives, the other by Cranford, are in several of Playford's anthologies, and also in the British Museum. A fly-leaf note, 'Cranford 6' in *GB-Ob* Mus. Sch. D 212-16 (c1615) possibly relates to copying that he had done in that manuscript. The six-voice elegy *Weep, Brittaines, weep* (*Och* 56-60) was occasioned by the death of Prince Henry in 1612.

He contributed two settings to Ravenscroft's 1621 psalter, and wrote the hymn tune 'Ely' (in *Lhm* Ad 31421, dated 1633). The verse anthem *O Lord, make thy servant Charles*, also known as *The King shall rejoice*, must have been written in the early part of the reign of Charles I, and was apparently his most popular work of this kind. It is in a simple, semi-polyphonic style, rather in the manner of Adrian Batten. Most of his

church music survives in imperfect or fragmentary form. Over 20 compositions for viols are known, many perhaps dating from the period of suppression of choral services. A total of nine three-voice catches are contained among Hilton's and Playford's publications. One, *Let's live good honest lives*, was later adapted by Purcell (ZD102). Hawkins wrote that Purcell put the words to Cranford's music.

It is not known whether the composer was related to Thomas Cranford, vicar-choral at St Paul's, or to the eccentric Presbyterian divine James Cranford (1592-1657). Some of his music, which is generally of good quality, reveals an individuality which would make such a relationship to the latter possible.

 NORMAN JOSEPHS

Crang & Hancock. London firm of organ builders. It was formed when John Crang (b. Devon or Germany, d. May 1774) went into partnership with John Hancock (fl. 1772, d. nr. Maidstone, Kent, Jan 1792) and James Hancock (fl. 1772-1820), who appear to have succeeded to the business. John Crang was an organ builder based in Wych Street, London. He built organs at Stoneleigh Abbey (1761), and Fonthill House (transferred to Towcester Church in 1817, where the case survives), and made additions to an organ at Maidstone in 1765. James Hancock built the organ at St Mary's Cray, Kent, and, in 1788, as 'Organ Builder to His Majesty', the chamber organ in the Royal Pavilion, Brighton. A James Grange Hancock, whose chamber organ of 1783 survives in St Peter's, Pertenhall, near Kimbolton, may be the same person as James Hancock. As a firm they built organs at the following places: St John's, Horsleydown (1770), Barnstaple Parish Church (1772), Chelmsford Parish Church, Essex (1772), St George the Martyr, Queen Square, London (1773); St Vedast, Foster Lane, London (1774, cost £240, moved to St Jude, Bethnal Green, in 1853 where it survived until 1900), Brompton Chapel (1774), and St Mary's, Scarborough (1774). Crang Hancock (fl. London, 1777-91) was a maker and inventor of pianos and violins. He built a piano in the form of a spinet (1777) and invented a violin in the form of a guitar (1791).

GUY OLDHAM

Cranko, John (1927-73). British choreographer, see DANCE, §VII, 1(iv).

Cranmer, Arthur (Henry) (b Birmingham, 5 May 1885, d Harlech, 20 Aug 1954) English baritone. He sang the part of Dalua in Boughton's *The Immortal Hour* during its run in London in 1922 some 500 times. Later he joined the British National Opera Company, and took part in the opera festivals organized by Napier Miles at Bristol, excelling as the Visitor in Miles's *Markheim*. His gift for conveying a sense of mystery made him particularly successful in Stanford's *The Travelling Companion*, at Bristol and at Sadler's Wells, but he also played Rossini's Dr Bartolo and Mozart's Don Alfonso. His outstanding performance in oratorio was of Christ in Bach's *Passions*. He earned praise in recitals and was a successful singing teacher.

H. C. COLLIER

Cranz, August. German firm of music publishers. It was founded by August Heinrich Cranz (b Berlin, 1789, d Hamburg, 1870) in 1814 in Hamburg. His son Alwin Cranz (b Hamburg, 1834, d Vevey, 10 April 1923) took over the music publishing house in 1857 and acquired the Viennese publishing firm C. A. Spina in 1876. August Cranz was the original publisher of many works by Josef, Eduard and Johann Strauss (father and son), including *Die Fledermaus*, *Der Zigeunerbaron* and *Eine Nacht in Venedig*. Viennese operettas and light music (e.g. Lanner, Suppé, Millocker) have always played a significant part in the publishing programme. Oskar Cranz, a partner from 1896, moved the firm to Leipzig in 1897. The August Cranz publishing house lost most of its stock in 1943, the rebuilding of the firm was carried out at first in Munich and from 1949 in Wiesbaden. Theo Nietzel was appointed director in 1972. In 1965 the firm began producing tapes and records. The firm August Cranz of Wiesbaden has branches in Brussels, London, Paris and Vienna and is represented by agents in several countries.

HANS-MARTIN PLIJSKI

Crappius, Andreas (b Lüneburg, c1542, d Hanover, 8 Jan 1623). German composer and theorist. He matriculated at the University of Wittenberg on 12 July 1565, but he took no degree. On 28 March 1568 he was appointed Kantor of the Lateinschule and of the Marktkirche, the two most important musical positions in Hanover, and he held them until he retired in 1616. His output reflects his activities in these posts. His three masses, which are parody masses, and his motets (1572 and 1581) show that he was a competent composer of polyphony, and his three-part songs (1594) are more contrapuntal than such pieces often were. His primer of 1599, dedicated to 54 of his pupils, including the infant Melchior Schildt, contains 14 canons as exercises.

KLAUS WOLFGANG NIEMÖLLER

Craquer (Fr. 'to crackle'). A dry and brilliant sound. Evidently the term 'craquer' was first used in reports of 17th-century violin playing in France (e.g. by Georg Muffat, when explaining in 1698 the practice of Lully's followers). It is a type of bowing where two (or more) notes (as shown in ex. 1) are played in one bowstroke.

but where each of the notes is distinctly articulated. Usually performed up-bow and in fast time, *craquer* is indicated by dots under a slur, the length of the slur indicating the number of *craquer* notes to be included in one bowstroke.

DAVID D. BOYDIN

Cras, Jean (Émile Paul) (b Brest, 22 May 1879, d Brest, 14 Sept. 1932) French composer. Unlike Roussel, Cras did not desert the navy, but became a rear-admiral. After 1900, as a close friend and pupil of Duparc, he wrote numerous works in various genres: songs, piano pieces, symphonic and chamber works (a particularly fine string trio, quartet and piano quintet), and an opera, *Polyphème* (text by Albert Samain). This opera won the first prize of the City of Paris in 1921 and was awarded a special production at the Opéra-Comique in December 1922. Ever mindful of the primacy of the text, Cras used a style of recitative similar to psalmody. Many of his compositions, as for example the symphonic suite *Journal de bord* (1927), reflect his interest in the sea. A virtuoso Piano Concerto (1931), his last work, was dedicated to his daughter Colette Cras, who played in its first performance.

ELAINE BROIDY

Crass, Franz (b Wipperfurth, 9 Feb. 1928) German bass-baritone. He made his first appearance at the age of 11 as the Second Boy in *Die Zauberflöte*. He then studied singing at the Cologne Musikhochschule with Clemens Glettenberg, and made his début at Krefeld in 1954 as the King in *Aida*. Engagements followed at Hanover (1956–62) and Cologne (1962–4), after 1964 he divided his time between Hamburg, Munich, Frankfurt and Vienna, with guest appearances in most

leading European theatres. Crass first appeared at Bayreuth in 1959 as King Henry in *Lohengrin* and returned each year until 1973, singing the Dutchman, Biterolf, Fasolt, King Marke and Gurnemanz. He has also appeared at Salzburg, as Rocco and Sarastro, and at La Scala from 1960, when he sang Don Fernando (*Fidelio*). Klemperer chose him to sing in the *Missa solemnis* in London in 1960 and in Mozart's Requiem in 1964. His large concert repertory includes works by Bach, Handel, Haydn and Janáček, and among his stage roles are Barak, Nicolai's Falstaff, Philip II and Bartók's Bluebeard. Crass possesses a beautifully schooled bass-baritone voice of lyric rather than dramatic quality.

HAROLD ROSENTHAL

Crassellius [Crasselt], **Bartholomäus** (b Wernsdorf, nr Glauchau, Saxony, 21 Feb 1667, d Dusseldorf, 10 Nov 1724). German theologian, hymn writer and composer. His family name was Crasselt, which he later latinized. He was probably instructed in poetry by the learned Wernsdorf pastor and poet laureate Johann Poeltz. He appears later to have been tutor to the Schonburg family at Glauchau Castle. He then moved to Halle and joined the circle of pupils around August Hermann Francke, through whom he became a convinced Pietist. He later stayed for a time with his brother, who was the minister at Saara, Saxe-Altenburg, but was obliged to leave after preaching one Sunday on a free text in the Pietist manner. In 1701 he became deacon at Nidda, Wetterau. From 1708 until his death he was a clergyman at Dusseldorf. He was one of the most consistent pioneers of Pietism and his uncompromising championship of it involved him on several occasions in violent disputes with authority. Ten or so hymns by him are known, but it is uncertain whether the melodies to those in Freylinghausen's songbook are by him too. *Dir, dir, Jehova* deeply felt and technically accomplished, became world-famous and is one of the most beautiful and moving of Protestant hymns. The best-known melody for it is by Bach (BWV299 and 452).

WORKS

(texts and possibly some melodies)

- Dir, dir, Jehova*, will ich singen, in Geistreiches Gesangbuch (Halle, 1697).
Ach Herr! wenn kommt das Jahr. Erwach o Mensch! erwache! Friede, ach! Friede, ach! göttlicher Friede, Heiligster Jesu, Heil'gungs-Quelle! Herr! horc mich und merke auf mein Wort! Herr! Jesu, ewiges Licht! Nun ruht doch alle Welt, Uns ist geboren Gottes Kind, in J. A. Freylinghausen, Geistreiches Gesangbuch (Halle, 1704).
Heilig ist Gott der Herr, in J. A. Freylinghausen, Geistreiches Gesangbuch (Halle, 1673/00).

WALTER HÜTTEL

Crassot, Richard (b Lyons, c1530). French composer. He is known for his settings of the 150 psalms of the complete Huguenot Psalter based upon traditional melodies in *Les psaumes mis en rime française par Clement Marot et Theodore de Besze, et nouvellement mis en musique a quatre parties* (Lyons, 1564). In his preface Crassot insisted on the need for using the traditional melody exactly as it stood, and he did no more than add three voices to the tune in a note-against-note style. The traditional melody is usually in the upper voice and is always accompanied by its text, as is indicated in the title of the Geneva edition of 1569, *Les psaumes de David à quatre parties avec la lettre au long*. Two psalms (nos xxv and li) were reprinted by Douen from the 1564 edition. It is possible that, like Goudimel, Crassot died in the Massacre of St Bartholomew in Lyons (28-31 August 1572).

PAUL ANDRIE GAILLARD

Craven, Elizabeth. See ANSPACH, ELIZABETH

Crawford, Robert Caldwell (b Edinburgh, 18 April 1925). Scottish composer. He was a pupil of Frankel at the GSM, London (1945-9). On his return to Scotland he worked as a composer and freelance critic, winning the Scottish Arts Council's Festival of Britain Prize in 1951 with his First String Quartet. This work was performed in the same year at the ISCM Festival. His Second String Quartet, commissioned by Glasgow University, followed in 1957. But the promise of these and the rest of his small, sensitively written output - including the Six Bagatelles for piano (1947), the Second Piano Sonata (1951), the Movement for clarinet quintet (1954) and the Variations for string orchestra (1955) - has not been fulfilled. In later years he has devoted the bulk of his energies to his work as a BBC music producer in Glasgow. His music is published by Augener and Bayley & Ferguson.

CONRAD WILSON

Crawford (Seeger), Ruth (b East Liverpool, Ohio, 3 July 1901, d Chevy Chase, Maryland, 18 Nov 1953). American composer and educationist. She received her early musical training largely at the School of Musical Art, Jacksonville, Florida, where she later taught the piano. In 1920 she entered the American Conservatory in Chicago, studying the piano with Henriot Levy and Louise Robyn and theory and composition with John Palmer and Adolf Weidig. Further piano studies with Djane Lavoie-Herz served to introduce her to a new musical circle which led her in 1929 to New York City and study in composition with Charles Seeger, whom she later married. In 1930 she received a Guggenheim Fellowship, which took her to Berlin and Paris for further study. In 1933 her Three Songs were chosen to represent the USA at the ISCM Festival.

In addition to her creative work, Crawford pursued two further musical interests throughout her life.

American folk music and teaching music to young children. She transcribed, arranged and edited hundreds of folksongs in the Archive of American Folk Song in the Library of Congress. Many of these were published in *Our Singing Country* by John and Alan Lomax and in her own books, *American Folk Songs for Children* (New York, 1948), *Animal Folk Songs* (New York, 1950), and *American Folk Songs for Christmas* (New York, 1953), which she used in connection with her teaching. She and Seeger also served as music editors of the Lomaxes' *Folk Song U.S.A.*

Most of Crawford's compositions are atonal and strongly dissonant, but highly organized. Some of her techniques, unusual for their time, have since her death become commonplaces, such as the serialization of, or the application of number systems to, several parameters and the unconventional use of glissandos, both vocal and instrumental.

MATILDA GAUME

Craxton, (Thomas) Harold (Hunt) (b London, 30 April 1885, d London, 30 March 1971) English pianist, accompanist and teacher. He was a pupil at the Matthay School of Matthay and Cuthbert Whitmore, becoming a professor there in 1914. He also taught at the RAM, 1919-61. He was awarded the OBE in 1960. In his varied career he gave recitals as a solo pianist, especially of early English music, and spent two years as Albany's accompanist and then 12 as Clara Butt's; he was then in great demand to accompany leading singers and instrumentalists. A fine teacher, he numbered among his pupils Denis Matthews, Peter Katin, Nina Milkina, Alan Richardson, John Hunt and Noel Mewton-Wood. In 1960 he was one of the judges at the Warsaw International Competition. He edited, with Tovey, the Associated Board edition of Beethoven's sonatas and published many transcriptions of early English music, as well as a few original piano pieces and songs. He recorded Delius's Cello Sonata with Beatrice Harrison and wrote articles on Matthay in *Recorded Sound*, 1/5 (1961-2), p. 135, and on Sviatoslav Richter in *MT*, cv (1961), p. 558.

FRANK DAWES

Craxton, Janet (b London, 17 May 1929). English oboist, daughter of Harold Craxton. After studying at the RAM (1945-8) and at the Paris Conservatoire (1948-9), she became principal oboe of the Hallé Orchestra in 1949. She has also been principal of the London Mozart Players (1952-4) and the BBC SO (1954-63), and has toured the USA with the RPO and the USSR with the English Opera Group. In 1967 she formed the London Oboe Quartet, which has given many concerts and broadcasts; she is also a member of

the London Sinfonietta and played in the Da Vinci Trio and, until his death, in a duo with her husband Alan Richardson. A polished and reliable artist, with a particular gift for chamber music, she has been entrusted with the first performance of works by Vaughan Williams (*Ten Blake Songs*), Berkeley, Rawsthorne, Lutyens, Macconchy and Rannin, and has made a number of recordings. Her publications include two books of solo oboe music (with Alan Richardson).

JOHN WARRACK

Crecelle (Fr.) RATCHI I

Crecquillon [Crecquillon, Crechillon, Grequillon, Cricquillon, Carchillon, Cyrquillon etc], **Thomas** (b between c1480 and c1500, d ?Béthune, probably early in 1557) Franco-Flemish composer. He was one of the leading Franco-Flemish composers of the post-Josquin generation.

I. LIFE. Crecquillon was a member of Emperor Charles V's chapel, but it is not clear what his exact office was: a list of benefice holders dated 1540 (now in the Belgian Archives Générales, Brussels), the earliest document to cite him, describes him as 'maître de la chapelle', and several title-pages of volumes containing his music confirm that he was Charles's *maître de chapelle*. However, Nicolaus Mameranus, reporting on the emperor's court of 1547 and 1548 (in *Catalogus familiaris*, Cologne, 1550), called Crecquillon merely a singer and a composer and implied that Canis was *maître de chapelle* at that time. A petition from the court singers, dated 1547, accords Crecquillon only the title 'chapelain de la haute messe'.

According to the 1540 document, Crecquillon held benefices in Termonde and Bethune. Vander Straeten cited a document from 1550 concerning a benefice of Crecquillon's at St Pierre, Louvain, and Fétis described archival notices that recorded Crecquillon's resignation in 1552 as canon at St Aubin, Namur, in favour of a similar position in Termonde. From 1555 he held a canonicate at Bethune. He probably died early in 1557, for in March of that year his successor at Bethune was named. Crecquillon may have fallen victim to the plague that ravaged the city at that time. He was certainly dead by 1566 when Guicciardini (*Descrizione di tutti i Paesi Bassi*) listed him among deceased musicians. Although Crecquillon's works were first published in the 1540s (by Susato in Antwerp and Moderne in Lyons), he may have retired from the imperial service early in the 1550s, if he served in Namur, Termonde and Bethune during his old age; he must have been born during the last decade or two of the 15th century.

2. WORKS. During Crecquillon's lifetime only a single volume devoted entirely to his music was published, *Le tiers livre de chansons*, printed by Susato in Antwerp in 1544. After his death, Phalèse issued two volumes of his motets (Louvain, 1559, 1576). The remainder of his vast output appeared in printed anthologies from the 1540s to the 1570s or in manuscript collections. Although he wrote almost 200 chansons, his sacred music – over 100 motets, 12 masses and two Lamentations cycles – probably deserves greater attention. Except for the cantus firmus *Missa 'Kam [Adler] in der Welt so schön'*, based on a German melody set by Jobst vom Brant, all Crecquillon's masses parody polyphonic compositions either his own chansons,

chansons by other composers or motets. His use of models is usually straightforward and the original contours of the parodied works are easily recognizable in his reworkings.

Almost all Crecquillon's four-voice motets are constructed in the same way, as a series of points of imitation, each setting a new phrase of the biblical or liturgical text. Although he sometimes reworked one motif several times before leaving it, he seldom repeated whole sections note for note (save in his few settings of responses that follow the conventional scheme *abcB*). He seldom used canon as a constructional device, nor dramatic chordal interruptions of the contrapuntal flow to heighten the rhetoric of the text. Indeed, he rarely varied the texture much once all the voices had entered. His music moves with a melodic and harmonic smoothness that allows no harsh or uncontrolled dissonances, disruptive leaps or dramatic changes of any kind.

Similarly, Crecquillon's chansons are paradigms of Netherlands polyphony. Phalèse and Susato published more by him than by any other musician, and Flemish printers ranked him above Lassus. Manchicourt, Gombert and Clemens as a composer of secular music. Like his motets, his chansons rely heavily on imitative technique. Musical continuity and logic seem to take precedence over heightened rhetoric, and the smooth flow of counterpoint is rarely broken entirely. On the other hand, he regularly used repetition, though usually only of the final phrase (to round off the form satisfactorily) or of the initial couplet and the final phrase. The relatively short and well-defined points of imitation in his chansons made them ideal models for the instrumental canzonas that developed during the second half of the 16th century, so it is perhaps no coincidence that his secular works were often arranged for lute or other instruments.

Crecquillon was recognized by his contemporaries, among them Hermann Finck, Coëchio and Venegas de Henestrosa, as one of the most important Franco-Flemish composers in the generations between Josquin and Lassus. As late as the beginning of the 17th century, Crone praised Crecquillon, Rore and Willaert as composers worthy of emulation. Along with Gombert (his predecessor in the imperial chapel), Clemens and Willaert, Crecquillon belongs to the group of musicians who made pervading imitation the central musical technique of the 16th century. Paradoxically, it is perhaps his exemplary mastery of this style that explains his neglect by modern scholars and performers. His music displays neither the complex density of Willaert's, the somewhat acerbic clarity of Gombert's, nor the discursiveness of Clemens's. To paraphrase Ambros, Crecquillon's works show strength, euphony, ingenious invention and simple grandeur of expression, but lack, perhaps, the individuality of those of his better-known contemporaries. He was, in short, a masterly composer, but without those special qualities that would place him in the first rank.

WORKS

Editions: *T. Crecquillon: Opera omnia* ed. N. Bridgman and B. Hudson (CMM, 18m/1 (1974) [B]).

The Four-voice Motets of Thomas Crecquillon, ed. H. L. Marshall. *Musicological Studies*, xxi 1-4 (Brooklyn 1970-71) [M].

MASS

- Missa 'Congratulamini', 4vv, B ii, 18 (on Sermsy's motet)
 Missa 'D'amours me plains', 4vv, B i, 1 (on Pathie's chanson)
 Missa 'Domine da nobis auxilium', 6vv, B iv, 1 (on own motet)
 Missa 'Domine Deus omnipotens', 6vv, B iv, 43 (on own motet)
 Missa 'Doulce memoire', 4vv, B ii, 1 (on Sandrin's chanson)

- Missa 'D'un petit mot', 5vv, B iii, 90
 Missa 'Je prens en gre', 4vv, B i, 73 (on Clemens's chanson)
 Missa 'Kain [Adel] in der Welt so schön', 4vv, B i, 25 (cf. F. of Jobst vom Brant's lied)
 Missa 'Las il l'audra', 4vv, B i, 53 (on own chanson)
 Missa 'Mort m'a privé', 5vv, B iii, 1 (on own chanson)
 Missa 'Pis ne me peult venir', 5vv, B iii, 33 (on own chanson)
 Missa 'Se dñe ie l'osoie', 5vv, B iii, 61 (on Benedictus Duen's chanson)

Credo (Lat., Eng. Creed) Affirmation of Christian belief, sung as part of the Latin Mass between the Gospel and the Offertory. Three Latin Creeds have come down to us ('Apostles', 'Nicene', 'Athanasian'), but the history of the texts is complex, the one used at Mass is that usually called 'Nicene'.

The original liturgical use of the Credo was at baptism, at a time when the articles of faith were delivered to the catechumens as part of their reception into the church. (The use of the first person, 'I believe', is ascribed to these circumstances, for the phrase seems inappropriate to a communal affirmation at Mass.) The baptismal use of the Credo, or *Symbolum* as it was called in this function, lasted throughout the Middle Ages and was incidentally responsible for the persistence of a Greek text in Latin manuscripts representing practices in northern France and Germany.

The Credo, in the so-called 'Nicene' (or 'Nicaea-Constantinople') version, was introduced into the eucharistic liturgy in the east early in the 6th century and soon afterwards into the Visigothic rite by the Council of Toledo (589). In both cases its introduction occurred in the wake of doctrinal controversies, and with the intent of clarifying the belief to be shared by all participating in the eucharist. Furthermore, in neither case was the Credo placed at its received position after the Gospel, in the Visigothic rite it preceded the *Pater noster*, and was to be said, not sung.

As part of the major revision of western liturgies and doctrine undertaken in the Carolingian reforms, the Council of Aix-la-Chapelle in 798 required the Credo to be sung at Mass, between the Gospel and the Offertory. For this purpose Alcuin (Charlemagne's liturgical adviser) pressed into use a new Latin translation that had just been made by Paulinus of Aquileia in 796, but Alcuin may well have got the idea for a sung Credo at Mass from an Irish practice of the 7th-8th centuries (which Alcuin would have known at York - see Capelle).

Smaragdus told how, when Charlemagne inquired of Pope Leo III, the latter sanctioned this use for the Franks, while taking exception to the addition of the 'filioque' which Charlemagne felt was necessary (the issue is still with us). The Credo was not actually incorporated into the Roman Mass, however, until the German Emperor Henry II required it of Pope Benedict VIII in 1014.

With characteristic enthusiasm and optimism for widespread liturgical reform, Charlemagne (or Alcuin) apparently envisaged the singing of the Credo in Latin specifically by the people. As has been pointed out, the singing of the long, complex Latin text, in a new version, by the northern peoples was an impossibility at first, and must have remained only an ideal in many places for centuries to come, but there is evidence of attempts at accommodation, including vernacular substitutes.

In any event, from 798 a new musical setting had to be provided, and we can assume that it is represented by the 'authentic' tone of Credo I in the *Liber usualis*.

Huglo has shown that the melody of a Greek Credo, preserved in a 14th-century Cologne manuscript (*D-KNu* W 105), has certain important points of resemblance with Credo I and may have been its source. This is in itself believable, for a Carolingian adapter could have had access to a melody traditionally associated with the Greek text used at baptism; there are obscurities not yet explained, however, for manuscripts of the 10th and 11th centuries apparently preserve different melodies for the Greek Credo. Alternatively, the melody may have come straight from Aquileia along with Paulinus's text.

The tone for Credo I is documented first in the 11th century, and the connections between it and the antecedent of Huglo's melody current in 800 may well have been complex. Credos II, V and VI preserve variants - some more or less remote - of the formulae in Credo I, and represent other medieval traditions of this common melody. Indeed, there are relatively few medieval settings that are completely new, a fact that reflects the persistence of the Carolingian ideal of a universal sung Credo.

Credo I recites on *g*, with an intonation rising from *e*; this first phrase is linked to a second by moving through *d*, the second phrase involves a rise to *a* *b*[♭], the terminal cadence, incorporated into the second phrase or placed in a separate third phrase as needed, is on *f* *a* *g*, but the last cadence (Amen) falls to *e* through a Carolingian Gloria in excelsis formula (Gloria I). The bipartite melodic formula is used throughout the text, but neither the formula itself nor the technique of adaptation bears much resemblance to 'psalm tones' as used for psalmody in the Franco-Roman Office, they are more closely related to the techniques of Gloria settings. And the nucleus (*e*) *g* (*a*) of the tone may be part of the old eucharistic G-tone postulated by Levy.

RICHARD L. CROCKER

Crehore, Benjamin (b Milton, Mass., 218 Feb 1765, d Milton, 14 Oct 1831) American maker of string and keyboard instruments. Although Spillane stated that Crehore was known as a maker of violins, cellos, guitars, drums, flutes and harpsichords by 1792, only the cellos remain to document this claim. He was especially renowned for his pianos (which he was making by 1797, according to a letter of November 1797 addressed to him) and may be said to be the founder of the New England piano industry.

Crehore lived and worked in Milton. In 1791 he entered into a partnership with Lewis Vose to build a shop which he rented from Vose from March 1792 until May 1796. At both this shop and a later one constructed on the property of his wife's family, he produced his instruments and trained such builders as Lewis and Alpheus Babcock and William and Adam Bent. Crehore was associated with several of the profes-

sional musicians attracted to Boston by the opening of the Federal Street Theatre in the 1790s. Among these was Peter von Hagen, who, together with his son, was a partner with Crehore between May 1798 and 28 June 1799 in music publishing and the sale and tuning of pianos. In 1801 two other musicians, Francis Mallet and Gottlieb Graupner, advertised 'a large assortment of American Piano Fortes, manufactured by Benjamin Crehore' and in 1807 Graupner advertised a piano with a transposing keyboard 'made, under his direction, after a plan of the Germans, by Messrs Crehore and Babcock of Milton'.

Never successful in forming a lasting business partnership, Crehore entered into an agreement (now at the Boston Public Library) on 11 July 1804 with William Goodrich to make combination piano-organs. He worked with the Babcocks on the Graupner transposing piano in 1807 and seems to have been associated with the Babcocks until the death of Lewis Babcock in 1814. By 1816 Crehore may have been semi-retired, for he stopped paying personal taxes. He is described in his will as a cabinet maker.

At least three cellos and five pianos by him still exist. The cellos (one in a private collection, one at the Forbes China Trade Museum in Milton and one at the New England Conservatory, Boston) have deeply cut scrolls and a typical body length of 73.6 cm. The five square pianos, similar in build to English pianos of the period, usually have mahogany cases resting on stands with tapered legs, hand-stops to raise the dampers, a range of five or five and a half octaves, Zumpfe action, and a long soundboard extending across the key frame. Two are still owned by the Crehore family, the others are at the Essex Institute in Salem, Massachusetts, the Boston Public Library and the Metropolitan Museum of Art in New York.

CYNTHIA ADAMS HOOVER

Creighton [Creyghton], **Robert** (b. 1636 or 1637, d. Wells, 17 Feb. 1734). English ecclesiastic and amateur composer. His father was professor of Greek at Cambridge, then Dean of Wells (1660) and Bishop of Bath and Wells (1670-72). Creighton was educated at Trinity College, Cambridge, of which he became a Fellow in 1659, taking the DD degree in 1678. He also became professor of Greek at Cambridge, a post he held from 1666 to 1672. In 1667 he became canon with prebend of Wells Cathedral, and in 1674 was appointed to the dignity of precentor. He retained his Wells appointments until his death. From 1670 he was also vicar of Ashbrittle, Somerset. Burney stated that he was a Gentleman of the Chapel Royal under Charles II, but this is unsubstantiated.

Creighton wrote a considerable amount of cathedral music, particularly services, of which nine are named

Earlier editions of *Grove*, probably echoing Boyce's *Cathedral Music*, stated that some of this music survived (presumably in manuscript) at Wells Cathedral, but none can now be found there. J. S. Bumpus, in *A History of English Cathedral Music* (London, 1908), referred to no fewer than five services and four anthems which cannot now be traced. A service in E♭ and a brief canonic anthem, *I will arise*, held a place in the general repertory for some time, but are now forgotten. At least two keyboard pieces by Creighton survive (in *GB-Lbm* 37074), they were probably intended for harpsichord rather than organ. His reputation probably owed more to his personal position than to the merits of his music, which is conservative and undistinguished. Bumpus attached undue importance to him by referring to a distinctively 'Creightonian' form of cadence:

Cremona. Italian city in the Lombardy region. The history of Cremona is characterized by the lack of a local court to subsidize its musical activities. In the Middle Ages musical life was organized around the 12th-century cathedral, whose *Statuta canonicorum* (1247) regulated the performance of music during religious services. Only scant information, however, is available on musical activities there before 1526, when the *Libri provisionum* (I-C R_d) recorded the appointment of Cesare Loco as *maestro di cappella*. The earliest account of the construction of its organ (built by P. De Marchis and Lorenzo Antonio da Bologna) dates from 1482; it was rebuilt by G. B. Fachetti in 1542-6. In the second half of the 16th century the ideals of the Counter-Reformation concerning the renewal of church music had an ardent supporter in Bishop Nicolo Sfondrato of Cremona (elected Pope Gregory XIV in 1590), an admirer and patron of music to whom M. A. Ingegneri dedicated his first book of motets (1576) and three other collections of masses and motets. Musical life at Cremona was particularly distinguished during Ingegneri's stay there from about 1570 until his death in 1592; he held the post of cantor in 1578 and that of director of the cathedral *cappella* in 1579-92. The young Monteverdi probably received his first musical training at the cathedral under Ingegneri, and lived in Cremona until 1591. Among the notable figures who held cathedral posts are Uomobono Morsolino (organist, 1591-1611), Tarquimo Merula (*maestro di cappella*, 1628-31 and 1633-5, organist and *maestro*, 1648-65) and Nicolo Corradini (*maestro*, 1635-46).

The musico-literary Accademia degli Animosi was founded in 1560 with Bishop Sfondrato's endorsement. After an interruption of its activities in 1588, it was reconstituted by Count C. Stanga in 1607 and remained active until 1642 in stimulating the performance of secular music in the city. Monteverdi became a member in 1607. Reconstituted once more in 1644, it continued its activities until about 1692, though with less vigour, particularly after 1675 when it had to compete with the Accademia dei Disuniti, which included mostly commoners. In about 1720 this academy became incor-

porated with the Accademia degli Arcadi. An exclusively musical academy, the Accademia Musicale, was founded in 1735. Its members, having taken an entrance examination, met twice monthly and soon organized an instrumental ensemble that had the exclusive right of performance in religious and private festive events.

A society that stimulated Cremonese musical life in the first half of the 19th century was the Società Filarmonica, founded in 1816. Its statutes prescribed the performance of at least 30 concerts a year, usually held on Friday evenings. Among its members were Donizetti (1816), Rossini (1817) and Bellini (1830). After 1830 it was known as the Casino dei Nobili, since it included mostly members of the local aristocracy who advocated independence from Austrian rule, as a result the society was harassed by Austrian police, particularly after 1838. Following the city's unification with Italy in 1859 the society ceased to exist.

Cremonese theatrical life suffered from a comparatively late start. In 1670 the Marchioness Giulia Ariberti had a small theatre built for the nobility. It ceased its activities in 1714 and was transformed into a church. The initiative for the construction of a new theatre was taken in 1745 by the Casino di Conversazione, a society of noblemen founded in 1738. The theatre, designed by G. B. Zaist, was a wooden structure with four tiers totalling 100 boxes; it was named Teatro Nazari after its owner, the Marquis G. B. Nazari, and was inaugurated on 26 December 1747 with a performance of a Bolognese comic opera. During its Carnival season and until 1765 comic operas, frequently brought by Bolognese impresarios, were predominant there. From 1785 to 1806, when it burnt down, the theatre was managed by the Nobile Società del Teatro and renamed Teatro della Nobile Associazione. Another theatre, the Teatro della Concordia, was then built to a design by L. Canonica, modelled after Milan's Teatro Carcano. It was inaugurated on 26 December 1808 with Pacé's *Il principe di Taranto* and mostly staged works of the Milanese repertory until it burnt down in January 1824. The new theatre, constructed in stone by L. Voghera and F. Rodi, was inaugurated on 9 September 1824 with Rossini's *La donna del lago*. In the 1890s it featured numerous operas by Ponchielli, born in Cremona. Named the Teatro Ponchielli in 1892, it was renovated in 1969.

Stimulated by the musicological heritage of Gaetano Cesari, a native of Cremona who donated his large library to the city administration, the Civico Istituto di Musicologia was instituted in 1949. The Scuola di Paleografia Musicale, affiliated to the University of Parma, has been active since 1952.

Cremona has been universally celebrated since the 16th century for the manufacture of excellent musical instruments, especially string instruments. The tradition was established in the early 16th century by the Amati family, whose craftsmanship led to the design of the modern violin. By 1530 they had already set up a shop in Cremona under the leadership of Andrea. Until well into the 18th century the family constructed string instruments of elegant shape and capable of producing a remarkably mellow tone. Its most illustrious member was Nicolo, who probably trained Antonio Stradivari and Andrea Guarneri. Stradivari was particularly successful in constructing instruments perfectly balanced in design, size and finish. The Guarneri family (especially Giuseppe) concentrated instead on developing a massive

build and powerful tone. Members of the Bergonzi family were active as instrument makers throughout the 18th century. The Scuola Internazionale di Liuteria helps to maintain the fine Cremonese traditions. The Museo di Organologia 'A. Stradivari', in the Museo Civico, houses a collection of rare early instruments as well as numerous documents concerning the history of musical instruments.

ELVIDIO SURIAN

Cremonese, Ambrosio (b. ?Cremona, early 17th century) Italian composer. In 1636 he was choirmaster at Ortona Cathedral. In that year he published at Venice *Madrigali concertati a 2-6 voci*. libro primo op.1, whose contents show that he was an able composer. The two-part madrigal *Ahi, come un vago sol*, for example, includes some imaginative vocal writing and effective contrasts between imitation and expressive homophony. The first imitative point seems uncomfortably long, however, and the piece is cast in an *ABB* form in which the second *B* section is an almost literal repeat of the first. There are also two pieces by him in *RISM* 1646' and one in 1646'.

JOHN WHENHAM

Crepitaculum (Lat.) A synonym for *SISTRUM*, see also *CYBELE*.

Créquillon, Thomas. See *CREQUILLON, THOMAS*.

Crescendo (It. 'growing', 'becoming louder'; gerund of *crescere*, to grow). A performance instruction appearing in sources from the 18th century on, abbreviated in earlier sources *cres* but now *cresc* and sometimes expressed by means of a 'hairpin'. The forms *crescendo il forte* ('increasing in loudness') and *crescendo sin'al forte* ('growing to forte') also appear. The effect is one normal to musical performance though it was indicated in notation scarcely until the 17th century, when words and signs for it gradually became common (see TEMPO AND EXPRESSION MARKS, §5). Domenico Mazzocchi, in the preface to his *Madrigali* (Rome, 1638), stated that the signs there used for *piano* (P) and *forte* (F), etc., were for 'common things, known to everyone', his use of *forte* followed by *piano* and then by *pianissimo* to indicate a decrescendo, and in reverse order a crescendo, was or became a familiar practice, as explained by W. M. Mylius in his *Rudimenta musices* (Gotha, 1686, p. 49). Locke used the expression 'Lower by degrees' (1675). The terms 'crescendo' and 'decrescendo' are in Leopold Mozart's standard list of terms (*Violinschule*, 1756).

The customary 'hairpin' signs for *crescendo* and *decrescendo* became prevalent in the 18th century (at least from Giovanni Antonio Pian's op. 1, Paris, 1712), and in spite of the evidence for an early beginning to expressive playing it is likely that the very layout of Baroque ensemble music made such swelling a relatively peripheral phenomenon before that date. Sometimes, as in Gluck's and Rossini's printed scores, the 'hairpin' forms appeared as in the illustration. The opinion expressed by

engaged for Sarti's *Didone abbandonata* at the Teatro Nuovo in Padua in 1782. In 1783 he appeared at the Argentina in Rome and in Cherubini's *Artaserse* in Livorno, in 1784 he sang in Venice and in Turin, where he had great success in Fari's *Il ritorno di Bacco delle Indie*. He then spent six months in London, but Mount-Edgumbe (who was abroad during Crescentini's London engagement) reported that he was not well received. For the next ten years Crescentini appeared at all the major opera houses of Europe, and became known as 'l'Orfeo italiano' at La Scala, Milan, in 1786 (Rispoli's *Ipermestra*, Tarchi's *Ariarte*), 1796 (the première of Zingarelli's *Giulietta e Romeo*), 1797 (Zingarelli's *Meleagro*), 1803 (Mayi's *Alonso e Cora*, Federici's *Ifigenia*) and 1804; at San Carlo, Naples, in 1788-9, at Padua in 1790 (Gazzaniga's *Idomeneo*), at Bologna in 1791, at the Teatro Argentina again in 1791, 1793 and 1796, at La Fenice, Venice, again in 1794 and 1796 (Cimarosa's *Gli Orazi ed i Curiazi*, written for him), at Reggio Emilia in 1796 and Piacenza in 1804. From 1799 to 1803 he was engaged by the Teatro São Carlos in Lisbon.

Besides being one of the last great castrato singers, Crescentini was also a composer, and had inserted his own prayer *Ombra adorata aspetta* into *Giulietta e Romeo* with such effect that Romeo became his most famous role. Napoleon heard him sing it in Vienna in 1805 and invited him to Paris to become singing teacher to his family. He lived in Paris from 1806 to 1812, retiring from the stage in the latter year. He returned to Italy, first to Bologna, then Rome and finally Naples, where he taught singing at the conservatory. Among his pupils was Isabella Colbran.

BRUCE CARR

Cresci, Orazio. See CRISCI, ORAZIO

Crespel, Jean. Flemish 16th-century composer. Only a few of his works survive complete. Four motets were published by Susato in Antwerp (*RISM* 1553¹⁰, 1554⁸, 1554⁹), and another by Berg and Neuber in Nuremberg (1564²); nine chansons by Susato (1549²⁰, 1552⁸, 1552⁹, 1555¹¹) and 21 by Phalèse in Louvain (1552¹², 1552¹³, 1552¹⁴, 1552¹⁵, 1553²⁴, 1553²⁵, 1554²², 1554²³). A motet is in MS in *PL-WRu* and six chansons are in *D-Mbs*.

ROBERT DONINGTON

Crescentini, Girolamo (b Urbana, nr. Urbino, 2 Feb. 1762; d Naples, 24 April 1846). Italian mezzo-soprano. He studied singing in Bologna with L. Gibelli and was

Crespin, Régine (b Marseilles, 23 March 1927). French soprano. She studied with Jouatte and Cabanel at the Paris Conservatoire, and made her operatic début at

Regine Crespin as Kundry in Wagner's *Parsifal*

Mulhouse in 1950, as Elsa, the role of her Paris Opera debut the same year (10 August). In the next six years, despite further appearances in Paris (as Vita in d'Indy's *L'étranger*, Desdemona and Gounod's *Marguerite*), her career was more successfully advanced in the provinces, in French opera (*Salomé* in Massenet's *Hérodiade*, Brunnhilde in Reyer's *Sigurd*) and also in the German and Italian roles, sung in French, with which her international reputation was later made – notably Sieglinde, the Marschallin and Tosca. In 1956 she returned to the Opera as Weber's *Rezia*, subsequent successes there led to engagements at Bayreuth, as Wieland Wagner's 'Mediterranean enchantress' Kundry (1958–60), and Sieglinde (1961), and at Glyndebourne (1959–60), as the Marschallin. In this role, an aristocratic, rather melancholy elegance of style and a delicate mastery of nuance, both vocal and dramatic, won her wide praise, particularly in Berlin, Vienna and New York (her Metropolitan Opera début, on 19 November 1962, followed direction in the role from Lotte Lehmann). At Covent Garden she played the Marschallin (début, 24 October 1960), Tosca, Elsa and, less happily, Beethoven's Leonore. She undertook her first *Ariadne* in Chicago (1964), and her first *Walküre* Brunnhilde at the 1967 Salzburg Easter Festival, but, with the onset of vocal difficulties marked by unease in her highest register, she relinquished the latter role. In the 1975–6 Metropolitan season she gave her first Carmen.

Crespin was the first French singer after Germaine Lubin to command the heroic roles of German and French opera with equal authority, in addition to the idiomatic assurance of her Wagner, she was distinguished for the classical nobility of style in French roles for which it was a necessity. Julia in *La vestale*, Berlioz's Dido, the titular heroines of *Iphigénie en Tauride* and Faure's *Penélope*. She was the New Prioresse at the Paris première of *Dialogues des Carmélites* (1957), and

Phaedra in the 1959 La Scala revival of Pizzetti's opera. Although her vocal timbre is not ideally suited to Italian opera, she has been a moving Amelia (*Un ballo in maschera*), Desdemona and Tosca. Her singing, in opera and concert, is notable for a remarkable finesse of diction, phrase shaping and tone-colour, capable of transforming a powerful but flawed dramatic soprano into an instrument of smooth, lustrous beauty, in her prime, the eloquence of her soft high phrases was matched by few other singers. A recitalist of great accomplishment, she performs Wolf subtly, and Poulenc and Offenbach with irresistible wit. She has recorded the New Prioresse, the Marschallin, Sieglinde and the *Walküre* Brunnhilde, and, among other works, haunting accounts of Berlioz's *Nuits d'été* and Ravel's *Shehêrazade*.

MAX TOPPERT

Creston, Paul [Guttovveggiu, Giuseppe] (b. New York, 10 Oct. 1906). American composer and teacher. Born into a poor immigrant family, he had no training in theory or composition although he did take piano and organ lessons. He did not decide on a career in composition until 1932. In 1938 he received a Guggenheim fellowship and in 1941 the New York Music Critics' Circle Award for his Symphony no. 1, from that time he was among the most widely performed American composers. Creston has made rhythm the keystone of his style, his technique depending primarily on constantly shifting subdivisions of a regular metre. The other main features of his music are long, florid, but motivically generated melody, lush impressionistic harmony and very full orchestration. The texture is generally homophonic, the tonality free and the form classical in its clarity and concision despite the flamboyantly romantic gestures. In sum Creston's work is brash and vital, spontaneous and intense, yet it is highly organized and displays remarkable ingenuity in thematic development. Creston has received many awards and commissions, he was president of the National Association for American Composers and Conductors (1956–60) and was a director of the American Society of Composers, Authors and Publishers (1960–68). From 1968 to 1975 he was professor of music and composer-in-residence at Central Washington State College.

Crevel, Marcus van (b Zeist, 16 June 1890, d Budel, 1 Sept 1974) Dutch music teacher and musicologist. While training as a schoolteacher in Haarlem he took lessons in singing, violin and keyboard instruments; later, as a teacher, he studied the piano with Dirk Schafer and theory with Johann Wagenaar. At the same time he continued his language and literature studies at Leiden University. As a headmaster in The Hague he was concerned with the problems of musical education and music for young people; this brought him into contact with Fritz Jode and other like-minded music teachers abroad. His activities as a music educationist include the founding of a society for folk music and folkdancing (1930), and through his work on a state commission for school music teaching (1946–8) he contributed to the renewal of music for young people in the Netherlands after the war.

In 1940 he received the doctorate at the University of Utrecht with a dissertation on Coclico which he prepared under Smijers. On the latter's death in 1957 he was commissioned by the Vereniging voor Nederlandse Muziekgeschiedenis to complete the second edition of the complete works of Obrecht. Van Crevel's musicological interests covered the central problems of Renaissance music. His work on Coclico contains a critical examination of the problems of *musica reservata* and *musica ficta*, and the latter question is again taken up in his criticism of Lowinsky's 'secret chromatic art'. In the fully documented prefaces to his two Obrecht mass volumes he advanced a method of transcription, based on a new theory of *tactus*, through which he had discovered a cabalistic numerological symbolism in those works.

Crisci, Oratio [Cresci, Orazio] (b Vasto; fl. 1581–9) Italian organist and composer. He was a pupil of Ippolito Sabino whose *Secondo libro de madrigali* (RISM 1581¹¹) he edited. From the dedication it is clear that he was living in Vasto in 1581. It is not known when he travelled north to Mantua, but he appears to have spent much of his later life there, employed as cathedral organist. All of his known works were published in collections devoted largely to the works of Sabino.

PATRICIA ANN MYERS

Crismann, Franz Xavier. See CHRISMANN, FRANZ XAVIER

Crispi, Pietro Maria (b Rome, c1737, d Rome, 16 June 1797) Italian composer and organist. In 1762 he became a member of the Congregazione dei Musici di S. Cecilia. From 1772 until his death he was organist at S. Luigi dei Francesi. He was also music tutor to the Marescotti family and was *maestro di cappella* (from 1778) and organist (from 1779) at the Oratorio di S. Girolamo della Carità. He composed a large amount of instrumental music, almost none of which was published, also several oratorios and comic intermezzos, most of which are lost. He held a musical *accademia* in his home every Friday evening, at which instrumental and vocal music was performed, his wife, the singer Lucia Puschi, took part, and Crispi himself played the harpsichord. Burney attended those evenings between 23 September and 16 November 1770; during this time his originally lukewarm opinion of Crispi's playing and composition improved.

WORKS

Operas: at least 5 intermezzos, lost, except *Il marchese a torza* (A. Prioli), Rome, Tordinona, 1777, *D-Dib*. Sacred: at least 7 oratorios, lost, except Oratorio della Passione, *I-Rsg*, at least 2 sacred dramas, 4 cantatas. Inst.: numerous ovs., syms., trios, hpd sonatas, *B-Bc*, *D-Bds*, *Dib*, *I-Grl*, *Mc*, *Nc*, *Vc*, *S-Uu*, The Periodical Overture in 8 Parts, no 5 (London, n.d.), piece or pieces in Feuilles de Terpsichore ou Journal composé d'ouvertures, d'airs arrangés et d'airs avec accompagnement pour le clavecin (Paris, 1784–98), The Periodical Overtures for the

Harpichord, Piano forte, no 5 (London, c. 1775), Sonata 3, I, 1 movt of Sonata 4, B♭, in W. Crotch *Specimens of Various Styles of Music* in (London c. 1815)

GUIDO SALVIATI

Crispin van Stappen. See STAPPEN, CRISPIN VAN

Crist, Bainbridge (b. Lawrenceburg, Indiana, 13 Feb. 1883, d. Barnstable, Mass., 7 Feb. 1969) American composer. He received the J.B. degree from George Washington University and practised law in Boston for six years, composing in his spare time. In 1912 he went to Europe for further study, taking theory and orchestration in Berlin and London with Juon and Claude Landi, and singing with William Shakespeare, Charles W. Clark and Franz Emerich. He taught singing in Boston (1915-21) and Washington, DC (1922-3), then returned to Europe and taught until 1927 in Florence, Paris, Lucerne and Berlin. After returning to Washington and teaching there, he settled finally in South Yarmouth, Massachusetts, in 1939. Nearly 200 of Crist's works were published, including 29 for orchestra (mostly with voice), three stage works, 13 for chorus and many songs. The last were for a time frequently performed and broadcast, the best of them are noteworthy for the skilful handling of the voice, the sensitivity of the melodic line and the aptness and variety of harmony. Among the larger works are the choreographic drama *Le pied de la momie* (1915, Bournemouth Festival, 1925) and the symphonic poems *La nuit revêue* (1933), *Hymn to Neferitti* (1936) and *American Epic 1620* (1943). Crist published *The Art of Setting Words to Music* (New York, 1944).

 NATHAN BRODERH. WILLY HITCHCOCK

Cristiani, Lisa (Barbier) (b. Paris, 24 Dec. 1827, d. Tobolsk, 1853) French cellist, possibly of Italian descent. She achieved fame as a performer, at a time when women performers were rare, and as the owner of the very fine Stradivari cello of 1720 which still bears her name. She made tours of Europe and Russia and was enthusiastically received, though her beauty and personal charm undoubtedly contributed to her success. She is said to have performed her repertory of salon pieces sympathetically and elegantly, with small tone but precise intonation. Mendelssohn accompanied her at a concert in Leipzig on 18 October 1845, his *Song without Words* op. 109 no. 38 (posthumous) was written the same year and dedicated to her. The King of Denmark appointed her 'Chamber Virtuosa'. In 1853 she travelled east on tour, she contracted cholera in Siberia and died within a few days.

LYNDA FLOYD REES

Cristo, Luis de. See CHRISTO, LUIZ DE

Cristoforeanu, Florica (b. Rîmnicul Sărat, 16 May 1887, d. Rio de Janeiro, 1 March 1960) Romanian mezzo-soprano. She studied the piano, and later singing, in Bucharest and Milan (at the Giuseppe Verdi Conservatory, with Vanceri Filippi and Bodrilla), making her debut as Lucia at Capodistria in 1908. After touring widely in western Europe she returned to Bucharest for performances in operetta (1910-13). Growing international fame led to her appearances at opera houses throughout Europe, notably at Barcelona, and also at the Teatro Colón, Buenos Aires. At La Scala, where she made her début as Santuzza, she appeared from 1928 to 1932, as Salome under Strauss, as Mariola in the premiere of Pizzetti's *Fra Gherardo* (1928), and as Carmen and Charlotte (*Werther*). By the time she retired she had mastered a repertory of more than 90 roles, embracing mezzo, dramatic, lyric and coloratura parts in opera and operetta. In Bucharest her Cio-ciosan, Minnie (*La fanciulla del West*), Kundry and Adriana Lecouvreur were especially admired. Her range, both vocal and dramatic, was exceptional, enhanced by a richly coloured timbre and an intense commitment to all her roles. After her death her memoirs *Amintiri din cariera mea lirică* were published (Bucharest, 1964).

VIORELI COSMA

Cristofori, Bartolomeo (b. Padua, 4 May 1655, d. Florence, 27 Jan. 1731) Italian keyboard instrument maker and designer. He served at the Florentine court of Prince Ferdinand de' Medici from 1690, and after the prince's death in 1713 remained as custodian of musical instruments. He drew up an inventory of the prince's collection in 1716. Although he carried out a number of experiments with harpsichord construction and actions, he is best known for his invention of the piano. An entry in Francesco Mannucci's diary (February 1711) gives 1698 as the time Cristofori began work on his 'arpicembalo che fa il piano e il forte', the inventory of Medici instruments for 1700 establishes that he had completed at least one such instrument by that date.

The first published notice of Cristofori's invention appeared in an article by Maffei (1711), stating that in 1709 Cristofori had built three wing-shaped instruments and one of simpler construction. An action drawing of the former shows a pivoted lever set in motion by a shortened key when the key is depressed an upright movable tongue on the front of the lever rises and lifts the hammer, simultaneously an under-damping mechanism is lowered, allowing the string to vibrate. After the blow the leather-covered hammers fall back on to silk strings crossed under them. Maffei pointed out that these instruments had inverted wrest planks in which the tuning-pins ran through the wrest plank, the strings being attached on the underside (though this is not shown in his sketch). Thus the nut is above the strings, eliminating the need for any down-bearing device to hold the strings in place. The differences between Maffei's diagram and the extant Cristofori pianos (see PIANOFORTE, fig. 1) could be explained by Cristofori's having changed or improved his action after Maffei's examination of it, or by Maffei's having been inaccurate (he evidently drew it from memory).

Three pianos by Cristofori survive. An instrument dated 1720 in the Metropolitan Museum of Art, New

York, has a range of four and a half octaves and is without the inverted wrest plank. The original hammer-heads, now replaced, were round and hollow, the elongated hammer butts being original, further alterations (which may predate a restoration known to have been done by Ponsicchi in 1875) include a skilful rearrangement of the keyboard (range now C to f'''), and a graft of what was probably the nameboard on to the top of the hammer rack. Another instrument from 1726, in the collection at the Karl-Marx-Universität, Leipzig (see PIANO ORTI, fig 2), has an inverted wrest plank, round hollow hammers and the nameboard with the maker and date in plain view. Its range is four octaves, C to c'''. The actions of the New York and Leipzig instruments differ from Maffei's drawing in several respects: both pianos have the hammer lifted by an intermediate lever that is set in motion by a movable tongue in a slot in the key, an over-damper is lifted from the string by the end of the key as it rises and each hammer is prevented from rebounding by an individual back-check attached to each key (see PIANO ORTI, §1, 2). A third, little-known piano of 1722, formerly in Padua and now in Rome, appears also to have an inverted wrest plank and a range of four octaves. All three pianos were constructed to be placed in an outer case in the style of Italian harpsichords.

In the Leipzig collection instruments attributed to Cristofori include two harpsichords of 1722 and 1726, the latter of doubtful authenticity, one double-strung spinet of 1693, and one pedal spinet or *arcicembalo* of about 1725, also of doubtful authenticity. The three-manual harpsichords in the Deutsches Museum, Munich, the Germanisches Nationalmuseum, Nuremberg, and the Stearns Collection, Ann Arbor, have been falsely attributed to Cristofori.

MARIBEL MEISFL, PHILIP R. BEI I

Cristoforus de Monte [de Feltro] (b Feltro, fl 1423)

Italian composer. A few biographical details may be gleaned from the text of the motet *Plaude decus mundi*, composed for Francesco Foscari, Doge of Venice. His birthplace is given in the text ('in Feltro natus Cristoforus') and the rest of the text implies that the motet must have been composed in Venice in 1423. Other works attributed to him are a Credo and another motet, *Dominici a dono*.

Criticism.

1. Definition and scope 2. Origins 3. The 18th century 4. The Romantic period 5. The early 20th century 6. Recent trends 7. The nature of criticism 8. The limitations of music 9. The aesthetic problem 10. Objective and subjective criticism 11. The critic's responsibilities 12. The critic's qualifications

1. DEFINITION AND SCOPE In attempting to grasp this eel-like subject it is necessary to keep in mind the primary meaning of the word. The *Oxford English Dictionary* defines a critic as 'one who pronounces judgement', a censorer, fault-finder, caviller, 'one skilful in judging of the qualities and merits of literary or artistic works'. The second of these definitions is a secondary and restrictive use that will henceforth be ignored. So will such metaphorical concepts as Matthew Arnold's view of poetry as a criticism of life. Self-criticism too is in part a metaphorical idea. For the purposes of this article criticism means the expression in words of judgments on the art of music. That definition too will need to be constantly re-examined and circumscribed.

A comprehensive history of music criticism has been seldom attempted and perhaps never achieved. It would require endless research into books, pamphlets, prefaces and the files of old newspapers and periodicals. The public memory, largely dependent on the whim of biographers and general historians, is highly selective. Ernest Newman in his edition of H. F. Chorley's *Recollections* put the position from the critic's point of view: 'If he talks sense, his views become the common places of later musical opinion, and no one thinks of crediting him in particular with them. If he talks nonsense, this is regarded as peculiarly his own'. That is partly inevitable, since popular history likes to recall the eccentricities while forgetting the circle. But it has often been the interest of posterity to misrepresent the critics of the past. Romanticism thrives on exaggeration, and a popular and picturesque exaggeration is difficult to disperse. We are told when a great composer has been damned, even if it is for an early or feeble work, but seldom when a mediocre one has been overpraised – a far commoner occurrence. One of the legends of critical history, exploded by Newman in *A Musical Critic's Holiday* but habitually resurrected, is that many of the greatest composers were more or less regularly misunderstood and blackguarded by critics and public alike. There is no single instance of a great composer whose works had an adequate hearing having suffered such a fate. This argument, a product of the pathetic fallacy that was one of the legacies of Romanticism and a favourite gambit of the Wagnerians, has been appropriated by the outriders of modern composers whom contemporary audiences have shown reluctance to place next to their bosoms.

Criticism of music was a haphazard growth, carried on for long periods either by amateurs interested in literature, aesthetics or social science, or by musicians who were amateurs in all else, including the processes of thought and verbal expression. How much of this musico-literary activity, ranging from press notices and reviews to the elaborate productions of scholarship and the remoter speculations of aesthetic theory, deserves the title of criticism? If the distinction is drawn too narrowly, there is an obvious danger of falling into a familiar pattern of academic logic-chopping; if too widely, philosophical definitions would need to be laid down that would carry the inquiry too far afield. It seems best to confine the term 'criticism' for the most

part to current discussion, in the daily and periodical press, of contemporary musical trends, while taking care not to block the irrigation channels that carry the fertile silt of scholarship and aesthetics. Much of the best criticism occurs in books, and much daily criticism is little more than the reporting of events. For so flexible a subject a flexible treatment is essential.

2. **ORIGINS** Since the daily and periodical press did not make its first irregular appearances until the late 17th century, everything before that is in a sense beyond this article's terms of reference. But it is notable that, whereas unorganized criticism of a sort must have been virtually co-existent with art itself, ever since records began the criticism of music has lagged behind that of the other arts. The probable reasons for this are discussed below, here it is sufficient to note that the elusiveness of musical material and the elements of sound and time in which it operates make it difficult to record accurately even now, almost impossible to describe in words, and therefore highly unamenable to criticism.

Ancient Greek myth, symbolizing the rivalry between the lyre of Apollo and the flute of Cybele in the story of Marsyas, gave music criticism its first martyr, whose grisly fate has been constantly wished upon his successors (it is not clear whether or not he antedated Midas). But although the Greeks and Romans, and the musicians of the Middle Ages, wrote technical treatises on art and discussed its philosophical implications, their preconceived methods of linking these two aspects seem now to fall outside the sphere of art criticism. There is however a perennial ring of familiarity about the terms in which Iehan des Murs in the early 14th century criticized the innovators of his time. The Renaissance released a flood of discussion, carried on in prefaces and pamphlets, in which music and especially the monodic revolution associated with the Florentine invention of opera about the year 1600 came in for their share of attention, for example in Artusi's attacks on Monteverdi, but its main import was academic or social, and largely concerned with the attempt to graft the newly apprehended (or misapprehended) theories of ancient writers on the surviving fabric of medieval society. Music was still regarded almost as a department of manners, and even the critical systems propounded in the France of Louis XIV approached it first through ethics and then through literature. Criticism of individual composers and compositions, except as illustrations for a thesis, and the formulation of a critical attitude to contemporary music as a whole had to wait for the press.

3. **THE 18TH CENTURY** The early 18th century is customarily regarded as a great age of criticism, and rightly so, but its treatment of music was circumscribed by considerations not easily appreciated today. All the musical writers of the period (there were no regular critics in the modern sense for another hundred years) were preoccupied with the idea, derived from Plato and Aristotle through Theophrastus and the Renaissance 'humours', that art was an imitation of nature (human or external). That doctrine found expression in the rationalistic doctrine of the passions known as the 'theory of affects', adumbrated by Glarean's criticism of Josquin's treatment of the modes, developed in relation to the other arts by Descartes, Spinoza and others, and applied systematically to music by later writers in Germany.

According to this theory every passion and psychological state was supposed to have its musical corollary. Its basis was a questionable analogy between music and speech. It was essentially a literary device designed to establish communication between composer and audience by means of a short cut, it assumed that the composer either worked through a literary text or wished to say something that could in part at least be communicated in words. Later these limitations began to be recognized, and expressiveness (sometimes descending to a sensibility parallel with that of Sterne, Rousseau and other writers) became the critical ideal. Avison attacked Handel for carrying imitation to an absurd length – not without reason, but the prominence of the mannerism seems to have blinded him to Handel's other qualities. Avison's ideal of 'expression' in fact meant something like an imitation of the ancients instead of nature. This generalized 'expression' must be distinguished from the romantic idea of self-expression, the overflow of powerful individual emotions. The attempts of some modern scholars to read a personal meaning into Bach's use of conventional symbols lead to delusion.

Among the earliest pieces of musical journalism were Addison's reflections on Italian opera in *The Spectator* of 1711. Addison was a critic of manners rather than art, and although he had written an opera libretto he was no musician, but his articles are important for their influence on the Hamburg theorist Johann Mattheson, who has claims to rank as the first modern music critic. He translated and imitated Addison and Steele in *Der Vernünftler* (1713) and went on to found the first periodical devoted wholly to music, *Critica musica* (1722–5). This contained original and translated matter of historical and aesthetic interest, but was largely devoted to problems of taste, in particular the controversy between the old polyphony, then reaching its climax in J. S. Bach, and the new melodic style, represented by Telemann, Handel's Italian operas and cantatas and Mattheson's own inclinations. His example was followed by other German theorists, and although their periodicals appeared irregularly they exerted a strong influence on the musical temper of the time and focussed attention on current activities, including books and concerts. Among the most prominent of these periodicals were *Der getreue Music-Meister* (Telemann, Hamburg, 1728, the first to publish compositions), *Neu eröffnete musikalische Bibliothek* (L. C. Mizler, Leipzig, at intervals between 1736 and 1754), *Der critische Musikus* (J. A. Scheibe, Hamburg, 1737–40) and three successive Berlin papers edited by F. W. Marburg, beginning in 1749. Many of their contents were still learned or theoretical, as befitted the age of the influential treatises of Rameau, Fux, Mattheson, C. P. E. Bach and others; but the growing importance of the middle classes throughout northern Europe introduced a less specialized, more popular element. Regular concert series had begun at Hamburg (1722) and Paris (1725); amateur music-making spread widely beyond aristocratic and court circles. Here was a new public eager for critical instruction, and J. A. Hiller's *Wöchentliche Nachrichten und Anmerkungen, die Musik betreffend* (Leipzig, 1766) seems to have been the first periodical designed to cater for them.

If Germany was first in the field with periodicals, the intellectual fuel that fed them was largely French. The monument of 18th-century rationalism was the great

Encyclopédie of d'Alembert and Diderot (1751-77), which was preceded and accompanied by a series of pamphlet wars on musical subjects. It is significant that the most prominent of these struggles -- between the successors of Lully and Quinault and the supporters of Italian opera early in the century, between the followers of Rameau and the newly introduced *opera buffa* in the 1750s, and between the Gluck and Piccini factions 20 years later -- were concerned with opera, that meeting-point of all the arts, including dance, scene painting, architecture and the art of polite society. The opponents were often men of letters and philosophers, such as Rousseau. But if music was not yet treated as an adult and independent art, there was much genuine music criticism in the periodicals *Mercur de France* and *Correspondance littéraire*, both edited by the German Grimm, who had studied with Scheibe's master Gottsched at Leipzig. There were also a number of short-lived musical magazines, the earliest in 1756. Furthermore, the critics were ahead of rather than behind the composers, their attacks on the extravagances of Baroque opera, the arch-enemy of rationalism, prepared the way for Gluck and influenced his operatic reforms. Gluck's much publicized endeavour to forget that he was a musician was a tribute to the criticism of his age.

England had no musical periodicals until much later, but there was a crop of treatises and pamphlets, mostly the work of dilettante philosophers and men of letters. Among the exceptions were Burney, who combined the industry of an academic historian and a sound musician with a limited historical sense, and Charles Avison, an able composer and organist who tried to reconcile theory with practice in his *Essay on Musical Expression* (1752). Burney's short 'Essay on Musical Criticism', prefixed to the third book of his *General History*, shows him more aware than most of his contemporaries of the problems implicit in his title. Observing that musicians even more than other people were apt to reason without principles, he sought to offer guidance to those who would learn 'how to listen, or to judge for themselves'. To Burney the critic meant not a professional musician, still less a journalist, but a judicious listener. That this was the usual view is clear from Johnson's division of critics into three classes: 'those that know no rules but pronounce entirely from their natural taste and feelings . . . those that know and judge by rules . . . [and] those who know but are above the rules'. The first class would not now rank as critics at all. Avison's limitations seem today more conspicuous than his virtues. He drew elaborate parallels between music and the other arts, especially painting, and considered that in the 16th century music was far more backward. 'The Works of Palestrina in that Infant-State of Music, may be considered as the first lights of Harmony.' The Baroque contrapuntists of the 17th century he called 'the Ancients', the moderns were the French and Italian opera composers. True musical expression he defined as 'such a Concurrence of Air and Harmony, as affects us most strongly with the Passions or Affections which the Poet intends to raise'. His ideal composers were Benedetto Marcello in vocal music, Geminiani in instrumental, and he assumed that 'the finest instrumental Music may be considered as an Imitation of the vocal'. On the other hand he urged the need for research into the lives and work of the great composers of the past.

It is in historical sense and disproportionate emphasis

on extra-musical values that 18th-century criticism seems deficient. Scheibe's famous criticism of Bach was not the outcome of a narrow malevolence, but an attempt to judge one technical method in terms of another -- a mistake repeated *ad nauseam* by the critics of every succeeding period. Nevertheless, the age saw the first systematic attempt at music criticism, even if it began on the wrong foot by claiming music as either the hand-maid of a philosophy of manners or a secondary and less efficient literary language, instead of accepting it as an art expressed in terms of sound. The social aspect also is important. The preoccupation with criticism typical of the period arose partly from an urge to demolish the extravagance of Baroque art and society, but the middle-class rationalism it fostered exerted in turn a decisive influence on artistic developments and underlying critical theories, especially in countries where music-making was not dominated by courts and ecclesiastical establishments. The decay of patronage opened the way to journalism.

4 THE ROMANTIC PERIOD In the closing years of the century musical journals multiplied, especially in Germany. C. F. Cramer brought out periodicals at Hamburg (1783-7) and Copenhagen (1789), the Abbe Vogler at Mannheim (1778-81), J. N. Forkel at Gotha (1778-9), in 1798 J. I. Rochlitz founded at Leipzig the influential *Allgemeine musikalische Zeitung*, which he edited until 1818 (the Berlin paper of the same name was founded by A. B. Marx in 1824). It was in periodicals of this kind that the new works of Mozart, Haydn and Beethoven were first criticized, often more favourably than their more sentimental biographers would have one suppose. Mozart, though condemned for excessive emotionalism, was on the whole treated better by the press than by his patrons, and it was the publishers, not the reviewers, who received Schubert with contumely. Beethoven while still a young man was recognized as a force to be reckoned with, though the critics often found fault with the qualities that have since been most admired -- a tribute, if by inversion, to their musical susceptibility. The tone of the critic was lowered as his audience expanded: he began to approach the reader as a colleague rather than a pedagogue. But analogies with the other arts were still prominent. Mozart was compared with Klopstock and Raphael, Haydn at various times with Sterne, Gellert, Wieland, Jean Paul Richter and Tintoretto.

With the dawn of Romanticism in the first quarter of the 19th century the reaction against rationalism went rapidly to extremes. Beethoven found a passionate if prejudiced admirer in E. T. A. Hoffmann, who began to write music criticism for the Leipzig *Allgemeine musikalische Zeitung* in 1809. Beethoven was the first composer to be acclaimed among the spiritual leaders of mankind (not entirely for musical reasons), an apotheosis completed by Wagner when in 1870 he called the Choral Symphony 'the new religion, the world-redeeming redemption'. Many Romantic critics, such as Hoffmann, Rochlitz and the two Reilstabs, were men of letters, inspired by idealistic notions linking all the arts with sociology and politics. This movement in its turn influenced Wagner. There was a strong element of propaganda as well as amateurishness and pure ignorance, while criticism broke the bonds of 18th-century rationalism it is doubtful if it came much nearer to music. Nature and manners were replaced by the

vapours of emotionalism and subjective irrelevance. An exception among men of letters was Heine, who for some years criticized music in Paris for the Augsburg *Allgemeine Zeitung*. He steered a course between pedantry and the cloudy raptures of German Romanticism, and his incisive wit half-concealed a sharp imaginative perception. In these respects he anticipated Bernard Shaw.

A new element in music criticism appeared in the use of the daily press for concert notices and articles. This practice seems to have been begun by J. K. F. Rellstab in the Berlin *Vossische Zeitung* during the earliest years of the century. He was succeeded by his son, who in a characteristically Romantic manner combined the criticism of music with that of politics and military affairs, and who was imprisoned for ridiculing public worship of the prima donna Henriette Sontag, thus early calling attention to the invidious position of the critic with regard to the laws of libel. In France and England regular daily musical journalism began a little later, although brief press reports of concerts (among them Haydn's in London) had appeared in the 1790s. *The Times* is said to have been the first English daily paper to appoint a regular music critic, Charles Lamb Kenney bore that title for two years from 1843, though T. M. Alsager, then manager of the paper, and the theatre critic Barron Field performed some of its functions from about 1806. Among the earliest musical journalists in England were Edward Holmes, author of the first English life of Mozart and critic of *The Atlas* from 1826, and George Hogarth, Dickens's father-in-law. In Paris the *Journal des débats* had a regular music critic in Castil-Blaze, under him and his successors Berlioz and d'Ortigue the French literary essay or *feuilleton* was applied to music with happy results. The establishment of the cheap daily papers *La presse* and *Le siècle* in 1836 increased the scope, but with certain exceptions French music critics during the next 50 years were more remarkable for quantity than quality. The first French musical periodicals of importance were Fétis's *Revue musicale* (1827) and the publisher Heugel's *Le menestrel* (1833). Fétis has been denounced as a reactionary pedant, but he was one of the first to give public lectures on musical history and aesthetics, it is hardly surprising that he came into conflict with the extreme romantics who surrounded Liszt. A more original journalistic enterprise was the *Gazette musicale de Paris*, founded by Schlesinger in 1834 to provide a platform for composers. In its first number Liszt attacked the critics as shallow and ignorant, and suggested that they should be subjected to knowledge and ability tests. Later issues included further articles by Liszt, and others by Berlioz, Wagner and the German critics Marx and Rellstab.

In the article mentioned above Liszt urged that composers should take up criticism, and the Romantic age was full of composer critics. Among the first was Weber, whose press experience began at the age of 14, when he engaged in violent controversy with an elderly organist who had criticized his opera *Das Waldmädchen*. From 1809 to 1813 he wrote on current musical affairs for a number of German papers, including the Leipzig *Allgemeine musikalische Zeitung*, and after 1815 mainly on opera for the *Prager Zeitung* and Dresden *Abendzeitung*. He seems to have been the first to prepare his audience by publishing articles on forthcoming productions. His criticism is often penetrating

and of considerable historical interest, but sometimes marred by a rift between detached judgment and propaganda, hence his ambivalent attitude to Beethoven. Schumann, who in his first article (Leipzig *Allgemeine musikalische Zeitung*, 1831) hailed Chopin as a genius, was a more sensitive critic. In 1834 he founded his own *Neue Zeitschrift für Musik*, an important venture in which for ten years he pursued a policy nicely poised between encouragement of young composers and cultivation of the historical sense. The rediscovery of J. S. Bach and Mendelssohn's revival of the *St. Matthew Passion* had given a healthy impetus to interest in the past and therefore to a balanced musical criticism. Schumann acclaimed Bach, Handel, Scarlatti, Couperin and Gluck on the one hand, and Beethoven, Schubert, Berlioz and Weber on the other. In his last article (1853) he added the 20-year-old Brahms. His interest was aesthetic rather than technical, and he had a high conception of his calling. His chief failing was a tendency to identify too many ill-fledged geese as potential swans. In Germany he has been highly esteemed as a writer, but the preciosity and awkward fantasy, of his earlier writing especially, do not endear him to every taste.

A more stimulating writer, though perhaps a more erratic critic, was Berlioz, who for many years contributed a regular musical *feuilleton* to the *Journal des débats*. Besides a fine musical perception he commanded a literary style of exceptional precision and flexibility. His blind spots were large (he called Handel 'a barrel of pork and beer' and detected 'no spark of genius' in Palestrina), but he wrote with acute penetration on composers such as Beethoven, Gluck and Weber, who stirred him deeply. He is probably the only great composer who might have reached equal stature in literature, and one of the few music critics who can be read with pleasure for their style alone.

The middle of the century saw a reaction against the extravagances of romantic criticism, an attempt to reformulate the tasks of the critic and map the proper spheres of technique and aesthetics. The leading figure in this neo-rationalism was Eduard Hanslick, who for 50 years (1855-1904) dominated the world of Viennese musical journalism in the *Presse* and *Neue freie Presse*. He is now remembered chiefly as the enemy of Wagner, who pilloried him (very clumsily) as Beckmesser in *Die Meistersinger*. Certainly it was the principles of the Liszt-Wagner school that Hanslick most roundly condemned, for he saw them (correctly) as the axe laid at the root of the tradition he admired. It is difficult to fault his view of Wagner's new path as an end rather than a beginning, and 'for him alone. Whoever follows will break his neck.' Many of Hanslick's strictures on Wagner can be defended, he recognized his genius (calling him the greatest living composer as early as 1846) and paid generous tribute on his death. Hanslick was a cultivated man, a graceful writer and a courageous and often penetrating critic. His limitations lay elsewhere, in the narrow bounds he set to his view of musical aesthetics. By denying anything more than a fortuitous connection between art and emotion he disqualified those Romantic composers whom he disliked, but at the same time cut away the ground beneath the Viennese Classics whom he worshipped. It was then very necessary to reassert the claims of music as sound against music as propaganda, but Hanslick seemed to include the expression of emotion under the heading of

propaganda. He all but denied music the attributes of an art like many reactions, his went too far.

In England music criticism during the 19th century drifted into a backwater. The periodicals founded early in the century, R. M. Bacon's *Quarterly Musical Magazine and Review* (1818-28), William Ayrton's *Harmonicon* (1823-33) and the *Musical World* (1836-91), set out with high ambitions and wide terms of reference, comprising journalistic and critical comment on all branches of musical knowledge. Ayrton was also a critic of literature and a friend of Lamb and Hazlitt. But the first two of these ventures failed, and English criticism followed the rest of English society into respectability. England had been early in its acceptance of Beethoven – much earlier than France – and the less inflammatory Romantics, Rossini, Weber, Spohr and especially Mendelssohn, had a fairly easy passage. Even Berlioz enjoyed a moderate if not a lasting success. But English musical life was stunted by a weak creative tradition. For a generation music criticism in London was dominated by H. F. Chorley (*The Athenaeum*, 1830-68) and J. W. Davison (*The Times*, 1846-79) in much the same way as Vienna's was by Hanslick. Their gods among the moderns were Rossini in opera and Beethoven (except the last quartets) and Mendelssohn in instrumental music. They were narrow and conservative in their tastes, but the particular case against them is not that they damned the early works of Wagner or over-rated Rossini, but that they set themselves blindly against a composer in their own chosen field, Verdi, and for social rather than musical reasons. Verdi was attacked for the vulgarity of his tunes and his bad taste in bringing passionate emotions and contemporary subjects on to the stage. Chorley wrote that he was never fully aware of the value of Auber's *Gustave III* until he heard 'the assault made by Signor Verdi on the same story' (*Un ballo in maschera*). He was for ever lamenting the decay of 'those great principles which are unchanging', when he meant simply the technical methods of the age of Rossini, and he denied the possibility of dramatic irony in opera, a quality in which it is supremely rich. Non-musical elements have been strong in English music criticism, owing perhaps to the deep hold obtained by the Puritan and evangelical movements of the 17th and 18th centuries, which were basically hostile to art unless adulterated by the spirit of edification.

In the 1880s-90s, when the great works of Wagner's maturity had more than justified his pretensions, the dams of hostile criticism gave way all over the Western world. In his numerous writings Wagner had been a propagandist for his own work rather than a critic of other people's (in 1848 he wrote that 'the immoral profession of musical criticism must be abolished', a sentiment echoed recently by Stockhausen). His followers, without his excuse, drew imaginary distinctions between a world of vested interests bent on denying Wagner a hearing and the small clan who alone held the standard of music aloft. In fact, as Ernest Newman demonstrated, even Wagner's early operas were popular with the public and the impresarios, and when he came into conflict with the latter it was generally his own fault. They were sometimes attacked by critics (often with reason), but the resulting controversies benefited both Wagner and music criticism by establishing the news value of each. Indeed Wagner unwittingly increased the numbers and the status of the tribe he

wished to abolish. The Wagner publicity movement, led for some years by the philosopher Nietzsche, was naturally strongest in Germany, but it changed the critical landscape all over Europe. In France, where except for the work of a few men like Reyher the standard since Berlioz's day had been very low, Wagnerism was for a time overwhelming. Hanslick's stronghold of Vienna was invaded by the young Hugo Wolf, who in the *Wiener Salonblatt* in 1884-7 trained his guns on the weight of Brahms and the levity of Johann Strauss. Wolf was a one-sided critic, but his work had a pungent wit. Brahms's supporters, he wrote, 'despite their fat bellies attach themselves to a much talked-of man and hold on like noughts after the figure one'. The countries where musical nationalism was in spate, Bohemia and Russia for instance, were disturbed by cross-currents of their own: the critical pen was more often than not the servant of a cause, sometimes of several causes. Smetana, who became critic of a Prague daily paper in 1864, campaigned continually for Czech national opera and the Liszt-Wagner movement. In Russia Cui and Stasov raised the standard of the St Petersburg nationalists. Cui, whose criticism has a stronger savour than his music, attacked not only Wagner, Italian opera, Rubinstein and Tchaikovsky, but the backslidings of Musorgsky (for using leitmotifs) and Rimsky-Korsakov (for studying counterpoint). Scriov, a fanatical Wagnerian, attacked the entire nationalist school in three languages at once. Tchaikovsky acted as critic of the Moscow *Gazeta* for some years in the 1870s, his criticism, predictably, was subjective, and he has not been forgiven by German writers for likening Bayreuth to a prison and preferring Delibes' *Sylvia* to the *Ring*. Russian music criticism has been compared for its violence with religious disputation on dogma. This may have been encouraged by the strict censorship, which forced discussion of social and political issues into the sphere of art. The critic Chernishevsky taught that life was more important than art, and under his influence Musorgsky and Tolstoy ranked realism above beauty and the peasant masses above the individual. The dictum of Musorgsky (the only great composer to write a song about music critics) that 'art is a means of conversing with man, and not an end in itself' anticipated Tolstoy's conclusion in *What is Art?* (1898). One can detect a parallel with Puritanism in English-speaking countries, and one of the sources of Socialist Realism.

Italy, with its firm operatic tradition, its localized press and (until 1861) its own brand of suspicious censorship, was less resistant to new trends than might have been expected, thanks largely to the critics Abramo Basevi, founder of the reformist journal *Armonia* (1856-9) and author of a perceptive study of Verdi, and Filippo Filippi. The latter, for some years editor of the Milan *Gazzetta musicale* and music critic of *La perseveranza*, did much for the acceptance of Wagner. In England the effect of the Wagner movement was curious. Some of the most active supporters of the English musical renaissance, including Parry and Hadow, combined a worship of the German classics (especially J. S. Bach) and an acceptance of Wagner as their heir with the hereditary prejudice against the stage, and turned to rend the fashionable Italian opera, thus they could do only by pretending that Wagner was a great moral teacher. The latter delusion, though on other grounds and without the prejudice against the

stage, was nourished by Bernard Shaw, an active London music critic for six years (1888-94) and by far the ablest of the Wagnerians who wrote in English. Shaw later confessed that he deliberately overstated his case in order to obtain performances of Wagner's works; he also asserted, probably with truth, that the public never took him seriously since he refused to write music criticism in the dry non-committal style to which they were accustomed. His power of expressing clear thought in memorable language, combined with a real knowledge and love of music, raised him far above the critical level of his contemporaries. He underrated Brahms and overrated Goetz, but in an age that tended to despise Mozart and Verdi, and to confuse clarity with childishness and flatulence with profundity, he was ahead of all but a few of his professional colleagues in judgment and let fall an astonishing number of *obiter dicta* of lasting validity.

5. THE EARLY 20TH CENTURY. Critics at the turn of the century were beset by many difficulties. The expansion of the popular press, while enlarging their platform, had disturbed its foundations. Their words, for good or ill, were diffused as by a gigantic megaphone over a much wider area. The demand for publicity promoted a new outlook not only in the public but in managers and impresarios, who looked to the press for advertisement and occasionally for something more. Political and national affairs made more and more incursions into the realm of art. In some countries the law of libel became a potentially grave stumbling-block: if the critic can be sued for depreciating the market value of an artist's services, he may be reduced to functioning with one hand behind his back. Above all, with radical changes in the language of music, it became difficult to distinguish between those two ingredients of every revolution: fertile innovation and simple brick-heaving. Hence chasms occurred on the lines of communication between critic and public. Especially in the years between the wars the serious critic, closely following the composer, parted company with the journalist and retired to his former sanctuary of the learned magazine, the journalists, keeping one hand in that of the public, risked loss of touch with modern music. Some musicians have condemned critics for siding with the public against the composer, but that is to bring only one of several defendants to justice. There were critics on the other side to urge the composers into backwaters and then churn up the mud in the face of those members of the public inquisitive enough to leave the mainstream and peer round the corner. Nor can blame be withheld from society as a whole: artists are not troglodytes, and when the community begins to lose its faith in spiritual values the disintegration is felt everywhere. Inevitably criticism tended to take refuge in the attitude of preciosity summed up by the slogan 'art for art's sake'. When not the vehicle for propaganda, it became a form of entertainment, sometimes very amusing, but often at the expense of the art it purported to serve. This was more conspicuous in Vienna and Paris than in Germany, where entertainment, like everything else, was taken very seriously. Max Graf compared the status of German music critics with that of town councillors or policemen; and they have been known to use their considerable scope for making byelaws and holding up the traffic.

Germany had now lost her musical hegemony of a

century and a half, but one important benefit continued to accrue. The research of the great German musicologists, begun about the middle of the 19th century and published in technical periodicals and complete editions of the classical masters, supplied for the first time in convenient form the material for a thorough appraisal of musical history. But it was some time before this was felt throughout the body of criticism. Faction remained strong. The non-Latin countries were for long divided in allegiance between Brahms and Wagner. Those two composers perhaps represent the two poles of the German spirit (or at least of its response to Romanticism), the repressed conservative and the heated, egocentric revolutionary, but criticism found them difficult to bring into focus. Richard Strauss was acclaimed as sole heir to the empire of German music, the cult of the colossal and the grotesque, and of a sensuous hedonism dressed in a mystic veil (popularized by *Parfital*), led to a grave imbalance of critical values. The new paths taken by Schoenberg and the Second Viennese School, like those of Wagner two generations before, were seen not as an extension of tradition but as a plunge into the arbitrary and the unknown. In view of the subsequent claim of their supporters that the 12-note method (evolved in the 1920s) had replaced an outmoded tonality, that is scarcely surprising. What suits a single artist or a group of artists need not possess universal validity. The doctrine serialist's *a priori* rejection of any tonal implications is the mirror image of the traditionalist's horror of novelty, both abridge the language of music, and the critic who points this out, though likely to be denounced as a neo-Beckmesser, is only doing his duty. The public, slow to accept Schoenberg at his own valuation, instead took to its bosom the last products of the Viennese symphonic tradition in the works of Bruckner and Mahler.

The Hitler regime broke the threads of German musical life and drove into exile not only composers and executants but such eminent scholars as Paul Bekker and Alfred Einstein, editor of the *Zeitschrift für Musikwissenschaft* from 1918 and music critic of the *Berliner Tageblatt* (1927-35). Submission to state policy inhibits criticism and reduces it to a bogus and inverted pedantry. Events in the USSR since the 1917 revolution have illustrated this repeatedly, for example in the critic Asaf'yev's denunciation of all advanced Western music as 'formalist'. The spectacle of critical somersaults and retractions at the bidding of people innocent of artistic experience became ludicrous at the time of the Zhdanov decree (1948), and the experience in the 1970s of eminent Russian writers and musicians confirms that despotism, whether tsarist or Soviet, cannot brook criticism.

In France, the early years of the century saw a sharp division of opinion. D'Indy and the Schola Cantorum group, developing two qualities hitherto more characteristic of German than French musicians – antiquarian research and an almost ethical reverence for the sublime – endeavoured by word and deed to found a Franck movement after the manner of Germany's Wagner movement. The more characteristic French temperament on the other hand, intelligent, sensuous, yet unburdened by non-musical aspirations, reasserted itself in Debussy, who three times (1901, 1903, 1912-14) held the post of music critic on a paper. Debussy, as one should expect, was a subjective and impressionistic critic. He declared himself 'much more interested in

sincere and honestly felt impressions than in criticism', which he compared with a child pulling a toy to pieces – a common attitude in creative artists. He abjured system and regarded technical analysis as doomed to futility. His criticism is pointed, often precious, sometimes penetrating; he likened Musorgsky's music to 'the art of an inquiring savage, discovering music step by step through his emotions', Wagner to 'a beautiful sunset that was mistaken for a dawn', and Strauss's *Heldenleben* to 'a book of pictures or even a cinematograph', but it is a hit-or-miss affair and tells no more about Debussy than about the music he heard. His scepticism over critical standards was not unique. Anatole France denied their validity altogether and defined criticism as talking about oneself with some great artist as an excuse. Debussy's dislike of sectarian controversy did not save him from a set of journalistic Debussysists, who annoyed their patron saint as much as his opponents. France, like Germany and Austria, was soon filled with critical sects, fighting furiously round the figures of the leading composers, especially Stravinsky and Schoenberg. The best French critics were not those whose energies were consumed in this daily warfare, but the scholars who carried a thorough familiarity with the past into their dealings with the present. Men like Tiersot, Combarieu and Prunières (founder in 1920 of the periodical *Revue musicale*) set a high standard that was not always followed; and mention must be made of the novelist and dramatist Roman Rolland, who turned the imagination of a creative artist, an acute analytical intelligence and a graceful style on the music of past and present.

Music criticism in the USA is of comparatively recent growth and may be said to have begun in 1852 with the foundation at Boston of *Dwight's Journal of Music*. The tone of this periodical, which rejected both Brahms and Wagner, was dogmatic, ethical and conservative – reminiscent of the Chorley Davison period in England. The opposite ideal of complete subjectivity was preached by W. F. Apthorp (1848–1913), critic of the *Boston Evening Transcript*, who wrote from a standpoint close to that of Debussy. He made fun of the 'aesthetic Rhadamanthus' so dear to the Germans and declared that 'criticism should be nothing but an expression of enlightened opinion'. That of course begs the question how 'enlightened opinion' is to be defined and cultivated. Apthorp's most prominent successors in Boston and New York were Philip Hale, Henry Theophilus Finck, J. G. Hunker and Lawrence Gilman. From the 1930s the USA served as a sanctuary for European musicians uprooted by political convulsions. This infusion widened the range and sympathy of American criticism, if in some cases it debased the style and transferred to new soil the sectarian controversies of central Europe. (Another result is that the USA began to replace Germany as the centre of musicological research.) But it can hardly be said that criticism flourished. For some years after World War II Virgil Thomson pursued a stimulating policy in the *New York Herald Tribune*, in healthy rivalry with Olin Downes in the *New York Times*, but the amalgamation of these papers narrowed the field, and the absence of a trans-continental press and scarcity of serious musical periodicals localized and restricted criticism. The leading journal of scholarship, the *New York Musical Quarterly*, has long been weighted towards musicology. On the other hand Joseph Kerman, in debate with Edward Lowinsky in the *Journal of the American*

Musicological Society (1965–6), stated a case for criticism as the highest form of musicology. In the summer of 1972 the Kennedy Center for the Performing Arts, Washington, sponsored a Music Critics Institute under the direction of Elliott W. Galkin, and courses in criticism have been held in universities and elsewhere. What appears to be wanting is a sufficiency of acres for their graduates to till. American criticism, like American culture in general, receives little help from radio or television.

In Britain the standard of criticism rose in the first half of the 20th century, together with a definite if uneven extension of musical culture and the establishment of a fruitful creative tradition. Ernest Newman, music critic of various papers from 1905 (from 1920 to 1958 of the *Sunday Times*), set the pace with a nice balance of urbanity and outspokenness. Constant Lambert's discussion of contemporary trends in *Musica Ho!* (1934), though in some respects open to a charge of wrong-headedness, reflected a broad culture and a full mind; it made the reader think, and its denunciation of vogue and axe-grinding was entirely healthy. The wider diffusion of music has been greatly stimulated by the gramophone and later the radio – a phenomenon of course universal but more radical in a country whose musical life had hitherto been underdeveloped. Moreover the policy of the BBC laid down by its first director-general, and in particular the establishment of the Third Programme in 1946, offered a service then unrivalled elsewhere. Most of the daily and weekly newspapers continue to maintain one or more music critics. Of the older periodicals, the *Musical Times* (founded in 1844) continues its long career as a purveyor of scholarly inquiry and critical comment, but the *Monthly Musical Record*, founded in 1871, expired in 1960. The 20th century has seen the birth of several new periodicals, of which the quarterly *Music & Letters* (1920) established itself as the foremost musicological journal. Publishing houses issue more critical works on music than at any earlier period, but the standard is so variable as to suggest a certain cynicism about the fodder needed to satisfy the public appetite for enlightenment.

6. RECENT TRENDS. The most conspicuous change in the musical climate – the release of copious new sources of supply in radio and television, has had less effect than might have been expected on concert-giving and the practice of criticism. To some extent it has taken up the slack of increased demand. Radio stations supplement their music programmes with a fair share of explanatory matter, including general talks, musicological discussion and criticism. Yet the tendency of the media to count heads and grudge time spent on troublesome minorities carries an inbuilt drift towards Philistinism. The broadcasting time allotted to criticism of current musical events, on the air, in the concert hall or in the theatre, is small. Nor is there much criticism of broadcast music in newspapers or periodicals, a serious gap in view of the power of the media. On the contrary, the instant matter of the radio and television interview has invaded the arts pages of reputable papers, where it is apt to oust serious criticism. The tendency of public relations operators to annex the territory of criticism and the expansion of gramophone recording into a big-business industry, pronounced throughout western Europe and America, have introduced further complications, not least the danger of commercial pressure. A number of monthly

journals are devoted to gramophone record criticism, the principal English-language ones being the *Gramophone* (founded in 1923), *High Fidelity* (1951) and *Hi-fi Stereo Review* (1958). Music publishing, too, has become big business, and in some European countries the links between critics and publishing houses may be seen as a threat to critical integrity, as, perhaps no less perniciously, may the importance attached to the political affiliations of composers and critics.

The spoon-feeding of journalistic pap has increased at a time when all the arts are in a state of disarray and the public in urgent need of the services of criticism. In music the revolt against tradition is more radical than that led by Wagner or Schoenberg. The art has developed so rapidly in so many diverse directions that it is not always easy for the specialist, and much harder for the public, to distinguish living from dead wood and genuine endeavour from pure spoof. Indeterminacy may be seen as a reaction against excess of system, structural or notational. Whether inspired by confidence, uneasiness or despair, it may loosen shackles, it can equally lead to the abandonment not only of tradition but of creative skill, evasion of responsibility, and a nihilism that calls in question established notions of the art of music. This may sometimes be its intention, but though a 'happening' may provide entertainment, its relationship to art in any hitherto accepted sense remains unproven. Similar factors govern the use of electronic and computer techniques. These things are not to be condemned, the computers still have to be programmed. But like other techniques they need to be organized and subordinated to artistic ends, and scrutinized before they are accepted or dismissed. When the critic sees the area of agreement between producer and consumer growing ever narrower, eccentric positions being occupied and historical bastions evacuated, he is justified in remaining more than ever on his guard, cool, watchful, detached, even suspicious. The very nature of indeterminate music complicates his task and to some extent undermines his role, when a work contains aleatory elements, any criticism of it can be of only a single realization, and the longer-term validity of the criticism must depend on the degree to which the performance is improvised.

The so-called ugliness of much modern music, for long a subject of contention, is a side issue. The standard of ugliness – the borderline of what the trained ear accepts – is always changing. (This was amusingly pointed out by C. K. Salaman in a paper on music criticism in 1875: 'Whether in music or in personal appearance, ugliness is, no doubt, an acquired taste, like the taste for tobacco, and similar nauseous appetites'.) A more interesting, and perhaps more debatable, question was put thus by Newman in 1925:

We may then take it for granted, I think, that none of the new works of to-day that fail to justify themselves at once, *aesthetically* to the average musical sense of the period will be of much significance for the future, no matter how fertile they may be in suggestions of new technical resources.

This can be tested only if the average musical mind is given a chance to decide – and that means more than one hearing and assistance rather than molestation from the critics. Certainly it will have the final say, neither propagandists nor critics can in the long run force indigestible matter down the public throat and compel its retention. The future will be determined by the creative gift of the composer of genius, a commodity for which the critic legislates at his peril. New music of

lasting value has hitherto been rooted in tradition, the point from which it stems becomes discernible when the new shoot has shown signs of independent growth. This is not easy to observe in an age of transition, which throws out so many suckers destined never to mature.

This is where the critic ought to come in, unfortunately it is where he sometimes goes out. Whereas in the past established critics often tended towards reaction, there is now a new phenomenon, which may be called the Beckmesser complex – the fear of being caught on the wrong foot by the future, and perhaps of being pilloried in a new *Meistersinger*. The critic is responsible to his own generation, like Macbeth, he must be prepared to jump the life to come. If on the contrary he jumps on the bandwagon he betrays his calling and, if he still claims the status of critic, the art of music as well. John the Baptist is not a suitable patron saint for critics. Every age has its critical heresies. The two most prominent today are that the critic's first duty is to sound the trumpet for the composer, and that he is serving a useful purpose only when he writes about music he likes. The demolition of slipshod, pretentious and vacuous music can be equally constructive and beneficial, it is as much the critic's duty to expose the bad as to elucidate the good. A fashionable aesthetic heresy is illustrated by the statement 'You cannot have critics with standards, you can only have *music* with standards which critics may observe' (Walker, 1966). That approach begs the question of criticism's very existence and confuses the roles of the critic and the partisan, the defending counsel and the judge. While every generation, and every individual critic, needs to reconsider the nature and aims of music criticism and strip it to its essentials, the fact that an almost continuous debate throughout the 20th century has revealed so little common ground is presumably a symptom of the age's disturbed values.

One practical difficulty needs to be recognized. The conditions under which modern newspaper criticism is written and published leave much to be desired. A critic whose notice of a concert, containing perhaps an important new work of which the score is not available, has to appear in the following morning's paper (the normal practice in Great Britain and North America) is unlikely to say anything of value about the music – though there have been honourable exceptions – and may say something hasty, unjust or inaccurate, which he will have opportunity to repent at leisure. He undergoes other, less obvious pressures. He has probably been subjected to too much music, which can blunt the finest susceptibilities. He is restricted in space – far more so than his predecessors of the 19th and early 20th centuries – and subject to the whims of the printer and the sub-editor, whose cuts and adjustments can mutilate good copy and reduce it to nonsense. Nevertheless too much can be made of this. While the daily critic can put up hares but not hunt them, and while his pronouncements, especially on new works, are often snap judgments, they are not necessarily to be condemned for that, a sensible reader will expect nothing more. If the critic is to be a consumer guide, he must give an opinion, should he remain on the fence the cramp will affect not only his posture but eventually his mind. There is much to be said for reconsideration at leisure, if the paper can resist commercial pressures to the extent of allowing sufficient space for new works and important revivals of unfamiliar music from the past to be discussed at the length they merit. It is in these wider discussions that

monthly and other periodicals, and especially radio programmes, could perform a more extensive and valuable service than they do at present

7 THE NATURE OF CRITICISM Criticism is in no sense a science and only in a limited sense an art. It may be roughly defined as the translation and grading of an aesthetic experience by means of intellectual analysis and imaginative inquiry. This is a composite process. Whereas the work of art is primarily concerned with one set of standards, the aesthetic, criticism has to communicate something of this quality together with the result of its impact on the critic's mind and experience. He is thus concerned with two sorts of problem instead of one, and generally with two media instead of one: in music criticism with music as the artist's material and with words as his own. He is bound therefore to make extensive use of metaphor. On the other hand neither he nor the artist is concerned with establishing an absolute philosophic truth.

Owing to this dual nature of criticism no single set of principles can be found to govern its expository and creative aspects. The former is subject to principles of logic and method, the latter depends on intuition, which is conditioned by the character and experience of the individual critic. Both are affected by the nature of music's primary material, sound. It is possible to lay down ideal standards for the critic's training, procedure and approach to his audience, and to define the opportunities and restrictions imposed by the nature of music as sound. It is not possible to legislate for the intuitive, re-creative response, without which criticism remains an external gesticulation. Here criticism comes closest to creative art, it is the translation of this intuitive experience that can raise the critic to the rank of an artist. Our inquiry therefore will be largely concerned with disentangling the various considerations to which different aspects of criticism are subject, and not permitting those that inhabit one field to stray into the next.

The general function of all art criticism is to establish a line of communication between the creative artist and the public. In an elementary, compact or narrowly restricted society (primitive tribe, Greek city-state, medieval or Baroque court) there is no need for this cultural middleman, but with the growth of less homogeneous, more self-conscious societies the critic, if not regarded as an essential link, became a tolerated and in time a useful citizen, his importance increasing as interest in the arts percolated through society. He now acts as interpreter, wine taster and public relations officer as well as judge. Since art itself is a form of communication, the critic may be said to give it an extra digestion before passing it on, and his prominence is perhaps symptomatic in an age that prefers to live on processed foods. The great critic is an artist as well. He tells us what he thinks is good, he tells us why he thinks so, and he performs both functions in such a way that we are excited by his manner while convinced by his argument. We appreciate the work he is criticizing all the more for his interpretation of it but we appreciate him as well for what he brings to the discussion.

Gibbon summed up this infectious type of criticism when he wrote of Longinus: 'He tells me his own feelings, and tells them with so much energy that he communicates them'. He distinguished two further types, the explanatory and the analytical, both familiar in music criticism, where the former is apt to degenerate into

more or less inept literary paraphrase and the latter into the dry pedantry so deftly parodied in Bernard Shaw's 'analysis' of Hamlet's famous soliloquy.

Shakespeare, dispensing with the customary exordium, announces his subject at once in the infinitive, in which mood it is presently repeated after a short connecting passage in which, brief as it is, we recognize the alternative and negative forms on which so much of the significance of repetition depends. Here we reach a colon, and a pointed postitory phrase, in which the accent falls decisively on the relative pronoun, brings us to the first full stop.

While technical analysis should be within the critic's power, he is not obliged, except in scholarly publications, to inflict it on the reader. It is risky to take station above the head of the public (though better above than below), and serious analysis - mere parsing is useless - is generally unreadable. This situation led Hans Keller in 1956 to evolve a principle of functional analysis, designed to demonstrate unity in contrast and rooted in the ideas of Schoenberg and Heinrich Schenker, he described it as 'the one ideal way of writing about music'. It is notes about notes, as literary criticism is words about words' (*Times Literary Supplement*, 9 October 1969). In some music this can serve as a useful educational tool, but it is not criticism, it is indeed related to the retreat in literature from judgment towards the use of the computer. And it is open to other objections. It presupposes that such unity in contrast exists and requires to be demonstrated in the interests of composer or listener. It may not communicate with the lay ear. Above all, it can be applied to great and mediocre works with similar results, unable to evaluate, it can detect the plumbing but not the flame of genius.

Theodore Meyer Greene, who subjected art criticism to a systematic study, found three main aspects, the re-creative, the historical and the judicial, each essential to the whole. Here we need only note the distinctions implied in modern practice, which as elsewhere tends to split up production among a number of departments. The philosopher, the scholar and the historian work through books, lectures and learned periodicals. The task of the press critic is ephemeral and doubtless lower, but in some ways more difficult and responsible, and frequently more controversial, since he is concerned with the day-to-day discussion of new music. Although the same people are often found in each camp, there are obvious dangers about a system in which a scholar may never review a concert or a press critic rarely grapple with a subject on a scale to fill a book. All are concerned with criticism in the wider sense, and none can afford to ignore, even temporarily, the work of the others.

8 THE LIMITATIONS OF MUSIC. Music is probably the most difficult of the arts to criticize, owing to certain innate characteristics that complicate the task at the outset. It is an art expressed in terms of time and sound. It has to be re-created anew at every performance, criticism from the score is an unsafe method, if sometimes an unavoidable substitute, since it ignores the physical impact of sound and the inexactitude of musical notation, factors which also ensure that no two performances are exactly alike. Secondly its primary material, sound, unlike the primary materials of all the other arts, has not in its pure form been developed for non-artistic use. Whereas music is not directly concerned with space or sight or tangible materials, like painting, sculpture and architecture, there is a link with literature, and particularly with drama and poetry, which do involve time and sound. But the resemblance is misleading and

has led to endless confusion. For the aesthetic appeal of music, although it may be allied with words, is not verbal, is in fact anti-verbal. It has to evolve its own concepts, which cannot carry the connotations of everyday life associated with a verbal language. To talk of the 'language' of music is to employ metaphor, the association of words and music is so firmly established that the daring nature of this compromise is forgotten. The music critic cannot communicate with his readers through notes and staves, he must use words. He is translating – and translating in the dark, for there can be no dictionary to help him. The word 'love' is common coin in life and literature, the note C has nothing to do with breakfast or railway journeys or marital harmony. The difficulty occurs with the other arts, but not to the same extent, for all of them either use a verbal language or are partly representational. Even an abstract painting can be described in terms of design or colour. The critic of music can only appeal from his own experience to that of his readers.

The time factor also imposes its pattern. A piece of music cannot be heard all at once. The faculty of memory is called into play and is continually operative from the first bar to the last. It is this that determines the peculiar nature of musical forms. An art that moves in time and is not expressed in words requires repetition or development of material, or at least allusion to what has already been heard. This in turn poses problems of balance, contrast, expectation and fulfilment, which are more central to music than to the other arts, supported as these are by their verbal or representational content. A painter can place a small cloud in one corner of a landscape, and that cloud remains before the eye and may dominate the picture (witness the cloud over the lock in one of Van Gogh's Provencal landscapes), but if a composer wishes a musical phrase to dominate a work of more than the slightest proportions he must allude to it more than once. Hence the complexity of musical forms, and, since it is difficult to invent a form that is both new and coherent, their slow evolution and long period of use. Here we pass a conspicuous side-turning to critical error. Whereas the need for balance, contrast etc remains constant, the methods of satisfying it alter from age to age, sometimes almost as imperceptibly as the flow of a glacier. The historian will detect the change eventually, but the critic may be led into mistaking the temporary canons of musical science for the permanent laws of the art – to take sonata form as equivalent to form, or the major-minor system for tonality itself.

9 THE AESTHETIC PROBLEM. These special properties of music, when taken in conjunction with the extensive general requirements of art criticism, are enough to account for the rarity of front-rank music critics in proportion to those of the other arts. But there is another basic difficulty. The critic has never been supported by a thoroughly worked-out musical aesthetic. The philosophers in whose province the promulgation of such matters lay have seldom had a working knowledge or a real understanding of music, failing to appreciate its inner nature, they have saddled it with 'principles' borrowed from the other arts, and from farther afield. The Greeks, and Plato in particular, viewed aesthetics across the territory of ethics and politics. Western philosophy has managed to disentangle the political thread and loosened the ethical (for long the bane not only of English music criticism, but of English musical life in all

its forms, though music with its non-verbal and non-representational centre of gravity must be the least ethical of the arts), it has not firmly established the independent position of music. There remains a chasm between the aestheticians on the one hand and the practical critics on the other, a chasm that can be bridged only by hard thought. Since the philosophers were not fitted to build a bridge, the critics – those who saw its necessity, and without it they could only work in darkness – have tried to throw one from the other side. Their repeated failure is the inner history of music criticism, at which it is now necessary to glance.

The 18th-century critics not only ignored the absence of a bridge, they saw no need for one. They applied their general aesthetic theories to music without regard to whether they made sense. Thus we find Mattheson, the leading critic of his day and a man of wide culture, attempting to legislate for all music on terms applicable only to the *galant* melodic style of which he constituted himself the prophet, regulating the proper content of musical forms ('A Concerto should convey hopefulness

the Sarabande has to express no other feeling than awe – voluptuousness reigns supreme in the Concerto Grosso', while the chaconne should express satiety and the overture magnanimity), and even prescribing the reactions of the animal kingdom: he said that crabs follow the pipe, hares the transverse flute, camels a small bell, trout and carp a large bell, bees the cymbals and spiders the lute, while 'pigs will go anywhere after a zither'. Needless to say, watertight systems of this kind rejected *a priori* both the early contrapuntal schools and the climax of Baroque counterpoint in J. S. Bach, and their absurd rigidity may have encouraged the irresponsible element in the Romantic reaction. The early 19th-century critics threw off the shackles of rationalist pedantry, only to impose new ones of their own. Glorifying the spirit of revolt represented by Beethoven, who became a sort of musical Byron, and later by Liszt and Wagner, they set up an inverted ethical standard that brought them no closer to music itself. It was in reaction to what he regarded as a chaotic and decadent empiricism that Hanslick wrote his book on musical aesthetics. His bridge broke down not because he was a bad musician but because he was a bad philosopher. He made it too rigid, not sufficiently tensile, his prejudices were opposed to the emotionalism of Wagner and Liszt, so he elevated them into general principles by denying the relevance of emotion. It is when elongated into a principle that prejudice becomes dangerous. Hanslick set the fashion for a spate of aesthetic bridge-building, especially in Germany, but the structures invariably collapsed either at the same point or on a misunderstanding of the scope of musical 'language'. One example only need be taken, that of Hadow in the first chapter of his *Studies in Modern Music* (1892). He put forward four 'principles of musical judgment': the principles of vitality (comprising technical inventiveness and imaginative power), labour (the best possible workmanship), proportion and fitness. With his elucidation of the first and third there can be no dispute, but the interpretation placed upon the second and fourth led him into a condemnation of Italian opera on ethical grounds and a false antithesis between sacred and secular music. He failed to distinguish between ends and means, his suspicion of the theatre, shared by most of his English contemporaries, led him into a series of equivocations, for instance over *Parsifal*, to whose Grail scenes he

denied theatrical power, solely, it would appear, because Wagner 'was too great an artist to confuse sacred music with secular'

It was the seeming inevitability of such failures that led some critics at the turn of the century to conclude that the establishment of principles was undesirable as well as impossible, that the critic's job was not to judge but to record his impressions and leave the reader to take them or leave them. Hence the criteria adopted by Debussy 'To render one's impressions is better than to criticize, and all technical analysis is doomed to futility

Remember the word "impressions", for I insist on keeping my emotion free from all parasitic aesthetics'

10 OBJECTIVE AND SUBJECTIVE CRITICISM These two approaches supplied the great bone of critical contention in the first half of the 20th century. They were endlessly contrasted, disputed and combined. Newman (*A Musical Critic's Holiday*, 1925) made a sustained attempt to lay down objective standards, especially for criticism of contemporary music. The book supplied a first-class intellectual stimulant and a healthy counter-blast to much sloppy thought, but carried the seeds of its own failure: for in testing the validity of a 19th-century German critic's attempt to lay down watertight objective standards, J. C. Lobe's *Musikalische Briefe eines Wohlbekannten* (1852), and demonstrating its failure in practice, Newman returned the inevitable verdict on all such enterprises, including his own. For aesthetic appreciation, depending on the sensory reactions of the individual, can be no more subject to predetermined laws than the proportions of a cathedral or the colour of a picture - than, in fact, the work of art itself. The critic may attempt to rationalize his responses, but the result will be valid for himself alone, and if he comes to give it the force of a principle he will find his receptiveness attacked by a sort of spiritual pneumoconiosis, a hardening of the tissue into stone, which will ultimately be fatal to an efficient performance of his duties. It is as dangerous for him as for the artist to hold his subconscious mind on too tight a rein. Thence springs the mentality unable to distinguish the mechanical from the organic, a sonata movement by Czerny from one by Beethoven. No listener can be exclusively objective where his own emotions are concerned, and if they are not concerned, he cannot be said to have experienced the work he has heard.

That, however, is no argument for wholesale surrender to the other side. Subjective criticism as advocated by Debussy and Anatole France opens the door to absurdity and irrelevance, and points straight to chaos. For there is no counter-check outside the critic's own personality. He becomes a circus turn, amusing the reader for as long as he can remain balanced on his tight-rope. However finely attuned his sensibility, it may be thrown out by the most trivial circumstance. Where his objective colleague may apply an obsolete and irrelevant yardstick, the subjective critic may unwittingly judge by what he has eaten for dinner or the proximity of his foe in the row in front smoking a noxious cigar.

It follows that, if a subjective critic often degenerates into a nuisance, an unprejudiced critic is a contradiction in terms - and if there were such a person he would be an insufferable bore, since when fully trained and in efficient working order he would always be right. This aspect of criticism has never been more trenchantly expressed than by Bernard Shaw:

Never in my life have I penned an impartial criticism, and I hope I never may. To be just to individuals - even if it were possible - would be to sacrifice the end to the means, which would be profoundly immoral. One must, of course, know the facts, and that is where the critic's skill comes in, but a moral has to be drawn from the facts, and that is where his bias comes out.

Shaw declared that 'there is no more dishonest and insufferable affectation' than the 'infernal, abstract, judicially authoritative air' of *ex cathedra* criticism, and pleaded instead for

sincerity of expression, not only of the critic's opinion, but of the mood in which that opinion was formed. We cannot get away from the critic's tempers, his impatience, his sorenesses, his friendships, his spite, his enthusiasms (amatory and other), nay his very politics and religion.

How then is the objective-subjective dilemma to be resolved? It does not help to take refuge in metaphysics and assert (with A. J. Sheldon) that objective criteria exist, but they can be comprehended only subjectively, or (with Calvo-Cosselli) that, while recognizing that they do not exist, the critic is entitled to proceed as if they did. The answer is to divide the problem, separating those aspects where an objective standard can operate (the basic laws and limitations of music, the critic's responsibilities, his training and intellectual armament) from the personal and intuitive factors. The critic needs to cultivate a kind of double vision. His mind must be open and susceptible while retaining its hold on accumulated experience; it must be cool and logical without losing the capacity to be moved; it must in a real sense be objective and subjective at the same time, like the mind of Keats when he watched the sparrows out of his window and projected himself into their existence as they picked about the gravel.

11 THE CRITIC'S RESPONSIBILITIES The critic owes responsibility to (a) the art of music, (b) the audience - actual and potential, and through it to society as a whole, (c) the composer, (d) the performer and (e) the promoter. That, it may be suggested, is the correct order of precedence. In a matter where the governing factor is an aesthetic judgment any attempt to impose a policy or a party line is an infringement of the critic's prerogative. And since the value of a criticism depends in part on the reader's knowledge of the critic's standpoint, the unsigned article is improper.

Responsibility to the art must be distinguished from responsibility to the composer, who like the critic is a servant of the art. The critic is not the composer's personal advocate; he should not, except in the compelling interests of music itself, lapse into the propagandist. He is the magistrate, even if his tenure of the bench is insecure and his judgment liable to be upset on appeal. It follows that he must be honest with himself and the public and absolutely fearless. His most valuable quality is his independence. It is not his first concern to be right, except in matters of fact; he should never confuse humility with abdication of responsibility. If there is one thing more distasteful than a critic who will not speak his mind but, like Shakespeare's equivocator, 'swears in both the scales against either scale', it is a critic groveling before the composer of his fancy, like a small boy begging for the autograph of a popular sportsman. Such behaviour is apt to be counter-productive in the short run, and it is superfluous in the long. If the new gods are genuine, they will prevail. Schumann well said that 'the critic who does not attack what is bad is but a half-hearted supporter of what is good'.

The critic's first obligation to the composer, living or dead, is to assess as accurately as possible (with the aid

of a score if he can obtain one) what he is trying to do, how far he has succeeded, how the work under discussion relates to others by the same composer or his contemporaries, and whether the attempt was worth making. He needs the perspective of history, not least in relation to modern music, and an ear sensitive to the pressures of fashion, otherwise he may mistake the manner for the matter. He is not telling the reader what to think, he is giving his own thoughts, and since he is human they may be fallible, inadequate, or even perverse. To expect him to suppress his personality is to demand the impossible and the undesirable.

At this point the horns of a familiar dilemma begin to obtrude. How is a composer of genius to be satisfactorily handled by a critic who cannot make pretension to such an endowment? Shaw maintained in *The Quintessence of Ibsenism* that no author can create a character greater than himself, how can a critic judge an artist greater than himself, especially when he meets him for the first time? In the words of Greene, 'If great art is the product of a great soul, only a critic of spiritual stature can hope to recognize and appreciate artistic greatness when he sees it. To the trivial all things are trivial'. The answer, as so often, is to look the dilemma between the horns and pass it by. The critic's pronouncements are generally valuable not so much for their conclusion as for the process of thought by which the conclusion is reached, and for the reactions they set up in the reader's mind. Many a smaller man than Beethoven has thrown light on Beethoven's music and on the nature and creative processes of art itself. But the critic cannot refuse his task, he must attempt to reach a conclusion or confess defeat. It is often better to judge wrongly than to mark time. Nor is he precluded from changing his mind. His verdict need not be final for himself, let alone for his contemporaries and successors, it is sure to be counter-checked by others. The verdict of posterity is after all no more than a majority vote, as Coleridge put it in his *Lectures*, early in the 19th century: 'the opinions of acknowledged critics accumulate in time, and are compacted into a mass that inevitably bears down before it all the opposition of false taste and ignorance'. Of course the man who expects the critic of a complex new work to return the considered verdict of posterity is demanding a miracle. Yet those critics who instinctively detected Beethoven's genius and attacked it according to their lights were doing music more service than partisan writers who proclaim half a dozen masterpieces every year in the hope of getting one shot on the target. There is a false as well as a true humility in criticism. Johnson put the pettifoggish critic in his place: 'A fly, sir, may sting a stately horse and make him wince, but the one is but an insect, the other is a horse still'. Newman emphasized the critic's high calling: 'The business of criticism is, in the case of the first-rate artist, to see him steadily and see him whole, and in the case of the second- or third-rate artist, to see him steadily and see him damned' (There is however a place for the second- and even the third-rate artist; without them the art might wither and the first-rate die on the branch).

While the critic who thinks that his utterances can alter the course of musical history is suffering from delusions, the composer who ignores criticism runs the risk of severing his strongest link with the public. The lordly contempt for critics exhibited by a few composers must be rebutted, not so much from a sense of the dignity of criticism but because it is a sign of weakness.

D'Indy wrote: 'I consider criticism absolutely useless, indeed, I should even say, injurious... Criticism as a rule is the opinion some gentleman or other has of a work. How should such an opinion be of any use to art?' (*Revue de l'art dramatique*, February 1899). The answer is that without the opinion of 'some gentleman or other' art would be wingless, since it cannot bloat in a vacuum, and under present conditions it must pass the Cerberus of criticism before it can hope to enjoy public favour. Cerberus may bark out of turn or up the wrong tree, but it is no use the composer peevishly pretending that he is inaudible. Liszt went to the other extreme when he wrote that 'criticism should become more and more an activity of productive artists'. This would work only if all had the open-hearted and responsible attitude of Liszt himself. It is interesting to compare the opinion of a later creative artist, E. M. Forster, who regarded criticism of a work of art and surrender to it as antithetical: 'Think before you speak is criticism's motto, speak before you think creation's' (Trench, 1948). But the critic hears and feels before he speaks. It is this dualism—the taking part and standing aside—that lies at the centre of criticism.

The critic's treatment of performers requires a slight change of emphasis. While composer and executant alike offer their wares to the public, and the former can be misrepresented by the deficiencies of the latter, it is doubtful if hostile criticism can hurt a good composer, except in his pride. It keeps him in the public eye and can generate support as well as controversy, especially if the reader detects animus or blindness. But it may undermine the confidence of a performer, who is subject to nervousness and sudden indisposition and may be below his best when the critic happens to hear him. For that reason the critic would do well to bear in mind the benefit of the doubt.

Responsibility to society also has its dilemma. Every work of art is a Janus, looking inwardly to its own laws and outwardly towards life, and it may touch life at any point, in its moral values and its commonplace incidents: it often acts as a lightning-conductor between the two, interpreting the former in terms of the latter, illustrating the general by the particular. In music this connection is obscure and elusive, even when words are attached, but its existence cannot be doubted. Jeremy Collier's complaint that music in the theatre 'throws a Man off his Guard, makes way for an ill Impression, and is most Commodiously planted to do Mischief' is a back-handed tribute to the art he wished to banish. The critic has to tread warily here. If he restricts himself exclusively to artistic laws he runs the risk of cutting himself off from life and falling into the preciosity of art for art's sake. There is an even greater danger of importing alien (especially ethical and political) values into music criticism. Dramatic composers who do not take sides for or against their characters, for instance Purcell and Mozart, have been attacked for 'weaknesses of artistic judgment and failures of artistic probity'. This used to be a common failing in England and Germany. German philosophers (e.g. Kant) have generally been hostile to aesthetic beauty, except when accompanied by moral ideas, and it has resulted in considerable injustice being done to French and Italian music, which is generally without such moral preoccupations. Music has continually to defend its territory against the incursion of moralists (Shelley in his *Defence of Poetry* saw the same danger in literature), and here the critic should

take the lead. This does not mean that moral questions are never to be asked. In the words of Edgar Wind, the critic should not be confined to asking 'Has the artist achieved the effect at which he aimed?' He should also ask the forbidden question: Should this kind of effect be aimed at, and what should be its place in our experience? (French, 1948). To that he can return only a subjective answer, but the ventilation of such matters is healthy. This is the proper sphere for discussing the aversion many people feel for the exaltation of negative human values in works like *Tristan and Isolde* and *A Village Romeo and Juliet*, and the vexed question of artistic decadence in general. Political pressure, the bane of many artists in the past, may now constitute a greater danger, at least in some countries. There is no such thing as democracy in art, nor can there be in criticism; doctrinaire ideology is the mortal enemy of both. One of the critic's roles is that of watchdog, and he must bark as appropriate.

12. THE CRITIC'S QUALIFICATIONS. The qualities required of the ideal music critic are so multifarious as almost to place him among the mythical beasts. Nevertheless, if the great critic is perhaps born, not made, much can be done by training, and it is worth attempting to sum up these qualities.

(i) A knowledge of the technical and theoretical principles of music. History shows that the critic who knows no art but music is of very little use, but the dilettante who does not understand music is of no use at all.

(ii) A knowledge of musical history and scholarship. Without this, in Greene's words, 'no critic, however artistically sensitive, can escape critical "sentimentality", that is, an illegitimate intrusion into a work of art of what does not exist in it and a failure to apprehend certain of its essential ingredients'. It has been well said that a critic should know something about all music and all about some, and that he should be, in the highest sense, a professional amateur: professional because he needs to be trained, amateur because he should enjoy his task and love music. He can learn too from the history of his own department. Criticism, like art itself, swings between the poles of classicism and romanticism, and old problems recur in new guises. Stainer (1880-81) found music criticism 'oscillating dangerously between the two extremes of dogmatic conventionalism and unblushing nihilism'. Perhaps it always does.

(iii) A wide general education, covering as many as possible of the subjects with which music can be shown to have a point of contact. At the narrowest, this includes aesthetics, social history and some at least of the other arts, but it can be extended to many other activities, for instance psychology, which may one day be regarded as an essential. To give an obvious example of this interdependence, no one can criticize liturgical music without an understanding of the liturgy or opera without specialized knowledge of the theatre.

(iv) The ability to think straight and to write in a clear and stimulating manner. Nearly everybody has been taught to write in childhood and thinks (after a fashion) because he cannot help it. Both functions need rigorous training before they are fit for inflection on the public, and they are connected. The critic has to engage the substance of the reader's mind, not merely its surface, he must therefore know his own. Criticism by catchphrase is a form of laziness, designed to evade the necessity for thought. It is better to be provocative than

soporific. Badly expressed criticism, if not useless, is largely wasted. Homer's antithesis between winged words, which find their mark, and wingless words, which might as well not have been uttered, is worth the critic's consideration. He thus has two reasons for studying literature: the large area over which it touches music and the fact that in putting pen to paper he is practising it. Too many music critics are found in the innocent condition of *Mohere's* Monsieur Jourdain, who was astonished to learn he had all his life been speaking prose.

(v) An insight into the workings of the creative imagination. This presupposes a touch of the same quality in the critic. If that is present, it can be trained to a high level of perceptiveness, without it there is always the danger of a super-academic irrelevance. The executant's point of view must also be understood, though there are no grounds for supposing that experience of performing before an audience is a prerequisite for a critic.

(vi) An integrated philosophy of life of his own. Greene put the point well: the critic must be able 'to share imaginatively in many different types of experience and to comprehend diverse interpretations and evaluations of these experiences'. Unless he believes in some scale of values, he must remain blind to the nature and significance of scales of value to which he himself cannot subscribe. The match must have a box to strike on.

(vii) An enduring inquisitiveness and willingness to learn. The man who has lost this has begun to lose his power to criticize, since neither the current stream of art nor its view of its own past is ever static. The critic who is no longer interested in music or in what other people are thinking about it grows pompous and repetitive, and should retire.

(viii) An acceptance of his own limitations, individual and generic. These are variable quantities, temporary currents of prejudice abound in every age, and any honest critic will admit that there are moments when he loathes and spurns a work that he knows to be a masterpiece. If from previous experience or his own admission his readers can locate his weaknesses, the harm done by an ill-considered judgment—and all critics make more of these than they like to suppose—will be minimized. If he sets himself up as an oracle, he has all the farther to fall.

That catalogue of qualifications is likely to rule out large sections of the community, not least in the musical profession. With very few exceptions active composers and performers make bad critics, and the more eminent they are in their primary role, the more erratic they are likely to be in the secondary, since their main energies are engaged elsewhere. The chances are that they will either be blinded by their own special skills or will over-compensate and omit to judge. Criticism demands a rigorous training of the mind. While more could be done in universities and colleges to teach it as a discipline in its own right, the heaviest work will always fall on the individual student. He needs to know the composer's and the executant's point of view, but must resist pressures that will make him the servant of either; in the last resort he stands alone. It may be permissible to suggest that the best way to educate his critical faculty and clear his mind of cant is to question acknowledged masterpieces, neither standing in awe of their reputation nor taking them for granted. It is a fallacy that great works

of art must be swallowed whole. To accept the stature of Beethoven's Ninth Symphony or *Tristan und Isolde* and then try to account for it is to put the cart before the horse. The quality of a work of art cannot be defined or demonstrated by rule; it must be experienced, and may then be communicated through the sensibility of another mind. When the student has learnt to do this, he is ready to undertake criticism.

In the absence of a trained critic a promising candidate is the composer content to abandon or subordinate his own creative activity, or even the practitioner of another art – provided he knows enough of music. It is not altogether an accident that one of the few outstanding music critics was a man who had trained himself as a novelist and social thinker and was to reach eminence as a dramatist: Bernard Shaw. All his music criticism, apart from a piece of special and mostly non-musical pleading in *The Perfect Wagnerite* – was confined to the columns of a weekly newspaper (in, it is true, a more spacious age). Nor is its stimulating quality even when he is discussing music since forgotten and singers long dead, dependent on his inimitable wit. With the possible exception of the second, he possessed in abundant measure all eight qualifications listed above.

This attempt to grapple with the subject of criticism cannot be ended more fittingly than with another quotation from Shaw.

A criticism written without personal feeling is not worth reading. It is his capacity for making good or bad art a personal matter that makes him a critic. When my critical mood is at its height, personal feeling – not the word, it is passion, the passion for artistic perfection – for the noblest beauties of sound, sight, and action – thrills runs in me.

Perhaps a ninth qualification may be added: criticism should not be a profession casually chosen or embraced with a view to easy subsistence – but a vocation.

WINTON DI AN

Critics' Circle. An association of British critics who review for newspapers, magazines and the radio. It was founded in 1913, and is divided into a number of sections, one for each of the performing arts, including a music section, whose role is to protect the art of criticism and the interests of music critics who are its members.

Crivellati, Cesare (b. Viterbo, fl. 1624) Italian doctor and music theorist, probably the brother of Domenico Crivellati. He practised as a doctor in his native town. According to Pitoni he studied music with Frescobaldi, but his only certain connection with music is that in 1624 he published at Viterbo *Discorsi musicali, nella quali si contengono non solo cose pertinenti alla teoria, ma etiam alla pratica, mediante le quali si potrà con facilità pervenire all'acquisto di così honorata scienza. Raccolti da diversi buoni autori*. As he admitted, his book is a compilation; it draws heavily on theorists of the past, ranging from Guido of Arezzo through Pietro Aaron to Zarlino and beyond, and it is predominantly concerned with the traditional materials of music - modes, proportions, ligatures and so on. However, not only the nature of his selections from the past but also his occasional views on the music of his own time tell the reader something of his own ideas. He was, for example (p. 60f), enthusiastic about monodic and operatic music and believed, like so many writers, that the music of his own day was best able to move the affec-

tions. In the last of his 54 chapters he offered sensible advice to singers.

NIGEL FORTUNE

Crivellati, Domenico (b. Viterbo, fl. 1628-9) Italian composer, probably the brother of Cesare Crivellati. He seems to have lived at Viterbo and to have been an amateur composer. Apart from a solo song in *RISM* 1629* he is known only by *Cantate diverse*, for one to three voices and continuo (Rome, 1628). Of its contents only two sets of madrigalian strophic variations are at all like what was normally thought of as a canfata in the 1620s. Apart from a madrigal the other solo songs, 12 in number, and the few duets and trios are all simple strophic pieces of no great musical interest, though the solo *Io pur saper vorrei* is attractive enough (there are five duets, but all except one seem to be settings of four verses of the same poem). The main interest of the book resides in the unusually full directions for performance, especially by instruments, for example, the players are told to repeat a verse purely instrumentally after the singer has sung it. There is also one tempo direction.

NIGEL FORTUNE

Crivelli [Crivello, Crubelli], **Arcangelo** (b. Bergamo, 21 April 1546, d. Rome, 4 March 1617) Italian composer. He was brought up in Bergamo. In October 1567 he left for Parma to study with P. Ponzio, whom he succeeded in April 1568 as singer, and in March 1569 as *maestro di cappella* at the church of the Madonna della Steccata. He remained there until September 1575. In 1578 he was elected a tenor singer in the papal choir in Rome; he was also a member, and later treasurer and secretary, of the Virtuosi Compagnia dei Musici, and papal composer in 1590 and 1595. He remained in Rome until his death.

Although Crivelli published only two single collections, one of masses and one of madrigals, a large number of individual motets and secular works were circulated in MS and printed anthologies. He was typical of the older, more conservative wing of the Roman school at the turn of the 17th century, in his sacred music he adhered to an *cappella* ideal which excluded any experiment with the concertato style. Even though not uninterested in textural contrast, he tended to shun pure homophony, cultivating a smooth, sometimes melismatic style. His double-choir works are mainly antiphonal, but the occasional tutti are sonorously conceived.

Crivelli's madrigals are also conservative in style and somewhat staid taking into account their date, like those of many other followers of Marenzio, they belong to the pastoral type. He also wrote in a lighter style three-part canzonettas (usually for two sopranos and bass), and contributed two *laude spirituali* to *Tempio armonico* (Rome, 1599), a collection of three-part *laude* designed to serve the needs of the Roman oratories; the latter, though written in a popular idiom, are not as racy as others in the volume.

An Arcangelo Crivelli contributed music to Giulio Strozzi's drama *La finta savia* (Venice, 1643) with F. Laurenzi, T. Merula, A. Leardini, B. Ferrari and V. Tozzi.

FEROMI ROCHE

Crivelli, Domenico, Italian composer, son of GAETANO CRIVELLI

Crivelli, Gaetano (b Brescia, 20 Oct 1768, d Brescia, 16 July 1836) Italian tenor. After making his debut at Brescia in 1794, he appeared at Verona, Palermo, Venice and Naples, where he studied with Nozzari and Aprile. In 1805 he sang at La Scala in operas by Mayr and Pavesi. He appeared in Paris on 19 January 1811 in Paisiello's *Primo* and sang Don Ottavio in *Don Giovanni* there later the same year. He made his London debut at the King's Theatre on 11 January 1817, as Ulysses in Cimarosa's *Penelope*. During this season he sang in Paer's *Griseida*, in the first London performance of *Don Giovanni*, and in *Così fan tutte* and *La clemenza di Tito*. Returning to Italy, he appeared at La Fenice, Venice, where he sang Adriano in the first performance of Meyerbeer's *Il crociato in Egitto* on 7 March 1824. Adriano became his favourite role, and he sang it at his farewell in 1831.

Domenico, his son (b Brescia, 7 June 1793, d London, 11 November 1851), was a singing teacher and composer who settled in London; he wrote a treatise, *The Art of Singing and New Solfegeggios for the Cultivation of the Bass Voice* (London, 2, 1844).

ELIZABETH FORBES

Crivelli, Giovanni Battista (b Scandiano, nr. Modena, d Modena, March 1652) Italian composer. He was organist of the cathedral at Reggio Emilia from 24 September 1614 to 24 October 1619, and in 1626 was director of music at the Accademia dello Spirito Santo, Ferrara. In 1635, while *maestro di cappella* of the Basilica della Ghiara at Reggio, he petitioned for citizenship there. He was a musician in the service of Duke Maximilian I of Bavaria, and *maestro di cappella* at Milan Cathedral from 1638 to January 1642, when he was appointed to a similar position at S Maria Maggiore, Bergamo, which he held until 1648 (his successor was appointed on 21 September in that year). He built up the choir to a strength it had lacked since before the plague of 1630 and assembled musicians he had met in Ferrara and Milan to perform at the exceptionally opulent Assumption Day celebrations in 1642. In 1651-2 he was director of music to the Duke of Modena.

Crivelli was one of the most talented lesser composers to adopt the new concertato style for motets and madrigals. His very attractive music shows the choice that composers faced in the 1620s between an expres-

sive idiom with emphasis on melodic beauty and an approach in which subtleties of musical structure were more important. In the motet collection the latter is well exemplified in *Ut flos ut rosa* for two tenors and continuo, which is in an *ABA* form in which *B* is in triple time and *A* is varied when it returns, attractive melodies and balanced form are combined in the five-part *O Maria mater gratiae*. In the madrigal collection, duets for equal voices are the commonest texture; again there are imaginative melodies and some chromaticism as well. Crivelli also contributed to opera, writing three scenes for the composite *La finta savia*.

FEROMI ROCHE

Croatti [Crotti], Francesco (b Ferrara, fl 1607-8) Italian composer. An Augustinian monk, he was *maestro di cappella* at the cathedral at Pavia, near Lucca, in 1607. His only known collection of music, the *Messa e motetti* for five, six and eight voices (Venice, 1608), shows him to be one of those church composers who were still writing for fairly large forces in the tradition of the Gabriels: the mass adopts an imitative style for the entries of the eight voices but is more homophonic in the Gloria and Credo. As in the earlier music of Giovanni Gabrieli, some of Croatti's double-choir motets use a second choir lower in tessitura than the first. There are also refrain forms. *I erum caro* has a triple-time tutti that punctuates 4/4 sections for the first choir alone. Several motets by him are included in contemporary anthologies (*RISM* 1612¹, 1617¹, 1621²).

FEROMI ROCHE

Croce, Benedetto (b Pescasseroli, nr. Aquila, 25 Feb 1866, d Naples, 20 Nov 1952) Italian philosopher, critic, historian and politician, whose aesthetic theory was highly influential, particularly in Italy, between World Wars I and II. In its original and most influential formulation Croce's aesthetic theory is part of a general philosophy of civilization (largely derived from Vico and Hegel) which treats all the major manifestations of human culture as forming a hierarchy of quasi-linguistic mental activities, but in such a way that the higher phases of the hierarchy can form bases for new cycles of development. The root of language and the basic form of mental activity is art, which is nothing but the expression of intuitions; that is, the bringing to clear and explicit consciousness of a unique emotional and perceptual configuration forming an unanalysable unity. Our basic awareness of ourselves and our world is formed from such intuitions, of which what we usually call works of art are the most striking examples. To have such an intuition is ipso facto to express it; its embodiment in a material or perceptible form adds nothing to its nature as intuition. Similarly, since the intuition is perfect and self-contained, any experience of

the artist that may have led to its formulation (his 'impression') is irrelevant to its appreciation. There can be no such thing as a bad or ugly work of art, since badness could only be failure to intuit and express, and whatever is not the perfect expression of an intuition is not a work of art at all. Because an expressed intuition is, ex hypothesi, perfectly clear, it should be completely accessible to persons other than the artist, the function of the critic cannot then be to interpret or evaluate, but only to clear away historical obstacles in the way of recapturing the intuition and to point out such lapses from clarity as clichés and reliance on set forms.

Croce's theory poses problems for the relation between composers and performers of music. The composer, as an artist, must have achieved a definitive intuition: the function of the executant can only be to recapture that intuition. But this is hard to apply in practice, and denies to the performer the status of artist. This issue was hotly debated between Croce's followers and others. Croce's later views, which modified his theory so as to assimilate all art to lyric poetry conceived as a cry from the heart, had less influence. His earlier theory is best known in the English-speaking world through the somewhat confused but polemically effective version formulated by R. G. Collingwood (*Principles of Art*, 1938).

Croce, Elena (fl. 1708–20). Italian soprano. She sang in operas by Caldara and Lotti at Venice in 1708 and in A. Scarlatti's *L'amor volubile e tiranno* at Naples in 1709. Probably early in 1710 she replaced Margherita Durastanti as Agrippina in some performances of Handel's *opera* at Venice. She sang there again, as Elena Croce Viviani, in 1712 and 1713. Early in 1716 she was in London, singing at the King's Theatre until June in the pasticcios *Lucio Vero* and *Cleante* and a revival of

Haym's adaptation of A. Scarlatti's *Pirro e Demetrio*. In 1719–20 she sang at Munich.

WINTON DIAN

Croce, Giovanni [Ioanne a Cruce Clodiensis; Chiozzotto] (b. Chioggia, c.1557, d. Venice, 15 May 1609). Italian composer, singer and priest. He was one of the best and most influential composers of the Venetian school, in both his sacred and his madrigalian music; he was in particular a master of the canzonetta and madrigal comedy.

1. **LIFE**. He was a pupil of Zarlino, who made him a member of the choir of St Mark's, Venice, while he was still a boy. He took orders before 1585 and for much of his life was in the employ of the church of S. Maria Formosa, though the evidence is conflicting as to whether he was ever parish priest. According to one report to the Venetian procurators he was a reliable singer of moderate quality. In the early 1590s he was made *vicinmaestro di cappella* of St Mark's, in 1593 being in charge of the singing teaching at its seminary. On the death of Baldassarre Donato in 1603 there was some dispute about the appointment of the *maestro*, one party favouring a search for a foreigner, but Croce's supporters gained the position for him. In his later years he suffered from gout, and there is evidence that the choir of St Mark's was not up to its usual standard during his six years of office. He died of some infection causing 'fever and spots'.

2. **WORKS**. Unaffected by most of the modern trends of his time, Croce's secular music is the epitome of the lighter style developed by Andrea Gabrieli. Setting the usual pastoral verse he preferred to ignore its sexual connotations and more emotional potential. Using diatonic melody based on crisp rhythmic motifs, and harmony which is rarely astringent and often full of cadential progressions, his madrigals are very attractive for the amateur singer, in mood and technique they can be compared with those of Thomas Morley, who imitated him quite closely in many ways. Though he was a competent contrapuntist his textures are rarely complex and never academic, they are the product of the twin-motif, whereby each theme is given a simultaneous counter-subject, thus making for concision and a distinctly homophonic attitude. His style can be heard at its best in the 'Spring' section of *I diporti della villa* (RISM 1601?) and in a similar madrigal sequence. *Ne la stagion novella*, in his first book of five-part madrigals (1585).

Croce's three-part canzonettas (1601) show his attractive melodic gift in their lively, balanced phrases, which are allowed to shape themselves without any reference to the imagery of the verse. The madrigal comedies are less abstract, possessing that fine grain of satire notable in their forebears, the *gustiniane* of Andrea Gabrieli. The *Triaca musicale* is a series of Venetian sketches - pictures of children going to school, folk games, peasants from the countryside (figures of fun in mercantile Venice) and so on - painted with musical allusions to popular songs of the time and occasionally geying the madrigal style. The *Mascherate piacevoli et ridicolose* is a set of dialect canzonettas, depicting by similar means the various characters in carnival entertainments. Both works include clever examples of echo music.

Croce's church music is also conservative. His

motets and masses include works written for a small choir, probably that of his parish church, which seem to reflect the needs of the Council of Trent in the audibility of the words and their general simplicity. His four-part motets (1597) are excellent examples of the small-scale church music that preceded the concertatos of Viadana. Designed for a group of singers lacking a true soprano, they are very easy to sing, never too demanding in either technique or emotion even when a penitential text might suggest a less detached attitude. Croce's style in these works, in both their smoothness of melody and purity of harmony, is closer to that of Palestrina than to that of his fellow Venetians, who were affected by the more abrasive rhythms and freer treatment of dissonance found in Lassus. His early works, for *cori spezzati*, are more obviously traditional to St Mark's and show a greater range. Those in the *Compietta* of 1591 tend to be constructed in more intricate counterpoint than his later music; the motets of 1594 show him following the paths of Andrea Gabrieli more closely in their densely argued dialogue and tendency to homophonic writing. He had much the same extrovert attitude to the words, which differentiates him from the more inward-looking Giovanni Gabrieli (who was almost his exact contemporary), and he excelled with texts of rejoicing. In spite of a title-page that suggests instrumental participation these motets do not use the extremes of range common in Venetian music at this time, and the style remains essentially vocal. Nor do they require keyboard support, even though this publication was one of the first to be supplied with a *basso per l'organo* (in fact a *basso seguente* which includes the bass part of each choir). The masses for eight voices (1596) are generally in a similar idiom, though their compactness makes for denser counterpoint. They are unusual in being parody masses, which were not often composed by Venetians for double choir (though they were later taken up in Germany) two use motets, the third Janequin's *La guerre* as models. The *Missa 'Percussit Saul'* is a particularly splendid work, full of virile rhythms and containing harmonic asperities not unlike those of English composers of the period. A later book of motets for eight voices (1605) seems equally to diverge from Venetian tradition in its lack of exploitation of sonorities, although there is still an effective use of double-choir dialogue and occasionally some new freedom of modulation between tonal centres.

The most significant of Croce's posthumously published music is contained in the *Sacre cantilene concertate* of 1610, which represents an attempt to combine the new concertato manner developed by Viadana with the Venetian grand manner. Each of these motets is divided into sections, in some of which solo voices are accompanied by the organ, others, alternating with them, being performed by ripieno voices with instruments if available. The differentiation of style between these sections, together with the fact that each is virtually self-contained, means that these are among the earliest works in the history of the church cantata. They may well have influenced Schutz in his use of *cori favoriti*, whose function is the same as that of the soloists in Croce's music.

Although he does not seem to have travelled abroad, Croce had a major influence on European music, especially as a madrigalist. Many of his works were reprinted in the Netherlands, and some were well known in England, where several of his best pieces were

reprinted with translations in the second book of *Musica transalpina* (1597). It was almost certainly his contribution to *Il trionfo di Dori* (RISM 1592¹¹) that acted as an incentive to Morley to compile *The Triumphs of Oriana*, and his set of spiritual madrigals setting vernacular versions of the penitential psalms (1596) was known in Germany and England, where it went into two editions. Croce was visited by Dowland and mentioned by Henry Peacham in *The Compleat Gentleman* (1622) as a distinguished composer, and some manuscript part-books (at *GB-T*) suggest that in the revival of madrigal singing in the 18th and 19th centuries he was a favourite with amateurs.

DFNIS ARNOLD

Croche (Fr.). QUAVERT (eighth-note); *fuse* and *huitième* are also used. See also NOTE VALUES.

Croci, Antonio (b. Modena, late 16th century; d. 1642 or later). Italian theorist, composer, organist and teacher

He was a minorite. His five published works arose out of his activities as a church musician and teacher, information about which derives from the title-pages and dedications of three of them. In 1633 he was organist of S Francesco, Bologna, and in 1642 was master of the novices at the monastery at S Felice sul Panaro, Emilia. He is more important as a theorist than as a composer. His last and most mature theoretical work, the *Geminato compendio*, is, as its title suggests, in two parts; the first deals with cantus firmi, the second with the rubrics of the breviary.

THEORETICAL WORKS

Instructio novitiorum (Faenza, 1630)

Breve discorso della perfezione del numero ternario (Modena, 1632)

Geminato compendio ovvero Dupliata guida per giungere facilmente alla perfezione del canto piano, op 5 (Venice, 1642)

WORKS

Messa, e salmi concertati, 4vv, org, op 3 (Venice, 1633)

Frutti musicali di messe tre ecclesiastiche, op 4 (Venice, 1642)

GIUSEPPE VILCCHI

Crocker, Richard L. (incoln) (b Roxbury, Mass., 17 Feb 1927). American musicologist. He graduated BA as Scholar of the House (Philosophical Orations) from Yale College in 1950, and completed the doctorate under Schrader in 1957 with a dissertation on the Limoges *prosa*. After teaching at Yale (1955-63), he became successively assistant professor (1963-7), associate professor (1967-71) and full professor (1971-) at the University of California at Berkeley. He became known for his independent ideas in *A History of Musical Style*, and in 'The Troping Hypothesis', for which he was awarded the Alfred Einstein Memorial Prize by the American Musicological Society. In 1969 he received a Guggenheim Fellowship. His work at Berkeley in developing methods of teaching non-musicians deserves mention (see *Listening to Music*). Crocker's major scholarly contribution, however, is to the history and analysis of the medieval sequence, and his work on music theory and early polyphony has been important in providing the basis for a new understanding of principles of composition in the Middle Ages, particularly those connected with tonal order.

PHILIP BRETT

Croes, Henri-Jacques de (b Antwerp, baptized 19 Sept 1705, d Brussels, 16 Aug 1786) South Netherlands composer, conductor and violinist. At the age of 18 (7 November 1723) he was named first violin at the St Jacques Church, Antwerp. In September 1729 he went to Brussels, where he entered the service of Prince Anselme-François of Thurn and Taxis. The prince held the monopoly of postal services in the Empire and had several residences, the most important being at Brussels and Frankfurt am Main and later at Regensburg; de Croes is mentioned in the prince's archives in Germany (in 1734, 1737-9 and 1742). By 1744 he was back in Brussels as a first violin in the chapel of Charles of Lorraine, whose sister-in-law, the Empress Maria Theresia, had made him governor of the Austrian Netherlands. In 1746 he became *maître de chapelle* at the court and directed the chamber music, for at that time the same musicians played in both chapel and court. There were six singers (two counter-tenors, two tenors and two basses) and 13 instrumentalists (six violinists, one violist, one cellist, one double bass player, two organists and two oboists), all of whom were French. For important festivals, the orchestra was augmented by the musicians of the most important collegiate church in Brussels, Ste Gudule (now the cathedral). De Croes remained master of music at the Brussels court until his death.

Given de Croes's circumstances, it is not surprising that he composed both church music and chamber music (in particular sonatas and concertos). He was in no way an innovator: his style may be described as an interweaving of the French and Italian traditions, as might be expected in the South Netherlands at a time when musical forms were in a stage of transition between the Baroque style and the *galant*. In his trio sonatas, for example, he wrote in the Corelli tradition with a slow introduction and fugal allegro followed by a number of movements alternately slow and fast. In other sonatas he conformed to a more modern Italian pattern: fast-slow-fast, with a lighter texture and more ornate melodic lines. The divertissements belong to the tradition of the French suite, with an overture in dotted rhythm followed by dances. As in the Italianate sonatas, the texture is light and the decoration combines French ornaments with new fashions like the 'Mannheimer Vorhalt' and the Lombard rhythms common in contemporary German music. The solo concertos and the concerti grossi are in the contemporary three-movement Italian style but with the lighter texture that was then employed in France after the manner of J. M. Leclair, the trademarks of the Mannheim school are also present, giving the concertos a pre-Classical accent. De Croes was influenced by Corelli, Vivaldi, Tartini and even Handel, and his opening themes frequently bear close resemblance to their works.

De Croes's extant church music includes several motets and fragments of masses, written for four voices and four instruments, with the usual tessituras; this was doubtless the force of the royal chapel and Ste Gudule. Despite the requirements of church music (particularly the masses), the idiom seems more instrumental than vocal. The instruments frequently double the voice parts or realize the figured bass in a fairly straightforward

manner. The motets are unusual in that they have a structure similar to that of the cantata, with alternating choruses and solo sections. In these works too, there is evidence of French influence (particularly of a tradition founded by Henry Dumont at the court of Louis XIV), combined with the traditions of the Italian cantata. De Croes's son, Henri-Joseph de Croes (*b* Brussels, 16 Aug 1758, *d* Brussels, 6 Jan 1842), was from 1775 a violinist in the service of the Prince of Thurn and Taxis at Regensburg, and *maître de chapelle* from 1776 to 1783. He is known to have composed only one work, a set of violin duos which his father presented to Charles of Lorraine in the (unfulfilled) hope that his son might succeed him as *maître de chapelle* at the Brussels court.

WORKS

- Sacred. Missa solennis, d, 4vv, 4 insts, 1738, *B-B*. Messe breve, d, 4vv, 4 insts, *B*. Kyrie and Gloria, 4vv, 4 insts, *B*. 5 motets, 4vv, 4 insts, *B*. Cum mirabiliter, motet, B solo, 4 insts, *B*. 53 masses, lost, 63 motets, incl. 24 with chorus, lost.
- Concs. 6 for 2 vn with 6 sonates 'a 4 parties', op 1 (Brussels, 1734), lost, 6 for 2 vn with 6 sonate, op 1 (n.p., n.d.) [*?* same as above], 4 for fl vn, with 4 divertimenti a 4 parti (Brussels, 1737), 1 for fl/vb *S-Skma*, 2 for fl, *Skma*, 5 for fl, 2 vn, 1 for fl vn, 1 for fl, *B-B*.
- Other inst. 6 sonates en trio, 2 vn/fl, bc, op 1 (Paris, before 1743), 6 sonates en trio, 2 vn, bc, op 3 (Brussels, 1747-49), publ. for 2 vn fl bc (Paris, before 1749), 6 divertissements, 2 vn, va, bc, op 2 (Paris, 1743-55), 6 sonates a 4 parties, 2 vn, va, bc, op 4 (Brussels, 1747), 6 divertimento, 2 vn, va, bc, op 4 (Paris, after 1749), 6 divertissements, 2 vn, vn/va, bc, op 4 (Paris, after 1750), 6 sonates en trio, 2 vn fl bc, op 5 (Paris, n.d.), 16 sym. orch, lost, 16 symphonies d'église, 4 insts, ob ad lib, lost.

SUZANNE CLERCX-LEFEUNE

Croft [Crofts], **William** (*b* Nether Ettington, Warwicks., baptised 30 Dec 1678, *d* Bath, 14 Aug 1727). English composer. He was a chorister in the Chapel Royal under Blow, of whom, as appears from verses prefixed to *Amphion anglicus* (1700), he was not only a pupil but a protégé. There is no reason to reject the probability that he is the 'Phillip Crofts' mentioned in the parish archives of St Anne's Church, Soho, as organist from 1700. In that year he renewed his connection with the Chapel Royal as Gentleman Extraordinary, sharing that post, together with the reversion of a place as organist, with Jeremiah Clarke (i). In May 1704 they jointly succeeded Francis Pigott as organist of the chapel, and when Clarke died in 1707 the whole place fell to Croft. His anthems in celebration of the battles of Blenheim and Ramillies show that he was already by then supplementing Blow's duties as a composer, and on Blow's death in 1708 he followed him not only as composer and Master of the Children of the Chapel Royal but also as organist of Westminster Abbey. Rather curiously, at some time before 1712, he paid for the restoration of the mon-

ument in Norwich Cathedral to William Inglist. In 1712 he relinquished his post at St Anne's.

In July 1713 Croft took the Oxford degree of DMus, being the earliest Oxford graduate in music relating to whom there survives solid extended work submitted for the degree, this took the form of two odes for solo voices, chorus and orchestra, *With noise of cannon* and *Laurus cruentas*, celebrating the Treaty of Utrecht, and published as *Musici apparatus academicus*. Croft was the senior Chapel Royal composer at the time when Handel began to find favour with Queen Anne, and even though there is no evidence of friction it is not impossible that this imposing volume may have seemed a means of maintaining the native composer's standing. In 1715 his stipend as Master of the Children of the Chapel Royal was increased by £80 a year, his duties to include teaching the boys reading, writing and arithmetic, as well as organ playing and composition. Croft broke new ground in 1724 by the publication of a handsome two-volume collection of his church music, entitled *Musica sacra*, engraved and in the form of a score rather than in parts, the advantages of which he cogently urged in his preface. A copy of his 'Proposals' to subscribers is now in the New York Public Library. A list dated 1726 (*GB-Lbm* Add 11732) shows that Croft was one of the earliest members of the Academy of Vocal Music. He married in 1705, but died childless.

William Croft, engraving by George Virtue from Croft's *Musica sacra* (1724)

and was buried close to Purcell in Westminster Abbey. Hawkins (*History*, II, 797) described him as a 'grave and decent man', and the imposing format of his two chief publications together with the nature of his music indicates that he took his position seriously.

Enough of Croft's songs and instrumental music is dated to justify the view that these branches of composition did not occupy him much after his third decade. His string pieces for the theatre are agreeable if not specially noteworthy, while his harpsichord music is smoother and more regularly turned than that of Blow, with whom Croft, together with others of Blow's scholars, combined in a publication of 1700 *The 'Hymn on Divine Musick'* from *Harmonia sacra*, II (1714), is worthily in the line of Purcell's sacred songs but has less intensity of feeling, in the pleasing solo cantata with flute, *By purling streams*, one sees the movements becoming shaped by purely musical considerations, not simply in response to the words, without yet becoming aria. Three sonatas for solo violin and continuo, written before the publication of Corelli's op. 5, are of an interesting quality and not merely because they adumbrate an understanding of the idiom of the late Baroque.

Croft was indeed the first English composer of substance to grasp that idiom in a consistent way without earlier gropings or admixture of styles. This is shown in the rhythmic vocabulary, contour of phrase, clarity of tonality, application of fugato and broad concertante handling of chorus and instruments as displayed in his *Te Deum* in D and *Musicus apparatus academicus*. For that reason it was Croft who among composers of his generation most decisively turned a new page in the history of the verse anthem. At the same time as he applied this idiom he also organized the anthem into well-rounded movements of clearly delineated abstract character, instead of the shorter-breathed sections of his predecessors. Solos, duets and trios make up the greater part of these anthems, and he used the organ (on lines already foreshadowed, but more systematically) by allotting introductory passages to it, sometimes in the form of melody and bass but much more frequently a melodic type of stiffly unfolding bass, figured to carry a simple chordal right-hand part. This type of anthem, which Croft transmitted to Greene, is well exemplified in *O praise the Lord, ye that fear him* in *Musica sacra*, II. Although he applied himself seriously to verse anthem composition and was entirely free from triviality, the general impression is somewhat dry. While in solo passages his melody is conventional, the sections for full choir are stolidly imitative. But like Blow and Purcell before him he was interested also in older polyphonic methods, and a small group of full anthems not only maintains this thread in English music but, as in *Hear my prayer, O Lord*, displays a sombre expressiveness.

In his services Croft, like others, was hampered by the restrictions of the 'short' service style. Nevertheless, in his Service in E♭ he achieved a broader feeling than his post-Restoration predecessors, and when reaching the Gloria to the *Jubilate* of the Service in A he launched into a rolling fugato of considerable effectiveness. The orchestral *Te Deum* and *Jubilate* is a dignified work, perhaps more spacious than Purcell's if less personal, which might well have established itself had it not been overshadowed by Handel's 'Utrecht' setting of some four years later. Croft's Burial Service is a noble classic of moving simplicity, into which, without any degree of incongruity, he overtly incorporated

Purcell's setting of *Thou knowest, Lord*.

Croft's hymn tunes in Playford's *The Divine Companion* include those now known as 'Eatington' and 'Croft's 148th'. What are now called 'St Matthew' and 'St Anne' first appeared in the sixth edition of the *Supplement to the New Version* (1708), a wholly anonymous collection, but the subsequent ascription of these to him is generally accepted as a probability. There is, however, much room for doubt about the ascription to him of 'Hanover' from the same collection (see article 'Saint Anne's Tune' in earlier editions of *Grove*).

WATKINS SHAW

Croix, Antoine. See LACROIX, ANTOINE

Croiza [Conelly], **Claire** (b Paris, 14 Sept 1882, d Paris, 27 May 1946) French mezzo-soprano. Croiza made her début in Nancy in December 1905 (in de Lara's *Mesvalina*). The following year she began her long association with the Théâtre de la Monnaie, Brussels (début as Delilah, September 1906), where her wide repertory included Berlioz's Dido, Clytemnestra in Gluck's *Iphigénie en Aulide* and in Strauss's *Elektra*, Erda, Carmen, Donizetti's Leonora, Massenet's Charlotte and Fauré's Penelope. At the Paris Opéra she appeared in 1908, as Delilah. At Rouc'hé's Théâtre des Arts in 1913 she sang in the d'Indy editions of *Poppea* and Destouches' *Éléments*, and an act of Gluck's *Orphée*. She sang the title role in Gustave Doret's *La tisseuse d'orties* at its first performance in 1926 at the Opéra-Comique, and in the first staged performance of Debussy's *La damoiselle élue* in 1919 at the Théâtre du Vaudeville.

From 1922 Croiza gave courses of interpretation at the Ecole Normale, and from 1934 at the Paris Conservatoire. Janine Micheau, Jacques Jansen, Camille Maurane and Gérard Souzay were among her pupils. She travelled largely as a recitalist, specializing in programmes illustrating French poetry of many periods. She was a regular visitor to London, where she had an enthusiastic following.

Croiza's instinct for the nature of the French language and her intelligence, clarity of tone, and passionate reserve caused her to be admired as much by poets as by musicians; in 1924 Paul Valéry hailed her as possessing 'la voix la plus sensible de notre génération'. Among the older French composers of her day Saint-Saëns, d'Indy, Fauré and Duparc admired her unreservedly, and of the next generation Debussy, Schmitt, Roussel, de Bréville and de Séverac. When she was no longer young, Honegger, Milhaud and Poulenc were delighted to entrust, and on occasion to dedicate, their songs to her. Her silvery yet warm tone, and that 'volupté du son' based on pure, perfect utterance of the words, can still be heard on her gramophone records.

MARTIN COOPER

Crokhorne. See CRUMHORN.

Croll, Gerhard (b Düsseldorf, 25 May 1927). Austrian musicologist of German origin. He studied musicology, art history and philosophy at the University of

Gottingen (1948–54) and received his doctorate in 1954 under Rudolf Gerber with a dissertation on Weerbeke's motets. After working for four years on a scholarship from the Deutsche Forschungsgemeinschaft he became assistant lecturer in 1959 at the University of Münster, Westphalia, where two years later he completed his *Habilitation* with a work on Steffani. In 1966 he was appointed to the newly created chair of musicology at Salzburg.

Croll worked initially in the field of sacred music of the 15th and 16th centuries, but after submitting his doctoral dissertation he turned to Italian and German Baroque opera as well as to music of the Classical era. One of the editors of the Gluck-Gesamtausgabe, he has been editor-in-chief since 1960. He is also a member of the Zentralinstitut für Mozart-Forschung and contributes to the Neue Mozart-Ausgabe. Some of his more remarkable Mozart discoveries include the Larghetto and Allegro in E♭ for two pianos (KV deest) and a sixth string quartet arrangement of a Bach fugue by Mozart (K405).

Croner, Daniel (b Braşov, 22 March 1656, d Hălchiu, 23 April 1740) Transylvanian composer and organist of Saxon descent. He studied theology and music in Braşov and Breslau, and, with the organist Johann Ulich, in Wittenberg. In addition to his work as an officer of Braşov City Council, he was organist of the Black Church, after completing his studies, he became a professor of organ and composer there. During his last years he was organist of the Evangelical Church in Hălchiu.

From the four manuscript collections of organ music

in tablature in the Library of the Black Church in Braşov (dated Braşov, 1675; Breslau, 1671; Wittenberg, 1682, Braşov, 1685, respectively), it is possible to distinguish not only Croner's considerable musical skills but also an innovative spirit underlying the works. The fugues, preludes, toccatas, fantasias and chorales all mark the transition from the earlier polyphonic style (illustrated by the works of Johann Ulich, Johann Froberger, Bernhard Meyer and Johann Kittel, some of whose pieces are included in his collections) to the new styles of the high Baroque. The composer's main innovation was the idea of a collection of pieces in a complete cycle of keys, for example, his own organ pieces (cf. Bach's later *Das wohltemperirte Clavier*). Other important features include the rhythmic variations of choral themes, the departure from early church modes, and the frequent introduction of the pedal. Quite interesting and original (in view of information expressed in earlier treatises) are the fingering methods he recommended for keyboard instruments and the finger extension principle for the execution of preludes and capriccios.

VIOREL COSMA

Cröner, Franz Carl Thomas (b Augsburg, c1724, d Munich, 1 Dec 1787) German composer, violinist and flautist. He was the son of Thomas Croner (c1690–1757), court musician to the Prince-Bishop of Augsburg and violinist at the Munich court from 1735. Franz Carl Thomas became an *Accademist* (unsalaried player who succeeded to a salaried post when one became vacant) in the Munich court orchestra in 1737/8 and for a time he was in the service of the abbot of the Benedictine Rot Abbey. During the early 1740s he toured extensively, going as far afield as Russia and England, with two of his brothers, Franz Ferdinand (b Augsburg, 24 March 1720, d Munich, 12 June 1780), violinist and flautist, deputy Konzertmeister at the Munich court from 1754 and Konzertmeister from 1772, and Anton Albert (b Augsburg, 23 April 1727, d Traunstein, 30 Sept 1770), a cellist and from 1745 court violinist at Munich; JOHANN NEPOMUK CRÖNER was another brother. Franz Carl Thomas and Anton Albert were sent to Italy for musical study in 1744/5 by Emperor Charles VII, in 1748 Franz Carl Thomas entered the service of Maximilian III Joseph as a court musician, as both violinist and flautist, and the five 'Sinfoniae' and 'Sonatae' listed in the 1753 Hofkapelle catalogue are probably by him. In 1759 he was made court composer. In this capacity he provided the elector with six viola da gamba concertos annually, none of which survives, his only known music is a six-movement Sinfonia in C (*D-HAR*) and *Six Sonatas for two Violins with a Thorough Bass* (London, 1758), works largely in the Baroque tradition. He also wrote for the Munich court the scenic oratorio *Il Giuseppe riconosciuto* (1756; libretto by Metastasio) and for the Greater Latin Congregation he wrote the Lenten

meditations *De bono usu mediorum ad finem, sive Job* (1751) and *Odoratus* (1761). For the Jesuit grammar school in Munich he wrote the comedies *Alphonsi Peresii Gusmani in regem fidelitas* (1760), *Religio Joviniani* (1761) and *Urbanitas praemium* (1763). Only the librettos of these works survive.

The family, also referred to as Kroner, Groner, Krenner or Kriener, was ennobled in 1749 and thereafter known as von Croner. A son of Franz Carl Thomas, Theobald (baptismal name Alois, 1763–1806), was a violinist who composed music, none of which survives, for the Cistercian Raitenhaslach Abbey, Upper Bavaria; Joseph von Croner (b 1754), a son of Franz Carl Thomas or his brother Anton, was a violinist in the Munich court orchestra, 1775–8.

ROBERT MÜNSTER

Cröner, Johann Nepomuk (b ?Munich, c1737, d Munich, 24 June 1785) German composer and violinist, brother of FRANZ CARL THOMAS CRÖNER. He was an *Accessist* (unsalaried player who succeeded to a salaried post when one became vacant) in the Munich court orchestra for some time before 1748. On 1 September 1751 he became a full court and chamber violinist. In 1774 he became vice-Konzertmeister of the orchestra, which he probably led at the premiere of Mozart's *La finta giardiniera* on 13 January 1774 at the Munich Salvator Theatre (see Leopold Mozart's letter of 18 October 1777, where he mistakenly called Johann Nepomuk 'Jos'). Of his compositions, six four-movement symphonies and a violin concerto survive (*D-Mbs*).

His wife Maria Josepha Croner (b ?Munich, c1737, d Munich, 24 June 1785) was a soprano who sang in opera and oratorio performances at the Munich court between 1753 and 1766; she was probably a daughter of the Munich court singer and tenor Johann Baptist Anton Perberich (1703–59).

For bibliography see CRÖNER, FRANZ CARL THOMAS

ROBERT MÜNSTER

Croner de Vasconcelos, Jorge (b Lisbon, 11 May 1910, d Lisbon, 9 Dec 1974). Portuguese composer and pianist. After initial studies with his mother, Laura Croner, he entered the Lisbon Conservatory, where he studied the piano with Silva and composition with de Freitas Branco. A government grant enabled him to pursue his studies in Paris with Dukas, Boulanger, Roger-Ducasse and Cortot. On returning to Lisbon he was appointed professor at the conservatory, and he continued his activities as a pianist. His works reveal a certain delicacy of harmonic and melodic style, with a tendency towards short, condensed forms, in which he subtly

attempted to recapture moods of other times, as in the *Toccatas a Carlos Seixas*.

JOSÉ CARLOS PICOLO

Cronhamn, Johan [Jóns] Peter (b Östra Karup, Halland, 7 May 1803, d Stockholm, 15 June 1875) Swedish composer, organist and educationist. He was first a glazier, then a schoolteacher in Lund (1821–5), and began formal musical studies in 1825 at the conservatory in Stockholm. He was organist of Skeppsholm Church in Stockholm (1827–37) and became a teacher at the conservatory in 1842. He joined the Royal Academy of Music in 1843 and was made its secretary in 1860. He edited the academy's proceedings from 1865 to 1873 and published a centenary account of its achievement, *Kongliga Musikaliska Akademien åren 1771–1871*. He wrote chiefly vocal music, including solo songs and quartets for male voices; he also edited sacred music for school performance and arranged 60 songs by Carl Bellman for male chorus. Besides his choral compositions, his contribution to Swedish musical life lay in the area of education.

His son Frithiof August Cronhamn (b Stockholm, 26 June 1856, d Stockholm, 28 April 1897) was a music librarian and critic.

ROBERT LAYTON

Crook (Fr *corps de rechange*, *ton de rechange*; Ger *Stimmhogen*) Detachable lengths of tubing inserted into brass instruments for the purpose of changing the tube length and hence the pitch. Since natural horns and trumpets can sound only the notes of the harmonic series, the sole way of playing this series at another pitch is to alter the fundamental note, and this is done by the crooks, which on the horn used to number up to ten, giving a range of notes from *Bb*'' to *Bb*'. The earliest mention of a crook is, however, for the trombone, in 1541: it was inserted between slide and bell joints to allow performance of parts lower than those for which the instrument was constructed. Horn and trumpet crooks are of two kinds. The commonest, inserted between mouthpiece and instrument, was known as a 'terminal' or 'mouthpiece' crook (so called because it incorporates a mouthpiece, which receives the mouthpiece). Less common are 'medial' or 'slide' crooks, inserted like a tuning-slide and having two legs. In Germany during the 18th century an 'Inventionshorn' or trumpet might have had crooks of either kind.

Although the need for crooks was greatly reduced by the invention of valves, many types of instruments were provided with crooks throughout the 19th century – and even into the 20th – so that a given harmonic series could be produced without the use of valves, and in

order to preserve the special tonal and technical qualities of crooks

The term is also applied to the curved metal tube upon which is placed the reed of a bassoon or english horn, and generally to any such removable bent tube holding a mouthpiece, as in saxophones and the deep clarinets

ANTHONY C. BAINES

Crooks, (Alexander) Richard (b Trenton, NJ, 26 June 1900, d Portola Valley, Calif., 1 Oct 1972) American tenor. He sang as a boy soprano, then studied with Sidney H. Bourne and Frank La Forge. Making his New York debut in 1922 under Walter Damrosch, he was initially very successful as a recitalist and in appearances with orchestras. He first sang in opera at Hamburg as Cavaradossi in 1927, then made appearances with the Berlin Staatsoper and in other European centres. His American opera debut was in Philadelphia, also as Cavaradossi, on 27 November 1930. Engaged by the Metropolitan Opera, he made his debut there as Massenet's Des Grieux on 25 February 1933. He sang leading lyric roles, mostly French and Italian, with the company and elsewhere in the USA as a guest for the next ten seasons, then continued a concert career until 1946. Crooks had a beautiful voice which, though limited in the upper register, was admired for its consistently high standard of tone and production. He was a sound musician but an indifferent actor. He was one of America's most popular tenors, especially in recital, radio and on records, where his repertoire included much light music.

MAX DE SCHAUENSEF

Crooning. A style of quiet, sentimental popular singing current from the 1920s to the 1950s. It originated when the radio microphone enabled performers to sing quite softly and still be heard. The pioneers included 'Whispering' Jack Smith, 'Little' Jack Little and Rudy Vallee, who was perhaps the first to transfer this style to the electronic public-address systems of ballrooms and auditoriums. Later singers like Russ Colombo, Bing Crosby, Perry Como and Frank Sinatra learnt to exploit the sensitive response of improved microphones and engineering techniques, and sang with a fuller voice and a wider dynamic range.

See also SINGING, §7

HENRY PLEASANTS

Crosby, Bing (Harry Lillis) (b Tacoma, Washington, 2 May 1904; d Madrid, 14 Oct 1977). American popular singer and actor. When he was a boy he played the drums and sang (without a microphone) in small jazz groups in Spokane. With Al Rinker (Mildred Bailey's brother) and Harry Barris he formed the Rhythm Boys, who sang from 1926 to 1930 with the Paul Whiteman Orchestra. He began working independently in about 1930; in 1931 he started a spectacularly successful career in radio (with the theme song *Where the blue of the night*) and musical films, notably *Holiday Inn* (1942) with a score by Irving Berlin that included *White*

Christmas. In Crosby's many records made in the 1930s he was influenced by Al Jolson and jazz, and evolved a style of singing appropriate to the microphone, using it to emphasize the text rather than the tune. He was one of the first crooners, and as the most popular singer of his generation prompted the definite separation of classical from popular singing. His way of seeming to talk or whisper to a melody involved singing less forcefully, passing into the head voice lower than art-song performers, singing on consonants (a practice of black singers shunned by classical artists) and the discreet use of appoggiaturas, mordents and slurs to emphasize the text. These devices were emulated by nearly all later popular singers.

His four sons from his first marriage were popular singers, and his brother Bob (George Robert Crosby, b 1913) was a successful singer and band-leader from the mid-1930s.

 HENRY PLEASANTS

Crosby, Fanny Jane (b South East, Putnam Co., NY, 24 March 1820, d Bridgeport, Conn., 12 Feb 1915). Leading American poet of gospel hymnody, author of several thousand gospel hymn texts. See GOSPEL MUSIC, §1. She wrote *Memories of Eighty Years* (Boston, Mass., 1906), see also B. Ruffin *Fanny Crosby* (Philadelphia, 1976) and G. H. Gienzmer 'Crosby, Fanny Jane', *DAB*.

Crosby, John (O'Hea) (b New York, 12 July 1926). American opera company general director and conductor. He was educated at Yale University (BA 1950), and was an accompanist, opera coach and conductor in New York from 1951 to 1956. In 1957 he founded the SANTA FE OPERA COMPANY in New Mexico and became its general director and a staff conductor. Almost wholly owing to Crosby's vision, it has established itself as an innovative and dynamic company, presenting many American and world premieres. Crosby himself has conducted the American stage premiere of Richard Strauss's *Daphne* (1964) and the world premiere of Carlisle Floyd's *Wuthering Heights* (1958). In 1976 he became head of the Manhattan School of Music, New York, in addition to his Santa Fe duties.

PATRICK J. SMITH

Crosdill, John (b London, 1755; d Eserick, Yorks., Oct 1825). English cellist. He was a chorister at Westminster Abbey and later a pupil of Jean-Pierre Duport; when he was nine he made his first appearance as solo cellist, in a concert given by Sipurini. He held appointments as violist at the Chapel Royal from 10 March 1778, member of the king's private band from 1778, chamber musician to Queen Charlotte from 1782 and composer of the state music of Ireland from 1783 (no compositions survive). He was a principal cellist at the Three Choirs Festival (1769-77 and 1779-87), at the Professional Concerts (1783-c1787), at the Handel Commemoration (1784) and at the Concert of Antient Music (1785-c1787). He was, with James Cervetto, the foremost cellist of his generation in Britain, his tone grander and more brilliant than Cervetto's but less expressive.

On 31 May 1785 he married a rich widow, and retired about two years later. He did, however, play at the coronation, in 1821, of George IV, his former cello

pupil. He left £1000 to the Royal Society of Musicians, of which he had been a member since 4 December 1768

GRAHAM SADI ER

Joan Cross as Elizabeth I in Britten's 'Gloriana'

Cross, Joan (b London, 7 Sept 1900) English soprano and producer. She was educated at St Paul's Girls' School, where she studied music with Holst, and at Trinity College of Music, where her singing teacher was Dawson Freer. In 1924 she joined the chorus of the Old Vic, soon undertaking such roles as Cherubino and the First Lady (*Die Zauberflöte*). She was principal soprano of Sadler's Wells Opera from 1931 to 1946, she sang Kupava in the first performances in England of Rimsky-Korsakov's *The Snow Maiden* and Miltrisa in his *The Tale of Tsar Saltan* (both 1933). Her Covent Garden début was during the 1931 English opera season, as Mimi. Having directed the Sadler's Wells Opera Company, 1943-5, at the reopening of the theatre in 1945 she sang Ellen Orford in *Peter Grimes*; other Britten roles that she created are the Female Chorus in *The Rape of Lucretia* (Glyndebourne, 1946), Lady Billows in *Albert Herring* (Glyndebourne, 1947), Elizabeth I in *Gloriana* (Covent Garden, 1953) and Mrs Grose in *The Turn of the Screw* (Venice, 1954). A founder-member of the English Opera Group, she began producing opera in 1946 with *Der Rosenkavalier*

(Covent Garden) and subsequently *La traviata* (Sadler's Wells, 1950) and several operas for the Norwegian National Opera. In 1948 with Anne Wood she founded the Opera School, which in 1955 became the National School of Opera. A singer of sincerity, intelligence and technical skill, she was a complete operatic performer for whom words and music were of equal importance. She was made a CBE in 1951.

HAROLD ROSENTHAL

Cross, Letitia (b c1681; d after April 1725). English singer, actress and dancer. Miss Cross was 'the girl' in Purcell's theatre company in the last few months of his life, when he wrote several songs for her, including 'I attempt from love's sickness' (in *The Indian Queen*), 'Man is for the woman made' (*The Mock Marriage*) and 'From rosy bowers' (*Don Quixote*, part iii). Daniel Purcell and Jeremiah Clarke later wrote for her. A pert and lively personality is indicated by the prologues and epilogues she delivered and her acting roles such as Hoyden in Vanbrugh's *The Relapse*. In 1698 she went off to France with 'a certain baronet' but returned in 1704. She resumed her old roles and songs and established herself as a dancer. Her last benefit was in April 1725 and she was described as 'dead some years' in 1731.

OLIVE BALDWIN, THELMA WILSON

Cross, Thomas (b ?London, ?1660-65; d ?London, ?1732-5) English music engraver, printer, publisher and music seller. He was probably the son of the 17th-century engraver Thomas Cross, who engraved some frontispieces and portraits for John Playford's publications, including the portrait of the composer John Gamble (*Ayres and Dialogues*, 1656), and who may have engraved some music. From 1683 to about 1710 the younger Cross often signed himself 'Tho Cross junior sculpt', as on his first known work, Purcell's *Sonnata's of III Parts* (1683), printed for the composer. From about 1692 to about 1720 he kept a music shop in London. He was the first to issue songs in single sheet format rather than in collections, and from the 1690s a considerable number of these appeared under his imprint. At first they were engraved on copper plates, which was an expensive method considering the ephemeral nature of the sheet songs, but he later used a cheaper material, probably pewter. He had a virtual monopoly of the music engraving trade at the end of the 17th century and worked for composers and other publishers, including Cullen, Meares and Wright, in addition to issuing his own publications. Walsh soon became Cross's great rival, despite their occasional business association. However, Cross scorned Walsh's frequent use of punches rather than pure engraving and warned on one of his sheet songs 'beware of the nonsensical punch ones'. It is doubtful that Cross ever did any work with punches, despite Hawkins's assertion that he did stamp the plates of a work by Geminiani. References in Purcell's *Orpheus britannicus* (1698) and Blow's *Amphion anglicus* (1700) attest to his fame and to the popularity of the new sheet music. He engraved in a bold style and his early work is particularly fine. It is clear, however, that he employed assistants, which probably accounts for some of the differences in engraving

style which occur on plates bearing Cross's name, particularly in the later part of his career. Important works engraved in the Cross workshop included Purcell's and John Eccles's *A Collection of Songs* (c1696), Daniel Purcell's *Six Cantatas* (1713), Handel's *Radamisto* (1720, for illustration see MEARS) and Benjamin Cooke's edition of Corelli's sonatas and concertos (1732), one of Cross's last known works.

Crosse, Gordon (b Bury, 1 Dec 1937). English composer. He studied at Oxford University with Wellesz, graduating in 1961, after which he spent a further two years at Oxford doing research into early 15th-century music. In 1962 he studied briefly with Petrassi in Rome. He has combined his activities as a composer with a succession of academic posts. From 1964 he was senior music tutor in the extra-mural department of Birmingham University, and in 1966 became Haywood Fellow in Music, also at Birmingham. In 1969 he moved to East Anglia as Fellow in music at the University of Essex, and in 1973 was composer-in-residence at King's College, Cambridge.

Crosse's earliest works, mostly for small chamber instrumental combinations, are serial in technique and rather fastidious in manner, influenced by Webern and, among British composers, Maxwell Davies. Crosse has related how his teacher, Petrassi, drew his attention to a certain expressive limitation in the style of the *Concerto da camera* (or Violin Concerto no 1), and encouraged Crosse to recompose the scherzo of that work in a more vigorous and trenchant manner. This exercise seems to have had a liberating effect on Crosse's subsequent music. In the song cycle *For the Unfallen*, composed the following year (1963), the solo voice is used for the first time in that energetic declamatory style, carefully moulded to the contour of the words, which is later also a feature of the operas *Purgatory* (1966) and *The Story of Vasco* (1968-73). From the same period date Crosse's first essays in music for children, of which he was to become an accomplished exponent. *Meet my Folks* and *Rats Away!* (both 1964) are a highly characteristic blend of crisp modernism with snappy, distinctive melody and piquant instrumental colouring. In *Changes* (1965-6), a large choral work passingly influenced by Britten, these same virtues invade Crosse's music for adults. The mellowing process continued in subsequent works, under the pressure of Crosse's interest in and flair for vocal declamation. Thus in the so-

called 'monodrama' *Memories of Morning Night* (1971) the vocal writing is lyrical as well as dramatic, while in *The Cool Web* (1973-4) it is almost entirely lyrical and picturesque.

Crosse's instrumental and orchestral music is more uneven in quality, but advantageously reflects the individualized declamatory and lyrical style of his vocal works. This is most noticeable in the concertante works, *Ceremony* for cello and orchestra (1966), the Violin Concerto no. 2 (1969), *Ariadne* for oboe and chamber ensemble (1971-2) and *Wildboy* (1978) for clarinet with cimbalom and seven players. Here a dramatic and expressive impulse is very pronounced. The concerto typically juxtaposes inert, reflective episodes with developmental passages of great virtuosity and expressive vigour. The transitions are handled, furthermore, with a skill and timing that partly conceal that the argument is rather over-extended (a fault to which the operas are also prone, except *Purgatory*). Crosse's symphonic works suffer, on the other hand, from the lack of any comparable individualized focus. In the Symphony no. 2, for instance, his fertile invention and dazzling aural sense cannot make up for the lack of real tension or growth in the ideas themselves. It is also noticeable that, since leaving Rome, Crosse has written no significant chamber instrumental music, discounting the concerto-like *Ariadne* and *Wildboy*.

As an opera composer Crosse has shown technical mastery and versatility in a genre to which British composers have been increasingly drawn since World War II but with variable success. In no sense is he an innovator. But in the one-act *Purgatory*, based directly on the late play of that name by Yeats, he showed himself immediately in command of the traditional materials of expressionistic melodrama, and not at all inhibited by the heavy Celtic gloom or the presence of only two characters engaged in a pre-eminently psychological struggle. The later operas, including the one-act comedy *The Grace of Todd* (1967-74), the three-act romance *The Story of Vasco* and the allegorical *Potter Thompson* (1972-3), all suffer from long-windedness and the composer's tendency to repeat himself, but are redeemed by their unflinching musical inventiveness, their apt and skilful writing for voices and instruments, and their underlying humanity of conception and feeling. *The Story of Vasco* is Crosse's only full-length proscenium opera, while *Potter Thompson* and *Wheel of the World* both adopt the morality-play style favoured by the avant garde, and lend themselves to performance in church or concert hall. It remains to be seen whether this is a real rather than modish tendency in Crosse's work, or whether his fairly traditional though eclectic idiom will again draw him back to the enclosed world of conventional opera.

STEPHEN WALSH

Cross-fingering. See FINGERING, §III.

Cross flute. An older name for the FLUTE (i.e. the transverse flute), used to distinguish it from the end-blown RECORDER.

Crossley, Paul (Christopher Richard) (b Dewsbury, Yorks., 17 May 1944). English pianist. An English graduate of Oxford (where he was organ scholar at Mansfield College), he studied the piano with Fanny Waterman in Leeds. In October 1967 he obtained a French government scholarship for study with Messiaen and Yvonne Loriod in Paris; the following year he won the Messiaen Piano Competition at Royan, and first appeared in London, at the French Institute. Tippett wrote for him a Third Piano Sonata, first played at the 1973 Bath Festival (26 May), and in London shortly afterwards in a memorable recital of all three Tippett sonatas (later recorded) and Messiaen pieces (he wrote about the new Tippett work in *The Listener*, 24 May 1973). A fluent technician with an easy mastery of

Messiaen's intricate rhythmic patterns and Tippett's 'mosaic' structures, he compensates with thoughtful musicianship for what his performances may sometimes lack in excitement. Mozart and Beethoven concertos and solos by Schumann, Debussy, Albeniz and Nicholas Maw (first performance of *Personae*, Elizabeth Hall, August 1973) form part of his wide repertory

MAX LOPPERT

Crossley-Holland, Peter (b London, 28 Jan 1916). English ethnomusicologist and composer. After studying physiology at St John's College, Oxford (BA 1936, MA 1941), he took a BMus at the RCM, London, in 1943. He also studied composition with Ireland, Seiber and Julius Harrison and carried out postgraduate work in Indian music at the London School of Oriental and African Studies. He was successively a regional director of the Arts Council (1943-5), a member of the music division of the BBC (1948-63) and an assistant director of the Institute of Comparative Music Studies and Documentation, Berlin (1964-6). He joined the faculty of the University of California at Los Angeles in 1969 and was appointed professor of music there in 1972 and chairman of the Council on Ethnomusicology in 1976.

In his ethnomusicological research he has concentrated on Celtic, Tibetan and native American music. The results of his studies and analyses of Tibetan vocal and instrumental music have been published in several articles; he has made a number of field recordings of sacred and secular pieces. He has also composed music for chorus, solo voices and various combinations of recorders. In 1965 he became editor of the *Journal of the International Folk Music Council*.

PAULA MORGAN

Cross-relation. See FALSE RELATIONS

Cross-rhythm. The regular shift of some of the beats in a metric pattern to points ahead of or behind their normal positions in that pattern, for instance the division of 4/4 into 3+3+2 quavers, or 9/8 into 2+2+2+3 quavers, if every beat is shifted by the same amount, this is called SYNCOPATION

See also POLYRHYTHM, RHYTHM

Crot. See CRWTH

Crotal. A hollow-sphere bell, such as a sleigh-bell, see BFIL (1)

Crotalum (Lat., Gk. *krotalon*) A term usually appearing in the plural, *crotala*, for an instrument resembling the castanet; it was probably the most common percussion instrument of classical antiquity. It consisted of two pieces of wood, bone or bronze, held in one hand and struck together by the action of fingers and thumb. Normally a pair was held in each hand. (For illustration see CLAPPERS, fig.3)

Like other ancient percussion instruments such as the tympanum and the cymbalum their most prominent iconographic representation was in the orgiastic rites of Dionysus and Cybele, where they were depicted in the hands of dancing women and satyrs. However, their usage seems to have extended to every occasion with dancing, whether cult, theatrical or domestic, with the possible exception of highly formalized choral dancing as in the Greek tragedy of the classical period

JAMES W. McKINNON

Crotch, William (b Norwich, 5 July 1775, d Taunton, 29 Dec 1847). English composer, organist, theorist and painter. He was a child prodigy without parallel in the history of music, and became one of the most distinguished English musicians of his day

1. LIFE. Crotch was the youngest son of Michael Crotch, a master carpenter, and his wife Isabella. At the age of about 18 months he began to pick out tunes on a small organ which his father had built, and soon after his second birthday he had taught himself to play *God Save the King* with the bass. He played to a large company at Norwich in February 1778, and at the beginning of November his mother began taking him on a series of tours in which his phenomenal gifts were exploited. They went first to Cambridge, then to London, where on 10 December 1778 Daines Barrington heard him play tunes 'almost throughout with chords'. On 1 January 1779 he played to the king and queen at Buckingham Palace. He could transpose into any key, and name all four notes in a chord by ear. Burney described his abilities in a report to the Royal Society on 18 February 1779. A second visit to London followed in October 1779, when an advertisement announced that 'Mrs. Crotch is arrived in town with her son, the Musical Child, who will perform on the organ every day as usual, from one o'clock to three, at Mrs. Hart's, milliner, Piccadilly'. He then toured the British

Isles, appearing several times in Scotland. He could play the organ, piano and violin, had already begun to compose, and was also talented in drawing and painting. On a visit to Leicester he played to William Gardiner, who reported that he could read Handel's organ concertos at sight.

The evidence of Crotch's precocity is incontestable, being based in part on contemporary printed accounts in many sources, including those of such qualified observers as Barrington and Burney. The fact that Crotch's ultimate achievement as a composer hardly lived up to this promise may perhaps be put down to the psychological damage he suffered as a child, when his mother dragged him from town to town to earn the wonder and the patronage of fashionable people. He was described in later life as being 'of a retiring disposition', and in old age became extremely conservative.

From 1786 to 1788 he was at Cambridge, as assistant to Professor Randall, who called him 'Dr Crotch'. He played the organ for services at King's, Trinity and Great St Mary's church. Then he was sent to Oxford and placed in the care of the Rev A C Schomberg, tutor of Magdalen College, who began to prepare him to enter the university and take orders in the church. This plan was dropped when Schomberg's health broke down and Crotch continued his musical studies. His oratorio *The Captivity of Judah*, prepared under Schomberg's guidance, was performed at Trinity Hall, Cambridge, on 4 June 1789. In September 1790 Crotch was appointed organist of Christ Church, Oxford, while still only 15 years old. During this period he came much under the influence of JOHN MATCHAIR, leader of the Oxford Music Club orchestra, who like Crotch was a painter as well as a musician. He took the degree of BMus on 5 June 1794, and that of DMus on 21

1. William Crotch, aged 3: engraving by James Fittler

November 1799 In March 1797 he succeeded Hayes as professor of music and organist of St John's College, and was also appointed organist of St Mary's church. At this period he directed the concerts of the Oxford Music Club. In 1800-04 he delivered a course of lectures on music in the university, the first of their kind, in 1804-7 he gave a similar series at the Royal Institution, and during those years he spent more and more time in London. In 1806-7 he gave up his Oxford organistships, and left the city; but he retained the professorship until his death, and continued to award degrees and to compose odes at chancellors' installations – the professor's only formal duties in those days.

In London Crotch became well known as a teacher, composer and scholar. His appearances as a soloist were infrequent but remarkable. He sometimes played one of his organ concertos at a benefit concert. On 7 June 1809, he played a programme of his own arrangements of Handel's music for organ and piano to commemorate the 50th anniversary of the composer's death (possibly the first example of a 'one-man' public concert in Europe). He assisted Samuel Wesley and Benjamin Jacob in bringing out the music of Bach at organ recitals. In 1812 came the performance of his oratorio *Palestine*, a considerable event in London's musical life, for it was the first even moderately successful oratorio composed in England since Handel's day. It was repeated many times in London and the provinces, though Crotch never printed the score and charged 200 guineas for the loan of the instrumental parts and his own attendance as conductor at each performance.

He was an associate of the Philharmonic Society on its foundation in 1813, and a member in 1814-19 and 1828-32. He frequently conducted concerts 'at the pianoforte'. His *Symphony in F* was performed by the society in 1814. From 1820 he again lectured at the Royal Institution. On the establishment of the Royal Academy of Music in 1822 Crotch was appointed its principal. He himself instructed the pupils in harmony, counterpoint and composition. Sterndale Bennett remembered him with affection.

An active man, he used to walk from his house in the neighbourhood of Campden Hill to Tenterden Street, entering his classroom with his pockets distended by paint-boxes and sketch-books, and allowing his pupils, to their great delight, to examine any additions he had made on his walk through Kensington Gardens. A musical treat, often enjoyed by his class, was his playing from memory a series of the Choruses of Handel, which he could select with endless variety.

He resigned the principalship on 21 June 1832. In that year, on the institution of the Gresham Prize for church music, Crotch was appointed one of the judges, along with Horsley and Stevens. In 1834 he produced at Oxford a third oratorio, *The Captivity of Judah* (composed 1812-15), a work which is entirely distinct from the composition of the same name performed at Cambridge 45 years before; it was repeated in London in May 1836. Crotch's last public appearance was at the Handel Festival in Westminster Abbey, when he played the organ on 28 June 1834. In retirement he devoted himself to sketching, composing and writing on all manner of subjects, especially for the benefit of his young nephews, nieces and grandchildren. He would sometimes visit his son, the Rev. W. R. Crotch, who was master of the grammar school, Taunton; it was during one such visit that he died. He was buried at Bishop's Hull, near Taunton. He left his music and musical copyrights to his son, and the rest of his property (estimated at £18,000) to his wife. After her death most of his

library was sold by Puttick & Simpson on 20 February 1873. The 275 lots included a vast range of antiquarian music, some of which had formed the basis of his famous *Specimens*, and a considerable selection of early theory books.

2 WORKS Crotch was a learned but not pedantic composer. His music shows his profound knowledge of many different musical styles, including that of his own time; it shows also a certain detachment from fashionable trends, above all an avoidance of vulgarity and sentimentality. It is poles apart from the idioms of such younger contemporaries as Field and Bishop, but not unlike that of Samuel Wesley, his senior by nine years. He was capable of setting side by side in the same work a movement in the 'ancient' style of Handel and one in the manner of Mozart, as he did, for example, in the Third Organ Concerto in B \flat . He was equally assured in both styles. His greatest work, *Palestine*, though quite clearly founded on the Handelian model, has many movements that are contemporary in character: the orchestration is surprisingly rich and colourful, owing more perhaps to Mozart's 'additional accompaniments' than to Handel's original scorings. At one point, to illustrate the phrase 'the voices of the dead, and songs of other years', Crotch deliberately introduced modal harmony with a mysterious flavour, an early instance of a practice often found in Romantic music, but elsewhere he experimented with enharmonic modulation. There are also, in *Palestine* and in the second *Captivity of Judah*, passages of bold, stark originality that even today can make a great impact: the chorus 'Let Sinai tell' from *Palestine*, for example, or 'Open ye the gates' from the second *Captivity of Judah* (quoted in Temperley, 1960, p.166).

Except for the organ concertos, Crotch's instrumental music rarely reaches the level of his oratorios, and his cathedral anthems too are relatively commonplace. Indeed the two pieces by Crotch that maintained their popularity longest in cathedral choirs were not written as anthems at all: one was the quartet 'Lo! star-led chiefs' from *Palestine*, the other the glee or 'motet' *Methinks I hear the full celestial choir*. The sub-dramatic, evangelical grandeur of the oratorio seems to have suited his gifts. Unfortunately, after the composition of the second *Captivity of Judah*, he never again attempted anything on a large scale. His horizons contracted to the point where he spent much of his creative energy on Anglican chants in later life. He composed single chants, double chants, canonic chants, retrograde chants, he published fugues based on chants; he made the composition of chants an important part of his teaching at the RAM. It is not, perhaps, wholly ironic that a couple of Anglican chants are the only music composed by him that remains in regular use.

Crotch was highly influential as a lecturer and writer on musical subjects. His *Elements of Musical Composition*, published in 1812 and twice reprinted, was much in demand as a manual for beginners, as were his books on thoroughbass and piano playing. Far more important were his lectures, delivered first at Oxford and then, in revised forms, at the Royal Institution and elsewhere in London, and ultimately published in 1831. In these lectures Crotch offered a historical survey of music, firmly grounded on an aesthetic theory. He divided all 'scientific music' (by which he meant something close to what would today be called 'art music')

into three styles, the sublime, the beautiful, and the ornamental. European music had passed through each of these in turn, and the passage was clearly represented as a decline. Therefore Crotch urged a rediscovery of the sublime style, through the revival and imitation of ancient music – a goal that obviously paralleled that of the Gothic revival in architecture. He attempted to put it into practice himself, first by exhaustive collection and study of old music, second by presenting examples for revival in performance, and third by imitating it in composition. In his *Specimens of Various Styles of Music* he was not only providing a convenient companion to his lectures, but was allowing the ordinary music lover to get to know many kinds of music besides those fashionable in his day. So influential were the *Specimens* that Grove in 1883 thought it worth while to list their contents in his *Dictionary*; Bumpus in 1907 still thought them ‘useful’. Crotch was also the first to set on foot a revival of early English church music. He published a selection of early psalm tunes, together with Tallis’s Litany and *Veni Creator*, in 1803. Several churches and colleges at Oxford began to revive these tunes and some of the Elizabethan and Jacobean cathedral music, and they were well established there by the time the more general revival got under way in the 1830s. Rainbow has shown that Crotch’s lectures had a decisive influence on Thomas Helmore and other musical leaders of the Tractarian movement. His concept of the ‘three styles’ was often quoted and referred to by later writers, and, more significantly, was also attacked and ridiculed. Henry Gauntlett disputed Crotch’s doctrine of a special church style (the ‘sublime’) in imitation of ancient music, and praised instead ‘that feature in musical composition, on which Mozart placed the highest value and importance – expression, which is rarely to be obtained by the dull and monotonous rhythm, or the timid and unvaried harmonies, which distinguish the founders of our church music’. Crotch in his own music was fully alive to the merits of modern as well as of ancient style, and employed a full range of expression, and his *Specimens* show how catholic was his taste. But in his old age he seems to have become unnecessarily dogmatic about what was proper in church music. He condemned S. S. Wesley’s *The wilderness* when it was submitted for the Gresham Prize in 1833, and the same composer’s *O Lord thou art my God*, his exercise for the Oxford DMus in 1839. He actually wrote to Maria Hackett on 4 March 1833: ‘The introduction of novelty, variety, contrast, expression, originality, etc. is the very cause of the decay so long apparent in our church music’. If this were so, then Crotch himself would have been one of the prime culprits, for his own music is distinguished by all these qualities.

The extraordinary range and depth of Crotch’s mental activity can be judged from his voluminous writings on many subjects besides music. As a painter he is regarded as a distinguished member of an ‘Oxford school’ of landscape painting that in some respects anticipated Constable (a close acquaintance of Crotch); his style is described as one of ‘lyric naturalism’. A collection of ‘Six Etchings by W. Crotch from Sketches by Mr [Hugh] O’Neill, of the Ruins of the late Fire at Christ Church, Oxford’ was published at Oxford in 1809. Some 1200 of Crotch’s paintings and drawings are in the Norfolk and Norwich Record Office, along with his plays and writings on architecture, art, astronomy, fortification, geography, geometry, grammar,

2 William Crotch portrait (1839) by John Linnell in the National Portrait Gallery, London

gunnery, history, physics, pyrotechnics and other subjects. The iconography of Crotch is extensive, and includes, as well as a number of representations of the child prodigy, portraits of various stages of his life (see figs. 1 and 2) Crotch’s 13 volumes of letters (1801–45) and memoirs as well as A. H. Mann’s exhaustive researches can be studied at the Norfolk and Norwich Record Office.

WORKS

LARGE VOCAL

NICHOLAS TEMPERLEY

Crotchet (Fr. *noire*; Ger. *Viertelnote*, It. *nera*, *croma*; Lat. *semiminima*, Sp. *negra*). The note that is half the value of a minim and twice that of a quaver. In American usage it is called a quarter-note. It is the equivalent of the old semiminim (Lat. *semiminima*), and is first found in 14th-century music. In sources using black notation it was shown as a minim with a crook, hence its name, while in 'white' or 'void' notation (post-1450) it is found either as a white minim with a crook or as a black or coloured minim. Some Italian and Spanish sources use the alternative terms 'nera' and 'negra' respectively. Occasionally the term 'semiminim' was qualified by the adjective 'greater' or 'lesser' (*semiminima major* or *minor*) to refer to the crotchet and quaver. The crotchet is still in regular use, although in common with other notes it now has a round note head. Many 20th-century composers have adopted the crotchet as a convenient value for the standard pulse, and it is found as the denominator in the most frequently used time signatures (3/4, 4/4 etc). Its various forms and the crotchet rest are shown in ex. 1a-e, the semiminim rest is shown in ex. 1f. The term 'semiminim' is still occasionally found.

JOHN MOREHEN

Crotte, Nicolas de la. See LA GROTTE, NICOLAS DE.

Crotti, Archangelo (fl. Ferrara, 1608). Italian composer. There is no evidence for Eitner's surmise that he was identical with FRANCESCO CROATTI. He was living as a monk at Ferrara when he published *Il primo libro de' concerti ecclesiastici a 1, a 2, a 3, a 4, & a 5, parte con voci sole, et parte con voci et istrumenti* (Venice, 1608). This volume is one of the earliest to include solo and duet motets in the new concertato manner of Viadana. The pieces were written for modest resources; the vocal parts are rarely difficult, using only the easier kinds of ornament found in 16th-century instruction books. A *Sonata sopra Sancta Maria* is historically significant, since it appeared two years before Monteverdi's famous work with the same title. Crotti's sonata uses exactly the same technique as Monteverdi's: a vocal plainsong cantus firmus is repeated while two cornetts or violins and a trombone or string bass play round it in the manner of a canzona.

Crotti, Francesco. See CROATTI, FRANCESCO

Crouch, Andrae Edward (b Los Angeles, 1 July 1942) Black American composer and performer of gospel songs. See GOSPEL MUSIC, §1

Crouch, Anna Maria (b London, 20 April 1763; d Brighton, 2 Oct 1805). English soprano. A daughter of Peregrine Phillips, a lawyer of Welsh extraction, she received her early training in music from Wafer, the organist of a chapel in Berwick Street. In 1778 she was article for six years to Thomas Linley and soon made her name at Drury Lane where she continued to act and sing until she retired in 1801. In Dublin in 1784 she eloped with the son of an Irish peer, but the marriage was prevented. A year later at Twickenham she married Edward Rollings Crouch, a naval lieutenant.

In March 1787 she met the tenor Michael Kelly, who had just arrived from Vienna, and sang with him at his début in Dibdin's *Lionel and Clarissa*. For three years Kelly remained an intimate friend of the Crouches, he lodged with them and accompanied them on their tours. When the marriage broke up in 1791, Mrs Crouch and Kelly remained together and gave brilliant receptions at their house in Pall Mall, but it is doubtful if she was ever his mistress. She was a woman of exceptional beauty. Kelly, though not an impartial judge, wrote that 'her appearance was that of a meteor, it dazzled, from excess of brilliancy, every spectator' and declared that 'she seemed to aggregate in herself all that was exquisite and charming'. Contemporary criticism of her singing was sometimes lukewarm, as in the notice of her first appearance, on 11 November 1780, when she played Mandane in Arne's *Artaxerxes*: 'Miss Phillips's pipe', wrote the critic, 'is a singular one, it is rather sweet than powerful, in singing it ravishes the ear with its delicacy and melting softness'. After her retirement she trained singers for the stage.

ALEC HYATT KING

Crouch, Frederick Nicholls (b London, 31 July 1808, d Portland, Maine, 18 Aug 1896). English cellist, singer and composer. He studied music with his father Frederick William Crouch (c1783-1844, author of a *Complete Treatise on the Violoncello*, 1826) and his grandfather William Crouch, organist of Old Street Church, London. He played in the orchestra of the Royal Coburg Theatre at the age of nine. From about 1822 he studied at the RAM, and was cellist in the King's Theatre and other orchestras, including Queen Adelaide's private band. After 1832 he moved to Plymouth, where he worked as a professional singer and a travelling salesman; during this time he composed his famous song *Kathleen Mavourneen* (c1838). He gave lectures on the songs and legends of Ireland, became supervisor at D'Almaine & Co. music publishers, and is said to have invented zincography, an engraving process. In 1849 he went to New York as a cellist, and subsequently undertook several, mostly unsuccessful, musical enterprises - conducting, singing and teaching

in Boston, Portland, Philadelphia, Washington and Richmond. He served as a trumpeter in the Confederate Army during the civil war, and then settled as a singing teacher in Baltimore. In 1881 he was working as a varnisher in a factory there; a testimonial concert was given in Baltimore in 1883.

Besides the song that made his name famous, and hundreds of others, Crouch wrote two operas, *Sir Roger de Coverley* and *The Fifth of November*, 1670, an *Othello Travestie* (Philadelphia, 1856) and a monody (now in US-CA). Some of his MSS are in the New York Public Library. One of his 16 children, Emma Elizabeth (1842-86), was the famous Parisian courtesan 'Cora Pearl'.

Crowd. See CRWILL, see also WALLIS, §2(iii)

Crowland Gradual (GB-Lbm Eg 3759). See SOURCES, MS, §II, 7

Crowne, John (b ?Shropshire, c1640, d London, buried 27 April 1712). English playwright. He went to North America in 1657 with his father, who had been granted land in Nova Scotia by Cromwell. From 1657 to 1660 he was a student at Harvard and then returned to England. He first wrote for the stage in 1671 and was taken up by the Earl of Rochester, whose influence brought him a commission to write the court masque *Calisto*, which was produced at Whitehall in 1675 with music by Nicholas Staggins. A staunch Tory and Protestant, he enjoyed the patronage of four monarchs: 'Little starched Johnny Crowne' - the nickname was prompted by his elegantly stiff cravats - was more at home in comedy than in tragedy; his one lasting success was *Sir Courtly Nice* (1685). Set of his numerous plays contained songs, Purcell set 'Ah me' to many deaths decreed for *Regulus* (1692) and wrote instrumental music and a song for *The Married Beau* (1694).

OLIVE BALDWIN, THELMA WILSON

Crozier, Catharine (b Hobart, Oklahoma, 18 Jan 1914). American organist. A 1936 graduate of the Eastman School of Music in Rochester, from which she holds the artist's diploma in organ and a master's degree in music literature, she made her professional début in Washington, DC, in 1941 at a national convention of the American Guild of Organists. She had joined the organ faculty at the Eastman School in 1938 and became head of the department in 1953. From 1955 to 1969 she was organ professor at Rollins College, Winter Park, Florida. Her own teachers included Joseph Bonnet, Yella Pessi (harpsichord) and Harold

Gleason, the American musicologist whom she later married. With him she has given innumerable master classes at many institutions. Her concert career has taken her to most European countries. In 1962 she joined E. Power Biggs and Virgil Fox in inaugurating the organ at Philharmonic Hall, New York. Her memorized repertory is immense and historically inclusive although she has specialized in contemporary music. Her great control, precision, sense of style and range of expression make her performances remarkable.

VERNON GOIWALS

Crozier, Nancy. See EVANS, NANCY

Cruft, Adrian (Francis) (b Mitcham, 10 Feb 1921) English composer. He was educated at Westminster Abbey Choir School (where he became head chorister) and Westminster School, and went to the RCM (1938–40 and 1946–7, the intervening years being spent on war service). At the RCM he held the Boult conducting scholarship, studied composition with Gordon Jacob and Edmund Rubbra, and double bass with his father, Eugene. From 1947 he played with all the major London orchestras, finally giving up bass playing in 1969. He was for sometime an active member of the Composers' Guild, becoming chairman in 1966, and was largely concerned in the setting up of the British Music Information Centre at the guild's London headquarters in 1967. His music is diatonic, firmly based in tradition and generally straightforward in idiom. His church music benefits from inside knowledge of the performing context, and his wide experience of other fields of practical music-making preserves it from the parochialism which so often threatens the specialist composer of church music. His works include three cantatas, settings of the canticles and many anthems and carols, works for orchestra, chamber music and music for children and amateurs.

WORKS

(selective list)

- Orch. Partita, op 7, small orch, 1951, Actaeon, op 9, ov., 1951, Concertino, op 21, cl, str, 1955, Concertante, op 25, fl, ob, str, 1957, Divertissement, op 28, 1958, Prospero's Island, op 39, ov., 1962, Elegie, op 52, hn, str, 1967.
- Choral All that Began with God, op 16 (J. A. Symonds), motet, SATB, str, 1953, A Passiontide Carol, op 26, A, SATB, str, perc., 1957, An Hymn of Heavenly Joye, op 53 (Spenser), Bar, boys chorus, SATB, str, harp, perc., org., 1967, Alma Redemptoris mater, op 54, cantata, A, B, SATB, fl, ob, vn, vc, org., 1967, Bemerton Cantata, op 59 (J. Norris), Mez, SATB, str, harp, perc., org., 1969, Lutheran Mass, op 64, SSAATTBB, 1970, Come, Holy Dove, op 66, Bar, SATB, str/org., 1970, Rex tragicus, op 71 (Herrick), T, SATB, str, harp, perc., org., 1972, anthems, part songs.
- Solo vocal Songs of Good Counsel, op 73, Mez, pf, 1973, Into God's Kingdom, op 80 (various texts), Bar, pf, 1975.

Principal publishers: Chappell, Boosey & Hawkes, Leeds, Novello.

HUGO COLT

Cruft, Eugene (John) (b London, 1887; d London, 4 June 1976) English double-bass player. He was principal of his section in the BBC SO from its foundation in 1929 until 1949, a position he held with distinction, then of the Royal Opera House Orchestra, 1949–52. Later he was director and principal of the Pro Arte Orchestra and performed with prominent London ensembles. His influence as a teacher was widespread, at the RCM, and with the National Youth Orchestra since 1952. He put his knowledge of music and the orchestral

world to good use in lectures, articles and administration. For the coronations of George VI and Elizabeth II he was the orchestral organizing secretary, his honours included the MVO. A keen and energetic manner of performance made him a striking personality. He published *The Eugene Cruft School of Double-bass Playing* (London, 1966).

WATSON FORBES

Crüger, Johannes (b Gross-Breesen, nr Guben, Lower Lusatia, 9 April 1598, d Berlin, 23 Feb 1662) German composer and theorist. His singular contribution to 17th-century German music lay in his revitalizing of the Protestant chorale. He was also influential as a theorist.

1. **LIFE** Until he was 15 Crüger was educated at schools at Guben and then began a period of extensive travelling. He studied with Paul Homberger (a pupil of Giovanni Gabrieli) in Regensburg in 1614. The following year he visited both Austria and Hungary, including a brief stay in Pressburg (now Bratislava). Before arriving in Berlin at the end of the year he travelled through Moravia, Bohemia and Saxony. In Berlin he became a tutor to the family of Christoph von Blumenthal, a captain of the royal guard of the Elector of Brandenburg. In October 1602 he entered the University of Wittenberg as a theology student. Nothing further is known about his musical education, but from 1619 he published music in Berlin. In some way he successfully established his reputation as a musician and teacher there, and on 23 June 1622 he was called back there to become Kantor at the Nicolaikirche (the city's most important parish church) as well as teacher at the Grauen Kloster Gymnasium. He retained his position as Kantor until his death 40 years later.

2. **WORKS** Crüger compiled, arranged and contributed new melodies to several major chorale collections, including *Praxis pietatis melica*, his most important achievement and the most influential chorale publication of the 17th century. His first collection – *Neues vollkommliches Gesangbuch, Augspurgischer Confession* – appeared in 1640. It includes 240 chorale texts and 137 melodies, of which 18 are by him. It is the first publication to arrange chorales as melodies with a figured bass accompaniment rather than as settings for several voices. Not only does this arrangement emphasize the importance of the organ in the accompaniment of chorales in Berlin churches, but the simplicity of the accompaniment as well as the melodic rhythm indicates the extent to which Crüger aimed to make these arrangements practical for singing in the home during private worship. This collection was apparently the first edition of the *Praxis pietatis melica*, extant first in an edition of 1647 and republished more than 40 times until well into the 18th century (printings of various Berlin editions also appeared in other European cities). In the edition of 1647, in which the chorales again have a figured bass accompaniment, 15 texts by Paul Gerhardt appear for the first time with melodies by Crüger. Gerhardt, perhaps the most renowned poet of German chorales, became a close friend of Crüger's in 1657 when he became deacon at the Nicolaikirche, and the two collaborated after this. From edition to edition *Praxis pietatis melica* changed and expanded in size, although by the end of the century Crüger's name as a composer of chorales had vanished from its pages; as early as

the tenth edition of 1661, which contains 550 chorales, only two melodies can still be attributed to Crüger

In 1649 Crüger published the *Praxis pietatis melica* in an arrangement for four voices, two instrumental parts (violins or trumpets) and thoroughbass entitled *Geistliche Kirchen-Melodeien*. The instrumental parts, which are optional, usually lie above the vocal melody and are generally florid: they produce something like chorale arias. Crüger claimed to be the first to add instrumental parts to chorale melodies, although precedents existed for such a combination of voices and instruments in the sacred symphonies of Venetian composers in the first decades of the 17th century. A similar arrangement for voices and optional instrumental parts appears in Crüger's next chorale publication, the *Psalmodia sacra*. The first part (1658) consists of the 150 psalms in the translation by Ambrosius Lobwasser arranged for four-part chorus, three instrumental parts and thoroughbass. Part II (dated 1657 [sic]) includes 173 sacred songs and psalms, of which 105 have instrumental accompaniments, mostly in two additional parts.

Some 71 melodies by Crüger appear in these several publications, only a few of which have remained in modern Protestant hymnals. The following are specially noteworthy. *Herzliebster Jesu, was hast du verbrochen* (words by Johann Heerman), *Jesu, meine Freude* (Johann Franck) and *Schmücke dich, o liebe Seele* (Johann Franck) and his adaptations of Johann Schop's melody *O Ewigkeit, du Donnerwort* and Michael Franck's *Ach wie flüchtig, ach wie nichtig*.

Crüger wrote several theoretical works, all of which have the character of instruction manuals. In 1625 appeared two brief manuals. *Præcepta musicae practica* and *Kurtzer und verständlicher Unterricht*, which were expanded and adapted as *Quæstiones musicae practicae* (1650), a work that in turn became the basis for his final treatise, *Musicae practicae . . . Der rechte Weg zur Singekunst* (1660). In between came his best-known treatise, *Synopsis musica* (1630). These volumes contain little that is original; Crüger drew most of the ideas as well as many of the music examples from authors such as Johannes Lippius, C. T. Walliser, Sethus Calvisius, J. A. Herbst and Michael Praetorius. The section of examples illustrating fugue in *Synopsis musica* originates in Sweelinck's rules of counterpoint (see M. Seifert, 'J. P. Sweelinck und seine direkten Schüler', *VMw*, vii, 1891, p.180). However, in drawing together many of the most important new theoretical ideas of the 17th century and especially in the emphasis that he placed on the harmonic primacy of music, Crüger gave his treatises an independent validity that influenced many subsequent music theorists. He defined music as 'the science of artfully and judiciously combining and inflecting harmonic intervals, which make a *concentus* of diverse sounds, especially for the purpose of moving man to the glory of God' (*Synopsis musica*, caput I). Although the concept comes from Lippius, Crüger was the first to introduce the idea into an instruction manual meant for music students.

In *Der rechte Weg zur Singekunst*, as in his other works, Crüger instructs the reader in the rudiments of singing. In the first five chapters he discusses the principles of notation, solmization, intervals and proportions. Chapter 6, however, is the most frequently cited. Entitled 'Diminutionibus notularum' and enlarging upon a similar chapter in the 1654 edition of *Synopsis*

musica, Crüger borrows heavily from Herbst's *Musicae practica* (1642) and Praetorius's *Syntagma musicum*, III (1619), both of which devote considerable space to the art of singing in the Italian manner. Crüger gives lengthy music examples of vocal diminution figures and ornamentation, *accento*, *tremolo*, *gruppo*, *trata*, *trillo* and *passaggio*. He suggests, however, that these forms of Italian vocal embellishment belong more appropriately to music sung at royal musical establishments and for the most part are not included in the education of schoolchildren. This would seem to indicate that although the Italian manner of singing was the rule in aristocratic circles in mid-17th-century Germany, it had not strongly affected the traditional church music practices of Berlin, where Crüger's influence remained paramount for 40 years.

WORKS CHORALE COLLECTIONS

- Neues vollkommliches Gesangbuch, Augspurgischer Confession, in welchem nicht allein vornemlich des Herrn Lutheri, und anderer gelehrten Leute, Geist- und Trostreiche Lieder, so bishero in Christl. Kirchen bräuchlich gewesen, sondern auch viel schöne newe Trostgesänge, insonderheit des vornehmen Theol. und Poeten Herrn Johan Heermanns, zu finden, mit aussenlassung hingegen der unnötigen und ungebräuchlichen Lieder. 4vv, bc (org) (Berlin, 1640)

GEORGE J BUFLOW

Crüger, Pancratius (b Finsterwalde, Lower Lusatia, 1546, d Frankfurt an der Oder, 23 Oct 1614 or 25 Oct 1615) German teacher and writer. He may have been related to Johannes Crüger. He is first heard of as Kantor at the Martinsschule, Brunswick. In October 1575 he moved to Helmstedt as a teacher of Latin and poetry, and at the inauguration of the university there on 16 October 1576 he received a master's degree in philosophy. From 24 December 1580 to 11 April 1581 he was dean of the faculty of philosophy and in January 1581 was appointed professor of logic. He later became Rektor of the grammar school at Lubeck. In his singing instruction there he wished to use note names (A, B, C, D etc) instead of the traditional solmization syllables (*ut, re, mi, fa* etc), and he also campaigned at Halberstadt and Rostock in support of the alphabetical system and against solmization. As a consequence, proceedings were started against him which led to his dismissal in 1588. He was in fact the first teacher who is known publicly to have advocated the use of note names, though there are no writings by him on the subject. The first publications about it, by Ambrosius Profe, Thomas Selle and Wolfgang Hase, date from the mid-17th century (see, in particular, PROFF, AMBROSIVS). In 1589 Crüger became Rektor at Goldberg, Schwerin. From the autumn of 1598 until his death he was professor of Greek at the University of Frankfurt an der Oder, during the winter term of 1598 he was chancellor. His few extant writings deal mainly with poetry.

INGRID SCHUBERT

Crumb, George (Henry) (b Charleston, West Virginia, 24 Oct 1929). American composer. He studied at Mason College in Charleston, the University of Illinois (MM 1953) and under Finney, whom he regards as his principal composition teacher, at the University of Michigan (DMA 1959). Teaching appointments followed at the University of Colorado (1959-65) and then at the University of Pennsylvania. He has received grants and awards from the Koussevitzky Foundation (1966), the Guggenheim Foundation (1967), the American Academy of Arts and Letters (1967) and other bodies. Among the prizes he has won are the Pulitzer Prize (1968 for *Echoes of Time and the River*) and the International Rostrum of Composers Award (1971).

Almost all of Crumb's vocal compositions are settings of verse by Lorca, and the composer views them as an extended cycle. The influence of Lorca's imagery is also present in instrumental works, notably the two sets of *Echoes*. Indeed, programmatic writing and sym-

bolism pervade Crumb's music: the piano work *Makrokosmos* is a zodiacal cycle and *Black Angels*, for electric string quartet, is 'a kind of parable on our troubled contemporary world'. The parable is told in terms of a polarity between God and the Devil, drawing its images from musical associations - the 'diabolus in musica', Tartini's *Trillo di diavolo* and the *Dies irae* chant - and from numerology: the numbers 7 and 13 play a large part in determining intervals, rhythms and formal proportions. Illustrative ends are also served here, and in all of Crumb's work, by a concentration on vivid sonorities, which may be haunting, sweet or macabre, and which are obtained from unusual instruments or from an enormous range of vocal and instrumental effects. There is sometimes a limited flexibility in precise point of entrance and ensemble coordination in the performance of short sections as staves may be printed in circular form, but movements and whole works are fixed in form, and the total shape is most frequently strongly palindromic. In later pieces there are prominent theatrical elements: directed movement, vocalization and the use of masks by instrumentalists, and danced interludes. Crumb has stated that Debussy, Mahler and Bartók were the principal influences on his music. Its emotional directness has brought it many and widespread performances, and almost all of his post-1962 works have been commercially recorded.

LEONARD A PEARLMAN

Crumhorn [crokhorne, cromcorn] (from Ger. *Krummhorn*: 'crooked horn'; Fr. *cromorne*, *tournebout*: 'turned-up end'; It. *cornamuto torto*, *piva torta*, or simply *storto* - not to be confused with *cornu torto*, which normally means a large *cornetto*; Sp. *cornamuda tuerta*, *orlo*). A WIND-CAP INSTRUMENT, that is, a woodwind with a double reed enclosed in a cap, which takes its name

from its characteristic curved or crook-shaped bottom. Crumhorns were the chief wind-cap instruments from the late 15th century to the 17th.

See also ORGAN STOP (*Cromorne*)

1 CONSTRUCTION AND TECHNIQUE 2 History 3 Repertory

1 CONSTRUCTION AND TECHNIQUE Since the crumhorn has a narrow cylindrical bore, opening out only at the very end, it sounds an octave lower than an instrument of similar length but with a conical bore. Its slender tube, usually made of boxwood, is bent like a hook at the bottom. It has seven finger-holes and a rear thumb-hole

1. Cross-section of the upper end of a tenor crumhorn

The bottom finger-hole is doubled on the smaller instruments, while some larger ones are given a swallow-tail key, to allow the performer to place either hand above the other when playing. In addition there are several vent or tuning holes, left open, below the lowest finger-hole. A double reed is fitted onto a staple which is inserted into the bore. A wooden cap is then put over the reed, and the instrument is sounded by blowing into a hole cut into the top of the cap, or, on the larger instruments, a slot in the side of the cap (see fig 1). Thus the player's lips do not control the reed directly, and so he cannot overblow. The range of crumhorns, like that of other wind-cap instruments, is therefore limited to a 9th, unless additional keys extend it by a few notes above or below. Crumhorns produce a relatively soft buzzing sound, with caution they can be mixed in consorts with viols and recorders, but they also blend well with sackbuts and cornetts. In playing them the performer must maintain a constant level of air pressure, since any change will alter the pitch, for this reason crumhorns have an extremely limited dynamic range.

Like many 16th-century instruments, crumhorns were built in families, to which more members were added as the century wore on. Virdung (1511) included illustrations of four sizes, but he implied that there were in fact only three, the middle size being responsible both for alto and tenor parts, as with recorders, shawms and other wind instruments of the time. Certainly Agricola (1529) knew only three sizes, a descant with a range from *g* to *a'*, an alto-tenor with a range from *c* to *d'* and a bass with a range from *F* to *g*. At the beginning of the 17th century Praetorius (1619) listed five regular sizes plus two special ones: small treble (*exilent*; *c'* or *d'* to

d'), treble (*cantus*; *g* or *a* to *a'*); tenor-alto (*c* or *d* to *d'*), bass (*F* or *G* to *g*, with the possibility of extensions down to *C*); and a great bass (*Bb'* or *C* to *c*, or *D* to *d* with the possibility of extensions down to *A'*). The two extended instruments, the bass and the great bass, had their ranges increased by means of sliders that could be set to give any one of the three notes below the normal range. Thus the bass slider could be pre-arranged to sound *E*, or *D*, or *C*, but not all three, and the range of the bass was thereby increased in a way that was particularly useful at cadences where the lowest instrument could play the tonic or dominant note at the lower octave, without the necessity of solving the complicated engineering problem of how to build a key around the curve of the instrument.

The names of two 16th-century makers of crumhorns are known from documents: Jörg Neuschel of Nuremberg, one of whose sackbuts survives but none of his crumhorns, and Jörg Wier of Memmingen, whose name is engraved on an instrument now in Berlin. 16th- and 17th-century crumhorns are preserved in the instrument collections in Berlin, Brussels, Leipzig, Linz, Munich, Nuremberg, Paris, Verona and Vienna. An especially fine set that originally belonged to Duke Alfonso II d'Este (*d* 1597) is now in the Royal Conservatory in Brussels (see fig 2). It consists of six instruments that correspond with Praetorius's sizes, one treble, three tenor-altos, one bass and one extended bass. An original reed for a tenor crumhorn is preserved in the Kunsthistorisches Museum in Vienna.

2 HISTORY Sachs argued that the term 'douçaine', or 'dolzama', could refer to crumhorns, a theory that would lead to the conclusion that the instrument was used as early as the 14th century. But his arguments are not convincing and they have not been accepted. And early German literary references to 'krumbes Horn' or 'Krumphorn' most likely describe a simple animal horn with finger-holes.

It seems probable that the crumhorn emerged as a fully distinct instrument, perhaps as a result of substituting a wooden cap for an animal bladder on a curved *Bladder Pipe*, during the late 15th century. An organ in Dresden in 1489 included a crumhorn stop. A quintet of crumhorns appears in a 15th-century intarsia in the doors of the *Stanza della Segnatura* in the Vatican (the intarsias were printed by Winternitz), and Vittore Carpaccio in 1510 included an angel playing the instrument in a painting of the Presentation of Christ in the Temple.

The crumhorn began to appear regularly in pictures and literary documents at a time when full consorts of like instruments (recorders, viols and so on) began to form the basis of most instrumental ensembles. That was about 1500, when the normal texture of music changed from three or four heterogeneous parts to four or five equal but independent parts. The consort of crumhorns thus took its place along with groups of viols, recorders, transverse flutes and voices, as another kind of sonority useful as contrast in the performance of the polyphony of the high Renaissance.

Kinsky and others furnished numerous references to the use of crumhorns in every country of western Europe during the 16th century. They are shown in pure and mixed consorts in the entourage of the Emperor Maximilian as depicted by Hans Burgkmair in his *Triumphzug* (1526), and are listed and described in

German and Flemish inventories Henry VIII owned several consorts of them, and Mersenne in 1636 reported that the best crumhorns were made in England. They are cited in performances of festival music in various courts during the century.

Crumhorns seem to have gone out of fashion in the 17th century. During a period when expressive playing, full of nuances and dynamic contrasts, was highly prized, the crumhorn, with its limited range and lack of dynamic variety, no longer met the needs of composers. The same impulses which caused the decline of consort playing, the rise of the solo sonata, the reconstruction of the flute and the recorder, the transformation of the shawm into the oboe, and so on, also caused the death of the crumhorn, whose importance as an ensemble instrument had lasted a little more than 100 years. Schneider documented what may be the crumhorn's last appearance outside France until the 20th century; he cited a performance of a motet in Breslau in 1668 which included a crumhorn as bass to a consort of recorders.

The crumhorn lived on only in France, where it continued to be played as a part of the *grande ecoute* of the royal household, along with the *trompettes marines* (see TRUMPET MARINE) the *crumornes* formed an ensemble that performed as a unit much like the combination of *hautbois de Portou* and *cornemuse* (bagpipe) in the same organization. But by then the instrument had changed its character and even its technique of playing, for it was sometimes used without its wind cap.

3. REPERTORY Like other consort instruments of the 16th century, crumhorns could in principle play any polyphonic composition, so no special repertory exists. Indeed, a surprisingly large amount of music from the period—masses and motets as well as secular pieces—is within the instrument's extremely limited range, and is therefore capable of being played by a consort of crumhorns. The repertory can of course be expanded if the notion is accepted that the players were allowed to change one or two notes to fit their instruments.

On the other hand, a few compositions from the 16th and 17th centuries are more closely associated with crumhorns, either because commentators reported that the instruments took part in a performance, or because the sources specifically mention them, and this repertory

3. Woman playing a crumhorn: detail from 'The Presentation at the Temple' by Vittore Carpaccio (1510) in the Galleria dell'Accademia, Venice

is an aid when deciding which music suits them. The earliest such piece is a six-part setting of Psalm xxxvii, *Erzürne dich nicht*, composed by Thomas Stoltzer in 1526, which he described as conceived for crumhorns ('an die Krumphorner gedacht'), not every composition is apt for the instruments, he went on to say, especially not those in many parts. In fact, none of his voices except the bass exceeds a 9th, but the motet must be transposed up a tone to fit the sizes of instruments described by Praetorius, a procedure he actually recommended in volume iii, chapter 7 of his *Synagoga*. As it stands, Stoltzer's composition requires a treble in *c'*, three tenor-altos in *f*, a bass in *Bb*, and a second bass in

2. Set of six crumhorns (in original case) made for Duke Alfonso II d'Este, 2nd half of the 16th century (Conservatoire Royal de Musique, Brussels)

B♭ with an extension down to *F*.

The music books of the wind band of Duke Albrecht of Prussia (dated 1541 and now in *DK-Kk*) reveal not only that crumhorns played with trombones, but also that they sometimes doubled one another. Two compositions in the collection each have one voice marked for 'Krumhörner' and the bass of Senfl's *Ich klag den tag* is intended 'auff Posaun und Krumhorn'.

From about the same time, various Florentine *intermedi*, listed and discussed by Brown, included crumhorns among the vast and colourful instrumental ensembles that accompanied the stage action. The musical context makes clear that they must generally have played inner parts in such mixed consorts. And similarly the combination of shawm, two cornetts, two crumhorns and cural, reported as playing together at the wedding festivities at the court of Munich in 1568 under the direction of Lassus, suggests that the crumhorns were relegated to the tenor or alto voices.

Several compositions for consorts of crumhorns survive from the 17th century. In his *Banchetto musicale* of 1617, Johann Hermann Schein included a *Padouana à 4 Krumhorn* that is published in the edition of his complete works. It fits nicely a group of crumhorns consisting of one treble, two alto-tenor and one bass of the pitches described by Praetorius. Praetorius himself allowed the possibility of adjusting some notes in a piece if necessary, for the middle parts of a *Passamezzo* and *Galliard a 5* by Francis Caroubel that Praetorius printed in his *Terpsichore* and described as suitable for crumhorns do in fact exceed their ranges on several occasions. And, finally, the first volume of the Philidor Collection in the Bibliothèque Nationale in Paris includes a *Suite pour les cromornes* by Degriens (1660), that may have been intended for performance by the *grande écurie*.

HOWARD MAYER BROWN

Crusell, Bernhard Henrik (b Nystad, 15 Oct 1775, d Stockholm, 28 July 1838). Finnish clarinetist and composer. Crusell's ancestors were bookbinders. At 12 he became a clarinetist in a military band at Sveaborg, and moved with it to Stockholm, where in 1793 he was made a court musician. He studied the clarinet with Tauscher and Lefèvre, and composition with the Abbé Vogler, Berton and Gossec. He became a distinguished soloist, using an 11-keyed Grenser clarinet. His com-

positions for clarinet are still valued. His association with the greatest writers of his day through Stockholm's Gothic Society, which he joined in 1818, led to his greatest successes, in settings of poems by Pixérécourt, Tegnér and Runeberg. Crusell was also a brilliant linguist and his translations of the foremost French, German and Italian operas for the Swedish stage earned him the Swedish Academy's Gold Medal in 1837. His manuscript autobiography is in the Royal Library, Stockholm.

Crustic, anacrustic. Terms used to distinguish a phrase that begins on the downbeat of a bar and ends at the end of a bar (crustic) from one that also contains an integral number of bars but begins and ends in the middle of a bar (anacrustic). The antecedent or consequent phrases of a crustic phrase are themselves crustic, while those of

imentary four-bar phrases: (a) crustic, (b) anacrustic

(a) Beethoven: Symphony no. 9, Ode to joy

(b) Beethoven: Choral Fantasy: Schmeichelnd hold

an anacrustic phrase are anacrustic, as is illustrated by two Beethoven themes given in ex 1. The word 'anacrusis' (from Gk. *anakrousis* 'a striking up') is an alternative term for 'upbeat'.

Cruvelli [Cruwell], Jeanne Sophie Charlotte (b Bielefeld, 12 March 1826; d Monaco, 6 Nov 1907) German soprano. A pupil of F. Lamperti, she made her début at La Fenice, Venice, during the carnival season of 1847 as Odabella in Verdi's *Attila*. She repeated the same role in Udine, followed by Lucrezia in *I due Foscari*. The dramatic heroines of Verdi's early operas suited her voice, which was large and powerful, if not always under perfect control, and the following year she sang Elvira in *Ernani* and Abigail in *Nabucco* (given as *Nino*) at Her Majesty's Theatre in London, as well as Leonore in *Fidelio* and the Countess in *Le nozze di Figaro*. She appeared in Milan in 1850, adding the title roles of Donizetti's *Linda di Chamounix* and Verdi's *Luisa Miller* to her repertory. She made her Paris début in April 1851 as Elvira, and at the Théâtre-Italien she

also sang in Bellini's *Norma* and *La sonnambula*, *Fidelio* and Rossini's *Semiramide*. In 1854 she transferred to the Opéra, and appeared as Valentine in Meyerbeer's *Les huguenots*, as Giulia in Spontini's *La Vestale* and as Rachel in Halévy's *La juive*. The same year she returned to London, this time to Covent Garden, where she sang in Rossini's *Otello*, *Fidelio* and as Donna Anna in *Don Giovanni*. During the autumn, while Verdi's *Les vèpres siciliennes* was in rehearsal at the Paris Opéra, she disappeared on a premature honeymoon with her lover, Baron Vigier, whom she subsequently married. On her return, rehearsals continued, and she sang Hélène at the first performance of *Les vèpres siciliennes* on 13 June 1855. She retired the following year, after her marriage.

ELIZABETH FORBES

Cruz, Agostinho da (b Braga, c1590, d Coimbra, c1632) Portuguese composer and organist. From 12 September 1609 he lived at the monastery of Santa Cruz, Coimbra, of which he later became choirmaster. He taught the organ and string instruments in Coimbra and had done so in Lisbon too. A few manuscript organ pieces by him survive (edns of two in *Silva iberica*, ed. M. S. Kastner, Mainz, 1954, and PM, xi, 1967, respectively). Cruz is not to be confused with another Agostinho, a recluse and poet who was a member of the same order about 100 years earlier.

KLAUS SPERL

Cruz, Filipe da (b Lisbon, c1603, d ?Lisbon, c1668) Portuguese composer resident partly in Spain. He took the white habit of a friar of Santiago at the royal monastery of Palmela (near Lisbon) and was *mestre de música* in the Casa da Misericórdia at Lisbon. He then went to Madrid, where he became a naturalized Castilian and was on 1 June 1641 appointed a singer in the Spanish royal chapel. Despite a salary rise on 1 August 1642 and other favours, he composed a solmization mass in which he cryptically declared his allegiance to King John IV of Portugal. On 1 September 1655, pretending that he wished to compete for the post of *maestro de capilla* at Málaga, he fled to Córdoba where he wrote a self-incriminating letter to his sister at Madrid. By a decree dated 18 May 1656 John IV made him *mestre* of the Portuguese royal chapel, with a yearly salary of 200,000 réis. Although he was recognized in both Spain and Portugal as a composer of the highest gifts, only two secular songs by him now survive, in a manuscript (*E-Mn* 1262) copied in 1655 (1 ed. in MME, xxxii, 1970). *No cantéis, dulce ruyseñor*, for three voices, one of the most emotional songs in the entire 1655 collection, aptly proves that in 17th-century Spain *mi-la* could, on the composer's demand, be sung as a whole step and *sol-la* as a semitone. According to Barbosa Machado, Cruz also wrote before 1649 two masses, one, in ten parts, entitled *Que razão podeis vos tener para no me querer* and presumably parodying Juan Vázquez (see MME, iv, 1946, pp.67ff), the other *Sola reynas tu en mi*, the solmization syllables of which, as mentioned above, were intended for 'Joannes Quartus Rex mi'; various sets of polychoral vespers and compline services; and two motets, *Dumitte me*, for twelve voices,

and *Vivo ego*, for five. Of his five villancicos listed in John IV's catalogue (1649), the one for Christmas is in Portuguese, the four for Corpus Christi in Spanish. Francisco Manuel de Melo credited him with the music of the 24th tono, *Sy apagar que eres Lucia*, in *La avena de Tersicore* (*Obras metricas*, ii, Lyons, 1665).

ROBERT STEVENSON

Cruz, Ivo (b Corumba, Brazil, 19 May 1901) Portuguese composer and conductor. He began his musical studies in Lisbon with da Silveira (piano), de Lima and Borba (harmony) while reading law at the university. In 1925, together with Eduardo Libório, he founded the periodical *Renascimento musical*, which was concerned with research into old Portuguese music. Then he went to Munich for five years, studying there with Mors (composition and conducting), with Reuss at the Trapp Music School and with Lorenz and von der Pfordten (aesthetics and music history) at the university. Back in Lisbon he founded the Sociedade Coral Duarte Lobo (1931) and the Lisbon PO (1937), with which he presented the major choral and orchestral repertory. He was appointed director of the Lisbon Conservatory in 1938, and he retained that post until his retirement in 1971. In 1941 he represented the conservatory at the commemorations in Germany of the sesquicentenary of Mozart's death, at which time he appeared as a conductor in several principal European cities. He was the initiator of the Pro Arte Society, a concert organization for promoting Portuguese musicians and taking music to the Portuguese provinces, both at home and abroad. In addition, he wrote music criticism for the *Nação portuguesa*, the *Revista portuguesa*, *Estudos portugueses* and *Fradique*. He composed no important stage work, but his music has a marked descriptive quality, often expressed through impressionist colouring. This is evident in the piano concertos 'Lisboa' and 'Coimbra' and in the *Sinfonia de Amadís*. The *Sinfonia de Queluz* and some of the vocal pieces show his taste for an antique courtly atmosphere.

JOSÉ CARLOS PICOTO

Cruz Brocarte, Antonio de la. See BROCARTE, ANTONIO DE LA CRUZ.

Crwth [crot, crowd]. A Welsh and Middle English term for plucked or bowed lyres. The words themselves are

cognate with Irish *crutt*, which originally denoted a lyre but was ultimately used for a frame harp, the later Irish lyre name being *timpán* (see *TIMPÁN*, *TIOMPÁN*). There is some precise information about the Welsh *crwth* in its final form, since it lasted into the 18th century and several examples have survived (see fig.1), the shapes, functions and techniques of the other forms are subjects for some speculation, since the only evidence is from depictions, written references and some comparable

1. *Crwth* (1742) from *Voelas* in north Wales (Welsh Folk Museum, Cardiff)

instruments which survived into this century around the Baltic, for example the Karelian *joikkikko*, Estonian *khyiukannel* and Swedish *tallharpa*.

The time at which a bow began to be used on north-western European lyres (see *ROTTÉ* (1)) is not precisely known. Continental manuscripts of the 11th and 12th centuries show three- to five-string waisted oval lyres played with bows (see fig.2). One English manuscript (*GB-Cu* Ff.1.23, f.4v; see fig.3) shows a plucked three-string lyre and a bowed four-string lyre held fiddle-wise on the shoulder, in each case with strings stopped over the end of the instrument, not through an opening. A carved figure at St Finian's Church, Waterville, Co.

Kerry, Ireland, holds a rectangular bowed instrument in the shoulder position. A drawing in a 12th-century manuscript (*GB-DRc* Hunter 100, f.62v; see fig.4) shows an oval lyre with four centrally set strings and two outboard strings of differing lengths, the upper fixing being ambiguously suggested.

However many varieties of lyre existed in the 11th and 12th centuries – plucked or bowed, with various methods of stopping – the one that appears to have become stabilized in the British Isles was generally a three-string instrument, even the six-string later Welsh *crwth* was in fact an instrument with three double courses. Little is known specifically about the earlier forms of *crwth* though the name occurs in Welsh writings from the 12th century onwards. According to one of several texts which describe the great festival held by Lord Rhys at Abertefi at Christmas 1176, *crwth* players were among those present. The *crwth* and the more aristocratic harp were the only instruments of bardic *cerdd dant*. In a petition of 1594 to Elizabeth I requesting permission to hold an *isteddfod*, the competitors were described as 'skillful, honest and sober men ... brought up to plaine on the harp and crowth (and the atcanard which doe singe to the instrumentes played by them) ... atayne skill and sciences pettedegrees and discentes ... to give example among the youthes and to make and instruct them'.

By the late 17th century, and possibly much earlier, the *crwth* was double-coursed. A three-string *crwth* mentioned by the 17th-century physician John Davydd Rhys as the instrument of players of inferior status was perhaps the earlier and by then outmoded form. Instruments in English depictions resemble the later Welsh *crwth* typologically, though not in detail. For example, the seal of Roger Wade (c1316, *GB-Lhm*) shows a four-string instrument with fingerboard (but no open bourdon strings, see *BOURDON* (1)) and a bow. In the Chapter House of Westminster Abbey are depictions (c1400) of two elders with probably three-string instruments, one with a bow and one without. In England, where no regional or ethnic association of the instrument developed and where it was apparently obsolete by the 16th century, the word 'crowder' was eventually used as an abusive term for an incompetent or rascally fiddler.

The ap Huw manuscript (*GB-Lhm* Add 14905), an enigmatic early 17th-century tablature for harp and *crwth*, has not yet been totally deciphered. In the 18th century the *crwth* was a bowed fingerboard lyre with three octave-tuned double courses of gut and a bridge with one foot long enough to pass through a soundhole and rest on the flat back of the body. Jones gave the tuning *g' g' c' c' d'-d'*; the G's were off the fingerboard and were plucked with the thumb, a technique reminiscent of medieval bourdon fiddling. Bingley, who visited Wales in 1801, gave the (probably erroneous) tuning *a- a'-e'-e'-b'-b'*.

Cryptography, musical.

1 Introduction 2 Cryptography using musical ideas and symbols 3 Other communication systems using musical symbols 4 Music using cryptographic and related concepts 5 Conclusion

1. INTRODUCTION. Cryptography ('secret writing') includes any method of masking a message. Sometimes the act of communication is itself concealed, e.g. by the use of invisible ink. More commonly, an overt message is disguised by code or cipher. In code an arbitrary assemblage of letters or numbers is assigned some specific meaning, or an ordinary word or phrase may be allotted some quite different significance. In cipher, the letters of a message are systematically transformed, either by changing their order or by replacing them with other letters or symbols. Both code and cipher principles can facilitate communications as well as conceal them, as for example in the Morse code (strictly a cipher) and in the invention of artificial languages. All these procedures are akin to some aspects of music. Thus 'key' is a basic common concept, while pitch and rhythm have evident semantic application. Indeed, music has often been conceived and described as a communication intelligible only to the initiated, which is precisely what language-structures in general and cryptograms in particular are designed to be.

Many cryptologists have been notable musicians. Among composers, Tartini, Michael Haydn, Schumann and Elgar are known to have been interested in cryptography. There is some evidence (e.g. Kahn, 1967, p.563) that the two abilities are positively correlated. The connection was also known to and used by the British wartime crypto-analytic service, candidates for which were asked among other things whether they could read an orchestral score. It is not surprising, then, that musical symbols or ideas should have been used in cryptography and allied disciplines from the earliest times, nor that quasi-cryptographic ideas should have been freely used in music. This article considers those separate areas in turn, dealing with each in chronological order, and then in conclusion discusses their occasional overlap.

2. CRYPTOGRAPHY USING MUSICAL IDEAS AND SYMBOLS. The most obvious method, the assignment of letters to individual notes of music, seems to have been the earliest and has certainly remained the commonest. The 15th-century *Tractatus varii medicinalis* (GB-Lbm Sloane 351, f15r) describes a system of five different pitches each variable in five ways (by note values or stem-directions) yielding 25 symbols to make an alphabetical cipher. For example, the five vowels are represented as in ex.1. As an illustration, the scribe has spelt out in his music-cipher the words 'In nomine summe et individue trinitatis hoc opus incipio'. The earliest documented system thereafter seems to be the analogous cipher used c1560 by Philip II of Spain. This begins as in ex.2 and continues similarly with different

Ex.1

Ex.2

note values. By the end of the 16th century some very complex systems were in practical use. Thus the papal cryptographic service c1596 used a music-cipher of nine different pitches each variable in eight ways, yielding a possible 72 symbols. Such proliferation is over-elaborate, and the simpler 11 x 2 system published by

Ex.3

D L

Porta (c1600, in later editions of his seminal work on cryptography) found more general favour (ex.3).

Many other possible uses of musical symbols were exploited by cryptographers. An anonymous French writer in 1584 had suggested that if each letter of the alphabet were allotted a numerical value, e.g. A = 1, B = 2, etc., the number of notes in a musical composition could have verbal significance. An analogous notion was propounded by Porta (1596) the garrison of a beleaguered city could send messages by ringing bells in a prearranged permutation, e.g. one bell once = A, twice = B, thrice = C, a second bell once = D; and so on. By 1650 Athanasius Kircher had transferred this idea to the orchestra, by allotting up to four successive notes among six instruments, thus one note from the first instrument would mean the letter A, two notes B, and so on. In 1685 Friderici proposed a number of novel and ingenious music-ciphers (such as ex.4). Not

X	Y	Z	.
B	C	D	E
M	N	O	I
G	H	L	K

were the visual aspects of music neglected. A Cambridge MS (Ctc 1089) seems to be Elizabethan state-cipher of the later 16th century disguised as lute tablature, while a 17th-century MS (Lbm Add 45850M), when folded, spells out a message, supposedly to Charles II, with the stems and tails of notes.

In general the cryptographic textbooks and source-books continued to describe some form of Porta's basic table (ex.3), which recurs in readily recognizable adaptations throughout the 16th and 17th centuries (Davies, 1967). Between 1620 and 1685 it appeared in five major works published in England, Germany and Italy (Schwenter, Godwin, Kircher, Schott, Friderici). Telemann may well have been referring to it when he wrote about having been offered instruction in a secret method of 'discovering by means of music the dealings of ambassadors and generals, and conveying orders to them' (Schneider, 1908).

The Porta system evolved with music history. A specimen in the Foreign Office archives c1750 uses crotchets and quavers with treble and bass clefs (Schooling, 1896). Another, suggested by Philip Thicknesse in 1772, uses crotchets and minims with treble clef and key signature, for extra authenticity. In the late 18th century and early 19th, the system appears in textbooks by Guyot in France, Hooper in England and Klüber in Germany, in the form of a cipher-wheel on which the notes and corresponding letters are written round in two circles, one fixed and one movable. This device, of vital importance in the history of general cryptography (cf Kahn, 1967, pp.128f) permits frequent resetting, thus baffling the hostile analyst. In these sources also the cipher further evolves, in the same

interest, towards the random allocation of cipher letters to musical notes, the occasional representation of one letter by a two-note group, and in general a policy of analogy with real music, at least in appearance (for which purpose Klüber recommended the addition of sharps and flats). This had always seemed desirable for cryptographic reasons. Thus the papal encipherers had added to their music-cipher messages an ostensibly relevant liturgical text, so as to avert suspicion. In the later 18th century and early 19th the possibility of combining real cipher with real music was the subject of lively experiment and debate (Blair, 1819). A notable contribution was made by Michael Haydn who (according to his biographers, 1808) invented an elaborate music-cipher of his own (ex 5) presumably for communi-

f#m though by analogy with A and O it would be

cation purposes but perhaps for composition as well. At least it strikingly foreshadows cipher systems later used as compositional devices (e.g. ex 10), and it may even have been designed (e.g. in its treatment of modified vowels) to yield results which were not too unlike real music. But it remained a private initiative. The only documented contemporary use of music-cipher in practice, in the French diplomatic service (correspondence between the Duke of Havre and the Duke of Lorges, *Lbm* Add.32259, f.180v) relies on a Porta-type system which is neither very convincing musically nor very secure cryptographically. This use continued as late as 1800. Nor is the type entirely extinct in this century; the first solved intercept of the New York City Police Department (Anon., 1952) was a series of melodic lines in the treble clef which turned out to be a note-for-figure encipherment of illegal wagers, furnished with occasional accents and pauses in an optimistic attempt at verisimilitude.

3 OTHER COMMUNICATION SYSTEMS USING MUSICAL SYMBOLS. Meanwhile, on a different (not strictly cryptographic) level, musical sounds or symbols had been considered as the basis for more general semantic systems and structures. One pioneer was Bishop Wilkins, who suggested (1641) that the ordinary notes of a musical instrument might be used to express not only letters and words but things and notions, so that 'there might be such a general language as should be equally speakable by all nations and peoples'. Leibniz (c1678) put forward a similar suggestion for an artificial language consisting solely of tones and intervals (Couturat, 1903). There must also have been practical research and experiment in this area, for in 1800 (as Klüber recorded, 1809) pupils at a school for the blind

in Paris were 'reading' phrases played on the violin. The (unspecified) techniques used may have been a Porta-type system extended for communication purposes (as by Bertini, 1811). But they were more likely to have been precursors of the ideas later developed by François Sudre (1787-1862), whose pupils could also converse with him via the violin. By 1817 he had constructed a complete artificial language, in which any seven different symbols could be combined five at a time, with variations of order and stress. The seven syllables or pitches of tonic sol-fa formed one obvious basis. His system incorporated such quasi-musical ideas as the use of 'domisol' (i.e. the perfect triad) to mean 'God' and its retrograde form to mean 'Satan'. Similarly 'sollasi' means 'ascend' and 'silsol' 'descend'. The idea was officially welcomed in its day as having potential practical value, but it found no lasting application, and was in effect superseded by the invention of the Morse code. With the demise of Sudre's system the last serious attempt to exploit purely musical resources for purely linguistic purposes came to an end.

4 MUSIC USING CRYPTOGRAPHIC AND RELATED CONCEPTS. No doubt the idea of using the elements of music to convey extra-musical semantic significance (whether audible or inaudible, overt or covert) is as old as music itself. Some devices depend on written notation. Words can be sung, for added emphasis, to their corresponding solmization names (e.g. 're' for 'king', 'sol' for 'sun'). Examples are found from Josquin to Schütz (Wessely, 1973, see also SOLMIZATION). EYE MUSIC, adding visual meaning to written scores, is found as late as Bach, some of whose music may also contain the idea of a ritual symbolism of gesture, motion or number (Krause, 1964). Numbers can be signified by intervals or instruments, voices or entries, from the 14th century (Wessely, 1973) to Bach (Krause, 1964, Geiringer, 1956). The numbers thus conveyed may then be used according to strict cryptographic principles to encipher letters of the alphabet, according to the system already described above. This device was used in the early 18th century by J. C. Faber, whose *Neu erfundene oblige Composition* enciphers the name 'Ludovicus' by the number of notes allotted to a particular instrument in each of nine movements. The same determined encipherer also used a Porta system analogous to ex 3 as a means of incorporating messages, e.g. in the viola part of a quartet.

The most common of all such devices however was the use of the letter-names of notes to create themes from words or (more usually) names of people. This idea too no doubt dates back to the beginning of letter nomenclature. It is particularly associated with the name of Bach, which in German usage can be written as in ex.6. Bach himself and his contemporaries incor-

porated that phrase in many works (as did Beethoven, Schumann, Liszt, Rimsky-Korsakov, Busoni and several others; see B A-C H). Bach showed further ingenuity in his seven-part canon over a ground of F-A-B-E, headed 'FABERpetatur' possibly a suitably cryptic allusion to J. C. Faber himself or a kinsman. Such ideas flourished especially in the common ground

between music and literature that was increasingly cultivated in the 18th and 19th centuries; they are, for example, typical of Jean-Paul Richter and occur in his novel *Die Flegeljahre* (1804-5). As a consequence, more letters and ideas were found musical equivalents than the standard A to G (and H, the German B \flat). For example, 'S' can be considered as the equivalent of the note E \flat , because the German name of the latter is 'Es'; this enabled Friedrich Fesca to begin a string quartet with F-E-E \flat C-A, literally his own signature tune. It helped Spohr sportively to render his own name as in ex.7 (*po* stands for *piano*, the old-style crotchet rest looks like 'i'). At one extreme, ideas of this kind

S P O H R

could be used in grave commemoration of the death of Schubert, as in the fugues written on the musical letters of his name by Stadler and Sechter, at the other, they could inspire such *jeux d'esprit* as John Field's tribute to his hostess Mme Cramer (MS. 1832) in the form of two grateful melodies on B-E-E \flat F and C-A-B-B-A-G-E.

The greatest and most prolific exponent of such notions, whether serious or genial, was Schumann. The musical letters of his own name, S-C-H-A, form a main theme of *Carnaval*, where they are also found as A-S-C-H, the name of his friend Ernestine von Fricken's home town, and anagrammatized as A-S-H-C. The A-S component is enciphered variously as two notes (A, E \flat) or as one (As = A \flat in German). Schumann also used, in published music, A-B-E-G-G and G-A-D-E (names of friends), F-A-E (standing for 'Frei aber einsam', free but lonely, a device also used in music by Joachim), and H (the answer to a riddle on the letter H). His other overt music ciphers used in extant letters or manuscripts include A-C-H, A-D-E, B-E-D-A (a pet name for Clara Wieck), B-E-S-E-D-H (the nearest equivalent to the name of a friend, Bezeth), E-H-E ('marriage') and, no doubt the longest example on record, (L) A-S-S-D-A-S-F-A-D-E, F-A-S-S-D-A-S-A-E-C-H-D(T)-E, or 'leave what is trite, hold fast to the right', in musical rebus.

It has been suggested that Schumann used a three-line, eight-note cipher (on a system derived from Klüber, 1809, with whose work he has been shown to be familiar; see Sams, 1970) much as in ex.9, especially for the purpose of making themes with the covert significance of 'Clara' (Schumann, née Wieck), and that Brahms also used such themes with the same meaning (Sams, 1971). Brahms was also much given to the meaningful use of musical letters. He seems to have used his own, B-A-H-S, in his A \flat minor organ fugue. He modified the F-A-E idea to F-A-F, standing for 'frei aber froh', free but happy, which was used in many works from the Serenade no.1 to Symphony no.3. The notes A-G-A(T)-H-E, A-D-E are used as a valediction to Agathe Siebold in the Sextet op.36 and arguably in other works (Sams, 1971). In correspondence Brahms referred to Adele Strauss as the notes A-E \flat (A.S.) and to Gisela von Arnim as the notes G \sharp -E-A (Gis-e-la). This ingenious combination of German names with solmization names, the typical French usage, recurs in the use of B \flat -A-F (B-la-F) in a string

quartet written for Belyayev by Borodin, Glazunov, Lyadov and Rimsky-Korsakov. It has been suggested that Tchaikovsky made analogous use of a friend's name, D-E(s)-S \sharp -re-E (Brown, 1978). Glazunov composed on the theme of his own pet name, S-A-C-H-A, César Cui linked the musical letters B-A-B-E-G in his wife's maiden name (Bamberg) with his own initials, C-C. Smetana not only composed with his own monogram B-S and the musical letters F-E-D-A in the name Froc \acute eda, but also enciphered the year 1862 as the first, eighth, sixth and second degrees of the scale.

In England, Elgar was a skilled cryptologist. He successfully solved a well-known challenge cipher, to which eminent experts later thought it worthwhile to publish their own solutions, he constructed a difficult if not impossible cryptogram, he made cipher entries in diaries and notebooks. One of his earliest works was an Allegretto on G-E-D-G-E, the name of a friend. It seems reasonable on the facts to conjecture that he used private ciphers in some of his compositions, and that suggestion has often been made in respect of the 'Enigma' Variations. The theme of Granville Bantock's contemporary Helena Variations is fashioned from his wife's initials, H-F-B.

The first major composer to make serious and acknowledged use of a detailed and coherent cipher system was Ravel, who in 1909 used ex.8 (except that,

A	B	C	D	E	F
H	I	J	K	L	M
O	P	Q	R	S	T
V	W	X	Y	Z	

presumably to avoid repetition, H was given its German equivalent, B \flat) to encipher the name Haydn in a commemorative Menuet for piano. Similar pieces were written on the same system at the same time by Debussy, Dukas, Hahn and d'Indy. The same 7 \times 4 system was used again in 1922 by Ravel and others (Schmitt, Enescu, Aubert, Koechlin, Ladmiraute and Roger-Ducasse) in commemoration of Fauré. The idea seems to have appealed to Ravel who (alone, apart from Schmitt) elected to encipher the whole name of Gabriel Fauré. In 1929 another group of composers (Poulenc, Honegger, Milhaud, Ibert and others) used cipher in commemoration of Albert Roussel, this time no uniform system was adopted. Some are unspecified, Poulenc's for example; but it can be inferred from the score of his *Pièce brève sur le nom d'Albert Roussel* to be an 8 \times 3 arrangement as in ex.9. The name 'Albert' is

Ex.9

A	B	C	D	E	F	G	H
I	J	K	L	M	N	O	P
Q	R	S	T	U	V	W	X

also enciphered backwards to make an additional theme. Of especial interest is Honegger's encipherment system, ex.10, which is worth comparing with Michael Haydn's

Ex 11

(ex.5) Honegger's actual compositional procedure is shown at exx 11 and 12

The simpler model of ex 8 was used by Arnold Bax in his Variations on the name of Gabriel Fauré in 1949. Otherwise outside France the German letter-name tradition continued in the 20th century as in the 19th. In Berg's Chamber Concerto the musical letters in the names Schoenberg, Webern and Berg (S C H-B E G, F B F, B-F-G) are incorporated in the music as personal symbols. Thea Musgrave has made a similar use of the names of the first Viennese school in her Chamber Concerto no 3 Dmitry Shostakovich, in his Eighth String Quartet and elsewhere, used his monogram D S C H as a theme, which Ronald Stevenson also used, in homage, in his Passacaglia, while Everett Helm has signed more than one composition with the musical initials E-H. In Bussotti's contemporary theatre-piece *La passion selon Sade*, D-E S A D E is interlocked with B A C H. But the most striking recent developments have come from what might be called the French tradition, in the form of Olivier Messiaen's 'communicable language' (ex 13) and complementary leitmotifs (see ex 14) which together make the complete cipher and

Ex 14 Theme of God

code system used in the organ work *Méditations sur le mystère de la Sainte Trinité* (Halbrech, 1972). Ex.13 is used to encipher extended quotations (in French) from the *Summa theologiae* of St Thomas Aquinas, ex.14 and other leitmotifs symbolize spiritual entities or basic concepts such as 'to be' or 'to have'.

It seems entirely fitting that such a system should have evolved in the only milieu ever to have produced real music on themes overtly derived from cipher, and

the only milieu ever to have produced a complete artificial language with musical elements. There is an evident affinity between ex 13 and ex 10 (mostly clearly in the first eight notes of each). Although the 'theme of God' means the same in its retrograde form, unlike François Sudre's 'domisol', the relation between his 'language' and Messiaen's is also manifest, especially when we learn that the latter's ascending 'to be' is counter-balanced by the descending theme 'to have'.

5 CONCLUSION The two streams of music and cryptography, usually quite separate, sometimes converge. That trend has become more marked in recent years. The combinative impetus comes from both sides. Cryptographers have always striven to make their music-ciphers as much like real music as possible in order to enhance their effectiveness as cipher. Some composers, conversely, may well have felt that their music was enriched by a judicious admixture of cryptographic elements. The use of cipher themes seems to have begun with J. C. Faber and may well have continued with Michael Haydn, Schumann and Elgar. The undisguised use resumed in France with Ravel, Poulenc, Honegger and others and has culminated in Messiaen. But, as Norman Cazden showed in 1961, modern scores present unvalued opportunities for encipherments of all kinds, and no doubt there are undeclared exponents of undisclosed cipher techniques of musical composition.

Critical mention of this practice tends to be uncomprehending and deprecatory. But on the evidence it derives from a true intuition that music and semantics have deep roots in common ground. Nor is this intuition confined to musicians, Thomas Mann for example in *Dr Faustus* envisaged a 12-note system which could also be used as cipher, suffusing the music with new quasi-verbal meaning. It is perhaps significant that in the past all the best-known and most frequent examples have been encipherments of names – presumably because names, of all words, are the least fixed and most fluid in meaning, and therefore the most closely akin to musical motifs as generally understood. With changing techniques and attitudes cipher equivalents may now more readily assume the form of words or phrases.

In any event there will remain the demonstrable kinship between the musical and the cryptographic mind. The ready assimilation of music to symbolic communications systems and language structures; the consensus that music has an import related to its own structure; the prevalent feeling that music is itself a mysterious language intelligible only to the initiated: all these and other affinities and analogies between music and cryptography at least suggest that the relation is not without psychological or aesthetic significance.

Csákány [czakan] (Hung. 'cane-flute') A variant of the English recorder and German *Blockflöte*. Gábor Mátray (*Tudományos Gyűjtemény*, II, 1829) referred to it as a Hungarian invention of his time; the first known mention of it is in an advertisement in the *Vereinigte Ofner und Pester Zeitung* (13 Aug 1807) for some compositions (including six 'easy pieces' and a concerto) by A. Heberle. According to a concert programme from Veszprém dated 28 May 1816, Heberle was its inventor. A csákány in the collection of the Gesellschaft der Musikfreunde in Vienna is a gift from 'Eberle of Pápa'. J. G. Albrechtsberger (*Sämtliche Schriften*, iii, Vienna, 1826, p.171) described it as a transposing flute in A₄ with a written compass of *c'* to *g''*. Some examples in A have also been found. Ernst Krähmer (1795-1837), a Viennese oboist, was the only known virtuoso of the csákány and composed for it. In his *Neueste theoretisch-praktische Csakan-Schule* he distinguished two kinds of csákány, the Viennese type and the more advanced type associated with Pozsony (now Bratislava), in which the back hole can be opened for notes higher than *c''*. Csákány methods were written by

W. Klingenbrunner (1819), W. T. Matiegka and Carl Kreith (*Scala für den Csakan*). István Koch, originally from Veszprém, was a well-known maker of the instrument in Vienna

Csárdás (from Hung. *csárda*: 'country inn'). A Hungarian dance composed of stylized folk elements and believed by its aristocratic promoters to have been danced by the daughters of rustics in country inns on Sunday afternoons. The term was unknown among the rustics at first, however, and is said to have been coined by Count Béla Wenckheim. The dance was introduced to the fashionable balls of the Hungarian capital during the early 1840s, and there is a description of it in the memoirs of Baron Frigyes Podmaniczky giving 1839 as its earliest date and associating its initiation with Count István Széchenyi. Another source gives its place and date of origin as Nagyvárad (now Oradea, Mare, Romania), 1834. The first documentary reference to the *csárdás* occurs on a piece of manuscript music among the papers of the Borbély de Roff family dated 1835 (in *H-Bn*). Musically the dance is hardly different from the VERBUNKOS. Characterized by simple duple time, frequent syncopations and typical cadential formulae, it is related to the quick (*friss*) part of the mature, late-period *verbunkos*. The *csárdás* retained its binary pattern at first, but later became multipartite and eventually acquired a slow introduction. During the 1850s its pace was considerably quickened, giving rise to fast (*sebes*) and slow (*lassú*) variants of the dance. It reached the height of its popularity between the 1850s and 1880s. Liszt first used it in his Hungarian Rhapsodies, the most interesting examples by him are the *Csárdás macabre* (1881 2) and the two *csárdás* of 1884 ('Allegro' and 'Csárdás obstiné')

Csatkai, Endre (b Darufalva, 13 Aug 1896; d Sopron, 12 March 1970) Hungarian art historian. He studied in Vienna and Budapest, taking his doctorate at Budapest University in 1925 and the CSc in art history in 1952, he was director of the Wolf Museum in Eisenstadt (1926-38) and the Liszt Museum in Sopron (1945-63), and editor of the *Soproni szemle* (from 1955). In 1954 he received the Kossuth Prize. Csatkai's research was mainly on the cultural and musical history of Burgenland, the Austrian province on the border with Hungary which has been ruled by both countries and of which the central area round Sopron was restored to Hungary in 1921.

IMRE FÁBIÁN

Csermák, Antal György (b c1774; d Veszprém, 25 Oct 1822). Hungarian composer and violinist. According to

his first biographer Count István Fáy, Csermák went to Hungary from Bohemia (by way of Vienna) in the 1790s. In 1795–6 he was leader of the first Hungarian national theatre company orchestra in Pest and Buda, and in 1795 he set up a 'musical academy' in the theatre. At this point he was not yet involved with Hungarian music, but gave much admired virtuoso performances of the violin music of Haydn, Mozart and Viotti. In 1802 or 1803, when Csermák was playing chamber music at Godolló, the home of Prince Antal Grassalkovich, he met the gypsy violinist and composer Bihari. Influenced by Bihari's playing, and by his and János Lavotta's *verbunkos* compositions, Csermák was drawn to the new Hungarian national music. In 1804 he published his first compositions in the Hungarian style, the *Romances hongroises* and the string trio *Magyar nemzeti táncok*. From then he was a famous composer and interpreter of *verbunkos* music, but since he held no permanent post he led a nomadic life, moving from one country estate to another. Fáy and Liszt both recorded that he appeared at the imperial court in Vienna, and that he also visited Russia. In 1809, inspired by the final revolt of the Hungarian nobility against Napoleon, he composed his first string quartet, a programmatic suite in the national style but also greatly influenced by Mozart. The last years of Csermák's life were filled with restless wanderings. The recollections of his contemporaries, as well as his own manuscripts dating from this period, testify to his increasing mental illness. In 1822 he was living in Veszprém, where he handed over the manuscripts of his many dance compositions to the cathedral Kapellmeister József Ruzitska, who was later to edit the great edition of *verbunkos* music *Magyar nóták Veszpremi vármegyéből* ('Hungarian tunes from County Veszprém'). He died in poverty and isolation.

Of the virtuoso violinist-composers who epitomize the golden age of *verbunkos* music, Csermák was intellectually the most sophisticated. His chamber music shows a high degree of theoretical understanding, combined with a thorough knowledge of the Viennese Classical style and an imaginative approach to harmony. In his chamber works he was a pioneer of a specifically Hungarian tradition in art music, which would combine certain aspects of the Viennese Classics with those of the *verbunkos*. He was also strongly influenced by Hungarian, Slovak and Romanian folk music, and revealed in Hungarian music a potential which was fully realized only in the 20th century. Some of Csermák's musical ideas were exploited by Liszt (Hungarian Rhapsody no. 4) and Erkel (Duo brilliant). His contemporaries, with typical Romantic overstatement, dubbed him 'the Hungarian Beethoven', praising him as a skilled composer and instrumentalist who expressed a certain patriotic spirit, and thereby contributed to the awakening of a national consciousness among his fellow countrymen.

VFRA LAMPLRT

Ctesibius [Ktesibios] (fl. Alexandria, 3rd century BC) Inventor. According to Tannery and Farmer, he was active during the reign of Ptolemy Euergetes I (246-221 BC). A recent and thorough review of the evidence by Perrot strongly supports the conclusion adopted here that he was active c.270 BC, the period of Ptolemy Philadelphus. He enjoyed wide fame in antiquity for his mechanical devices operated by the pressure of water or air. Often these were elaborate toys created to amuse the court: one such was a water-clock, with sounding trumpets among its ingenious fittings, made for Ptolemy's queen Arsinoë.

The most famous and significant of Ctesibius's inventions was the **HYDRAULIS**, or water-organ. While some references fail to establish him precisely as its discoverer, his claim is assured by the weight of the total evidence and the lack of any satisfactory alternative theory. Farmer argued reasonably that the case for Ctesibius is strengthened by the existence of an Alexandrian treatise, surviving only in Arabic translation; this describes and illustrates a hydraulic musical device of a type much earlier than that described by Vitruvius or by Hero of Alexandria. His attempt, however, to identify the author, a certain Muristus (whose name exists in several variant forms), with Ctesibius remains highly conjectural and involves difficulties.

No description of the hydraulis by Ctesibius himself has survived. According to reasonable modern con-

ture, a lever-actuated piston forced air into a chamber partially filled with water and thence to the pipes. Lucretius (v 332-7) and Cicero (*Tusculans*, iii, chap. 18, §43) wrote admiringly of the hydraulis, which achieved great popularity in Rome, and in the first years of the Empire Vitruvius attempted to describe it. He spoke of a wind chest divided into four, six or eight air channels – the limitation to the octave is noteworthy – and gave a detailed account of a mechanism in which keys set slide valves in motion to open or close the passage of air to the pipes (x, chap 8, §§2, 6). A Roman hydraulis dating from AD 228, very close to the date of Athenaeus's description of the instrument (174a, e) has been unearthed at Aquincum, near modern Budapest. Ctesibius's invention, essentially an elaboration of the panpipes, is without question the ancestor of the immensely complex modern pipe organ.

Cuba. Island republic in the West Indies

I. Art music II. Folk music

I. Art music.

The history of art music in Cuba shows that it surpassed that of any other Caribbean island, although colonial music started much later there than in large Latin American countries. Musical activity during the 16th and 17th centuries was apparently limited. At that time sacred music was concentrated at Santiago Cathedral, the earliest reference to music indicates the presence there in 1544 of Miguel Velázquez, a native organist. The post of *maestro de capilla* was established in 1682, with limited means, by Bishop Juan García de Palacios, and was first held by Domingo de Flores.

Attempts to revive church music at Santiago, begun during the first half of the 18th century, were successful only during the latter part of the century, when Cuba produced its first important composer, Esteban Salas y Castro. Before his transfer to Santiago in 1764 Salas was associated with the music of the Havana parish church (which became a cathedral in 1788). His extensive output includes masses, generally in four parts with string accompaniment, lamentations, and psalm settings, motets, litanies and numerous villancicos in the vernacular. His liturgical pieces are in a transitional style combining late Baroque and pre-Classical characteristics. Another Cuban, Francisco José Hierrezuelo, succeeded Salas at Santiago; after his resignation the Spaniard Juan Paris (1759-1845) occupied the post (1805-45). The musicologists Alejo Carpentier and Pablo Hernández Balaguer discovered several of Paris's works, which include many villancicos. By the 1830s

operatic and symphonic music was being performed in the cathedral, much to the disapproval of some local musicians.

Music at Havana Cathedral seems to have reached its peak during the early 19th century, though there have been no specific studies of the historical and musical archives there. The Academy of Music was founded in 1814, and the S Cecilia Academy in 1816; the first music published in Cuba was a *contradanza* (1803).

Symphonies, operas and piano music, at first in a Classical and then in a predominantly Romantic style, characterized 19th-century Cuban music. Antonio Raffelin (1796–1882) wrote a mass, several symphonies and chamber music works in a Classical idiom. Robredo Manuel Saumell, a prolific composer, cultivated the *contradanza* with its typical dotted-figure accompaniment, characteristic of the later habanera, *danzón* and other Latin American popular dance rhythms. Laureano Fuentes [Matóns] (1825–98) wrote many chamber works, sacred pieces, a symphonic poem *América*, an opera *Scila* and several zarzuelas. Nicolás Ruiz Espadero (1832–90) wrote virtuoso piano pieces in a style derived from Liszt and Gottschalk, such as his *Chant du Guagiro*. Gaspar Villate studied at the Paris Conservatoire and had three of his operas given their first performance in Europe (*Zeila*, Paris, 1877; *La zarzina*, The Hague, 1880; *Baltazar*, Madrid, 1885).

The first decisive step towards musical nationalism in Cuba was taken by Ignacio Cervantes (1847–1905), the most important Cuban composer of his generation. He was a pupil of Gottschalk and Ruiz Espadero and then of Marmontel at the Paris Conservatoire, and had a successful career as a concert pianist. Among his many works the 21 *Danzas cubanas* for piano (1875–95), many of them *contradanzas*, combine folk-music elements of both Afro-Cuban and Guajiro traditions in a Romantic virtuoso piano style. These pieces are the most original contribution to 19th-century Cuban art music. Among the many composers active during the early 20th century Eduardo Sánchez de Fuentes, one of the most influential, also advocated a Romantic national style. Later outstanding composers associated with musical nationalism included Amadeo Roldán and Alejandro Caturla, who found in 'Afrocubanismo' the most suitable source of national expression. The stylistic idiosyncrasies of Roldán's impressive output are best seen in his series of six *Ritmicas* (1930) for various instruments, the last two for Afro-Cuban and other percussion instruments. Caturla had several of his works published in Europe and the USA. His skilful and original treatment of Afro-Cuban music is well represented by his *La rumba* (1933) and *Tres danzas cubanas* (1937) for orchestra, and particularly by his many settings of Alejo Carpentier's and Nicolás Guillén's Afro-Cuban poems. For a time Roldán was leader of the Havana PO, founded in 1924 by Pedro Sanjuán (b 1886). Previously the Havana SO had been established under Gonzalo Roig (b 1890), composer of the popular zarzuela *Cecilia Valdés*. Ernesto Lecuona, a member of the same generation, was internationally renowned for his musical comedies and many popular songs.

After the premature deaths of Roldán and Caturla, José Ardévol (b 1911) occupied a leading position as a composer and teacher from the 1930s to the mid-1950s. He gave many young composers a solid technical training, and he founded the Grupo Renovación Musical

(1942) in Havana, which promoted contemporary music and rejected nationalism for its own sake. The group's manifesto stated, however, that a 'national factor is indispensable in musical creation, in the sense that all artistic expression occurs within a cultural setting'. As a composer Ardévol moved from a rigorous neo-classical style which he initiated in Cuba to a modernistic 'national' style.

Ardévol's pupils who were associated with the group and became prominent included Serafin Pro, composer of choral works, Gisela Hernández, Edgardo Martín (b 1915), Harold Gramatges (b 1918) and Argeliers León (b 1918), also noted as an ethnomusicologist in the 1960s. One of the youngest of the group, Julián Orbón, has established an international reputation as a composer and a pianist. In the early 1950s he broke away from the group to develop his own artistic ideas. Other 20th-century Cuban composers who developed independently include Carlo Borbolla, Félix Guerrero and Aurelio de la Vega. The last-named is the best-known composer outside Cuba, for a time he directed the school of music at the Universidad de Oriente, then moved to the USA as professor of music at S Fernando State College, California, where he directs the laboratory of electronic music. He has written in an atonal idiom and turned to electronic music in the 1960s. Among the younger generation Juan Blanco and Leo Brouwer have used electronic and serial techniques respectively.

II. Folk music.

1 Introduction 2 Instruments 3 Song and dance genres

1 INTRODUCTION. Little is known about folk music in Cuba before 1800. Few conclusions can be drawn from early descriptions of the island's indigenous culture and music or from archaic instruments (maracas, large conches and wooden drums). In the accounts of Columbus's voyages only vague mention is made of musicians. The chronicles of Hernando de la Parra (whose writings date from 1598 to 1662) mention a small Havana music ensemble including violin, clarinet, *violón* (large guitar) and *viñuela*, played by Micaela Ginés, a freed slave from Santo Domingo. Laureano Fuentes (1825–98) reported that in 1580 Santiago had only two or three musicians all of whom had belonged at one time to the ensemble of Teodora and Micaela Ginés. One of the best-known early tunes from Cuba, *La Ma-Teodora*, is named after Micaela's sister; an analysis of its melody (Fuentes recorded it in 6/8 metre) shows anachronisms in both the melody and the notation. Nevertheless the tune has many elements common in 16th-century European folk-songs: simple structure, close links with ecclesiastical forms, modality and metric flexibility.

Other early examples of Cuban folk music, *San Pascual bailón* (1803) and *El sungambelo* (1813), are mentioned for the first time by Ramírez (1833 1907) but their written style clearly belongs to that in vogue at the beginning of the 19th century – the musical language of the coteries of the Cuban salons. From the mid-19th century several works have characteristically Cuban rhythms. *El bacalao* ('The codfish'), *La caringa* (a pursuing-dance), *Ta bueno mayorá* and *Mamá Inés*, all with a festive air similar to that of the later Cuban *guaracha* (see §3 (i) below). *El cocoyé* from Oriente province also became known at this time, it consisted of a potpourri of eight motifs in 2/4 metre (with an introduction in 6/8), all conforming to the habanera pattern. The *cocoyé* theme originated in a *comparsa* (a masquerade carnival) from Santiago de Cuba: the Spaniard Juan Casamitjana (1805–82), leader of a military band, combined it with other themes to compose *El cocoyé*, and the first public performance (1847) achieved such local success that military bands were soon performing it throughout the island.

2 INSTRUMENTS At the time of Columbus's discovery of the New World three main types of instrument were used by the Ciboneye (Cuban aboriginals): a conch, a drum and maracas. The conch (*guano*) was cut open at the tip and blown like a trumpet, chroniclers reported that its sound was poor. The drum (*mayohuacan*) was made entirely of wood from a hollowed tree-trunk. In one side a large 'H' was cut, and from this two small tongues or languettes protruded, on which the beat was struck. The *mayohuacan* seems to have been more popular in Santo Domingo than in Cuba. Chroniclers of the 16th century noted that Indians used wooden rattles with stones inside, and maracas are now always included in any Cuban ensemble. They are made from the fruit of the wild calabash tree and are about the size of a large orange, when the fruit dries and the peel hardens the pulp is extracted through holes, one at either end. Stones are placed inside and in the modern instrument a handle seals the two holes.

Instruments now popular in Cuba are the *güiro* or gourd (also known as the *rascador*, 'scraper', or *guayo*), the *claves*, the bongos and the *tumbadora*. The *güiro* (probably the same instrument as the *calabazo*) is usually made from the gourd of a climbing plant. It is elongated, with raised marks or frets close together on its sides: a switch is rubbed against the frets, producing a distinctive sound which gives rhythmic emphasis to the music. The *claves* are two small cylindrical sticks of polished hardwood (each about 20 cm long with a diameter of 2.5 cm). They are not aboriginal: Fernando Ortiz (1881–1969) referred to their use in the Havana dockyards from the 17th century to the 19th.

Only two members of the drum family are now in common orchestral use in Cuba, the *tumbadora* and the bongos. The *tumbadora* is made in three sizes, the largest, the *conga* type, is 1 metre high. The drums, made of staves, are long and barrel-shaped with a swelling or 'belly' in the middle. The heads have diameters of 29 cm, 27 cm and 24 cm; the base of each drum is smaller than the head, which is tightened by turnbuckles or keys. Bongos are the most important instruments in any small Cuban ensemble. They are smaller in both height (most pairs are about 16 cm and 18 cm high) and diameter than the *tumbadora*. In their modern form they are usually round (but sometimes square) and are made

from a hollowed section of a tree-trunk. Cuban, not African, in origin, they were created around 1900 to meet the needs of small groups of players. Other more unusual percussion instruments (e.g. frying-pans, cow-bells) are used in both small and large ensembles, although strictly speaking they belong more to the *comparsa* (see §3 (vi) below). Their main function is to add timbre rather than rhythmic colour.

A very important instrumental ensemble in the Manzanillo and Holguín regions in the province of Oriente includes a mechanical organ, a tin *güiro* or scraper, and two large timpani. The organ is modelled on those made by Barbieri, an Italian who made small organs at the end of the 18th century for European fairs. The organs that came to Manzanillo in the 19th century (more than 200) were all French, built by Poirot, de Mirecourt and Limonaire of Paris. Between 1920 and 1950 about 12 full-size organs were built in Manzanillo by Francisco and Carlos Borbolla. At first they were small and cylindrical, like barrel organs, but modern ones are heavier and have approximately 300 pipes. Their operation, by a handle, requires considerable rhythmic skill. The ensemble with organ is popular in both urban and rural districts. Its sonority and pleasing rhythmic effect, together with the additional sustaining power of the organ, may account for its great popularity.

3 SONG AND DANCE GENRES. Song and dance have generally been inseparable in Cuba. Almost every song in 2/4 metre could be converted (with slight rhythmic alterations) into dance music such as the bolero, the *canción*, the *guaracha*, the *son*, the *chachachá* and the *mambo*. Even the *danzón*, an instrumental form, may include a sung section. Genres may be combined to create a rondo form (*ABACAD*). Two metres predominate in popular Cuban music: 6/8 appeared shortly before 1800 in the *punto*, in creole music and in what used to be called *el zapateo* (see §3 (iii) below), 2/4 predominated after 1800 and was almost always syncopated. Later in the 19th century syncopation became more complex, nationalism influenced Cuban music, and forms distinct from the music of Spain evolved. In *El Abujar*, an authentic Cuban piece dating from 1830, there are syncopated figures which are different from anything then familiar in urban dancing, and the habanera rhythm predominates (ex. 1a). Possibly this syncopation derived from the *contradanza* style of the period.

Ex. 1 Habanera rhythms

Dances in vogue during the early 19th century were minuetts, gavottes, waltzes, quadrilles and *contradanzas* (cotillons). Ramírez, mentioning a chronicle by Buenaventura Ferrer (1782 1851), reported that 'balls were so numerous that there were as many as 50 a day'. Most musicians were blacks who danced these European dances with great style. Dance phrases were customarily repeated, extending the length of a dance for 10 or 15 minutes. Probably the musicians, in order to simplify and vary these repeated phrases, would have changed them from the one shown in ex. 1a to those in ex. 1b or 1c. From *El Abujar* of 1830 to a tune of 1880 that is a pure habanera, or to a *mambo* of 1950, there is

a progressive increase in syncopation.

After 1838 many musical works were published, including *danzas* and *contradanzas*. Publications included those by Tomás Buelta y Flores (*d* 1851), Robredo Manuel Saumell (1817–70), Tomás Ruiz and José L. Fernández de Coca. Hundreds of publications came from the presses of J. Federico Edelmann (1795–1848).

(i) *Areyto, guaracha and danzón* Fernando de Oviedo (1478–1557), a chronicler and also mayor of Hispaniola, described the dance known as *areyto* as a circle-dance for men and women who join hands and perform the steps in orderly figures, following the movements of a soloist. Padre Bartolomé de las Casas, who went to Cuba on one of the early voyages, spoke of the *areyto* being accompanied by rattles. The word 'areyto' was often mentioned by 16th-century chroniclers referring to a dance native to Santo Domingo, Cuba, Mexico and Central America, but the term apparently referred also to a ceremonial event. In the *areyto* of Cuba and Santo Domingo the accompaniment for the dance was supplied by the *mayohuacan* (wooden drum without skin) and maracas.

The original *guaracha*, according to Felipe Pedrell (1841–1922), was a solo theatre dance of the 19th century. It was in 6/8 metre and apparently resembled the *zapateado*. Its name comes from the Caribbean word 'guaraco' or 'araguaco' ('dance'). In Cuba the sung *guaracha* achieved great success in comic popular operas. In 3/4, 6/8 or 2/4 metre, its verses made festive and humorous reference to well-known people or topics. The *guaracha* *El sungambelo*, first performed in 1891, is dated 1813 on its original score, the style (but not the tune) of the piece makes this date doubtful, and the pompous introduction is more like a *danzón* than a *guaracha*. The festive and ingenious song texts, however, are typical of the genre. Other *guarachas* followed *La carincha*, *El bacalao*, *Ta bueno mayora* and *Mamá Inés*, for example, which were defined as rumbas by contemporary historians, but are now regarded as *cantos aguarachados* ('songs in the form of the *guaracha*'). The *guaracha*, though lively, is a cheerful song rather than a wild dance, unlike the rumba, which probably first appeared about 1875 (see §3 (iv) below). A famous Cuban *guaracha* is *El negro bueno*; a performance at the Teatro Villanueva in 1869 (during the first war of independence, 1868–78) caused such a commotion that the militia fired indiscriminately into the crowd.

The *danzón*, important in the history of Cuban dance music, was popular between 1880 and 1940. Good orchestras proliferated on the strength of its popularity and it was the favourite dance at all social levels. The first documented *danzón* (c.1879 in Matanzas), by Miguel Failde (1852–1921), consisted simply of the two parts of a *contradanza habanera* each with an eight-bar introduction. This simple idea was modified and acquired a specific character when Raimundo Valenzuela (1848–1905) added a third part, giving the piece three melodic sections instead of two, all quite distinct in feeling and tempo. The structure resembled that of a rondo: *ABACAD*. Sections *B*, *C* and *D* were in turn light, sentimental and lively; *B* was usually played by the clarinet; in *C* the violins introduced a contemporary popular tune; and in *D* (known as *parte rumbada*) the whole orchestra returned. Among the important exponents of the *danzón* (each with his own orchestra)

who developed individual styles were Antonio María Romeu (1876–1955), Felipe Valdes (1895–1946) and Eliseo Grenet (1893–1950). The genre remained in fashion for 60 years; it influenced composers of *boleros*, *canciones*, *guarachas* and *sones* and still remains popular.

(ii) *Son*. Towards the end of the 19th century the *son* became popular, especially in Oriente. With the rhythmic emphasis on the fourth quaver in a bar of 2/4 metre, it is unique in Hispanic popular song. Its distinctive form is shown in ex.2.

Ex.2 *Son* rhythm

In the *son* syncopation seems to have been a gradual development. Minor accentuation must have become more and more firmly established in the performing style of the small country ensembles from Oriente, made up of guitar, *tres* (small guitar) and singer. The most important accent was on the last quaver or the last two semiquavers of the bar, emphasized by silence on the first beat of the bar (see ex.2). A few isolated pieces written in the last decades of the 19th century suggest this effect, but they are too few to allow the construction of a history of the 20th-century *son*. *El negro bueno*, a *guaracha* in vogue in 1869, anticipates the *son* but has little or no metric regularity. Probably the *son* grew out of an interaction between performers and context, in which the texture and structure of the melodies were adapted and varied.

(iii) *Zapateo, punto and montuno*. Everything to do with the countryside is referred to as 'guajiro' or 'montuno'. *Baile guajiro* or 'dance from the countryside' comprises primarily the *zapateo* in 6/8 metre, which is a variant of the Spanish *zapateado* (also in 6/8), brought to Cuba by tobacco cultivators from the Canary Islands. It was accompanied by guitar, lute and *bandurria* (flat-backed, short-necked lute), the *tres*, a small guitar with three double strings, was used later. All six quavers in the bar were strummed vigorously on these three instruments, with a precisely marked and slightly varying rhythm. According to contemporary accounts, the dance was performed with short steps and heel blows (*taconazos*) against the floor or from shoe to shoe, the male dancer would turn around his partner who faced him, also striking her heels against the floor. There were normally few couples, and a single guitar provided the accompaniment. It is not known exactly when *coplas* or *décimas* were introduced to the *zapateo* – these were verses that made humorous reference (while the dancing was at its height) to topical events or to local people. As they mixed with other Cubans, the Canary Islanders gradually lost interest in the *zapateo*: by the beginning of the 20th century it had disappeared completely, and was replaced by the *danza* and the *danzón*.

Décima singing (together with melodic fragments imitative of the *zapateo*) survives in the 20th century as the *punto*. This is particularly popular in rural areas. It blends three ingredients: the guitar providing the accompaniment, the *décima* or sung anecdote, and the *tres* reinforcing the sung melody with the insertion of dramatic flourishes at cadences. Two types of *punto* developed during the 19th century: the traditional *punto*

pinareño (from Pinar del Río) and the *punto camagueyano* (or *punto de Las Villas*), more experimental in colour and form. There are two types of *punto pinareño* (according to content), the *punto español* and the *punto cubano* (a creole version). The *punto camagueyano* also has two contrasting forms, the *punto fujo*, characterized by the percussive effect of the *claves*, and the *punto cruzado*, which uses syncopation and has other voices interweaving between those of the principal singers. The *punto* is generally in the major mode and uses transition from tonic to dominant to enable a question posed to be answered by another singer. Sometimes the answering singer continues, but with new *décimas* that repeat the content of the first ones. The guitar accompanies either with two groups of three quavers (binary rhythm) or with three groups of two (ternary rhythm).

In eastern Cuba the word 'montuno' is used to describe all rural phenomena, for instance the worker in the fields and his dances (*bale montuno*). Like the *son* and the *bolero*, the *montuno* originated among small groups from Oriente known as *bunga* (a term implying insignificance). The *montuno* is not a genre but simply a link or bridge between two separate pieces – a simple repeated phrase which enables the dancers to make a smooth transition from one piece to another. It is also used as a preamble to dancing, or to lengthen a piece, its repeated phrases being interspersed between various sections of the piece. The *montuno* is purely instrumental: its rhythms and melodies are performed largely on the *tres*. Modulation is possible, but the repeated phrase is always only one bar even though many different notes and intervals are used. A simple rhythmic pattern governs almost all the various forms of the *montuno* and the accent is always on the first quaver of the bar. The three commonest rhythmic figures are shown in ex. 3.

Ex. 3 *Montuno* patterns

(iv) *Rumba*. The name 'rumba' (as well as *rumbo*) perhaps derives from *rumbo* ('magnificent', see RUMBA). Ramirez quoted a paragraph from a newspaper of 1807 in which the word 'rumboso' is used: 'Tonight a magnificent orchestra [una rumbosa orquesta] will play in the salons of the Coliseum'. Thus the term was not then connected with a dance. Rumba in the 20th century refers not so much to a specific genre of music as to a general dance style – lively, nervous and erotic – that originally characterized some liturgical rites of Afro-Cuban cults. Any suitable refrain, even a two-bar motif in 2/4 metre, can serve as the basis for a rumba if it is performed with zest and accompanied by drums or kettledrums, it may quote from a traditional work or from a popular piece. In the Afro-Cuban liturgy three special sections are devoted to dancing, each with particular characteristics, the *rumba yambú*, a couple-dance of moderate speed, pantomimes old age, the *rumba guaguancó*, with a postponed third beat of the *clave*, is a long, narrative couple-dance; and the *rumba columbia*, taking its inspiration from the *diablito* ('little devil') of the Nāñigo festival, is a solo dance.

The *rumba* of the Afro-Cuban liturgy was carried over into stage music and became established in comic opera during the first decade of the 20th century. Its choreography was distinguished by virtuoso leg

movements. From 1915 to 1935 the dance became popular through the exceptional skill of certain dancers such as Pepe Serna and Archimedes Pous. Not until the 1930s was the rumba performed in the salons, as a vivacious dance in 2/4 metre incorporating some steps of other dances.

(v) *Bolero, mambo and chachachá*. The Cuban *bolero* (which has no connection with its Spanish counterpart) is a binary song form in 2/4 metre. In the mid-19th century it superseded the *guaracha* in popularity. The rhythmic characteristics of the Cuban *bolero* have changed considerably since the latter part of the 19th century and now often include the complex *cinquillo* and *tresillo* figures (see LATIN AMERICA, §IV). The trend towards *montuno* ('rusticity') during the first half of the 20th century influenced the *bolero* and resulted in compound forms such as the *bolero-son* and *bolero-mambo*.

The word 'mambo' (of African derivation) refers to a Cuban popular urban genre of the mid-20th century. It is strongly influenced by Afro-Cuban forms of the late 19th century and the early 20th, is generally in binary metre and often incorporates non-lexical syllables for rhythmic effects. Though not improvised, it draws on the technical resources of jazz (dissonance, polytonality, glissandos), has rhythmic figures similar to those of the *danzón* and often uses popular melodies. Its distinctive character results from the contrast of saxophone and brass timbres, juxtaposed with the melody in both its instrumental and vocal forms.

The *chachacha* (its onomatopoeic name reflects the stamping of the feet) has become internationally popular as a ballroom dance (see CHACHACHA), rivalling the *mambo* by the 1950s. It is generally in 2/4 metre and consists of an exposition (in the form *AB*), sometimes a *montuno*, and a coda. It is played by the traditional *charanga* ensemble (two violins, piano, flute, double bass, *timbral-cencerro* or 'drum-bell', and *güiro*) with a solo singer. It has diatonic harmony and little syncopation, and has given rise to other types (*bolero-cha* etc).

(vi) *Comparsa and conga*. *Comparsas* (masquerade carnivals) are mentioned from the middle of the 19th century, but attained their modern form only after the establishment of the Republic of Cuba in 1902. The music for the *comparsa* was normally based on an eight-bar theme. The *comparsas* depicted in pictures by the Spaniard Victor P. Landaluze (1828–89), who came to Cuba soon after 1850, show that at that time they lacked the brilliance and discipline they later achieved. During *comparsas* performed around 1900 such quarrelling broke out that severe restrictions were imposed and in 1913 they were banned, in 1937, however, they were revived and enjoyed great success. *El cocoyé*, performed in Santiago de Cuba in 1840, is referred to as a *comparsa*, but at that date seems only to have been sung, without the elaborate choreography of the modern versions known in Havana, Santiago de Cuba and Manzanillo. Possibly some *comparsas* contained quotations from Afro-Cuban liturgical themes concealed in the musical fabric of the piece.

The *conga* gradually became established as an essential ingredient of the total choreography of the *comparsa* and became popular in the first decades of the 20th century because of its use in the propaganda displays of the election campaigns. Despite its African name it is probably not derived from Afro-Cuban ceremonial ritual. The rhythm of the *conga* is based on a figure of

Bata okonkole (small waisted drum) in the Museo Nacional de la Música, Havana

two bars and its variants, with syncopation in the second bar (ex 4). The steps of the dance always dictate the

rhythm: three short steps are dragged out slightly and the fourth step is a forward leap.

(vii) *Afro-Cuban music*. Afro-Cuban ritual music originated with the traditional music of Africa which, before the advent of the Republic (1902), had to be performed in secret. Songs and dances in cult groups all address the gods and are accompanied by three sizes of *bata* (waisted religious drums): *ivá* (large), *ntotele* (medium) and *okonkole* (small, see illustration). All perform ritual rhythms and accompany ritual offering songs. In addition to organized rituals, more informal fiestas (*bembe*) are held in private houses, when music for drums and popular music is performed.

GÉRARD BEHAGUÉ (I), CARLOS BORBOLLA (II)

Cuclin, Dimitrie (b. Gaiati, 24 March 1885). Romanian composer, theorist and writer. At the Bucharest Conservatory (1903-7) he studied theory and solfège with Kiriac, composition with Castaldi and the violin with Klenck. He continued his composition studies in Paris, with Widor at the Conservatoire (1907) and with d'Indy and Sérenyx at the Schola Cantorum (1908-14). Back in Bucharest he was made professor of aesthetics and composition at the conservatory (1919-48) and he was also active as a music critic, founding and editing the review *Foia volantă* (1932-3). His literary activities extended to translating opera and oratorio texts into Romanian and writing plays, novels, poems and opera texts in Romanian, French and English. Among his extensive theoretical writings, the valuable treatise on music aesthetics received a Romanian Academy prize. As a composer he has remained an isolated figure, partly as a result of his involved philosophical style, partly because of the huge forces demanded by his operas and symphonies. The first 14 symphonies are organized into a coherent tonal cycle; the later ones have contemplative programmes on life, death, human fate, etc. Each symphony follows a similar form: action, reaction, meditation, triumph of action over reaction.

Cuclin's chamber pieces are closer to Romanian folk-song, though the modal melodies are transformed diatonically. His most brilliant writing is in the suites for solo violin.

VIOREL COSMA

Cucu, Gheorghe (b Pucști-Tîrg, Vaslui district, 11 Feb 1882; d Bucharest, 24 Aug 1932). Romanian composer and conductor. He studied in Bucharest at the school for church choristers and then at the conservatory (1899-1905), where he was a pupil of Brătianu (theory and solfège), Kiriac (harmony, counterpoint and choral conducting) and Wachmann (harmony), he also studied counterpoint with d'Indy at the Schola Cantorum in Paris (1908-11). After experience with various church choirs in Bucharest he took appointments as conductor at the metropolitan church (1912-32) and of the Carmen Society (1912-28); he also taught harmony at the conservatory (1918-32) and the academy of religious music (1928-32). From his pupils he gathered a vast collection of folk music, which he later published and used in compositions, particularly carols and love-songs. In these he sublimated a mastery of classical counterpoint into a folk-type heterophony, as simple as it is original. With Enescu he was one of the most distinguished Romanian melodists, drawing on ancient psalm intonations as well as folk music. His masterpiece, *Nu pricep, Curată* ('I cannot understand, Curată'), is a synthesis of the Romanian-Byzantine style of the first half of the 20th century; it paved the way for such large-scale religious works as Constantinescu's oratorios.

VIOREL COSMA

Cucuel, Georges (b Dijon, 12 Dec 1884; d Grenoble, 28 Oct 1918). French musicologist. After schooling in Montbéliard and at the Lycée Louis le Grand in Paris he attended the Schola Cantorum and the Sorbonne, where he was a pupil of Rolland and took his doctorate in 1913 with a dissertation on La Pouplinière and 18th-century chamber music, as well as a subsidiary on the 18th-century orchestra. He was subsequently given a government grant to do research in Italy on *opeka buffa*, but this was interrupted by the outbreak of war, his conscription and his death from influenza at the Grenoble military hospital. He established his reputation as a major scholar of 18th-century music in his many articles, his dissertations and in his book on the origins of French comic opera, all based on thorough knowledge and full of detailed information, expressed with elegance and concision. He left an account of 18th-century aristocratic musical life in Italy drawn from documents in Rome, Florence and Naples (*Feste musicali italiani del 700*) ready for publication at the time of his conscription.

Cuculion. An alternative English spelling for the Greek *koukoulion*, the name used in Byzantine chant for the PROOIMION, see also BYZANTINE RITE, MUSIC OF THE, §10.

Cudworth, Charles [Cyril Leonard Elwell] (b Cambridge, 30 Oct 1908; d Cambridge, 26 Dec 1977). English writer on music. Largely self-taught, he worked in various university departments and libraries from 1930; his musical studies were particularly encouraged by E. J. Dent. He was appointed assistant in the music section of the University Library, Cambridge, in 1943 and librarian of the Pendlebury Library at the

University Music School in 1946, becoming curator of that library in 1957; in the following year the honorary degree of MA was conferred on him by the University of Cambridge. He retired from the Pendlebury Library in 1973.

Cudworth's interests ranged wide. He lectured and wrote extensively on the architecture and local history of East Anglia, and wrote several novels and plays as well as librettos for musical treatment by Patrick Hadley (*Fen and Flood*, 1955, *Commemora*, 1958). As a musical scholar his interests focussed on the 18th century and especially on British music, where his work on the keyboard concerto and the symphony opened up new areas of study, but he also worked on topics from the early 17th century to the early 20th, particularly on the links between music and literature, while his careful research on questions of attribution and authenticity solved many outstanding problems (he was the first to establish that 'Purcell's Trumpet Voluntary' was by Jeremiah Clarke). Cudworth contributed extensively to musical dictionaries (he contributed the 'Libraries and Collections' entry to *Grove* 5 and many entries on 18th-century English composers for *MGG*) and was a prolific writer of criticism and record sleeve notes as well as a frequent and skilful broadcaster, not exclusively on musical topics, he also prepared performing editions of many 18th-century works. Many generations of Cambridge music students are indebted to him for his generous and friendly assistance and counsel.

STANLEY SADIE

Cue (from Fr. *queue*: 'tail'). At the end of a series of rests in a vocal or instrumental part, in a concerted work, a prominent phrase from another part may be printed as a 'cue': it is designed to help the performer come in correctly. It is normally printed in small notes (ex.1).

Orchestral parts are sometimes 'cued' so that music written for a larger band may be played by a smaller one. Solo parts for wind instruments may be cued into

Ex 1

the string parts, for example, or a bass clarinet phrase may be cued into the bassoon part

Cuellar y Altarriba, Ramón Félix (b Saragossa, 20 Sept 1777; d Santiago de Compostela, 7 Jan 1833) Spanish composer and organist. While a chorister in the metropolitan church of La Seo, Saragossa, he studied with the *maestro de capilla*, Francisco Javier García, known as 'el Españolito'. Cuellar succeeded him as *maestro de capilla* in 1812 as the result of a competition. In 1815 he was appointed an honorary musician of the royal household to Fernando VII and in 1817 he was unanimously acclaimed the winner of a competition for the post of *maestro de capilla* at Oviedo Cathedral. Because of his liberal ideas he was forced to leave this position in 1823, fleeing to Madrid and taking refuge with one of his disciples, a singer in the cathedral there. For five years Cuellar lived in poverty, finally obtaining in 1828 the position of first organist at the basilica of Santiago de Compostela, where he remained until his death. Cuellar composed mostly sacred music in the Italian style promoted by García and his school. He enjoyed considerable renown throughout the 19th century in Spain. After a performance of one of his masses, a reviewer in the *Gaceta musical de Madrid* (11 Jan 1866) spoke of 'the inimitable grace of its melodies', phrases which 'portray the majesty of God' and asked 'Is there any mass more perfect than that of Cuellar?'

WORKS

- (most MSS in F-Ol, V, others in BUa, SD, SC, Mp)
 Sacred: 16 masses, 10 psalms, 5 Magnificats, Te Deum, Salve regina, Miserere, motets, incl. Laudis Sion Salvatorem, 5vv, insts, ed. H. Esclava y Elizondo *Lira Sacro-hispana, Siglo XIX*, 1st ser., i (Madrid, 1869), oratorios, vespers, responses, Lamentations, villancicos, others.
 Inst. pieces for org, sinfonias, sonatas, marches, other works.

GUY BOURLIGUEUX

Cuenod [Cuénod], Hugues (Adhémar) (b Vevey, 26 June 1902) Swiss tenor. He studied at the Basle Conservatory and privately in Vienna. After teaching at the Geneva Conservatory he began his career as a singer, making his stage début at the Théâtre des Champs Elysées in Paris in 1928. He has appeared in many character roles in the main opera houses. He created the role of Sellem in Stravinsky's *The Rake's Progress* (Venice, 1951), sang the Astrologer in *The Golden Cockerel* (Covent Garden, 1954), and appeared

regularly at Glyndebourne after 1954, his roles including Don Basilio and the travesty parts of Erice and Linfea in Cavalli's *L'Ormindo* and *La Calisto*. A cultivated musician with a wide command of languages, he sang Baroque music under Nadia Boulanger (1937–9), taking part in the pioneer recordings she made at that time of Monteverdi; and he also made outstanding recordings of lute-songs, of Couperin, and of the Evangelist in Bach's *St Matthew Passion*. He was a fine interpreter of lieder and French song, and used his high, light tenor with exquisite taste in all the music he performed. On stage his interpretations were full of humour, where that was called for, and he was also a master of the grotesque.

ALAN BLYTH

Cugley, Ian (Robert) (b Richmond, Melbourne, 1945) Australian composer. Until he was 13 he lived within the moral and musical world of the Salvation Army, travelling extensively in Australia. He wrote music as a child, but it was not until 1963, his first year at Sydney University, that he began to compose seriously, though he has rejected much of his music of that period. At the university he came under the influence of Sculthorpe's music and teaching, and took a special interest in the noh drama. He was appointed lecturer at the New South Wales Conservatorium (1967) and lecturer in music and education at the University of Tasmania (1968). In addition, he lectures on Japanese music to adult education classes and is principal percussionist in the Tasmanian SO. He has developed his compositional idiom outside the fashionable mainstreams.

MAUREEN THÉRÈSE RADIC

Cui, César [Kyui, Tsezar Antonovich] (b Vilnius, 18 Jan 1835; d Petrograd, 26 March 1918) Russian composer and critic of French descent. His father, an officer in the French Army, remained in Russia after Napoleon's retreat from Moscow in 1812, married a Lithuanian, Julia Gucewicz, and lived at Vilnius where he taught French at the gymnasium. César received his early general education there, at the same time studying the piano, and receiving some lessons in harmony and counterpoint from Moniuszko. He entered the Engineering School at St Petersburg in 1851, and later studied at the

Academy of Military Engineering (1855–7); on graduating he was appointed lecturer, and in 1878 professor. He was an acknowledged expert on fortifications, and his writings on the subject were widely acclaimed.

Cui decisively entered into the musical life of St Petersburg in 1856, when he met Balakirev; in 1857 he was also introduced to Dargomizhsky, and subsequently became friendly with all the members of the so-called *moguchaya kuchka* ('Mighty Handful'). Like them, he was much influenced by Balakirev, though his works seem not to have come in for such despotic treatment as some of theirs as Rimsky-Korsakov recorded in his autobiography, 'crediting Cui, as [Balakirev] did, with a talent for opera, he allowed a certain degree of liberty to Cui's creative genius, treating with indulgence many an element that did not meet his own tastes'. He did, however, help Cui with his orchestration (for which Cui had 'neither inclination nor ability', according to Rimsky). Possibly Balakirev supervised the orchestration of Cui's two earliest known works, the piano scherzos of 1857 (the first was based on the notes B A B E G derived from the surname of his wife, Malvira Rafayilovna Bamberg, the second bears the inscription 'à la Schumann'), and he certainly had a hand in the scoring of the overture to Cui's first opera *Kavkazskiy plennik* ('A prisoner in the Caucasus'), which is to a libretto, based on Pushkin, by Viktor Krilov, a fellow student of Cui's at the military academy. When Cui conceived the opera (1857–8) it had only two acts, but he composed a new, central act in 1881, and in this form the opera was first given at the Mariinsky Theatre in 1883 (Around this time the Belgian Countess of Mercy Argenteau, Cui's earliest biographer, became interested in his music, and it was through her influence that the opera was first performed abroad, at Liege in 1886). Krilov was also responsible for the libretto for Cui's second stage work, the operetta *Sim mandarina* ('The mandarin's son'), composed in 1859.

Two years later Cui began his finest large-scale composition, the opera *Vil'iam Ratclif* ('William Ratcliff'), a setting of Pleshcheyev's version of Heine's play, it occupied Cui until 1868 and was given at the Mariinsky the following year. In the partisan musical climate of Russia the mixed critical reception was to be expected. Laroche and Serov were hostile, Cui's friends were more appreciative. Rimsky-Korsakov, for example, writing in the *Sanktpeterburgskiy vedomosti* (where he was substituting for Cui himself, who had been music critic of the paper since 1864), commented on the impact of the narratives though he mentioned also the poor theatrical effect of having four such lengthy numbers, and, although Balakirev is known to have marked a copy of the score with such comments as 'What are these magpie hops?' and 'What Asiatic part-writing have we here?', he too was enthusiastic about it. Stasov dubbed it 'one of the most important compositions of our time'; Musorgsky remarked that 'not once has it disappointed our expectations'. Again, though, there was general discontent with the orchestration. Balakirev thought it amateurish; and Rimsky said, 'The best thing Cui could do now is to entrust me with the reorchestration of the whole of *Ratcliff* ... In its present state the opera is unperformable, because of its incredible, clumsy orchestration; one can't orchestrate an opera like that – avoiding double basses as coarse instruments and replacing them by horns'. Despite its charm, its fine

César Cui

characterization (particularly of Maria, her father, Leslev and Margarethe) and much music that reveals a dramatic flair. *William Ratcliff* has never gained a place in the repertory.

Not that this discouraged Cui from embarking on other opera projects. In 1869, in response to a request made by Dargomizhsky before he died in January that year, Cui completed *The Stone Guest*, a work to which he was fanatically devoted, and in 1872 he composed the first act for the (abortive) opera-ballet *Mlada*, written in collaboration with Rimsky-Korsakov, Borodin, Musorgsky and Minkus. At the same time (1871-5) he was also working on the four-act opera *Anzhelo*, with a libretto by Burenin, after Hugo. Similarly, his next opera, *Saratsin* ('The saracen', 1896-8), was based on French literature, Dumas' *Charles VII chez ses grands vassaux*, though he returned to a Russian subject for the one-act *Pri vo vremya chumi* ('A feast in time of plague', 1900), a setting of one of Pushkin's 'little tragedies'. A Pushkin story also provided the material for the last of his important operas, *Kapitanskaya dochka* ('The captain's daughter', 1907-9), which was preceded by two more operas on French works, *Mademuzel' Fifi* (1900, after Maupassant) and *Matteo Falcone* (1901), a 'dramatic scene' after Mérimée and Zhukovsky. Towards the end of his life he composed a few children's operas and completed a performing version of Musorgsky's *Sorochintsy Fair* (given at the Petrograd Music Drama Theatre on 26 October 1917).

But by then Cui was principally occupied with composing his vast output of vocal and instrumental miniatures, having also largely abandoned his activities as

a critic: for most of his life he had contributed to many journals and newspapers, including the *Sanktpeterburgskiy vedomosti* (1864-77), *Novoye vremya* (1876-80, 1917), *Nedelya* (1884-90), *Novosti i birzhevaya gazeta* (1896-1900), *Revue et gazette musicale de Paris* (1878-80), and others. Both in his reviews and in his book *La musique en Russie* (1880) Cui was a fervent supporter of nationalist ideals, and his often bigoted approach sometimes made him blind to the shortcomings of his favoured music and to the merits of music written by composers outside his coterie. He was averse to the music of Tchaikovsky and Anton Rubinstein; and on these two, and on others, he frequently vented a caustic wit. He likened Rakhmaninov's First Symphony, for example, to 'a programme symphony on the Seven Plagues of Egypt' (*Novosti i birzhevaya gazeta*, 17/29 March 1897). And he was also known to turn on his friends: on 6/18 February 1874 he published a malicious notice of the first complete performance of Musorgsky's *Boris Godunov* in the *Sanktpeterburgskiy vedomosti*.

Cui's own music often contrasts strikingly with the principles he advocated in his writings, but in his operas, particularly, he offered the explanation (in a letter to Felipe Pedrell):

Un sujet russe d'opéra m'irait pas du tout. Bien que russe, je suis d'origine mi-française, mi-lithuanienne et je n'ai pas le sens de la musique russe dans mes veines. C'est pourquoi à l'exception de mon premier opéra *Le prisonnier du Caucase*, tous les sujets de mes opéras sont et seront étrangers.

In the first act of *A Prisoner in the Caucasus* there are certainly some Russian inflections, but most of his stage music reveals the influences of Auber and Meyerbeer. In *William Ratcliff* he took up the ideas of 'musical realism' and 'melodic recitative' that are prominent in *The Stone Guest*, though, as in *Boris Godunov*, these stark elements are tempered by lyrical melody, and the recitative often dissolves into *arioso*. But Cui is known chiefly as a miniaturist. By far the largest part of his music consists of songs and short piano pieces, in which he displayed the fascination with Chopin that had been with him since his childhood, and also his ability to crystallize a particular mood or to express succinctly the sentiments of a poem.

WORKS

(Most published in Cui's lifetime by Bessel, Belyayev, Heugel and Jurgenson.)

STAGE

- Kavkazskiy plennik [A prisoner in the Caucasus] (opera, 3, V. Krilov, after Pushkin), 1857-8, 1881, St Petersburg, 16 Feb 1883, pf score (St Petersburg, 1882).
- Sin mandarina [The mandarin's son] (operetta, Krilov), 1859, St Petersburg, 19 Dec 1878, pf score (Hamburg and St Petersburg, 1888).
- Vil'yam Ratclif [William Ratcliff] (opera, 3, A. Pleshcheyev, after Heine), 1861-8, St Petersburg, 26 Feb 1869, pf score (Leipzig, 1869).
- Anzhelo [Angelo] (opera, 4, V. Burenin, after Hugo), 1871-5, St Petersburg, 13 Feb 1876, pf score (St Petersburg, 1876).
- Mlada (opera, 4, Krilov), 1872, Act 1 only (St Petersburg, 1911), other acts by Rimsky-Korsakov, Borodin and Musorgsky, incidental ballet music by Minkus.
- Le fibustier (opera, 3, after J. Richepin), 1888-9, Paris, 22 Jan 1894, pf score (Paris, 1893).
- Saratsin [The saracen] (opera, 4, after Dumas' *Charles VII chez ses grands vassaux*), 1896-8, St Petersburg, 14 Nov 1899, pf score (Moscow, 1899).
- Pri vo vremya chumi [A feast in time of plague] (opera, 1, Pushkin's 'little tragedy'), 1900, Moscow, 1900, pf score (St Petersburg, 1901).
- Mademuzel' Fifi [Mam'selle Fifi] (opera, 1, after Maupassant), 1900, Moscow, 15 Dec 1903, pf score (Moscow, 1903).
- Matteo Falcone (dramatic scene, after Mérimée and Zhukovsky), 1901, Moscow, 27 Dec 1907 (Moscow, 1907).

- Kapitanskaya dochka [The captain's daughter] (opera, after Pushkin), 1907-9, St Petersburg, 27 Feb 1911
 Snezhniy bogatir' [The snow prince] (children's opera, M. Pol'), 1905, Yalta, 28 May 1906, pf score (Moscow, 1953)
 Kot v sapogakh [Puss in Boots] (children's opera), ? Rome, 1915 (Moscow, 1961)
 Krasnaya shapochka [Red Riding Hood] (children's opera), 1911
 Ivanushka-durachok [Ivan the idiot] (children's opera), 1913, pf score (St Petersburg, 1914)

GEOFFREY NORRIS

Cuíca. A Brazilian FRICTION DRUM

Cuivré (Fr.: 'ringing', 'sonorous'). The peculiar brassy tone from the horn, achieved by a slight tensing of the lips and an incisive attack. This can be done equally well on the open or stopped horn.

Cuivres (Fr.) BRASS INSTRUMENTS

Culp, Julia (b Groningen, 6 Oct 1880; d Amsterdam, 13 Oct 1970) Dutch mezzo-soprano. She studied with Cornélie van Zanten and Etelka Gerster and made her début in 1901 in Magdeburg in a concert with Busoni. She never appeared in opera, and seldom in oratorio (though Henry Wood praised her in Elgar's *The Dream of Gerontius*), but was one of the first singers to specialize in lieder. As such she was pre-eminent, appearing in Germany, Holland, England and, between 1913 and 1917, in the USA. She had a rather small but beautifully even voice, and worked wonders with delicate tone-shadings and the subtlest musical and textual details. On her second marriage she settled in Czechoslovakia, returning to Holland in 1939. After giving some lectures in Amsterdam, she spent her last 30 years in retirement.

LFO RIEMFENS

Culshaw, John (Royds) (b Southport, 28 May 1924) English record and television producer. He studied music during his war service and had no formal training. In 1946 he began producing classical recordings for Decca. After a short spell with Capitol he returned to Decca in 1954 to become manager and chief producer, remaining in the post until 1967, when he became Head of Music Programmes for BBC Television. From 1975 to 1977 he was chairman of the music panel of the British Arts Council. He has twice toured Australia on behalf of the ABC. At Decca he was responsible for widening the scope of operatic recording in both a technical and an imaginative sense. His achievement there culminated in the first complete recording of Wagner's *Ring*, a project begun with *Das Rheingold* in 1959 and concluded in 1966. He has described the alarms and excursions of the undertaking in his entertaining book, *Ring Resounding*. He has also recorded some 30 other operas. At the BBC he has tried, with considerable success, to improve the presentation of music both in his own work, by encouraging other producers to experiment, and by broadening the scope of opera broadcasts.

ALAN BLYTH

Cummings, E(dward) E(stlin) [e. e. cummings] (b Cambridge, Mass., 14 Oct 1894; d Silver Lake, New Hampshire, 3 Sept 1962). American writer. Before World War II his poems attracted the attention of

several American composers, notably Cage, whose settings show a response to Cummings's naivety of tone rather than to the novelty of style which included an inventive use of punctuation, layout and neologism. These were, however, the features that commended his work to Boulez and Berio, both of whom first encountered it during visits to the USA in the early 1950s. Cummings's innovations seemed to them to parallel some of their own, and his sensitivity to phonetic values made his writing a valuable starting-point for new approaches to text-setting. He made an English translation of the narration for the published score of Stravinsky's *Oedipus rex*.

PAUL GRIFFITHS

Cummings, W(illiam) H(ayman) (b Sidbury, Devon, 22 Aug 1831; d London, 6 June 1915). English musical administrator and church musician. He was a chorister of St Paul's Cathedral, where in 1838 he sang at the funeral of the cathedral organist, Thomas Attwood. But Attwood's successor, William Hawes, treated the boys so harshly that Cummings's father found him a place in the choir of the Temple Church. He sang alto in the first London performance (16 April 1847) of *Elijah* under Mendelssohn. A few months later he became organist of Waltham Abbey on the recommendation of his teacher, E. J. Hopkins, the Temple organist. Cummings's adaptation of a theme from Mendelssohn's *Festgesang* (1840) to 'Hark! the herald angels sing' dates from this time. His love of singing outweighing his interest in the organ, he became tenor at the Temple Church and later at the Chapel Royal. Until about 1880 he was one of the leading tenors in oratorio, where his sound musicianship found ample scope in works such as Bach's *St Matthew Passion*. He also made two concert tours of the USA.

In later years Cummings played an important part in many English musical institutions. He was a professor of singing at the Royal Academy of Music (1879–96) and served on the management committee. He also taught singing at the Royal Normal College and School for the Blind in London. From 1882 until its demise in 1888 he was associated with the Sacred Harmonic Society, first as chorus master and later (1885) as conductor; he appears to have been more successful with choirs than with orchestras. In 1896 he succeeded Sir Joseph Barnby to become the third principal of the Guildhall School of Music, where he modernized the

curriculum; he retired in 1910. The foundation of the (now Royal) Musical Association and the Purcell Society owed much to Cummings's energies and skill in business matters, and the affairs of the Incorporated Society of Musicians, the Philharmonic Society and the Royal Society of Musicians profited greatly from his professional integrity and wide sympathies. He became a Fellow of the Society of Antiquaries in 1884 and was awarded an honorary doctorate of Trinity College, Dublin, in 1900.

Cummings's lifelong admiration for the music of Mendelssohn proved too strong an influence in his compositions for voice and chorus, which include an anthem, a morning service and a cantata, *The Fair Ring*. His scholarly work, on the other hand, has retained much of its value. Although modern research has supplanted his biography of Purcell (1881) his editions for the Purcell Society and monographs on the national anthem (1902), Blow (1909) and Arne (1912) contain much fundamental information. Today Cummings is remembered chiefly for his magnificent music library; he was already collecting rare editions at the age of 19 and some 50 years later owned 4500 pieces, including autograph letters and manuscripts. In an article 'On the Formation of a National Musical Library' (1877), Cummings had warned against the dispersal of important collections by auction, and it was a cruel mischance that precisely this misfortune befell his own treasures some 40 years later in London (Some 400 volumes are now in *J-Tn*, 59 are in *US-Wr*).

 HUGH J. McLEAN

Cundell, Edric (b London, 29 Jan 1893; d Ashwell, Herts, 19 March 1961) English conductor and composer. Having studied the horn with Adolph Borsdorf at Trinity College of Music, London, he joined the teaching staff of that institution in 1920 and began to be known as a conductor. In 1937 he joined the musical staff of the Glyndebourne Opera, but in 1938 became principal (in succession to Sir Landon Ronald) of the Guildhall School of Music and Drama. Among his achievements there was an extension of student opera performances which, conducted by himself, won considerable notice. He retired in 1959. His gifts both as administrator and as conductor assisted the Royal Philharmonic Society in maintaining activity during World War II, and he served as chairman of the music panel of the Arts Council of Great Britain from 1951 to 1953. He was made a CBE in 1949. As a composer he made less mark, though his String Quartet won a *Daily Telegraph* competition for chamber music in 1932. His other works include a symphony and a piano concerto.

ARTHUR JACOBS

Cunclier. See CUVILLIER, JO

Cunha, Brasílio Itiberê da (b Paranaguá, 1 Aug 1846, d Berlin, 11 Aug 1913). Brazilian composer and pianist. A career diplomat, he was largely self-taught in music. For many years he lived in Berlin as minister plenipotentiary, and there he made the acquaintance of the leading composers of the time, among them Liszt, who played his works, and Rubinstein, to whom he dedicated the *Etude de concert* (Milan, n.d.). In many other piano pieces, such as the *Nuits orientales* (Milan, n.d.), he tried to present a fashionable Romantic exoticism, but he is chiefly remembered for *A sertaneja* (1869), a piano fantasy based on urban popular music and the first Brazilian nationalist composition.

GERARD BÉHAGUE

Cunha, João Itiberê da (b Curitiba, 8 Aug 1869; d Rio de Janeiro, 25 Feb 1953). Brazilian composer, poet and music critic. Like his brother Brasília Itiberê da Cunha, he was an amateur musician. He studied law in Belgium for a diplomatic career; but after some experience as a diplomat, he decided to concentrate his activities on journalism, and particularly music journalism. For more than 40 years he was the music critic of the Rio newspaper *Correio da Manhã*, among others. He became an accomplished self-taught pianist and composer. Most of his best-known works are for piano, although his orchestral *Suite brasileira* became quite successful in the early 1950s. He showed a predilection for programmatic music and a clear liking for the subtlety and refinement of French impressionistic harmony. His best-known piano pieces include *Marcha humorística*, *Danse plaisante et sentimentale*, *Fête villageoise* and *Quatre portraits du vieux carnaval* ('Arlequin', 'Pierrot', 'Scaramouche', 'Polichinelle'), all written in a post-Romantic style. Other piano pieces slightly reflect the

composer's interest in Afro-Brazilian secular and sacred dances.

GERARD BÉHAGUE

Cunningham, Arthur (*b* Piermont, NY, 11 Nov 1928). Black American composer. He began to study the piano at the age of six and wrote music for his own jazz band when he was 12. He received the BA in music from Fisk University and the MA from Columbia University Teachers College, and then studied further at the Juillard School and privately. While serving in the US Army (1955-7) he wrote music for army bands, musical shows and television. The compositions of his mature period reflect his eclecticism; he draws freely on traditional techniques, serialism, jazz and rock – the last particularly in his later stage works. His career has included teaching and touring as a lecturer and conductor.

WORKS

(selective list)

Orch. *Adagio*, ob. str., 1954, *Theatre Piece*, 1966, *Prometheus*, 1966, *Concentrics*, 1968, *Lullaby for a Jazz Baby*, 1970, *The Walton Statement*, db. orch., 1971.

19 works for ens., many solo and choral songs.

60 pieces for pf incl. *Figments*, 1970.

5 stage works incl. *Strings and Jazz Quartet Ballet*, 1968, *Shango*, 1969, *Harlem Suite Ballet*, 1971.

FILLEN SOUTHERN

Cunningham, George D(orrington) (*b* London, 2 Oct 1878, *d* Birmingham, 4 Aug 1948). English organist. He did more than any of his contemporaries to advance the standing of the instrument at a time when it was not highly regarded. Cunningham studied at the Royal Academy of Music and became a Fellow of the Royal College of Organists at 18. He served his apprenticeship as a concert organist during his 17 years at the Alexandra Palace (1901-18), then a music centre in north London comparable with the Crystal Palace in the south. This experience gave his technique a fine edge, developed his musicianship and equipped him with a wide-ranging repertoire from which he instinctively excluded all that was meretricious.

As city organist of Birmingham from 1924 until his death he made his weekly BBC midday recitals a national institution. His programmes were well chosen and brilliantly performed, his treatment of the orchestral transcriptions then in vogue were in impeccable taste. His 600th recital was celebrated on 10 June 1941 with a presentation to him by the Lord Mayor of Birmingham and in 1944 Birmingham University made him a DMus (a research fund for postgraduate students in music there perpetuates his name). Cunningham was a frequent solo performer at the Promenade Concerts at the Queen's Hall, and later in the Albert Hall, and was one of the first organists to make records. As conductor of the City of Birmingham Choir he inspired fine performances of Classical and contemporary works and did much to influence the younger generation of musicians as organ teacher and examiner at the RAM.

STANLEY WEBB

Cuno, Johann. See KUHN, JOHANN.

Cupis [De Cupis, Cuppis, Cuppi, Capi, Cappi] de Camargo. Franco-Flemish family of musicians active in

Brussels and Paris. They originated in Rome, whence a branch emigrated to Brussels, the necrology for (2) Marie-Anne Cupis (the most famous member of the family) in the 1771 edition of *Spectacles de Paris* traces the name 'Camargo' to the Spanish wife of her grandfather Cupis. The Brussels Bibliothèque Royale contains an important manuscript (MS 1266) on the Cupis family.

(1) **Ferdinand-Joseph Cupis** [de Camargo, Ecuyer Seigneur de Renoussant] (*b* Brussels, baptized 29 Feb 1684, *d* Paris, 19 March 1757). Teacher of music and dancing. He taught in Brussels before moving to Paris about 1725-6 with his wife, Marie-Anne de Smedt, and their children. In Paris he played for society balls and continued to teach.

(2) **Marie-Anne Cupis** ['La Camargo'] (*b* Brussels, baptized 15 April 1710, *d* Paris, 28 April 1770). Dancer, daughter of (1) Ferdinand-Joseph Cupis. She learnt dancing at an early age. At the bidding of members of the Belgian court she studied for three months in Paris about 1720 with Françoise Prévost, a famous opera dancer; on her return she became the first dancer at the opera. After an engagement in Rouen in 1725 she and her family moved to Paris where she made her début at the Opéra on 5 May 1726 in *Les caractères de la danse* (music by J-F Rebel). Thereafter she danced there regularly, appearing in many important premières including Rameau's *Hippolyte et Aricie* (1733) and his other theatrical works (her roles are fully listed in *ES*).

Her success created resentment in Mlle Prévost, resulting in attempts to hinder Marie's career. Her early career was also marked by rivalry with Marie Sallé. But 'La Camargo' was nevertheless successful, and was also noted for her modesty and charity (though later she was involved in scandals, see Barbier). She influenced the aesthetics and technique of ballet, as the first dancer to shorten the skirts of her costumes to above the instep; this immodest display of foot and ankle enabled her to make technical innovations (e.g. the *entrechat*) by allowing greater freedom of leg movement. She was famous for her leaps, one of which resulted in an accident that kept her off the stage in 1735, in the same year, her career was further interrupted by the demands of the Count of Clermont, the father of her two children. She returned to the stage in 1740 and danced in the 1747-9 seasons' productions in Bayreuth and those of the 1749-50 season in Lyons. La Camargo retired at the height of her fame in 1751 with an unprecedented pension from the king. She was the subject of numerous portraits (see *DANCE*, fig 14), verses (Voltaire) and 19th-century operas (Lecocq and Enrico de Leva).

(3) **Jean-Baptiste Cupis** (*b* Brussels, baptized 23 Nov 1711, *d* Montreuil, 30 April 1788). Violinist, composer, horseman and horticulturist, second son of (1) Ferdinand-Joseph Cupis. He first learnt the violin from his father. He moved with his family to Paris where he met and married Constance Dufour in 1729; they had two sons, Jean-Baptiste (*d* before 1778) and Marc-Suzanne-Jean (a cavalry captain at the time of his father's death). On 20 December 1737 Cupis received a *privilege général* to publish three sets of works, issued between 1738 and 1745. Although he was never a member of the chapel or the Académie Royale de Musique, he worked on the musical arrangements for the dauphin's marriage in 1745.

He appeared with Guignon and Blavet at the Concert Spirituel in 1738, 1739 and 1742. The *Mercure de France* of 1 June 1738 compared Cupis favourably with his contemporaries, predicting that his playing would unite the tenderness and feeling of Leclair with the fire and brilliance of Guignon. Cupis contributed to the evolution of violin playing through his use of 8th position, fourth-finger extensions and new bowing methods with extended phrases on a single bow. His violin sonatas (with one exception) each contain four movements, a slow movement followed by three faster ones. The *allegro* movements are characteristically monothematic and careful attention to dynamic nuance is evident throughout. The first sonata of op.2 contains the famous 'menuet de Cupis'.

Numerous anecdotes concerning his horsemanship exist in private journals, he assumed his father's title of *écuyer* until he was made a baron in 1773. He retired to Montreuil where he spent the rest of his life growing peaches.

WORKS

(all published in Paris)

- 6 sonates, vn, bc, op 1 (1738)
- 7 sonates, vn, bc, op 2 (before 1742), menuet from sonata no 1 pubd in numerous 18th-century anthologies
- 6 symphonias a 4 parties, op 3 (?1742-5)

(4) **François Cupis** [*le jeune*] [Cupis de Renoussard] (b Paris, 10 Nov 1732; d Paris, 13 Oct 1808). Cellist, composer and teacher, youngest son of (1) Ferdinand-Joseph Cupis. He was apparently a wild youth, in 1751 when he was a cello student under Berteau at the Collège des Quatre Nations, his parents petitioned to have him arrested for stealing linen from his father and selling it, and in 1759 action was again brought against him (and his brother Charles, a horn player and *ordinaire* of the Académie Royale de Musique) for habitual drunkenness. But he became a creditable cellist and composer.

According to *Spectacles de Paris* Cupis was a member of the Concert Spirituel orchestra, 1764-71 and 1774-7, and a member of the Académie Royale de Musique orchestra, 1767-70. In 1770 two Cupis were listed as cellists, 'l'aîné' and 'le cadet', but only one appears on the registers of 1771 and 1772; Cupis signed a renunciation of the theatre on 3 November 1770 (drawn up by his parish priest) in order to marry, so could not be the Cupis named on the post-1770 lists. On the 1773 dedication on his op.5 duos he is described as 'professeur de violoncelle'.

WORKS

(all published in Paris)

- 6 sonates, vc, b, op 1 (c1761)
- 6 duos, 2 vc, op 2 (c1767), lost
- 6 duos, 2 vc, op 3 (c1770)
- [3] Duos, 2 vc, op 5 (1773), nos 1 and 3 also for vn, vc
- Concerto, D, vc, orch (1783)

JULIE ANNE VERTREES

Cupo (It. 'gloomy', 'dejected', 'sepulchral', 'hollow') A direction used particularly by Verdi both in instrumental parts and in vocal parts at moments of extreme quietness. *Cupo ed allargando* also appears.

Cuppi [Cuppis] **de Camargo**. See CUPIS DE CAMARGO family

Curioni, Alberico (b Milan, 1785, d Torno, March 1875) Italian tenor. The early years of his career were spent in Naples, where he sang in the first performance of Rossini's *La gazetta* in 1816. In the following year he appeared at La Scala, and in June 1818 he sang in the special performances of *La gazza ladra* in Pesaro (inaugurating the rebuilt opera house), rehearsed by Rossini himself. In 1821 he was engaged at the King's Theatre, London, he returned there frequently during the next 12 seasons. He sang in *La clemenza di Tito* and *Così fan tutte*, in several Rossini operas (including *Otello*) and in Meyerbeer's *Il crociato in Egitto*. He created the part of Orombello in Bellini's *Beatrice di Tenda* at La Fenice, Venice, on 16 March 1833. He also sang Pollione in *Norma* in Venice with Pasta, in Bologna with Giuditta Grisi and in London with Giulia Grisi.

ELIZABETH FORBES

Curioni, Rosa (fl 1753-62). Italian mezzo-soprano. She sang in Perez's *Merope* and Latilla's *Antigona* at Modena in 1753 and in Cocchi's *Antigona* at Bergamo in 1754. That autumn she was engaged as *seconda donna* for the King's Theatre in London and made her début on 9 November in *Ipermestra* by Lampugnani and Hasse. She remained for two seasons, singing in Italian and English works. She specialized in male roles, playing the Emperor Valentinian in Hasse's *Ezio* in 1755. The part of Lysander in J. C. Smith's *The Fairies* (Drury Lane, 3 February 1755) was written for her, but sung by Guadagni; she did however create Ferdinand in Smith's second Shakespeare opera, *The Tempest*, at the same theatre on 11 February 1756. She sang in oratorios under Handel at Covent Garden in the early months of 1756, appearing in *Athalia*, *Israel in Egypt*, *Deborah*, *Judas Maccabaeus* (Israelite Man), *Jephtha* (Storge) and *Messiah*. Her name in the Tenbury score of *Messiah* has sometimes been mistaken for Cuzzoni's. She sang the title role in Traetta's *Didone abbandonata* at Venice in 1757. She was back in London for the 1761-2 season; the libretto of the pasticcio *Alessandro nell'Indie* de-

scribes her as 'Musician to H.S.H. the duke Clemens of Bavaria'.

WINTON DEAN

Curphey, Margaret (b Douglas, Isle of Man, 27 Feb 1938) British soprano. She studied at the Birmingham School of Music. After touring with Opera for All, and two seasons in the Glyndebourne chorus, she joined Sadler's Wells in 1965. A full and flexible lyric soprano has enabled her to play a wide range of parts for the company, from Mimi, Pamina and Violetta to Ellen Orford, Elisabeth de Valors and Santuzza, all sung with taste and distinction, and acted with reserve. In Wagner, however, she has progressed from a capable, vocally well-projected Eva (notably at the first Coliseum performances in August 1968), Elsa and Gutrune, to a Sieglinde (first London appearance, 20 December 1975) of rich vocal amplitude and real pathos, two months later she undertook her first *Walküre* Brünnhilde (24 February 1976), and a complete Brünnhilde in autumn 1977. In 1970 she won a bronze medal at the Bulgarian young opera singers' competition.

MAX LOPPERI

Currentes (Lat.) The ligature known also as the *con-iunctura*, or more usually the short, diamond-shaped descending notes that form the latter part of the *commun-tura*. See LIGATURE (1).

Currulao. A couple-dance of the Afro-Hispanic communities of the Pacific lowlands of Colombia and Ecuador. It functions as a symbolic reinforcement of established social and political institutions and interpersonal affiliations. The 6/8 rhythms of the two *bombos* (bass drums) and two *cununos* (conical drums), the ternary vocal melodies of the *glosador* (male soloist) and *cantadoras* (female chorus), and the binary *guasa* (rattle) accompaniment combine in polyrhythm with 6/8 marimba melodies improvised by the *bordonero* (marimba player) and his accompanist, the *tiplero*, who plays on the lower part of the same instrument. While the song texts reflect the social reality of serial polygyny, the choreography symbolically concurs, with *zapateo* (foot-stamping), hat- and scarf-waving, and the use of full skirts by women for both seductive and defensive purposes.

WILLIAM GRADANTZ

Curschmann, Karl Friedrich (b Berlin, 21 June 1805; d Langfuhr, nr Danzig, 24 Aug 1841). German composer and singer. The son of fairly well-to-do parents, he studied, after his father's early death, at the Gymnasium. In 1824 he began to study law at the University of Berlin. After a short time he transferred to the University of Göttingen, where he decided to adopt music as his career, and in 1825 he went to Kassel to study under Spohr and Hauptmann. He made a name as a composer of church music, but none of his works was published and all seem to have disappeared. A one-act comic opera, *Abdul und Erminie, oder Die Toten* was performed in Kassel on 29 October 1828 and created a favourable impression. He stayed in Kassel for four years but had no systematic instruction, although he was an active member of the Cäcilienverein. He returned to Berlin in 1829. At this period his songs were becoming known and, being gifted with a pleasant voice, he made several concert

tours in Paris and Vienna. In 1837 he married Rose Behrend, a dramatic soprano, somewhat older than himself. Four years later he died of appendicitis; his wife survived him by only a year.

Curschmann's 83 songs were all published in his lifetime, and a near-complete collected edition of them, together with a few vocal trios, appeared in 1871. Among the poets he set are Goethe, Schiller, Uhland, Heine, Tieck, Müller and Chamisso. Popular in the early years of the 19th century, his songs are now forgotten; they are tuneful but show no marked individuality. The influence of Schubert is nowhere apparent and, indeed, Curschmann was bold enough to set Müller's *Ungeduld* and Rückert's *Du bist die Ruh'* after Schubert's settings had become known. Apart from his songs, the vocal trios and the operetta he composed little. He set Heine's *Die heiligen drei Könige aus dem Morgenlande* for double chorus and piano, and wrote variations for piano on his own *Ungeduld*. Attempts at the end of the 19th century to revive interest in his music were unsuccessful.

WORKS

(all published in Berlin unless otherwise stated)

- Abdul und Erminie, oder Die Toten (comic opera, 1), op. 12, Kassel, Kurlfürstliches Hoftheater, 29 Oct 1828, vocal score (1836).
Sacred choral: Die heiligen drei Könige aus dem Morgenlande, Christmas song (Heine), op. 19 (1838), Pfingstmusik, 6 solo vv, org, unpubd, Barmherzig und gnädig, motet, solo v, chorus, brass insts, unpubd.
Secular choral: 2 canons, 3vv, pf, op. 7 (1834), Dürnbam, 3 T, pf (1835), Der Wald, 5 T, pf, op. 17 (1837), Blumengruss, 3 S, pf (Leipzig, c1839), Das Veilchen, 2 S, 1, op. 27 (c1840).
Lv, pf: 71 songs, 13 vols., opp. 1-5, 9, 11, 13-15, 18, 23, 25 (c1830-c1840), Romeo, scena and aria, op. 6 (1833), 4 canzonets, op. 8 (1834), canzonet and 3 songs, op. 16 (1837), canzonets and 2 songs, op. 70 (1839), 12 Solleggien, op. 21 (Leipzig, c1839), Già la notte, canzonet, pf/gut acc., op. 24 (c1840), Die Perle auf Lindahaide, 7 songs, op. 28 (1841), with K. A. F. Eckert.
Thema con variazioni, pf (n.d.).

MAURICE J. E. BROWN

Cursi, Bernardo. See CORSI, BERNARDO.

Cursiva (Lat.) A term used in the 15th century to describe mass movements in which the text is not sung in all the voices simultaneously but moves from one voice to another. Although the word itself is found in only one manuscript (*GB-Ob* Can.misc.213), where it is used in the index to describe a Gloria by Loquerville, it is evidently more widely applicable. It was first noticed and discussed by Hans Schoop (*Entstehung und Verwendung der Handschrift Oxford Bodleian Library, Canonici misc. 213*, Berne, 1971, 49ff.). (See also AVFRSI and VIRILAS.)

Cursus. In some artistic Latin prose, a regular alternation of accented and unaccented syllables at the ends of clauses and sentences forming certain patterns. These accentual patterns grew out of quantitative patterns; according to one theory, the line and rhythm of several popular quantitative patterns were imitated in many cadences of Gregorian chant.

- 1 The relationship between Gregorian cadence formulae and their texts
 2 Mocquereau's study of cursus 3 Broadening the use of the term 'cursive cadence'

1. THE RELATIONSHIP BETWEEN GREGORIAN CADENCE FORMULAE AND THEIR TEXTS. Gregorian melodies frequently serve more than one text. When this happens, either of two procedures may be adopted. Adjustments may be made in the melody, serving to make room for extra syllables, to telescope the melody (if the new text is shorter than the old), or to align words and music so that accented syllables at crucial points in the text fall on particular musical elements. (This procedure is particularly interesting at cadences.) But in some Gregorian cadences, the accentuation of the text is ignored; according to this second procedure, the final elements of the melody are made to fit the final syllables of various texts, regardless of their differing accentual schemes, in exactly the same way. Such unchanging musical cadence formulae have been called 'cursive' for reasons discussed below.

Both types of cadence appear in the tones for the verses of introits. The intermediate cadence is adjusted to the accent pattern of the text and the termination (except, in many sources, in the tone for the 5th mode) is applied mechanically to the last five syllables of the verse. Some examples of intermediate cadences in verses of introits in the 3rd mode are shown in ex.1, the

Ex.1 GR, 270 introit *Vocem iunctunditatis* (5th Sunday after Easter)

Ju - bi - lá - te Dé - o om - nis tér - ra
 GR, 130 introit *Igo clamavi* (Tuesday after the 3rd Sunday in Lent)

Fx - au - di Do - mi - ne ju - sti - ci - am mé - am

GR 607 introit *Benedicti* (Dedication of the Church of St Michael)

GR 494 introit *Ece oculi* (St Nereus and his Companions)

Fx - sul - ta - te sti - in Do

melodies are taken from the *Graduale romanum*. Word accents are marked: in Latin a two-syllable word is accented on the first syllable, a word of three or more syllables is accented on the penultimate syllable if that is long, and on the antepenultimate if it is not. Monosyllables may be stressed or unstressed, according to their context and meaning. The four common patterns of stressed (*s*) and unstressed (*u*) syllables at the ends of lines are: *s-u-s-u*; *s-u-u-s-u*; *s-u-s-u-u*; and *s-u-u-s-u-u*. Occasionally a stressed monosyllable occurs at the end of a line; this disrupts the pattern and the treatment varies in different sources.

In the intermediate cadence shown in ex.1 the last three elements are applied to the text without regard to its accent. Before those three elements, the musical cadence is adjusted to the text accent according to the position of the penultimate accent in the line: the syllable carrying it is sung a tone above the reciting note for the formula. If it occurs on the fourth syllable from the last, the three final elements follow directly. If it occurs on the fifth or sixth syllable from the last, the first element of the final three is anticipated once or twice.

Intermediate cadences for the 3rd mode introit tone are treated thus in the Vatican edition of Gregorian chant. The picture is, however, less clear in the MSS. In many MSS, not enough of the introit verses was notated to show how the intermediate cadences were handled. In some (e.g. *CH-E* 121, published as *PalMus*, iv) the notation is at times difficult to interpret. In others, introit verse intermediate cadences were treated more flexibly than one might expect: this is true of the intermediate cadences of the 3rd mode introit tone of an 11th- or 12th-century gradual of S Millán de la Cogolla, in the Rioja, a region of northern Spain (*E-Mah* 51). Some of them are shown in ex.2. They should be contrasted with the settings of the same verses in an 11th- or 12th-century Beneventan gradual (*I-BV* VI.34, published in *PalMus*, xv) shown in ex.3. The Beneventan

Ex.2 from *E-Mah* 51

Ex.3 *I-BV* VI 34

versions are as regular as those in the *Graduale romanum* and they underline even more effectively the natural accentuation of the text by setting the third syllable from the last with a B if it is stressed, and with a C if it is not. (It seems probable that a study of the introit tones found with musical notation in Gregorian MSS of the 10th to 12th centuries would be rewarding.)

2. MOCQUEREAU'S STUDY OF CURSUS. The classic study of the relationship between Gregorian cadence formulae and their texts was published in *Paléographie Musicale* (volumes iii and iv), by Mocquereau (for the attribution of it to Mocquereau, see *PalMus*, x, 213). It was a major achievement, and every subsequent inquiry into the subject has drawn heavily on the system of analysis developed by Mocquereau, and his findings. Paolo Ferretti's discussion of tonic formulae and their modifications, in *Estetica gregoriana*, was heavily dependent

on Mocquereau's study. Nevertheless, Mocquereau's work was incomplete in one respect his study of the unchanging cadential formulae was limited to those for which he believed literary models could be found.

His study was principally concentrated on 45 formulae (listed in *PalMus*, iv, 44-8) that seemed to him to constitute a single group. They include the most conspicuous unchanging formulae in the chant repertory: the final cadences of the tones for the verses of responsories in all the modes, and of introits in all the modes except the 5th mode. There are also terminations for the psalm tones in four of the modes and for some invitational tones, as well as some chants from the sacramentary, including the solemn preface and the Lord's Prayer. All these 45 cadence formulae involved five musical units (single notes or groups of notes), one for each of the last five syllables of the texts set to them. For the purposes of discussion, these are numbered in descending order. The character of the musical line they produce is typically as follows: 5 and 4, elevation and repose; 2 and 1, elevation and repose; 3, preparation for 2. Ex 4 shows the endings of the tones for the verses of responsories in the 1st and 8th modes, in which this structure is particularly clear. If one accepts Mocquereau's characterization of these elements, and regards the elevation and repose as equivalent to stressed (*s*) and unstressed (*u*) syllables, respectively, the pattern made by the elements 5-4-3-2-1 is the same as *s-u-u-s-u* in a Latin text.

Ex 4 tones for verses of responsories 15 1 4

This pattern is familiar to those acquainted with artistic Latin prose of certain periods. In such prose, the endings of sentences and clauses often conformed to patterns of which the most popular was (in accent) the same as above, or in quantitative terms, long-short/long-long long (short). Mocquereau concluded that this prose cadence, abundantly employed in early liturgical texts such as those of the Leonine sacramentary (the contents of which seem to date from the mid-6th century), was the model for the musical cadences discussed above. (He termed it the 'cursus planus', but see below.) The 45 cadences he printed were all musical expressions of the same rhythm, emphasis and phrasing: as he explained it, 'Ainsi se trouve démontrée l'identité fondamentale de toutes ces cadences au point de vue de la structure, & la conformité parfaite de cette structure avec celle du cursus planus'. Il résulte que ces terminations musicales ont été modelées sur le cursus planus' (*PalMus*, iv, 53). Thus he stated the relationship between an important group of cadence formulae found in Gregorian chant and a cadence much used in the prose of the period during which much of the Gregorian repertory probably came into being. He did not examine the possibility that there might be unchanging cadence formulae in Gregorian chant which did not show such a relationship.

The prose cadences to which Mocquereau referred were described by rhetoricians of antiquity (Cicero, *De oratore*, iii, chap 50 and *Orator*, chaps. 63-4, etc., Quintilian, *Institutio oratoria*, ix, chap. 4, §§93ff) who wrote of clausulas (phrase endings) composed of various feet (i.e. various successions of long and short syllables). In the early Middle Ages, for example at the time of the compilation of the Leonine sacramentary, phrase endings were organized according to both quantity of syllable and accent, but the procedure was abandoned between the 7th and 11th centuries.

At the end of the 11th century this style of writing was revived in the papal chancery (although the quantity of the syllables was not now observed), it was given a theoretical formulation by Albert of Morra (later Pope Gregory VIII) and Trasimund in the late 12th century. It was only at that time that the term 'cursus' (pl. *cursus*) was applied to it, and the patterns of stressed (*s*) and unstressed (*u*) syllables in the three accentual cursus were described. These were the *cursus planus*: 5-4-3-2-1 corresponding to *s-u-u-s-u* ('ore leonis' or 'all's well that ends well'), the *cursus tardus*: 6-5-4-3-2-1 corresponding to *s-u-u-s-u-u* ('festa paschalia' or 'happy and glorious'), and the *cursus velox*: 7-6-5-4-3-2-1 corresponding to *s-u-u-u-s-u* ('mentibus sentiamus' or 'varsity education'). Mocquereau believed that the *cursus tardus* and the *cursus velox* were imitated in the cadences of the *Exsultet* – the chant sung at the blessing of the Paschal candle at the Easter vigil, and the *cursus velox* in some invitational tones as well.

3 BROADENING THE USE OF THE TERM 'CURSIVE CADENCE'. Despite the late date at which it was introduced, the term 'cursus' was consistently used by Mocquereau, and some of the unchanging cadences described in this study (to which he referred, for example, as 'cadences pentasyllabiques planae') were later termed by Ferretti 'cursive pentasyllabiche'. Other writers have called all unchanging cadences cursive cadences. This practice has led to some confusion. There are unchanging cadences in Gregorian chant and also in other chant repertories (see Randel) where a derivation from any of the cursus is impossible to demonstrate. Thus it might be desirable to adopt a simple descriptive term to bypass Mocquereau's fascinating but problematic theory of the origin of this compositional procedure.

RUTH STEINER

Curtain tune. English 17th-century term, now obsolete, for music played while the curtain was being raised at the beginning of a play or opera, usually after the prologue but occasionally before it – as, for instance, in Dryden's and Howard's *The Indian Queen* (1664), where the prologue was acted with scenery. In the latter part of the 17th century the curtain tune was increasingly cast in the form of a FRENCH OVERTURE, and the two terms came to be regarded as synonymous. Even when an overture was provided, a short tune was sometimes played after it for the raising of the curtain (e.g. in Purcell's music for *The Indian Queen*). On occasion dramatists made the introductory music part of the opening scene of the play, the first scene of Dryden's and Lee's *Oedipus* (1678), for instance, begins with a 'plaintive tune', and in the operatic *The Tempest* (1674), Locke's curtain tune depicts the storm with which the drama opens.

MARGARET LAURIE

Curtal [double curtaile, curtall, curtoll, curtle, corthol, courthol]. The name used in England from the late 16th century to the early 18th for both the DULCIAN and the BASSOON.

Curtin, Phyllis (b Clarksburg, W. Virginia, 3 Dec 1922). American soprano. She attended Wellesley College and studied singing with the bass Joseph Regneas. Her first significant opera appearances were with the New England Opera Theatre in Boston as Lisa in *The Queen of Spades* and Lady Billows in Britten's *Albert Herring*, followed in 1953 by a début with the New York City Opera in Einem's *Der Prozess*. Her extensive and varied roles at the City Opera over the next ten years included all the major Mozart heroines, Violetta, Salome, Walton's Cressida, and Susannah in Carlisle Floyd's opera, a role she created. Engagements in Vienna, Buenos Aires, Frankfurt, and with the Metropolitan Opera, La Scala and Scottish Opera in the 1960s brought her international reputation. She has made numerous recital and concert appearances throughout the USA and Europe and is particularly known for her singing of contemporary works, many of which were composed for her. Although she lacks the star qualities of more celebrated operatic sopranos, her singing has always been much respected for its cultivated musicality, interpretative grace and vocal purity.

PETER G. DAVIS

Curtis, Alan (Stanley) (b Mason, Mich., 17 Nov 1934). American musicologist, harpsichordist and conductor. He took the BMus at Michigan State University in 1955, and the MMus at the University of Illinois the following year. From 1957 to 1959 he studied in Amsterdam under Gustav Leonhardt, returning to the University of Illinois for the PhD degree, which he gained in 1963 with a dissertation on Sweelinck's keyboard works. In 1960 he joined the University of California at Berkeley as an instructor; he became an assistant professor in 1962, associate professor in 1966 and professor in 1970. His scholarly work has concentrated largely on keyboard music and includes several editions and a book on Sweelinck. In addition to his work as a scholar, he has built up a considerable reputa-

tion as a harpsichordist and conductor in the USA and Europe. He is dedicated to the authentic interpretation of the music of the 16th, 17th and 18th centuries, and among his more important recordings are performances of Monteverdi's *Poppea*, Cavalli's *Erismena*, Handel's *Admeto* and keyboard works by François Couperin. He is especially associated with early music performers in the Low Countries.

Curtz, Albert (b Munich, 1600, d. Neuburg an der Donau, 19 Dec 1671). German theologian, mathematician, philosopher, poet and composer. His father was Count Philipp Curtz, chief steward at the Bavarian court. He attended the Jesuit Gymnasium in Munich and entered the Jesuit order in 1616. He taught mathematics and philosophy for the order at Dillingen and Ingolstadt and for a time was a preacher at St Stephen's Cathedral, Vienna. In 1646 he became rector of the Jesuit college at Neuburg an der Donau. He later became rector of the colleges at Eichstätt and Lucerne but in 1663 returned to the Neuburg post. As well as many works on mathematics and astronomy (e.g., in 1666 he published the literary legacy of Tycho Brahe) he produced a German psalter, which was widely used in German-speaking lands. This is the three-part *Harpfen Davids mit Teutschen Saiten bespannt auch zu Trost und Erquickung der andächtigen Seel. Gesangsweis angerichtet* (Augsburg, 1659, rev. 2/1669); four melodies (without continuo) are in Bäumker, iv (Freiburg, 1911), nos 381-4, and have appeared in many more recent Catholic songbooks too. The first edition contains 47 engraved melodies which fit the repeating strophic forms of the 150 psalms. The second edition includes only 18 melodies from the first edition, unaltered; the other 32 are new. All the contents are continuo songs after the style of the dance forms found in the work of Johannes Kuen. Curtz himself may have composed the music for some of his texts.

 WALTHER LIPPHARDT

Curwen. English family of music educationists and music publishers.

(1) **John Curwen** (b Heckmondwike, Yorks., 14 Nov 1816; d Manchester, 26 May 1880) Congregational minister, proponent of tonic sol-fa. He was educated at Wymondley College and University College, London, and appointed assistant minister at Basingstoke in 1838, it was during his ministry there that he first attempted to teach music to the children of his Sunday school. The venture was unsuccessful, for though he was a teacher of great natural gifts who had made a serious study of educational principles, Curwen knew nothing of music. His later activity as a music educationist was brought about by circumstances rather than natural inclination. In 1841 he was commissioned to investigate and recommend the best way of teaching music to children in Nonconformist Sunday schools. His acquaintance with Pestalozzi's principles led him to reject as misguided the 'continental' method then being widely taught in London by John Hullah, and to adopt instead the general plan of a system employing indigenous sol-fa advocated by Sarah Glover, a Norwich schoolmistress, in her *Scheme to Render Psalmody Congregational* (Norwich, 1835, 2/1839). After teaching himself to read music from her book Curwen devoted his life to perfecting a system based on her plan which should bring music within the reach not only of children but also of the poorer classes in general. An understanding of his work depends on the recognition that his aims were not purely musical but social and religious.

Curwen cannot be called the inventor of tonic sol-fa. Just as the basic idea of the system sprang from Glover, many features were adopted, with due acknowledgment, from other teachers in England and abroad. Curwen's achievement, to select devices to ease the learner's task, was due not only to his insight as a teacher but also to the personal musical limitations which forced him to approach the subject as a learner himself. His first articles outlining a course of lessons following the new system appeared in the *Independent Magazine* in 1842 and were followed a year later by *Singing for Schools and Congregations*. Both publications displayed the system in its most primitive form, but the refinements and improvements which Curwen had made to Glover's *Scheme* were already apparent. Other publications followed, each representing further improvements in detail.

After 1844 Curwen printed his own publications, sustaining losses which involved considerable domestic hardship. In 1851, he began to edit and publish a periodical called the *Tonic Sol-fa Reporter*, the venture was unsuccessful and only two numbers were issued. But the publication of a series of his articles in Cassell's *Popular Educator* in 1852 attracted thousands of pupils to tonic sol-fa, and Curwen's work began to be recognized nationally. The following year he again undertook the publication of a journal, which he edited himself, under the title the *Tonic Sol-fa Reporter and Magazine of Vocal Music for the People*. A breakdown in health, due to overwork, obliged him to resign his ministry temporarily in 1856; a further breakdown in 1864 led

to his final resignation after which he devoted his time to the tonic sol-fa movement and to his publishing firm I. Curwen & Sons, which he had established in 1863. In 1869 he founded the Tonic Sol-fa College (which in 1973 set up the Curwen Institute).

The distributing side of the new firm was first known as the Tonic Sol-fa Agency; their first publications were mainly works for popular singing classes, but soon music for schools, chiefly in tonic sol-fa notation, was added. In 1874 the firm assumed the name of John Curwen & Sons, Tonic Sol-fa Agency. The creation in 1885 of a grant for sight-singing in schools and the recognition by the education department of the tonic sol-fa method led to an expansion of Curwen's catalogue, and the firm rapidly became prominent publishers of educational music. At the same time it issued much music for congregational and Sunday school use and catered to the great demand for music for the American organ and harmonium.

For illustration of Curwen's manual signs see TONIC SOL-FA

(2) **John Spencer Curwen** (b London, 30 Sept 1847; d London, 6 Aug 1916) Musician and publisher, son of (1) John Curwen. His childhood at Plaistow coincided with the years of his father's early struggle to develop the tonic sol-fa system, as the movement gathered followers, and his father set up a printing press to publish music in sol-fa notation, the boy became increasingly involved with the publication of scores. To fit himself for the work he abandoned an earlier intention to train for the ministry, and enrolled as a student at the RAM. As a trained musician he was able to influence the standard of publications and to acquaint himself with the state of musical education on a wider basis. He became principal of the Tonic Sol-fa College in 1880 and from 1881 was editor of the *Tonic Sol-fa Reporter* (from 1889 entitled *The Musical Herald and Tonic Sol-fa Reporter*, then from 1891 simply *The Musical Herald*). In 1882 he started the competition festival movement, on the basis of Eisteddfodau at which he had acted as judge, with the foundation of the Stratford (East London) Festival. An account of his visits to schools in many parts of Europe and the USA was published in *School Music Abroad* (London, 1901); and a survey of varying standards of church music was presented in two volumes of *Studies in Worship Music* (London, 1880–85). On his father's death he became leader of the movement and head of the publishing firm. During his directorship he expanded the firm's catalogue to include choral music and established the firm's tradition of supplying modest amateur needs. School operettas, amateur light opera and collections for the use of organizations such as the Women's Institute, British Legion and scouts became features of the Curwen output.

(3) **Annie (Jessie) Curwen** [née Gregg] (b Dublin, 1 Sept 1845; d Matlock, 22 April 1932) Music educationist, wife of (2) John Spencer Curwen, whom she married in 1877. She was trained at the Royal Irish Academy of Music, and taught the piano in Dublin before going to Scotland where she first encountered the tonic sol-fa system. Applying its principles to piano teaching, she produced *The Child Pianist* (London, 1886), subsequently known as *Mrs Curwen's Pianoforte Method*, a course of lessons contained in a teachers' guide and a series of pupils' books. The piano method was a valuable addition to the Curwen music catalogue. She was a student of Herbartian psychology and published *Psychology Applied to Music Teaching* (London, 1920).

(4) **John Kenneth Curwen** (b London, 12 April 1881, d Gerrards Cross, Bucks., 25 Feb 1935) Publisher, nephew of (2) John Spencer Curwen. He became head of the firm J. Curwen & Sons on the death in 1919 of his father Joseph Spedding Curwen, who had managed the printing works and had briefly served as director from 1916. Although the tradition of publishing music for schools and amateur organizations continued into the 20th century, J. K. Curwen was responsible for adding orchestral music to the catalogue. Among their publications were Holst's *The Planets* and Vaughan Williams's *Hugh the Drover*, Mass in G minor and Third Symphony, as well as works by Varèse, Bantock, Boughton and Ethel Smyth. Editors such as Cecil Sharp, Percy Dearmer and Martin Shaw were associated with the firm. The periodical *The Musical Herald*, in 1920 incorporated into *The Musical News and Herald*, continued until January 1929; *The Sackbut* (1920-34) also bore the Curwen imprint.

(5) **John Christopher Curwen** (b Gerrards Cross, 21 Aug 1911). Publisher, son of (4) John Kenneth Curwen. He succeeded to the directorship of the firm in 1935. Crowell, Collier & Macmillan purchased J. Curwen & Sons in 1969 but J. C. Curwen has continued as a director of the firm under its old name. In January 1971, Crowell, Collier & Macmillan, while retaining ownership of J. Curwen & Sons, closed the London office and divided the rights for distributing the firm's catalogue between Faber Music and Robertson Publications.

Curwen Institute. London institute founded in 1973 to promulgate the revised version of tonic sol-fa; see LONDON, §VII, 4.

Curzon, Sir Clifford (Michael) (b London, 18 May 1907). English pianist. He entered the Royal Academy of Music in 1919, studying with Charles Reddie, and winning, among many prizes, the McFarren Gold

Clifford Curzon

Medal, subsequently he worked with the pianist Katharine Goodson. His first public appearance, at the age of 16, was in a Bach triple concerto, at the Queen's Hall with Sir Henry Wood, who was notably helpful in advancing his career. In 1926 he took a sub-professorship at the RAM, interrupting his work there in 1928 for two years' study with Schnabel (to whose greatness as a teacher Curzon has eloquently testified in a radio interview). After this Berlin sojourn he went to Paris, where Landowska and Nadia Boulanger were influences nearly as powerful. In 1931 he married the harpsichordist Lucille Wallace. Returning to Britain in 1932, he resigned from the RAM (of which in 1939 he was elected a Fellow) to embark on tours of Europe and, in 1939, America. Since the war and his 1947 American visit he has appeared as soloist, recitalist and chamber musician in every important European and American musical centre: prolonged periods of sabbatical study have made concert performances, and those on record, comparatively infrequent.

In his youth Curzon was associated with a more spectacular piano repertory than that he subsequently maintained - although as late as December 1974 he was heard in London in Tchaikovsky's First Concerto, he gave many first performances, including those of Rawsthorne's Second Concerto (1951) and the Berkeley Sonata (dedicated to him, 1946). In later years, however, he has devoted himself to works of Classical composers, in them he is unequalled for sensitivity and directness of manner, beauty of tone and an inner stillness. A somewhat retiring player, Curzon is apt in the early stages of a public performance to sound tense (he customarily plays from the score); in the slow movements of the mature Mozart concertos, above all in the B \flat (K595), a unique combination of nervous energy and Olympian

calm has earned him the virtually undisputed title of 'greatest living Mozartian'. Among many honours received he has been made a CBE (1958) and DMus of Leeds University (1970), and he was knighted in 1977

MAX TOPPERT

Curzon, (Ernest) Frederic (b London, 4 Sept 1899, d Bournemouth, 6 Dec 1973) English composer and organist. He studied the violin, cello, piano and organ at an early age, and his settings of the *Magnificat* and *Nunc dimittis* were used by his local choir when he was 12. At 16 he was a pianist in a London theatre orchestra, and at 20 was conducting and composing accompaniments for silent films. He was an organist for many years at Shepherd's Bush Pavilion and other theatres and halls throughout the country. As a composer he was given early encouragement by Dan Godfrey at Bournemouth and by Ralph Hawkes of Boosey & Hawkes, of which he became head of the light music department. Curzon's works show a gift for pure melody and fresh and effective scoring; he wrote many light orchestral works, instrumental pieces and songs and much music for films, radio and television. Among his most successful orchestral works are the suites *In Malaga* (1934), *Robin Hood* (1936) and *Salon Suite* (1941), the overtures *Vanguard* (1939) and *Punchinello* (1947) and the novelty pieces *Dance of the Ostracised Imp* (1939), *The Boulevardier* (1939) and *Galavant* (1951). Curzon was a president of the Light Music Society.

ANDREW LAMB

Curzon, (Emmanuel) Henri (Parent) de (b Le Havre, 6 July 1861, d Paris, 25 Feb 1942). French critic and writer on music, son of the painter Alfred de Curzon. His early training was in history and archaeology. He took the degree of docteur es lettres and in 1882 joined the Archives Nationales in Paris, where he eventually became director, retiring in 1926. He then became librarian of the Opéra-Comique. His interest in history turned gradually to literary and so to theatrical history, and in 1889 he began to write music criticism, having found his true métier he was for the rest of his life a prolific author of books, articles and reviews. From 1920 he contributed regularly to *Le Ménestrel*, and in 1928 succeeded Adolphe Jullien as music critic of the *Journal des débats*. He wrote a large number of biographies of composers, mostly careful compilations of earlier work with little original research. He paid special attention to Schubert, to whom he devoted a study of the songs and a critical bibliography, and to Mozart, on whom he wrote two biographies, as well as translating and editing many of his letters. Curzon was a co-founder of the Société Française de Musicologie, and vice-president of the Association de la Critique Dramatique et Musicale.

MALCOLM TURNER

Cushing, Charles (b Oakland, Calif., 8 Dec 1905) American composer. He took the BA and the MA at the University of California at Berkeley and won the Prix de Paris Fellowship (1929), which took him to the Ecole Normale de Musique for composition lessons with Boulanger; he also studied the violin, viola, clarinet and piano. He taught at Berkeley (1931-68, professor 1948), where he conducted the University of California Concert Band (1934-52). His music is lyrical and makes use of impressionist harmonies, notable among his works is *Carmen saeculare*, which was performed under his direction at the Greek Theatre in Berkeley. He translated the texts of Milhaud's *Les malheurs d'Orphée* and Satie's *Socrate*, and he contributed articles to *Modern Music*. In 1952 he was admitted to the Légion d'Honneur.

WORKS

(selective list)

- Incidental scores: *The Tempest* (Shakespeare), 1964, 3 others (Giraudoux, Aristophanes)

VALERIE BROOKS SAMSON

Cushion dance [Kissing dance] An old social dance sometimes called 'Joan Sanderson' in England and 'Babbity Bowster' ('Bob at the Bolster') and various other names in Scotland. It enjoyed great popularity among all classes of society and there were frequent references to it in the 17th century. It was published in Playford's *Dancing Master* (1686 and later editions). Thomas Wilson included it in *A Companion to the Ball Room* (c1812) together with a modified version of the dance and an alternative tune, both of which he considered more suited to the times.

The main features of the dance are these: a man (or woman, if she initiates the proceedings) dances round the room holding a cushion (or sometimes a handkerchief) which he places before a chosen member of the opposite sex. She kneels on it and they kiss, she takes the cushion and the two dance hand-in-hand round the room. She in the same way chooses a man and the three dance in a ring. The action is repeated until all, men and women alternately, have been drawn into the ring. The process is then reversed, and one by one they leave the ring. A theatrical relic of this is the Pillow Dance in the Lavrovsky version (1940) of Prokofiev's *Romeo and Juliet*.

The dance has not survived in England or on the Scottish mainland, but with certain modifications and accompanied by various tunes it is, or was until recently, performed in the Hebrides, Newfoundland and Tristan da Cunha.

MAUD KARPELES

Cusins, Sir William (George) (b London, 14 Oct 1833, d Remouchamps, 31 Aug 1893). English pianist, organist, violinist and composer. He was a chorister at the Chapel Royal, and after studying at the Brussels Conservatory won a King's Scholarship at the RAM in 1847. He first appeared in public as a solo pianist in 1849 and was in that year appointed organist at Queen Victoria's private chapel; at about the same time he joined the orchestra of the Royal Italian Opera. In 1851 he became associate professor at the RAM, and in 1867 succeeded Sterndale Bennett as conductor of the Philharmonic Society, a post he held until 1883. During 1885 Cusins accepted a professorship at the GSM, and conducted the London Select Choir. He was nominated Master of Music to the queen in 1870 and was knighted in 1892, resigning his court appointment in 1893. His work in the sphere of music education included examining at Queen's College (London) and (jointly with John Hullah and Otto Goldschmidt) for scholarships of the National Training School. He travelled widely, and played at concerts in Germany. In 1867 he conducted the first performance of Sterndale Bennett's *Woman of Samaria* at the Birmingham Festival. His own compositions include an oratorio, cantatas, concert overtures, and concertos for violin and for piano, he produced editions of piano works by Schumann, and also edited a collection of songs to words by Tennyson. His brief monograph *Handel's Messiah: an Examination of the Original and some of the Contemporary MSS* (London, 1874) is a scholarly study of Handel's vocal and instrumental resources, described by William C. Smith as 'an important foundation pamphlet' (*A Handelian's Notebook* (London, 1965), p. 54).

E. D. MACKERNFESS

Custodio, Bernardino (Feliciano) (b Manila, 20 May 1911). Filipino composer, conductor and pianist. After a four-year scholarship under Lippay, he graduated from the Conservatory of the University of the Philippines in 1932 and then taught theory and the piano at that institution. In 1959 he took the MA at the University of Santo Tomas and travelled to the USA on

a Smith-Mundt grant. He was director of the University of Santo Tomas Conservatory (1957-61), associate conductor of the Manila SO for several years, and a member of the executive board of the National Music Council of the Philippines. Most of his compositions, written in a late-Romantic style, were burnt during World War II, notable among his works were the Malayan Suite for orchestra (1936), songs and chamber pieces on Philippine themes.

LUCRECIA R. KASILAG

Custos (Lat.) DIRECT

Cutell [Cotell], Richard (fl 14th century). English theorist. He may have been the minor canon of St Paul's Cathedral, London, in 1394-5. The content of Cutell's short treatise and the matter surrounding it in the MS place his activity in the 14th century. It is found in *GB-Ob* Bod 842, f 48r-48v, headed 'Opinio Ricardi Cutelli de London'. Apart from a quite conventional description of the sights, or transpositions, and consonances proper to disant, and of the three degrees of disant, mene, treble, quatreble, the work is undistinguished. In keeping with the new proscription arising in the 14th century, Cutell forbade parallel perfect consonances of the same kind, and endorsed parallel imperfect consonances. He also stated that on perfect intervals, the solmization syllable *fa* must go with *fa*, and *mi* with *mi*, a stricter form of the usual rule prohibiting *fa* against *mi* on perfect consonances.

ANDREW HUGHES

Cuti, Donato Antonio. Italian composer, uncle of MICHELE DILIPARI.

Cutner, Solomon. See SOLOMON.

Cut time (It. *tagliato*). A name for the *proportio dupla* of the system of PROPORTIONS of the late Middle Ages and Renaissance. It was frequently indicated by writing a stroke through one of the traditional mensuration signs ('cutting' the time), so that, for instance, C became C̄, and O became Ō. The effect was to diminish the relative value of each note shape in the ratio 2:1.

Cutting, Francis (fl 1583 c1603). English lutenist and composer. The only document known to contain a reference to him is the poor rate book of the parish of St Clement Dane, London, where a 'Frauncis Cutting' was rated at 4d in 1583, 1588 and 1589. The fact that so little is known of him, although he was one of the most distinguished 16th-century English lute composers, would accord with his having been a gentleman, living quietly, outside the circle of musicians directly connected with the court. He may have come from East Anglia, where his surname is more common than in other parts of the country.

The style of his music suggests an early date of composition, and it is notable that many of his pieces appear in early sources: 11 in Barley's *A New Booke of Tabliture* (London, 1596), 16 in *GB-Cu* Dd.ii.11 (the

earliest of the Cambridge manuscripts) and one in the 'Dallis' Lutebook (*EIRE-Dic*). Much of this music is for six-course lute, and no piece requires more than seven courses. His last work may well have been *Sir Iooke Greviles pavan*, which was probably written no later than 1603. Cutting wrote in a close-textured manner and (particularly in the galliards) he made much ingenious use of imitation. His almans are memorably tuneful and his toys and other trifles charmingly gay and lighthearted.

DIANA POULTON

Cutting, Thomas (fl 1608-13) English lutenist. He may have been a younger member of the same family as FRANCIS CUTTING. There are three letters concerning him in *GB-Lbm* Harl.6986. The first, from Queen Anne, dated 6 March 1607/8 and the second (undated) from Prince Henry are both addressed to Lady Arbella Stuart, and request her to release Cutting from her employment, and allow him to go to the court of the queen's brother, Christian IV of Denmark. Lady Arbella replied on 15 March 1607/8 agreeing, although saying that she 'may have some cause to be sorry, to have lost the contentment of a good Lute'. Cutting appears to have stayed in Denmark for about three years, at a salary of 300 dalers a year.

He entered the service of Prince Henry in 1611, and was one of the musicians to whom an allowance for mourning livery was issued for the prince's funeral in November 1612. In February 1613 he was among the lute players who received £2 10s for playing in George Chapman's *Masque of the Inner Temple and Lincoln's*

Inn during the celebrations for the marriage of Princess Elizabeth and the Elector Palatine.

DIANA POULTON

Cutts, John (fl 1665, d ?Lincoln, before 19 Nov 1692). English composer. He was made junior vicar and poor clerk at Lincoln Cathedral on 31 May 1665. He appears to have spent most of his remaining life there, but was admonished in 1680 for leaving the city without permission. On 14 January 1684 he was made Master of the Choristers, though the chapter acts indicate that he lacked diligence in this office. An argument involving Cutts and his dog in the cathedral on 31 October 1689 led to his expulsion a few days later. However, on 1 April 1690 the dean and chapter resolved to establish 'two public consorts' each year and Cutts was appointed as instrumental teacher to the choirboys. He was reinstated as junior vicar and poor clerk, at the choir's request, on 11 November 1690.

Nine short solos for bass viol are in *GB-Lcm* II.f.10, and Lot 13 in the sale of Thomas Britton's library included lute consorts by Cutts, but these are unknown today. Eight anthems by Cutts are in MSS at Lincoln including an eight-part setting of *Almighty and everlasting God* dated 1685. *My days are gone* is included in *GB-Lbm* Add 30478-9 and 34203.

ANDREW ASHBEE

Cuvelier, Jo(hannes) [Jean, Jacquemart le Cuvelier] (b ?Tournai, fl 1372-87) French poet and composer. He was wrongly entered as Cunelier in *F-CH* 564. In 1372 he was a *discour* of the King of France. According to the anonymous *Règles de la seconde rhétorique* he was called Jacquemart le Cuvelier, came from Tournai and was the *faiseur* of Charles V. In 1387 he completed a chronicle of the life of the High Constable Bertrand du Guesclin. Cuvelier's ballade *En la saison*, set to music by Hymbert de Salinis, is dedicated to Olivier du Guesclin, a cousin of Bertrand, and to Olivier's mother, Thomasse le Blanc. In addition, *F-CH* 564 contains three three-voice ballades by Cuvelier which he set to music himself: *Lorsque Arthus, Alexandre et Paris, Se Galaas et le puissant Artus* (concerns Gaston Phébus, Count of Foix, d 1391), and *Se Genevre, Tristan, Yssout* (all ed. in CMM, liii/1, 1970). These instrumentally accompanied songs are prime examples of the very complex notational style of the *ars subtilior*.

URSULA GÜNTHER

Cuvelier d'Arras, Jehan le (fl. c1240–70) French trouvère. He was perhaps the Johannes Cuvellarius of Bapaume (on the outskirts of Arras) cited in documents of 1258. His period of activity can in any case be determined: the chanson *Pour la meillour* is dedicated to Wagon Wion, who was *échevin* (sheriff) of Arras in 1265 and who died by January 1273. As respondent in nine *jeux-partis* and judge in six others, Cuvelier was familiar with many of the more important members of the Arras poetic circle, including Jehan Bretel, Jehan de Grieviler, Lambert Ferri and Adam de la Halle. Since Gamart de Vilers addressed Cuvelier as 'Sire', it would appear that he was a figure of importance.

With the exception of *Pour la meillour*, which is decasyllabic, Cuvelier's chansons *courtoises* favour heptasyllabic lines, often mixed with pentasyllabic or other lines. *Amours est* follows the pattern AA'BB'CC'DE, otherwise, all chansons are cast in bar form. Generally some form of repetition or motivic play is present in the caudas. Cuvelier's predilection for plagal modes (except for *J'ai une dame*) is unusual. In half of the melodies the final is not a tone centre of primary importance. In the Chansonier Cagé there are occasional hints of modal rhythms in *Amours est*, *Mout me plaisent* and *Pour la meillour*; and the disposition of ligatures in *Anus et desesperance* and *Jolivetés* also hints at times that a free use of modal rhythm may not be inappropriate.

THEODORE KARP

Cuvillier, Charles (Louis Paul) (b Paris, 24 April 1877, d Paris, 14 Feb 1955). French composer. He studied at the Paris Conservatoire and with Fauré and Messager. He began writing for the popular theatre with *Avant-hier matin* (Paris, 20 Oct 1905), and several subsequent works had international success, particularly in Britain. *Son petit frère* (Paris, 10 April 1907, later as *Lais, ou La courtisane amoureuse*; as *Wild Geese*, London, 12 Feb 1920); *Afgar, ou Les plaisirs andalous* (Paris, April

1909, London, 27 Sept 1919); *La reine s'amuse* (Marseilles, 31 Dec 1912, later as *La reine joyeuse*; as *The Naughty Princess*, London, Oct 1920); *The Lilac Domino* (New York, 28 Oct 1914, London, 21 Feb 1918) and *Flora Bella* (New York, Sept 1916)

ANDREW LAMB

Cuyler, Louise E(Ivira) (b Omaha, Nebraska, 14 March 1908). American musicologist. Her first musical training was in Omaha, where, while still in high school, she appeared publicly as a violinist. She received the BM in violin from the Eastman School of Music in 1929. Since then she has been associated with the School of Music of the University of Michigan, where she taught theory and took the MM in theory and composition in 1933. After serving in the American Red Cross during World War II, she returned to the University of Michigan and at the same time resumed studies at the Eastman School, taking the PhD in musicology in 1948. At Michigan she became professor of music (1953) and director of the department of musicology (1957). In addition she served for over two decades as music critic for the *Ann Arbor Daily News*, retiring in 1971. She has lectured widely and has been visiting professor at the University of Washington in Seattle (1964), Stanford University (1965), Indiana University (1975) and the University of California at Santa Barbara (1976). In 1975 she was made Neilson Distinguished Professor of Smith College, Northampton, Massachusetts. Although her interests are wide, Cuyler is best known for her studies of the Franco-Flemish Renaissance and music in Germany during the Josquin period. In particular she has discussed the political use of the motet and the interaction of church and state in musical commissions.

EDITH BORROFF

Cuypers [Kuypers, Kuppers], Johannes Theodorus (b Dornick, 14 Oct 1724; d The Hague, Sept 1808). Dutch violin maker. He became a burgher of The Hague in 1752, and worked there continuously for about 50 years. He was one of the first makers in northern Europe to work on the pattern of Stradivari, though his instruments are highly personal in character and easily

recognized. Many violins are in circulation, those of the later period noting their maker's advancing age on the manuscript labels within; they are consistently fine-sounding. Johannes Cuypers was followed by his sons Johannes Franciscus (*b* 12 Jan 1766, *d* 16 July 1828) and Johannes Bernardus (*b* 3 May 1781, *d* 15 Sept 1840), whose work is of considerably less distinction

CHARLES BEARF

Cuzzoni, Francesca (*b* Parma, c1698, *d* Bologna, 1770) Italian soprano. She was a pupil of Lanzi. Her first known appearance was in an anonymous *Dafni* at Parma in 1716. She sang in June that year at Bologna in Bassani's *Alarico rè de'Goti*, in spring 1717 at Genoa in C. F. Pollarolo's *Venceslao*, at Bologna once more in October (in *Merope* by Gasparini and Orlandini), and again in 1719. She made her Venice debut in 1718 as Dalinda in C. F. Pollarolo's *Ariodante*, with Faustina Bordoni as Ginevra, the future rivals appeared there again in two operas the following year. Cuzzoni sang at Turin in 1720, and in five more operas at Venice in 1721–2, in Orlandini's *Nerone* she played Poppaea, Faustina Octavia and Diano Vico Agrippina. Cuzzoni was described at this period as chamber virtuoso to the Grand Duchess Violante of Tuscany.

There was talk of her engagement for London in 1720, but she did not arrive until the last week of December 1722, having married the composer and harpsichordist Pietro Giuseppe Sandoni on the way. Her reputation as an extraordinary singer preceded her and was repeatedly mentioned in the press. Her King's Theatre debut on 12 January 1723 as Teofane in Handel's *Ottone* was one of the most sensational in London's theatrical history. The part had not been composed for her, at rehearsal she refused to sing her first aria, 'Falsa imagine', until Handel threatened to pitch her out of the window, but her triumph was complete, not least in this aria. Half-guinea tickets for the second night changed hands at two and three guineas ('like another Mississippi or South Sea Bubble'), at her benefit on 25 March, with three new bravura arias, 'some of the Nobility gave her 50 Guineas a Ticket'. This was in addition to her salary of £2000 a season. She remained a member of the company until the Royal Academy closed in June 1728, and sang a leading part in every opera: Handel's *Flavio* (Emilia), *Giulio Cesare* (Cleopatra; she and Senesino had an outstanding success), *Tamerlano* (Asteria), *Rodelinda* (title role), *Scipione* (Berenice), *Alessandro* (Lisaura), *Admeto* (Antigona), *Riccardo Primo* (Costanza), *Radamisto* (Polissena in the 1728 revival), *Siroe* (Laodice) and *Tolomeo* (Seleuce), Ariosti's *Coriolano*, *Vespasian Artaserse*, *Dario*, *Lucio Vero* and *Teuzzone*, Bononcini: *Ermia*, *Farnace*, *Calpurnia* and *Astianatte*, and the pasticcios *Aquilio Consolo*, *Elpidia* and *Elisa*. The eubérance of Cuzzoni's admirers soon led to quarrels first with the partisans of Senesino and later with that of Faustina Bordoni, who made her London debut in *Alessandro* on 5 May 1726. The rivalry between the two greatest sopranos of the age was notorious, and became a public scandal when ovations, whistles and catcalls in turn led to a scuffle between the artists on stage during a performance of *Astianatte* on 6 June

1727 in the presence of the Princess of Wales. At some performances Cuzzoni could scarcely be induced to appear; but the final Academy season seems to have been less cantankerous, despite (or because of) the satirical portrait of the ladies as Polly and Lucy in *The Beggar's Opera*.

Outside the opera house Cuzzoni surprised and delighted 'a very numerous Concourse of the Nobility and Quality' at Burlington House on 18 January 1723 and took part with Faustina and Senesino in a St Cecilia concert at the Crown Tavern on 22 November 1727. Early that year her performance of Bononcini's music at the Duchess of Marlborough's private concerts won her a breathless panegyric from the diplomat Beddevole. She gave concerts at Bath in autumn 1723 and according to Anastasia Robinson 'gott a good deal of Money'; Lady Bristol heard her sing, accompanied by a lute, 'for 2 hours like a nightingale, she has learnt two English baliads, which she makes the agreeablest thing you ever heard'. In summer 1724 she visited Paris and made a sensation at Fontainebleau in church music by Bononcini. She returned to Bath in autumn 1726, and possibly in other years. She gave birth to a daughter in August 1725, according to Mrs Pendarves, 'the minute she was brought to bed, she sang "La Speranza", a song in Otho' (not from her part).

Cuzzoni spent the winter of 1728–9 in Vienna at the invitation of Count Kinsky, the imperial ambassador in London, she made a great impression in court circles but was not engaged for the opera because she demanded the exorbitant salary of 24,000 florins. She sang at Modena and Venice in 1729. Heidegger wished to engage both prima donnas for the Second Royal Academy that autumn, but Handel, who according to Rolli had never liked Faustina and wanted to forget Cuzzoni, preferred to write for new voices. In 1730

Cuzzoni (left), Farinelli and Heidegger: etching by the Countess of Burlington (Dorothy Boyle) and Joseph Goupy after drawings (c1730) by Marco Ricci and Goupy (for further illustrations see under BERENSTADT, GAETANO, and NICOLINI)

Cuzzoni sang in Hasse's *Ezio* at Naples and in three operas, including Hasse's *Artaserse*, at Venice (where Faustina was engaged at a different theatre). She was in two operas at Florence in the Carnival season of 1731–2, and in the latter year sang for the last time at Venice, in Hasse's *Euristeo*. She appeared at Genoa in the 1733 and 1734 Carnival seasons. It is not surprising that when the Opera of the Nobility planned their opposition to Handel early in 1733 one of the first singers they approached was Cuzzoni, but she did not arrive until April 1734, when she joined the cast of Porpora's *Arianna in Nasso*. Between then and summer 1736 she sang in four more operas by Porpora (*Enea nel Lazio*, *Polifemo*, *Ifigenia in Aulide* and *Mitridate*), Hasse's *Artaserse* arranged by Farinelli's brother Riccardo Broschi, Handel's *Ottone* (her old part of Teofane, but under Nobility management), Sandoni's *Issipile*, Veracini's *Adriano in Siria*, the pasticcio *Orfeo* and F. Campi's *Onorio*, as well as at occasional concerts. Her last new part was Venus in Porpora's wedding serenata *La festa d'Imeneo* in May 1736. She seems to have roused less enthusiasm on this visit, perhaps because much of the music was inferior.

Cuzzoni sang in Leo's *Olimpiade* and Caldara's *Ormusda* at Florence in 1737–8. In 1739 she was at Vienna, in September 1740 a member of Angelo Mingotti's opera company at Hamburg, where she also gave concerts. She sang in concerts at Amsterdam in February–April 1742 with the Wolfenbüttel Kapellmeister Giovanni Verocai, and Sandoni had now separated. She is next heard of at Stuttgart, where she was engaged as chamber singer to the court on 28 December 1745 at a salary of 1500 gulden. She remained there for three years, performing at concerts and chapel services, but absconded to Bologna in autumn 1748 leaving many debts (her extravagance and improvidence had been notorious as early as 1723). Her offer to return at more than double the salary was curtly refused. In 1750 she revisited London and gave a benefit concert at Hickford's Room on 18 May. According to Horace Walpole she was arrested for debts of £30 and bailed out by the Prince of Wales. She sang twice with Guadagni the following year, at the annual Musicians Fund benefit at the King's on 16 April and for her own benefit at Hickford's on 23 May. The latter appearance, she informed the public in a letter to the press, 'shall be the last I will ever trouble them with, and is made solely to pay my Creditors'. Her programmes included the love-duet from *Giulio Cesare*, three songs from *Ottone* (including 'Falsa imagine') and 'Return, O God of Hosts' from *Samson*. It was a pathetic farewell, Burney says that since 'she was grown old, poor, and almost deprived of voice, by age and infirmities, there was but little company' and she returned to the Continent 'more miserable than she came'. 'A very good judge' assured him however that in private 'fine remains of her former grace and sweetness in singing Handel's most celebrated songs ... were still discoverable'. She went to the Netherlands, where she was again imprisoned for debt, the prison governor allowed her to discharge it by releasing her under guard for occasional concerts. (This may possibly refer to her 1742 visit.) She spent her last years in Bologna, supporting herself, it is said, by making buttons. She died in obscurity and extreme poverty.

Cuzzoni in her prime was by universal consent a superb artist. Burney expressed the views of various writers, including Tosi, Quantz and particularly

Mancini (*Pensieri riflessioni pratiche sopra il canto figurato*, 1774).

It was difficult for the hearer to determine whether she most excelled in slow or rapid airs. A native warble enabled her to execute divisions with such facility as to conceal every appearance of difficulty, and so grateful and touching was the natural tone of her voice, that she rendered pathetic whatever she sung, in which she had leisure to unfold its whole volume. The art of conducting, sustaining, increasing, and diminishing her tones by minute degrees, acquired her, among professors, the title of complete mistress of her art. In a cantabile air, though the notes she added were few, she never lost a favourable opportunity of enriching the cantilena with all the refinements and embellishments of the time. Her shake was perfect, she had a creative fancy, and the power of occasionally accelerating and retarding the measure in the most artificial and able manner, by what the Italians call *tempo rubato*. Her high notes were unrivalled in clearness and sweetness, and her intonations were so just and fixed, that it seemed as if it was not in her power to sing out of tune.

Tosi praised her 'delightful soothing *Cantabile*', and contrasted her pre-eminence in '*Pathetic*' with Faustina's dramatic fire in '*Allegro*'. Quantz, who heard her often in 1727, said that 'her style of singing was innocent and affecting', and her graces 'took possession of the soul of every auditor, by her tender and touching expression'. She could move an audience to tears in such simple arias as 'Falsa imagine' and Rodelinda's 'Hò perduto il caro sposo'. A cruder tribute to her powers was the cry from the gallery while she sang 'Sen vola' in *Admeto*: 'Damn her! she has got a nest of nightingales in her belly'. She was probably at her best on her first visit to London, and the wonderful series of parts Handel wrote for her, especially Cleopatra, Asteria, Rodelinda and Antigona, seems perfectly calculated to bring out the qualities mentioned above. They call for a fluid use of the whole compass from *c'* to *b''* (Quantz said she sang up to *c'''*) and offer repeated openings for her famous trill. The tessitura is about a tone higher than Faustina's. Cuzzoni was neither a great actress nor a beautiful woman, her magnetism was purely vocal. Horace Walpole, with reference to Rodelinda (one of her most popular parts), said

she was short and squat, with a doughy cross face, but fine expression was not a good actress, dressed ill, and was silly and fantastical. And yet on her appearing in this opera, in a *brown silk gown*, trimmed with silver, with the vulgarity and indecorum of which all the old ladies were much scandalised, the young adopted it as a fashion, so universally, that it seemed a national uniform for youth and beauty.

The best likeness of Cuzzoni is a print after Seeman, reproduced in Hawkins's *History*. She appears in many caricatures, including two operatic scenes engraved by Vanderbank (1723, see BRENSTADT, GAFFANO) and Goupy (1729) and original drawings by A. M. Zanetti (two in the Cini collection, *I-Vgc*) and Marco Ricci (two at Windsor Castle, one of which is reproduced here).

WINTON DLAN

Cvetko, Dragotin (b Vučja Vas, Ljutomer, 19 Sept 1911). Yugoslav musicologist. He studied at Ljubljana Conservatory and at the University of Ljubljana, where he received the PhD in music education in 1938, he then continued his studies at the master school of the Prague Conservatory. He taught at the Ljubljana Academy from 1938 to 1943 and from 1945 to 1962. In 1962 he founded the department of musicology at the University of Ljubljana, where he became professor; from 1970 to 1972 he served as the dean of the faculty of arts there. He is a member of the Slovene and Serbian Academies of Arts and Sciences, vice-president of the IMS and editor of *Muzikološki zbornik*. He was awarded the Herder Prize in 1972.

Cvetko was initially interested in music education.

but later turned to musicology and has become an authority on the history of Slovene music. His studies of the life and works of Jakob Handl (Gallus), Gabriel Plautzius, Johannes Baptist Dolar and several other composers of Slovene origin show conscientious and wide-ranging research. His books organize successfully the detailed information on individual figures and institutions given in his numerous articles into a systematic music history of Slovenia, which is presented in the context of its cultural and political history. He believes that in order to understand fully the development of European musical culture it is necessary to follow not only its mainstream, but also its course in peripheral centres. Accordingly he has studied the contribution of eastern central Europe to the musical life of the Renaissance and Baroque, it is largely because of his efforts that the music history of Slovenia and its relationship with the powerful musical cultures of neighbouring Austria and northern Italy are now so well documented. With Andreis he was the founder of the modern school of musicology in Yugoslavia.

BOJAN BUJIĆ

Cybele [Kybēlē, Kybella, Kybelē, Kybēbē (Lydian); Lat. Cybele, Cybebe, Cybela]. Ancient Phrygian deity, often called the Great Mother by both Greeks and Romans. She was linked with many other female divinities, especially Rhea and Artemis. By the time her cult

reached Greece (5th century BC) it had become fused with the liturgy of DIONYSUS, reflecting the cult of divine mother and son in Asia and Crete. The male figure worshipped in specific conjunction with Cybele was, however, her youthful consort Attis. His cult, which became important only in Rome under Claudius (emperor AD 41-54), included the use of the syrinx; he was originally a shepherd god.

An extensive fragment of a dithyramb, or choral hymn to Dionysus, by Pindar, from the first half of the 5th century BC, mentions tympana and krotala (clappers or rattles, usually in pairs like castanets) sounding in honour of 'the august Great Mother' (frag. 61, ed. Bowra, ll 6-8). A Homeric hymn which must date from approximately the same period refers to these two instruments as well as the aulos (xiv, *To the Mother of the Gods*, l 3). In the *Bacchae*, produced about 405 BC, Euripides gave particular prominence to the tympanum as the invention of Dionysus and Rhea (i.e. Cybele ll. 59, 120-34), linking it with the use of Phrygian aulos, (ll 127-8, 159-61) and describing its deep, booming tone (l 156, *barybromōn*). Cult statues or paintings of the goddess usually showed her with the tympanum (for illustration see TYMPANUM). The Athenian minor tragic poet Diogenes described the Phrygian women worshippers of Cybele as using rhombi in addition to the usual tympana and cymbals (frag. 1, ed. Nauck, p. 776, ll. 3-4, = Athenaeus, xiv, p. 636a). According to Menander, the begging priests of Cybele's cult used cymbals to summon her (frag. 245, ed. Kock), Firmicus Maternus (4th century AD) described a similar use of the tibia.

Ovid described the introduction of Cybele's rites to Rome in 204 BC and listed the instruments regularly used, including the Phrygian double aulos with one recurved bell-shaped mouth (*Fasti*, iv, l 181). Apuleius (2nd century) described the music used by followers of the 'Syrian goddess' Atargatis, whose cult resembled that of Cybele and was characterized by the presence of eunuch priests, and hence of castrato singing. He also mentioned a *choraula* (in this context a cornu player), dancing in triple rhythm, the tibia and various percussion instruments (*Metamorphoses*, viii, chaps. 26-7, p. 198, ed. Helm, ll 2-4, 19-20). The scene depicted on a Roman terracotta suggests that a long-handled spherical rattle (the Greek *platagē*, identical with the sistrum of the cult of Isis) was used in the rites of Cybele.

Only members of her priesthood and trained instrumentalists performed the rites; and since the hymns were required to be sung in Greek (Servius on Virgil, *Georgics*, ii, l. 394), they were performed by professional singers called *hymnologi*.

Clement of Alexandria in his *Protrepticus* quoted a ritual formula recited by those being initiated into the mysteries of Cybele. 'I ate from the tympanum; I drank from the cymbal' (chap. 2, §14), where the round tympanum is an image of the earth as primal element, while the concave cymbal is a chalice.

Cybernetics. See PSYCHOLOGY OF MUSIC, §I, 5(ii).

Cybot [Cibot, Cirot], Noël (*d* Paris, Aug 1556). French composer, singer and organist. He came from Limoges and was appointed a singer in the Sainte-Chapelle, Paris, on 9 August 1522. In 1543 he was still resident there, having been elevated to the position of *chapelin perpétuelle*, and also acted as organist. One of Attaignant's volumes (*RISM* 1530⁶) includes two courtly four-voice pieces by him in the generally homophonic manner of Sermisy. Two more pieces, rustic anecdotes set in the lively syllabic contrapuntal style of Jancquin and Passereau, figure in another Attaignant volume (1535⁶), ascribed to 'Cirot'. A collection of *Magnificat* settings published by Attaignant (1534⁷) opens with one by Cybot composed in the polyphonic style of the post-Josquin period (ed. A. Smijers and A. T. Merritt, *Treize livres de motets parus par Pierre Attaignant en 1534 et 1535*, v, Monaco, 1960).

Cybulski, Izidor Józef (*b* 2nd half of the 18th century; *d* ?Warsaw, 1st half of the 19th century). Polish composer and music engraver. The first date known in his life is 22 November 1802, when as a priest he delivered a sermon in the Augustinian church in Warsaw on the influence of music on the human mind and soul. In 1803 he worked in Elsner's music engraving workshop, but from 1805 to 1817 he ran one of his own, which in 1817 published Chopin's first composition, the *Polonaise* in G minor. In 1809 he organized and directed a school of organists in Warsaw. Cybulski's compositions include a Polish mass to a text by F. Wężyk (1805, manuscript in *PI-CZp*), 8 *variations pour le clavecin* (Warsaw, n.d.), *Polonaise* in B \flat (Warsaw, n.d.) and *Trois polonaises pour le clavecin ou pianoforte* (Warsaw, 1805-6).

ALINA NOWAK-ROMANOWICZ

Cyclic form. Music wherein a later movement reintroduces thematic material of an earlier movement is said to be in 'cyclic form'. In its strict meaning such music returns at its end to the point whence it set out at the beginning, in the manner of the song 'There's a hole in my bucket', to produce an endlessly rotating cycle, but in practice the simplest examples have been works like Haydn's *Symphony* no.31 in D (*Hornsignal*), Beethoven's *Serenade* op.8, Brahms's *Third Symphony* and Elgar's *Second Symphony*, whose finales all close with the material of the beginning of the work. More generally the term 'cyclic' describes those works where thematic links bind more than one movement, it is not properly applied to mere thematic resemblances. Examples may be found in many instrumental sonatas, suites and canzonas of the early 17th century (see VARIATIONS, §§4, 5) and can be cited in a large number of sacred works, like Bach's B minor Mass and Mozart's Mass in C K317. But they are rare (except in Boccherini's music) in the 18th century. Beethoven (*An die ferne Geliebte*, Piano Sonata in A op.101), Schubert

(Piano Trio in E \flat ; *Fantasia* in C for violin and piano) and Berlioz (*Symphonie fantastique*) laid the foundations on which Mendelssohn, Schumann, Liszt and Franck elevated cyclic principles to great importance, associated with the widespread application of THematic TRANSFORMATION and the desire for greater continuity between separate movements, all methods of establishing a tighter cohesion in multi-movement forms. Since the 19th century cyclic form has been adopted as a regular stock-in-trade of musical structure.

Cymbale (Fr.) An ORGAN STOP (*Zimbel*)

Cymbalon [cymbalum] (Hung.) DULCIMER

Cymbals (from Gk. *kymbos*, Fr. *cymbales*, Ger. *Becken*, *Schellbecken*, *Tellern*, It. *piatti*, *cinelli*). Instruments of percussion, normally of indefinite pitch. The modern orchestral cymbals are a pair of large round plates of metal (an alloy of c.80% copper and 20% tin), the exact constituents and processing of which are the makers' secrets. The highest-quality cymbals are said to contain pure silver. Present manufacturers include the long-established and world-famous ZILDJIAN family with branches in Turkey and the USA, M. M. Paiste & Sohn of Switzerland, the Premier Drum Co. of England, and the Italian firm of Zanchi; their combined output amounts to several thousands yearly.

To meet present-day requirements in the orchestra and in jazz where they are integral instruments, cymbals are made in many sizes and grades of sound. Diameters (edge to edge) range from 30 cm to 65 cm, a decided contrast with the cymbals of the ancients which are known to have been considerably smaller. For standard orchestral purposes, cymbals measuring 40-50 cm in diameter are used, the desired tonal qualities being brilliance, resonance and a multiplicity of overtones. In general, orchestral cymbals are 'paired' with a slight difference in pitch. The finest-quality cymbals are cast,

2 Profiles of (a) Chinese, and (b) Turkish cymbals

3 Bronze cymbals, Greek, c500 BC (British Museum, London)

rolled, hand-beaten and machine skimmed (pared) to a predetermined thickness. Each plate is slightly convex to ensure that only the outer edges meet. In the centre of each plate is a shallow saucer-like recess forming a dome. A double strap by which the cymbal is normally held is passed through a central hole and is knotted with a crown ('sailor's') knot inside the cymbal where the recess is concave. The strap is gripped between the thumb and first finger. To shield the knuckles a circular pad of soft leather or felt covers the dome. In some cases cymbals are held by a special handle. Moderate-quality cymbals of brass serve useful purposes, but are completely out of place in the full orchestra, where, with certain exceptions such as the occasional use of Chinese cymbals, only the best quality 'Turkish' instruments are acceptable.

China is often credited with being the oldest cymbal-making country, but authentic records suggest that cymbals entered China by means of foreign influence. A Chinese source enumerates cymbals among the instruments of an East Turkistanic orchestra established at the imperial court in AD 384. According to the *Yueh-shu*, the bible of Chinese musical instruments written in AD 1104 by Ch'en Yang, cymbals came originally to China from Tibet, but other evidence suggests that the country of their origin may have been India or Turkey. A possible Turkish influence is suggested in the similarity of the content of the metal used in the manufacture of the old sacred cymbals of the Chinese (considered to have been 81% copper and 19% tin) and that used traditionally by Turkish cymbal makers. Cymbals (like gongs) have long been and continue to be used in the religious and secular life of the Chinese and, as well as manufacturing gongs, China remains a cymbal-making country.

Present-day Chinese cymbals (*nao po*) differ from modern 'Turkish' cymbals in both shape and sound (see fig.2). In the majority of Chinese cymbals the curved section from the boss to the edge shows a distinct upward curve, and though the formula of the metal is similar in each case the casting and processing of the Chinese cymbal renders it brittle in sound and texture in comparison with the 'Turkish' cymbal. Consequently,

4 Indian finger cymbals (*manjira*)

Chinese cymbals are used in the Western orchestra only for special effects.

Whether originally Chinese or not, cymbals are of ancient origin. Historians refer to their use in central Asia Minor in 1200 BC. There is constant reference to cymbals in the Bible if, in fact, the translation represents the original correctly. In Psalm cl loud and high-sounding cymbals are mentioned (from the Hebrew *tseltshim* and *metslayim* 'noisy' and 'clear'). The high-sounding cymbals could have been similar in design to the *Crotalum* of ancient Egypt, Greece and Rome. At the dedication of the Ark three musicians, Heman, Asaph (the chief) and Ethan, were appointed to play cymbals of brass.

Cymbals not unlike those in use today are portrayed on Babylonian and Assyrian sculptures from the turn of the 1st millennium BC. A Babylonian plaque dated c700-600 BC (*GB-Lhm*) shows a cymbalist accompanying a performer on a drum. Here the cymbals are held vertically - a style maintained in the modern orchestra. An Assyrian bas-relief c680 BC depicts cymbals held horizontally. Egyptian cymbals (*Lhm*) include a pair of beaten bronze cymbals dated after 850 BC. These measure 17 cm in diameter and are secured by the original cord. Smaller bronze cymbals from Egypt and ancient Greece are also found (fig.3). These cymbals frequently defined as *crotales* - date from the middle of the 1st millennium BC, and are thicker than the beaten bronze cymbals. In most cases *crotales*, which in all probability were cast, have a large central boss and upturned rim. Many produce well-defined bell-like notes of high pitch the 'well-tuned cymbals' of Psalm cl. *Crotales* vary in size, suggesting their use as cymbals and also as metal castanets and finger cymbals (fig.4).

In Europe, cymbals appear on early Greek and Roman architecture. They are clearly portrayed on a marble statue of the Hellenic period 3rd century BC, and on a mosaic found at Pompeii dated AD 73. An illustration from Herculaneum shows a pair of cymbals connected by a strap. In contrast, on an ancient Greek drawing of a female centaur and a bacchante, the centaur holds a cymbal in her left hand which she strikes against an identical instrument held in the bacchante's

right hand, to assist, it is supposed, in the musical activity concerned with an orgy. Greek cymbals were closely associated with such rites, particularly the ancient orgiastic rites of the goddess Cybele, and the raucous rites connected with the worship of Dionysus.

A set of cymbals from the ruins of Pompeii (in the City Museum, Pompeii) range from small crotales to cymbals measuring 41 cm in diameter. These instruments are said considerably to have interested Berlioz, who was certainly responsible for introducing the gentle tinkle of ancient cymbals into the orchestra. In the scherzo of his dramatic symphony *Roméo et Juliette* (1839) two pairs of ancient cymbals tuned a 5th apart to $b\flat''$ and f''' are needed. Debussy scored for two ancient cymbals (*cymbales antiques*) in e'' and b'' in *Prélude à l'après-midi d'un faune* (1894). In *Daphnis et Chloé* (1912) Ravel scored for six pairs of antique cymbals with definite notes sounding b' , c'' , $d\flat''$, e'' , f'' , a'' .

Thanks to present-day manufacturers, chromatic scales of tuned crotales are readily available. In the past the parts for these instruments were often given to the glockenspiel. (When Berlioz conducted *Roméo et Juliette* in London no small cymbals were available, but with his usual thoroughness he persuaded a London metal founder to manufacture instruments in time for the performance.)

For a long time cymbals, in addition to their use in religious and secular life, have been credited with remarkable powers. This subject, and the use and properties of ancient cymbals in Greek, Roman and Jewish history, are discussed at length by F. A. Lampe in *De cymbalis veterum* (1700) and R. Ellys in *Fortuita sacra quibus subiicitur commentarius de cymbalis* (1727).

Cymbals closely resembling those used by the Greeks and Romans frequently appear in pictorial representations of the Middle Ages. In most cases instruments are represented as played – by angels and women generally – in the manner of ancient cymbals, i.e. horizontally, as portrayed by Matteo Giovanni (*Assumption of the Virgin*, late 15th century). Mersenne (1636) illustrated cymbals with straps much as we use today. Cymbals – flat and hemispherical – are illustrated in 13th-century English manuscripts. In addition to their use in Christian and pagan rites and as instruments of war, cymbals (smaller than those in the modern orchestra) were used throughout the Middle Ages by dancers and to some extent in ensemble music. They were included in the orchestra in 1680 by N. Strungk in his opera *Esther*, and in Freschi's opera *Berenice*. Cymbals were prominent instruments in the JANISSARY MUSIC of the mid-18th and early 19th centuries (fig 6). Gluck's use of cymbals in *Iphigénie en Tauride* excited Berlioz. Mozart (*Die Entführung aus dem Serail*, 1782), Haydn ('Military' Symphony, 1794) and Beethoven (*Die Ruinen von Athen*, 1812, and the Ninth Symphony, 1823), made cunning use of cymbals with other janissary effects.

It is from the early part of the 19th century that we find a more positive and extended use of cymbals as orchestral instruments, due in no small way to the pioneering of Berlioz. In his *Grande messe des morts* (1837) Berlioz scored for ten cymbals, certain of which he specified to be struck and/or sustained with soft sticks. His ideal ensemble included four pairs of cymbals (he frequently scored for more than one pair), and he scorned the combination of bass drum and

cymbals played by one musician.

Wagner's use of cymbals is exemplary. One of the finest moments for the cymbals is their first entry in the overture to *Die Meistersinger von Nürnberg*. There is also the truly noble effect of two loud strokes at the climax of the *Lohengrin* prelude. Here as in *Die Meistersinger* two cymbals are clashed in the normal manner. In *Der Ring des Nibelungen* Wagner used the mysterious ringing sound of a single cymbal, in some cases struck with a drumstick and in others with two drumsticks to produce a roll. In *Das Rheingold* a roll ('Becken mit Paukenschlageln') describes the glitter of the precious metal, and a similar effect occurs in the second act of *Die Walküre*, when Wotan utters his mysterious blessing of Alberich. Wagner also used the two-plate roll. Here a pair of cymbals are rubbed together or the edges agitated against each other. Bartók scored for this effect in his Second Violin Concerto and his Second Rhapsody for Violin and Orchestra. It also occurs in Vaughan Williams's *A London Symphony*. Today the roll is more generally allotted to the suspended cymbal.

Tchaikovsky used cymbals imitatively (short notes) in the duel scene of his fantasy-overture *Romeo and Juliet*. The single stroke (*mf*) with the well-calculated vibrating period prescribed by Dvořák in his Symphony 'From the New World' is a model of economy in the use of orchestral percussion.

Many late 19th- and 20th-century composers have made considerable demands on cymbals (and the player). In *Antigone* Orff requested ten pairs of cymbals. Peter Schat in *Signalement* wrote for 12 suspended cymbals of specified sizes. Composers such as Mahler, Strauss, Schoenberg, Bartók, Stravinsky, Bliss, Hindemith, Gerhard and Walton have requested various effects. Mahler asked for the cymbal to be struck with a steel rod in his Third Symphony. In *Ein Heldenleben* Strauss wrote *zischend*, here usually interpreted as 'hissing'. This effect is customarily produced by the brushing of the two inner faces of the cymbals, by passing the edge of one of the cymbals swiftly across the inner face of the other; or by scraping across the striations (tone-rings) with the fingernail or a coin. Schoenberg wrote for a sustained note to be played by drawing a cello bow over the edge of a cymbal in his Five Orchestral Pieces. Bartók in his Sonata for Two Pianos and Percussion required the suspended cymbal to be struck forcibly on the dome with the heavy end of a side-drum stick, and in contrast, that the instrument be struck on the very edge with the fingernail or the blade of a pocket-knife (*pppp*). Stravinsky frequently specified cymbal with triangle beater, e.g. in the *Firebird Suite* and *The Wedding*. Bliss asked for two cymbals, placed respectively on the heads of a pair of timpani, to be struck with hard beaters in *Meditations on a Theme of John Blow*. Hindemith in his Symphony in $E\flat$ (1940) somewhat anticipated the 'sizzle' cymbal of modern rhythmic groups (a suspended cymbal equipped with loose rivets or similar device) in his instruction for a cymbal to be struck with a soft stick while a thin rod is held to vibrate against the edge of the instrument.

Further unusual effects come from Gerhard and Walton. In *Hymnody* (1963) Gerhard scored for the edge of a large suspended cymbal to be scraped with a threaded rod. In one of Walton's earliest works, *Facade* (1923), occur two novel requests: that the suspended

cymbal be struck (and sustained by means of a tremolo) with wire brushes, and the (possibly unique) effect produced by striking the edge of a cymbal with a triangle.

In orchestral scores the part for the cymbals is written either on a staff or on a single line. At times the cymbal part is combined with that of the bass drum, and is signified by the use of 'tails up' and 'tails down', a method used since the time of Haydn. In many modern scores easily recognizable shapes are given, ex. 1a shows cymbals clashed (*naturale*) and ex. 1b a suspended cymbal struck with a soft stick.

Ex. 1

(a)

()

For the normal two-plate stroke (*naturale*, a 2) the cymbals are held vertically and clashed together with a swift up-and-down or across movement. Maximum brilliance is obtained by the almost full circumference of each plate meeting simultaneously. To obtain the fullest sound the instruments are turned outwards after impact and held at arm's length. Long notes are indicated by the direction *laissez vibrer* (let ring) or the sign in ex. 1b, in which case the plates ring freely. Short notes are also indicated by notation, or by the terms *acc.*, *étouffé* etc. To still the vibrations the player 'damps' the sound by pressing the cymbals against his clothing. To indicate by notation the desired length of every cymbal note is not always possible. Frequently the decision to damp or not is left to the player's (and conductor's) experience.

The observance of note values and dynamics is a major part of orchestral cymbal technique. For *pp* the two cymbals meet as in the full clash, the degree of movements being adjusted to ensure the required volume. In certain circumstances the cymbals are played edge to edge to produce a *pianissimo* effect. Occasionally, to produce the minimum sound or a particular effect, one cymbal is lightly brushed across the other, or the two plates merely pulled apart.

In the past the suspended cymbal was one of a pair of hand cymbals, it was held in one hand, the other executing the strokes. Today the 'loose' cymbal is suspended on a stand. The tremolo is executed as is a roll on the timpani: a series of reiterated single strokes. To keep the cymbal horizontal during a tremolo, the beaters operate on the opposite edges. The playing spot, unless otherwise requested, is c. 3 cm from the edge. Where a single stroke with hard stick is indicated, the cymbal is normally struck on the edge. Note values on the suspended cymbal are usually observed by the method of 'hand-damping'.

Among the many recent improvements in cymbal equipment is the insulated rack to hold one or more pairs of cymbals upright during *tacet* periods.

The combination of cymbals with bass drum (one performer) as a measure of economy is seen less today than it was at the time of Berlioz. The effect produced by a player striking a cymbal fixed to the bass drum with a held cymbal simultaneously with a stroke on a bass drum is, however, effective, particularly in the military band and when requested for a particular reason (as by Mahler in his First Symphony, 1891 *Türkische Becken* and *grosse Trommel*; and by Stravinsky in *Petrushka*, 1911).

In jazz a variety of cymbals and cymbal effects are used, including the hi-hat pedal-operated foot cymbals

5. Cup-shaped cymbals, held horizontally: detail from 'The Triumph of Bacchus over Hercules', Roman silver dish (4th century AD) from the Mildenhall Treasure (British Museum, London)

6. Janissary handsman with cymbals: watercolour by an unknown artist, early 19th century (Royal Military School of Music, Kneller Hall)

and suspended cymbals: 'crash', 'ride', 'bounce' and 'sizzle'.

JAMES BLADES

Cymbalum (Lat., from Gk. *kymbalon*). Term, usually appearing in the plural, *cymbala*, and designating two related musical instruments, a type of ancient cymbals and a medieval set of bells.

Ancient cymbala were a pair of small, plate-shaped or more often cup-shaped bronze cymbals (See CYMBALS and TYMPANUM for illustrations.) They were associated in Greco-Roman culture with orgiastic religious rites, where they played ecstasy-inducing music together with the tympanum and the AULOS. They became particularly prominent in Rome after the introduction of the Magna Mater, Cybele, from Asia Minor in 204 BC. They appear on numerous vases and in murals and reliefs; a typical literary reference is that of Catullus who had a young votary of the goddess exclaim: 'Come follow me to the Phrygian house of Cybele, to the Phrygian grove of the goddess, where the voice of the cymbalum sounds, where the tympanum echoes, where the Phrygian tibia player sings on his deep-toned curved reed, where they celebrate the sacred rites with shrill

cries, where the milling crowd of her worshippers rushes to and fro.'

Medieval cymbala were a set of small bells hung on a frame and struck with a hammer (see illustration). Iconographic representations usually show from four to eight bells, and theoretical sources invariably designate a diatonic scale based on C, also including B \flat . Their use closely paralleled that of the organ. Early medieval treatises used their weights as an illustration of Pythagorean pitch relationships in the same manner as they used the length of organ pipes for this purpose. After the organ was in use in the church, cymbala were frequently mentioned with it in parallel fashion, as when the 12th-century Cistercian Aelred remonstrated: 'Whence are there so many organs, so many cymbala in our churches?' In the late Middle Ages as the organ became more prominent cymbala declined in importance, but the term reappeared in the Renaissance, predictably meaning an organ stop.

The precise relationship between ancient and medieval cymbala has yet to be determined. The term is the same, as illustrated in Christian commentaries on the psalms, which apply it to one in classical times and to the other in the Middle Ages. Moreover the similar cup-like shape suggests a relationship. However, the steps in the presumed evolution from a pair of cymbals struck together to a series of bells struck by a hammer are not known.

Cyprus. See CYPRUS MEDIEVAL POLYPHONY, for discussion of Grecian and Turkish folk music styles, see GREECE, §IV, and TURKEY, §2.

Cyprus: medieval polyphony. No Cypriot music from the early Middle Ages has survived, and conjectures as to musical activity on the island depend on scattered hints in literary and historical sources and on inferences drawn from more certain knowledge about other aspects of Cypriot life and culture (see Hoppin, 'The Cypriot-French Repertory', 1957). Early in the 15th century, however, the island produced one of the largest and most representative collections of late medieval music. All of the pieces are anonymous, and none appears in any other manuscript. Nevertheless, the repertory clearly stems from a transplanted French culture at the court of Cyprus and brings the island to temporary prominence in the history of music.

Cyprus became an outpost of French culture in the later Middle Ages; it had been Greek until the end of the 12th century, but Richard I Coeur-de-Lion seized it in 1191 during the third crusade and sold it to the Knights Templar, who put it in the charge of French barons with Guy de Lusignan at their head. Within a few years, this

Cymbalum and fiddle (top) with a harp, rebec and pan-pipes: illuminated capital from a French psalter, first half of the 13th century (NL-DHk 76 E 11 f.2r)

branch of what was an illustrious French family became hereditary kings and began the period of Frankish rule that lasted until 1489. Establishment of the Lusignan dynasty brought with it a return of Cyprus to the 'bosom of the Roman church'. This return did not wholly suppress the Byzantine rite, but it required the importation of clerics from the West and made their liturgy and music the dominant form of religious life. Thus, in both sacred and secular spheres, Cyprus acquired a ruling class that was almost entirely Western and predominantly French.

Evidence of French architecture in Cyprus still survives in the many cathedrals, churches and monasteries built during the 13th and 14th centuries. The music of the time was more ephemeral. Only from the latter half of the 14th century does slight evidence survive. A polyphonic Kyrie in the repertory of Avignon (*F.A.P.T.*, ed. in *CMM*, xxix, 20) bears the word 'Chypre' (see *CHYPRE*). A list of composers in the text of a motet (*F.C.H.* 564, no 108) includes one or possibly two men from Cyprus. Minstrels accompanied Peter I, King of Cyprus, in his travels throughout Europe in the 1360s. Guillaume de Machaut told the story of those travels in his narrative poem *La prise d'Alexandrie*, which bears ample witness to Peter's love of music. Among the 'familiar' of Peter's court were clerks, chaplains and singers from the dioceses of Cambrai, Tournai, Arras and Liege. And in Venice, according to the Florentine historian Villani, Peter bestowed a laurel wreath on Landini for his organ playing. After Peter's assassination in 1369 his chancellor, Philippe de Mezières, returned to the West with a dramatized musical Office for the Presentation of the Virgin, which Philippe had seen in Cyprus and had himself translated from the Greek.

Suggestive as these bits of evidence may be, they scarcely foreshadow a sudden flowering of musical activity during the reign of King Janus (1398-1432). More than to Janus, perhaps, that flowering may be credited to his second wife, Charlotte de Bourbon, who came to Cyprus in 1411. According to the Cypriot chronicler Makhairas, Charlotte arrived with a retinue of some 60 people, of whose names only 19 are preserved. Among them, however, is a group of men, including two priests, who probably formed the nucleus of Charlotte's private chapel. One of these men, Gillet Veliout, may well be the *GILLET VELIOUT* whose compositions are found in a slightly later continental manuscript (*GB-Ob* Can. misc 213). In any case, the chroniclers say that Charlotte brought good luck to the island and in her time she died in 1422 – there was peace and abundance. Other evidence confirms that the manuscript of Cypriot music in *I-Tn* is one of the few tangible remains of that period. A summary list of the contents of this manuscript will show its arrangement in five large sections: a plainchant collection of two rhymed Offices and six mass cycles (see illustration), 17 polyphonic mass movements (three Glorias and seven Gloria-Credo pairs); 33 Latin and eight French motets; 102 ballades, 43 rondeaux and 21 virelais. A polyphonic mass cycle, complete except for the Agnus Dei, was later inserted between the sections containing the ballades and the rondeaux and virelais.

The most likely explanation for the unusual inclusion of plainchant in an otherwise polyphonic repertory is that it originated in Cyprus, probably in the first two decades of the 15th century. This is known to be true of

Page from the plainchant section of *J119* showing the Office of St Anne (who is depicted in the initial), beginning with the chapter 'Mulierum fortem', followed by the great responsory 'Inter legis sacramenta' (*I-Tn* *J119*, f 14r).

the Office of St Hilariion with which the manuscript opens. At King Janus's request, the schismatic pope John XXIII approved the Office and sanctioned its performance in a bull dated 23 November 1413. With several relics of St Anne preserved in Cypriot churches, her Office in all likelihood was also a native product. So too must have been the mass cycles, for the melodies appear nowhere else. Three cycles are complete, even including the Credo, three consist only of Kyrie, Sanctus and Agnus Dei. Each cycle is written in a single mode, and they thus become the earliest known examples of unified plainchant masses.

The polyphonic mass movements contribute a valuable addition to the continental repertory of Gloria-Credo pairs that foreshadow the Renaissance cyclic mass. In addition to being unified by mode, metre and style, the pairs provide characteristic examples of the three different styles of contemporary mass movements in western Europe: two in motet style with text in the two upper voices, two with text in all four voices; three in three-part song style with text only in the upper voice. The added mass cycle is also in song style, but is unusual in having all its movements based on part or all of the same tenor melody. Still unidentified, the melody is in triple metre, with regular rhythms and a clear phrase structure that suggest secular origin (ex.1).

Ex 1 Tenor mass cycle (1st section)

Wherever or whenever this cycle was composed, it must be one of the first tenor masses

The most important aspects of the 41 motets are the use of four part writing in all but three pieces, the appearance of isorhythm in all but one, and the concentration on sacred texts. Even a majority of the French texts praise the Virgin Mary, and only two seem to be entirely secular. Eight Latin motets (nos 23-30) with texts that trope the 'Great Antiphons' for the *Magnificat* constitute a unique series of pieces composed as a unit, although they would have been performed, one each day, in the week preceding Christmas. The texts of motet 12 establish a connection with earlier continental music by using the same poetic forms and rhymes as the texts of the motet *Impudenter circum/Virtutibus* attributed to PHILIPPE DE VITRY. On the other hand, three motets (nos. 6, 8 and 17) name King Janus and thus confirm stylistic evidence that the collection originated in the first decades of the 15th century.

The French songs are so similar in general style that they may be discussed together. Only 16 of the 166 pieces depart from normal three-part writing with text in the upper voice. One ballade has two upper parts with different texts; two-voice writing appears in four virelais and nine rondeaux, two of which have the text in both voices, one virelai has the text in all three voices, and the final rondeau is a four-voice canon.

In their rhythmic style, however, the secular songs display a wider range of style than any other group of pieces. Some are scarcely more complex than the late works of Machaut. A few rival the complexities of late 14th-century manneristic style (see *ARS NOVA* and *ARS SUBTILIOR*). From these few, Wolf and Apel picked their illustrations of the Cypriot manuscript and caused it to be ranked undeservedly with such monuments of mannered notation as the Chantilly and Modena manuscripts (*F-CH* 564 and *I-MOe* 5,24). The majority of pieces make but moderate use of manneristic devices. Only 'displacement syncopation' and the simpler proportions (3:2 and 4:3) occur with any frequency. A return to rhythmic simplicity characterizes what must be the latest songs in the manuscript. Shifts from 6/8 to 3/4 rhythms (notated in full-red coloration) still occur, but other notational complexities almost disappear. The modernity of these pieces also manifests itself in the use of semiminims (semiquavers in transcription) and in the presence of textless and presumably instrumental passages in the upper voice. Such pieces differ in no way from exactly contemporary continental songs.

The repertory from Cyprus thus proves to be much more than a record of musical activity at a remote provincial court. By its quality, its variety, its reflection of current practices and its anticipation of future developments, it provides our most comprehensive sur-

vey of the state of music just before the appearance of the first Renaissance composers.

Czartoryska [née Radziwiłł], **Marcelina**, Princess (*b* Podluzna na Polesiu, 18 May 1817, *d* Kraków, 5 June 1894) Polish pianist. She was educated in Vienna and began studying music under Czerny; she was later a pupil of Chopin in Paris, and in a comparatively short time became a fine interpreter of his music. She was one of the few friends present at his death. In 1848 the Austrian government dismissed her from Vienna as a Russian subject. She moved to Paris where she formed a small group comprising the most eminent of the Polish émigrés and members of French artistic and literary circles. She gave charity concerts in Paris, London and Vienna, often with the most celebrated artists, including Viçuxtemps, August Franchomme, Pauline Viardot and Liszt. In 1867 she returned to Poland and settled in Kraków, where she formed, as in Paris, a group bringing together figures from the world of art and literature. She gave many Chopin concerts in different towns in Poland. Czartoryska also initiated Stanisław Tarnowski's Chopin lectures, which she illustrated herself, as well as two historic concerts in Kraków in 1877, at which were performed works by Polish composers from Gomółka to Żeleński. She was regarded by many critics as one of the most authentic of all contemporary pianists in Chopin's own manner of interpretation.

ZOFIA CHECHLIŃSKA

Czech Nonet. Czech chamber ensemble. The members are Václav Snitil (*b* Hradec Králové, 1 March 1928), violin; Milan Heřmánek (*b* Mařovice, 8 March 1942).

viola; Rudolf Lojda (*b* Plzeň, 4 July 1927), cello; Václav Fuka (*b* Prague, 7 Dec 1933), double bass; Jiří Boušek (*b* Prague, 27 March 1943), flute; Jan Krejčí (*b* Dolní Hbity, nr. Příbram, 11 Dec 1935), oboe; Václav Kyzivát (*b* Libáň, 24 Dec 1936), clarinet; Jaroslav Řezáč (*b* Hrdlořezy, 17 March 1929), bassoon, and Arnošt Charvát (*b* Blansko, 15 Aug 1928), horn. The nonet was originally formed from members of Reissig's student orchestra at the Prague Conservatory, for a performance in March 1923 of Taraba's *Three Meditations* for wind and string instruments. It was established on a permanent basis by the violinist Emil Leichner (*b* Prague, 30 July 1902), took the name Czech Nonet, and gave its first concert in Prague in January 1924. That year its members moved to Lithuania to teach at the Klapėda Conservatory for four years, they also gave concerts there. From 1928 the ensemble was again based in Prague. It toured throughout Europe, Africa, South and Central America (from 1945), the USA and Canada (from 1968), and it led to the founding of similar ensembles in Rome (the Gruppo Stromentale Italiano) and Leningrad. It played at the International Festivals of Contemporary Music in Paris in 1937, and London and Brussels in 1938. The personnel has changed many times but Leichner's uninterrupted membership helped to ensure continuity of style and tone-colour, and the high standards he set were maintained after he left the group in 1963. The first composer to write for the ensemble was Foerster (Nonet, op. 147), others to have done so include Prokofiev, Hába, Martinů, Lutosławski, Bořkovec, Dobiáš, Kapr, Pauer and Novák.

ALFNA NFMCOVÁ

Czechoslovakia. Central European republic. It was created in 1918 out of former Habsburg territories Bohemia, Moravia and Slovakia. This reflects the composition of the 9th-century kingdom of Great Moravia. Slovakia fell to the Magyars in 906 (and remained part of Hungary and later the Habsburg Empire until 1918); Bohemia, with a strong line of Přemyslid princes and kings, became dominant and in 1029 formally incorporated Moravia as a margraviate. The teachings of Jan Hus gave the kingdom a largely Protestant character, eroded neither by five assaults by imperial and crusader armies (1419-31) nor by the election of a Habsburg as king in 1526. After the Battle of the White Mountain (1620), in which the Czech nobility were defeated by the Habsburgs, Bohemia and Moravia became virtual provinces of the Habsburg Empire and were forced to adopt its language and religion. Reaction to this culminated in the 19th-century national revival, which in turn led to independence in 1918. As a result of the Munich Pact (1938) various border territories were annexed to Germany, Hungary and Poland, and in 1939 the republic was dismembered with Bohemia and Moravia becoming a German protectorate and Slovakia an

independent state. The country was liberated in 1945, largely by the Red Army, and in 1948 became a socialist state. Czechoslovakia became a federation of Czech and Slovak socialist republics in 1968.

1. BOHEMIA AND MORAVIA

(i) To 1723. Christianity is believed to have been brought to Bohemia by Bavarian evangelical priests early in the second quarter of the 9th century. In about 863 the Byzantine missionaries Cyril and Methodius came to the Great Moravian Empire to preach Christianity in the Slavonic tongue. Although their introduction of a Slavonic liturgy received papal approval, the Roman Catholic priests and their bishop opposed this vigorously and resolved to make the Latin ritual prevail, the Slavonic liturgy was banned in 885 by Pope Stephen V. Byzantine chant was sung during this time, but early in the 10th century Gregorian chant became predominant. In the 11th century singing in Slavonic was forbidden in the churches, so that the earliest surviving Czech melodies, although religious, are not liturgical. One of the first of these, *Hospodine, pomiluj ny* ('Lord, have mercy') appears in Jan of Holešov's tract of about 1397. The *Svatý Václave* ('St Wenceslas') melody, which was later used by Dvořák, Suk and Novák, occurs in a gradual of about 1473. The first signs of a metrically conceived song are seen in *Buoh všemohúci* ('Almighty God'), in the Jistebnice Cantional (c. 1420), the earliest Bohemian hymn collection, where *Jezu Kriste, šedřý kněže* ('Jesus Christ, bountiful priest') is also found.

The simplicity of popular melody was clearly reflected in the early 15th-century Christmas hymns, such as *Vizmež pacholička* and *Narodil se Emanuel*. Although some of the songs of the Hussites were original, a considerable number were adapted from Gregorian plainsong and secular sources. The most powerful of these melodies, *Krož jš Boží bojovníci* ('Those who are God's warriors'), was fervently sung by Žižka's army on the battlefield and meant to strike fear into the hearts of their enemies. The Jistebnice Cantional comprises 77 of these songs, including this celebrated melody. Almost a century later the puritanical Bohemian Brethren (Unitas Fratrum) began publishing numerous Protestant collections of hymns and psalms, as did the moderate Hussite group, the Calixtines or Utraquists. Some of these hymnals lack tunes, including the earliest of them, the *Pisničky* of 1501, which is usually associated with Bishop Luke of Prague. One of the more important collections with tunes is the famous *Pisně chval božských* (Szamotuly, 1561), closely linked with Jan Blahoslav, the translator of the New Testament. Šimon Lomnický's *Pisně nově na evangelia* (Prague, 1580), which includes tunes, is the first of many Catholic hymnals. Šteyer and Božan were assiduous collectors of hymns, whereas Michna and Holan Rovenský were composers who included in their cantionals sacred songs for several voices. From 1620 onwards, during the Thirty Years War (1618-48), leading Protestants were forced to flee from persecution, and consequently Tranovský's *Cithara sanctorum* was published at Levoča, Slovakia (1636), and Bishop Komenský issued his important *Kancionál ... kniha ...*

pismi duchovních at Amsterdam (1659).

Bohemian composers were slow to adopt polyphonic styles, and even in the second half of the 15th century, as the Kutná Hora Gradual shows, they were still writing in *Ars Antiqua* forms. Jan Franus's *Cantional* (1505), however, includes some examples of the newer type of motet and even some five-part works. After this polyphonic music developed rapidly and before the close of the century Spongopaeus wrote a composition for eight-part double choir Trojan Turnovský, Jiří Rychnovský and the nobleman and humanist Harant z Polžic a Bezdružic (beheaded in 1621) were the leading composers of the Renaissance. A single five-part mass, two motets and some motet fragments are all that survive of Harant's work, but these provide ample evidence of his talent.

During most of the 16th century (Habsburg domination began in 1526) the three emperors, Ferdinand I (1556–64), Maximilian II (1564–76) and Rudolf II (1576–1612), maintained splendid musical establishments. Rudolf was particularly fortunate in having such composers as Jacob Regnart, Kerle and Monte to serve him at Prague castle, where he preferred to reside; Prague thus became one of the most important European musical centres. Following the example of the imperial court, the powerful Rožmberk family established a fine orchestra and library of music at Český Krumlov. In the 17th century the Kinskýs, Czerníns and Fürstenbergs had singers and instrumentalists at their Prague palaces, and Count F. A. Sporck, a connoisseur of the arts and patron of Italian opera, had theatres at Prague and Kuks and engaged Antonio Denzio to direct them. There were musical establishments at the Moravian castles of Tovačov, Vyškov, Holešov (where Holzbauer was the director of music) and Jaroměřice nad Rokytinou, the seat of Count J. A. Questenberg and the home of the Miča family. But the most important group of musicians was at Kroměříž in the chapel of the Prince-Bishop Karl Liechtenstein-Kastelcorn of Olomouc. The most important musician there was Pavel Vejvanovský; Biber was there from about 1668 until he left for Salzburg in 1670.

Jesuit colleges provided a thorough training for young church musicians, and monasteries and churches offered good opportunities for composers of sacred choral music, organ music, school and sepulchre dramas and Christmas pastorals. Michna, organist of one of these colleges, was in many ways the most typical Czech composer of the early Baroque period. There are marked Italian influences in his music, but his use of indigenous elements has particular significance. He planned his *St. Wenceslas Mass* on a festive scale for six solo voices, six-part choir and an orchestra that includes trumpets. During the first half of the 18th century Zelenka was the most outstanding Czech composer. He studied with Fux and Lotu and became court composer at Dresden. Among his many compositions are three oratorios and an allegorical *Melodrama de Sancto Venceslao*, which he wrote in 1723 for the coronation of the Habsburg Emperor Charles VI as King of Bohemia (Fux wrote *Costanza e Fortezza* for this occasion). Zelenka's contemporary Černošský, who was the minorite choirmaster of St. Jakub's, Prague, was known as 'Il Padre boemo' in Italy and was highly regarded at home.

Primislao, primo re di Boemia (Venice, 1698) was almost certainly the first opera based on a Czech sub-

ject, for it anticipated Bartolomeo Bernardi's *La Libussa* (Prague, 1703) by several years; but the composer is not known and may not have been Czech. Another version of the same legend, *Praga nascente da Libussa e Primislao*, was performed at Count Sporck's theatre (Prague, 1734), the composer is believed to have been Antonio Bioni. When Mysliveček began composing operas more than 30 years later he also used Italian librettos, but made no attempt to set Czech subjects.

(ii) *The period of migration.* After Charles VI's coronation in 1723 there was little incentive for noblemen to spend much time at their Prague palaces or on their Bohemian and Moravian estates except for hunting. For a century the imperial court had been permanently established in Vienna, and Prague had consequently declined to the level of a provincial city. Many Czechs had found the crushing defeat in 1620 hard to bear, they were forced to use the language of their conquerors, and Protestants (e.g. the Bendas) found the lack of religious freedom intolerable. But perhaps the most serious aspect of the situation for musicians was the limited number of worthwhile posts that they could fill. The conditions that prevailed led to an unprecedented migration of Czechs and Moravians to many parts of Europe (where most of them became known under the forms of their names – usually Germanized – that were used locally).

While Johann Stamitz, his two sons and F. X. Richter and Filtz were contributing to the development of the pre-Classical symphony at Mannheim, Georg Benda was experimenting with the new art of melodrama at Gotha. His violinist brother Franz was Konzertmeister to Frederick the Great at Berlin. Opera drew Mysliveček southwards to Italy, where he followed up a triumph at Naples with successes in several other Italian cities and at Munich. Adalbert Gyrowetz was well known in several capital cities as a composer of stage and instrumental music, and virtuosos like the horn player Giovanni Punto and the pianist-composer Jan Ladislav Dussek travelled widely. František Adam Miča spent his time in Austria and Poland, and J. B. Vanhal first studied in Vienna, then travelled in Italy and finally returned to settle in the Austrian capital. Many other Czech and Moravian composers made Vienna their home. František Tůma was composer to the Empress Elisabeth (Charles VI's widow) and director of her Kapelle, Josef Štěpán was court piano teacher and had Marie Antoinette and Princess Caroline as pupils; after making his mark as an *opera buffa* composer in Italy, Gassmann followed Gluck as director of the imperial theatre, Leopold Kozeluch became court composer after Mozart, and was in turn succeeded by Franz Krommer from Moravia; and Paul Wranitzky (the composer of *Oberon, König der Elfen*) and his brother Anton were important members of the imperial opera orchestra. The harpist and composer Krumpholtz played in Prince Esterházy's orchestra, but he later went to Paris, where Josef Kohout (1736–93) and Antoine Reicha, Berlioz's teacher, had established themselves. Pichl was director of music and composer to the Archduke Ferdinand at Milan for 21 years, and Rosetti, a double bass player was Count Oettingen-Wallerstein's music director. The only two important Czech musicians to remain at home during this period were F. X. Brixi, who directed the music at St. Vitus's Cathedral, Prague, and F. X. Dušek, a piano teacher and friend of Mozart.

After the Thirty Years War it was normal for com-

posers to write Latin church music and operas in Italian, German or French. Czech words were rarely set, except at Jaroměřice, where between 1728 and 1737 František Antonín Miča composed operas and short sacred works to Czech texts. At about this time Zelenka used the Kralice Bible translation for his setting of Psalm 1, written at Dresden, and in the early 1760s Felix Benda (1708-68), a Prague organist, composed two Czech sepulchre dramas. Apart from such works and minor operas of the Singspiel type in country districts, the Czech language was not used by musicians until the beginning of the 19th century.

(iii) *Growth of nationalism* The strong literary developments in Bohemia during the last decades of the 18th century represented a protest, by those who had read Rousseau and Herder, against the suppression of the Czech language. Dobrovský embarked on his vitally important philological and historical studies, and his literary work was continued by Jungmann. At Prague University a chair of Czech language and literature was founded in 1791. Thám published the first anthology of old and new poems in 1785, but the 'discovery' of the notorious Dvůr Králové Manuscript over 30 years later was a far more momentous literary event. Ryba succeeded in having a set of Czech songs published in 1800, and his example was followed several years later by Jan Doležal and Tomášek. The first foreign opera performed in a Czech translation was *Die Zauberflöte*, enterprisingly mounted in Prague by an Italian troupe in about 1794, but Weigl's *Schweizerfamilie*, given in Czech in 1823, initiated the steady flow of translated works from abroad. Starting with *The Tinker*, 1826, František Škroup tried to establish himself as a composer of Czech operas, but after the third attempt he felt obliged to turn to German librettos.

Czech composers were pioneers of the salon piano pieces greatly favoured during the Romantic period. Tomášek wrote some Eclogues in 1807, and his Rhapsodies (1810) and Dithyrambs (1818) followed. The Impromptus (1822) of his pupil Voříšek preceded those of Schubert. Bedřich Weber was chosen to be the first director of the Prague Conservatory, which was opened in 1811, and when the Prague Organ School was started in 1830 Jan Vítěšek became its head. Like Tomášek, Vítěšek was a great admirer of Mozart, who had taken Prague by storm when he presented *Le nozze di Figaro*, *Don Giovanni* and *La clemenza di Tito* there to the delight of the Czechs. The St Cecilia Society and the Žofín Academy, both Prague concert-giving organizations, began in 1840. The growing interest in folksong became apparent when František Sušil issued his first collection of Moravian songs (1835) and Karel Erben followed it with a book of Czech songs (1842).

The transformation of the political situation caused by the Austrian defeats in Lombardy in 1859 led to great optimism about the future course of Czech music. Plans were laid to open a Provisional Theatre for Czech opera and drama in 1862, and Count Jan Harrach offered prizes for operas and librettos. Hlahol (male-voice choral societies) were established in Nymburk (1860), Prague (1861) and Plzeň (1862), and the Umelecká Beseda, a society composed of the leading personalities in each of the arts, was founded in Prague in 1863. Smetana's decision to compose a series of operas on historical and legendary subjects culminated in *Dalibor* (1868) and the epic festival opera *Libuše*,

which was held in reserve until 11 June 1881, for the festive opening of the National Theatre. The theatre burnt down almost immediately but reopened in 1883. His cycle of six symphonic poems *Má vlast* represents the continuation and completion of his aim to glorify the Czech nation in his creative work. His insistence that national art should adopt contemporary compositional methods and not be based on folksong led to opposition from traditionalists and misunderstanding by the public. They enjoyed *The Bartered Bride* (1866) and to a lesser extent *The Krys* (1876), but failed to appreciate *Dalibor*. During his eight years as principal conductor of the Provisional Theatre (1866-74) Smetana broadened the operatic repertory, mainly by reducing its Italian content and including several new Czech works by such composers as Karel Šebor, Rozkošný, Bendl, Vojáček and Blodek. With his own compositions he raised the quality of Czech music to a level of considerable distinction, and at the same time established a style that is unmistakably Czech.

Smetana was an ardent patriot who was not interested in having his works performed abroad, and whose aim was to provide a repertory of Czech music. When Dvořák (his junior by 17 years) became known, the struggle to give Czech art and culture its rightful place in the life of the nation had been largely achieved. He too was by nature a patriot, although not an extreme one. His music may also be seen as genuinely Czech, but he was perfectly willing to let the outside world share it with his own people. His greatest successes were in fact in England and the USA. He was determined, however, to write a stage work that would win a permanent place in the hearts of the Czech people, and towards the end of his life he succeeded with *Rusalka* (1901), a fairy-tale opera written on quasi-Wagnerian principles. His interest in Wagner influenced his work at various times, but his admiration for the Viennese composers and his friendship with Brahms left a more lasting impression. Small basic elements of Czech folk music became an essential feature of his personal style, which did not change fundamentally, even under the impact of the exotic music he heard in the USA.

Melodrama was favoured by Fibich in his trilogy *Hippodamia* (1890-91), which makes use of a complex leitmotif system. Karel Kovačovic, composer of the patriotic opera *The Dog-heads* (1898), and Otakar Ostrčil, who wrote the melodious one-act opera *The Bud* (1911), were both pupils of Fibich and distinguished conductors at the National Theatre, Prague. Josef Bohuslav Foerster also wrote for the stage and was successful with *Eva* (1899) and *The Invincibles* (1918), but he excelled in choral music. None of these men was able to score an international success such as Weinberger had with *Svanda the Bagpiper* (1927).

Dvořák's Moravian friend Janáček waited 12 years for the Prague première of his *Jenůfa* (Brno, 1904), but this belated recognition encouraged him greatly and in the final decade of his life he composed four more operas (*Káťa Kabanová*, Brno, 1921, *The Cunning Little Vixen*, Brno, 1924, *The Makropulos Case*, Brno, 1926 and *From the House of the Dead*, Brno, 1930), as well as the Glagolitic Mass, the Sinfonietta and his finest chamber music. Janáček was steeped in Moravian folk music; his extremely personal style, which relied greatly on the repetition of brief melodic and rhythmic fragments and resulted in a kind of musical mosaic, proved to be a highly satisfactory vehicle for the expression of

intimate and intensely passionate thoughts and emotions.

The music of Josef Suk (†), the second violinist in the Bohemian Quartet, acquired greater depth of feeling after the double blow of the death of his teacher Dvořák and of his wife, Dvořák's daughter Ottilie. The *Asrael* symphony (1905–6), the symphonic poem *Ripening* (1912–17) and the Second String Quartet date from this period. Vítězslav Novák, another of Dvořák's pupils, was an outstanding teacher whose pupils included Ladislav Vycpálek, Dobráš, Jaroslav and Otakar Jeremiáš, Axman, Vomáčka, Kunc, and Alois and Karel Hába, as well as the Slovak composers Cikker, Alexander Moyzes and Suchoň. There is a strong national feeling in Novák's operas *Karlštejn* (1916) and *The Lantern* (1923). The themes that recur most frequently in his music, however, are nature, often associated with Slovakia, and love.

(iv) 1918–45 After the deaths of Janáček (1928), Suk (1935) and Ostrčil (1935), the remaining active 20th-century Czech composers were V. Novák and Foerster. Their legacy formed the link for the mainstream of modern Czech music, which, while it was influenced by impressionism and schooled in the works of Mahler and Strauss, and also took its inspiration from jazz, folksong and social poetry, basically did not exceed the bounds of the established Czech style. Among the composers in that style were L. Vycpálek, Karel, Otakar Zich, Otakar Jeremiáš, K. B. Jiráček, Křička, Vomáčka and others. The organizational links between them were primarily Prague institutions, the Spolek pro Moderní Hudbu (Society for Modern Music, 1920–39), the Umělecká Beseda (1863–1973) and its journal *Listy Hudební malice*, later renamed *Tempo*. Above all this group of composers enriched the Czech tradition of choral song and raised its musical quality; they also developed symphonic and chamber music.

The Czech interwar avant garde split away from this movement, one important group was formed by Alois Hába and his pupils, including Karel Hába, Šrom and Reiner. They took their inspiration from the expressionists and moved towards the techniques of the Second Viennese School. Their music is characterized by atonality, an athenatic style and Hába's micro-intervallic system (quarter-tone, sixth-tone etc). Hába's experimentation and the construction of quarter- and sixth-tone instruments (piano, harmonium, clarinet etc) was a Czech contribution to the development of composition and resulted in the establishment in 1923 of a special Hába composition class at the Prague Conservatory. In 1935 the society for contemporary music, Přítomnost, was founded by that sector of the Czech avant garde with the journal *Rytmus* as their official publication. The strong tendency of Hába's group to social criticism attracted to Přítomnost a further group of Czech composers, also active in the Communist proletarian movement, Svaz DDOČ. Those composers (e.g. Vít Nejedlý and Schulhoff) were orientated towards Soviet music and the German Kampflied and subordinated their art to the demands of the working class and the struggle against Fascism.

At the other end of the spectrum of the Czech avant garde was a group of composers whose most important member was Martinů. The group's artistic orientation was more towards France (Les Six, Stravinsky), and their music shows neo-classical and constructivist ten-

dencies with the rich use of jazz. Other members of this group, organized within Mánes, the society of graphic artists, were Bořkovec, Iša Krejčí and Ježek. Hlobil and especially E. F. Burian, whose works synthesize most of the tendencies of the interwar avant garde, were loosely connected with this group.

In Moravia it was Janáček who significantly advanced the development of music through the quality of his composition and the establishment of the Brno Organ School in 1882. His pupils, including Vladimír Ambros, Kvapil and Petřelka, formed the Klub Moravských Skadatelů (Club of Moravian Composers, 1922–49) in Brno. Some composers in his circle were influenced by the late Romantic style of Mahler and Reger, and by impressionist music, while others, notably Kaprálová, were French-orientated. Only Pavel Haas and Harašta, who explored a method of modal composition and the rhythmic layering of structures, thought Janáček's compositional technique through to its conclusion.

A group of German composers, which included Finke and Ullmann, also played a progressive role. This group was drawn primarily towards expressionism and the Second Viennese School, they were organized in Prague as the Verein für Musikalischen Privataufführungen and published the journal *Der Auftakt*. In the 1930s they cooperated with Czech artists, in particular with Hába's circle and Přítomnost. Under the artistic directorship of Zemlinsky and Szel, the Neues Deutsches Theater in Prague became an important institution with a repertory that pioneered works by Janáček, Schoenberg, Shostakovich, Milhaud, Krenek etc. Several artistic institutions played an important role in Czech musical life at the end of the 1930s in Prague: the National Theatre and the Czech Philharmonic under Talich created a repertory representative of Czech music (mainly Smetana, Dvořák, Novák and Suk), while in Brno the Moravian Municipal Theatre gave premières of almost all Janáček's operas, as well as works by Martinů, Ostrčil, E. F. Burian and non-Czech composers such as Prokofiev. In Ostrava Jaroslav Vogel and Schulhoff created the conditions for the growth of modern music and Stravinsky, Prokofiev and Hindemith gave premières of their own works there. Professional musicians were trained in Prague and Brno and in the university extension 'masters schools'. The network of societies for chamber music and the hundreds of choral societies affiliated to the organization Pěvecká Obec Československá (Czechoslovak Choral Council, 1868–1951) made concerts possible in virtually all the larger towns in Czechoslovakia. The Czechoslovak radio extended this network with its stations in Prague (1923), Brno (1925), Ostrava (1929) and later Plzeň (1946). This gave wide publicity to the most famous performing bodies and soloists in Czechoslovakia. The departments of musical sciences at the Charles University in Prague and at the Masaryk University in Brno facilitated the study of musicology. Conservation of musical materials (mainly at the music department of the National Museum, Prague, and at the Moravian Museum, Brno) and instrument making achieved a high standard. There were several established private publishers (in Prague, the Urbánek family, 1871, F. Chadim, 1906, Melantrich, 1936 and the Umělecká Beseda, 1871; in Brno, the Pazdírek family, 1911). Czech musical life thus had a well-developed institutional basis that not only satisfied its own demands but was open to international contacts, the

most prominent of which were those with central, western and south-eastern Europe.

The 1935 festival of the ISCM foreshadowed the onset of Fascism. Originally to have been held in Berlin, it was moved (after political disputes within the German section of the ISCM) to Karlovy Vary (formerly Karlsbad). German pro-Nazi members, in the majority in the Karlovy Vary council, withdrew their cooperation at the last minute; the festival was therefore organized from Prague and passed off successfully.

The Munich Pact (1938), the formation of the independent Slovak state (1939) and the Nazi occupation of Czechoslovakia (1939) complicated and progressively limited Czech musical life, which during World War II was conducted within the framework of Hitler's Reich (1939-45). The interwar avant garde was dispersed and individual European national cultures were isolated. Czech music suffered grave losses. Martinu emigrated to the West, and Kaprálová (1940) and Ježek (1942) died in exile there. Z. Nejedlý emigrated to the East. Many professional Czech musicians, including Vít Nejedlý, died in the free Czech army. Karel Reiner, F. F. Burian, Karel Ančerl, the musicologist Helfert and many others suffered in Nazi prisons and concentration camps. R. Karel and the musicologist Zdeněk Némec among others died in prison. Artists of Jewish extraction who did not choose to emigrate in time died in concentration camps (Schulhoff, Krása, Pavel Haas, Bedřich Weiss, Ullmann and others). The closing of the universities made the study of musicology impossible. The Czech opera theatres in Prague, Brno, Ostrava, Plzeň and Olomouc were closed. Many Czech artists reacted to the Nazi occupation with violent opposition, illegal activities (many works with anti-Nazi themes were written) or passive resistance. The music written during the occupation shows a marked simplification of musical language as well as a dependence on national folk materials. Some artists continued their struggle even through the Nazi campaign against *entartete Kunst*. Hába continued his composition class at the Prague Conservatory, quarter-tone and athematic compositions were still performed at concerts of Pitomnost, and the Prague festival on the 120th anniversary (1944) of Smetana's birth was a highly successful manifestation of Czech musical culture, in spite of the opposition of the occupying forces.

(v) *Since 1945.* With the liberation of Czechoslovakia in 1945 new perspectives opened for Czech musical life. The suspended international contacts were re-established. In 1946 the annual music festival Prague Spring was begun in Prague, bringing renewed contacts between Czechoslovak musicians and those of both the West and the East. Similar traditions of regular festivals with international participants were established elsewhere in Czechoslovakia (Brno Music Festival, Ostrava Musical May, the Chopin Festival in Mariánské Lázně etc.).

With the establishment of a socialist state in 1948 a new phase began in the country's musical life. The process of nationalization began with the Czech Philharmonic (1945), and in the 1950s several new symphony orchestras were established. State philharmonic orchestras were founded in Brno (1956), Ostrava (1954, from 1972 the Janáček Philharmonic), in Olomouc (Moravian Philharmonic, 1951), in Gottwaldov (Workers' Philharmonic, 1958), in the west Bohemian

spa towns (Karlovy Vary, 1951, Mariánské Lázně, 1954), and in north and east Bohemia. All the existing theatres passed into state hands, including the new Czech opera houses which had been taken over from the Germans in 1945 (Neues Deutsches Theater in Prague and the houses in Opava, Liberec, Ústí nad Labem and Teplice). Instrument making, previously in private companies, was concentrated into a few well-known factories, for example Petrov pianos, Amati wind instruments and Krnov organs. The former Ultraphon and Esta gramophone companies were merged into Supraphon (1946). The nationalized Czechoslovak film industry with studios in Prague-Barrandov and Gottwaldov has the Film Symphony Orchestra (1945), and the radio stations in Prague, Brno, Ostrava and Plzeň also have orchestras. The television network was established in Prague (1953), Ostrava (1955) and Brno (1961). The music schools, museums, libraries, archives and collections were taken out of private hands. The publishing houses and music printers were centralized into large state publishing institutions (Státní Nakladatelství Krásné Literatury, Hudby a Umění). Private concert agencies were replaced by Pragokonzert (from 1962, after succeeding the Musical and Artistic Exchange in Prague, 1948-57), which organizes concerts by international performers. The total rebuilding of the organization of Czech musical life meant abandoning old organizations. The network of choral and musical societies was abolished (the Czechoslovak Choral Council, the Sokol and working-class choral bodies etc.). The Syndicate of Czechoslovak Composers (1946-9) was replaced by an ideological organization, the Czechoslovak Composers' Union (1949-70) with branches in Brno, Ostrava and later Plzeň, which had at its disposal the musical information media in Prague and Brno, the journal *Hudební rozhledy* (joined after 1969 by the Brno journal *Opus musicum*), the Czech Musical Fund (1953, to safeguard continuing musical creation) and later the publishing house Panton (for scores, books and gramophone recordings, from 1958). Along with the musical societies and their network the function of church music in the life of society was destroyed. A central music archive was established in the music department of the National Museum in Prague and the Moravian Museum in Brno from the libraries of the monasteries and church organizations and private archives. Museums devoted to the foremost composers were established (in Prague the Smetana and Dvořák Museums, in Brno the Janáček Museum).

All music education came under state control. A new system of specialist schooling was created with primary schools (from 1960 the so-called Folk Schools of Art), secondary schools (from 1960 the music conservatories with centres in Brno, Ostrava and Plzeň), and universities (from 1946 the Academy of Musical Arts in Prague, and from 1947 the parallel Janáček Academy of Musical Arts in Brno). Music teaching is studied at university level at institutes with departments of music education (Prague, Brno, Ostrava, Olomouc, Plzeň, České Budějovice, Ústí nad Labem, Hradec Králové). The study of musicology is based at the arts faculties of Charles University in Prague, the University of Jan Evangelista Purkyně in Brno and the reinstated Palacký University in Olomouc (1947). The basic methodological approach in theory, musicology and education became the Marxist-Leninist philosophy, Pavlov's theory of the conditioned reflex and in particular

Asaf'ev's theory of intonation, developing Kurth's concept: Z. Nejedlý, Antonín Sychra and Jirák are considered the foremost exponents. Czech musicology had its research basis in the Musicology Institute (1962-71), and, from 1972, in the Institute for the Theory and History of Art in the Czech Academy of Sciences; important periodicals are *Miscellanea musicologica* and *Hudební věda*.

While composers in the West were concerned with the Second Viennese School, in Czechoslovakia the development of music was determined by the aesthetic of socialist realism and distinguished by the principles of socialist content and popular form. The style was essentially late Romantic, emphasizing programmatic elements, the expression of new socialist ideals, the simplification of musical language and the stylization of traditional folk materials. It consequently isolated itself from Western music and disowned its progress after impressionism. It emphasized the function of music as an ideological lever for the achievement of current political goals (the composition of mass songs, *častušky* v. folk cantatas etc). Most composers in Czechoslovakia went through this evolutionary stage (c.1950-65) Dobráš, Kapr, Jan Seidel and E. F. Burian. Those associated with the Composers Collective of JAMU, a young group at the Janáček Academy of Musical Arts in Brno (1951-4), composed in this spirit. At Prague Conservatory Hába's department of quarter-tone composition was disbanded once again in 1950. Jazz was excluded as a possible source of artistic inspiration, and formalist tendencies were noted in the work of Czech composers living abroad (Martinů, Jirák, Husa). However, by the beginning of the 1960s a number of distinct tendencies were noted. One group comprised composers who had never severed their connection with Czech tradition (e.g. Řídík and Horký). But the largest group consisted of those whose styles had been influenced by non-serial 20th-century composers (e.g. Eben, Kalabis, Pauer, Sommer, Hurník, Jirko, Kovaříček, Bárta, Dvořáček, Gregor, Matys). A third group consisted of composers who developed their style independently of the influence of socialist realism (O. F. Korte, Hanuš, Jaroš, Slavický, Doubrava); some of them leant towards experimental music and created conditions for its realization in Czechoslovakia (Burghauser, Rychlík, Vostřák, Kabeláč). Kabeláč also taught the youngest generation of Czech composers the techniques of electronic music and *musique concrète* (Klusák, Loudová, J. Málek, Miroslav Hlaváček, Zdeněk Lukáš, R. Růžicka, Josef Slimáček etc).

A movement towards re-establishing contacts for the development of Czech music with the international mainstream is evident from the first half of the 1960s, when Czech artists once again entered the international music forum. Their participation at international festivals of new music was significant, for example at Warsaw and the Darmstadt summer course; in Prague an annual international jazz festival was established in 1964 as an adjunct to Prague Spring. Apart from the Novák Quartet the performers of such new music were young groups who also performed at ISCM festivals: in Brno, *Musica Nova* (1961) and *Studio Autorů* (1963); in Prague, *Musica Viva Pragensis* (1961), *Chamber Harmony* (1960), *Sonatori di Praga* (1964) and the *QUaX Ensemble* (1967). Of paramount importance was the founding and construction of the studios for electronic music and *musique concrète* at the Czechoslovak

radio in Plzeň (1964), followed by the workshops at JAMU in Brno and at the film laboratories at Prague-Barrandov. Studios were begun at the conservatory in Ostrava (1966) and at the Czechoslovak radio in Prague (1968) but never finished. Thanks to these foundations, however, Czech composers made a substantial contribution to the composition of experimental music. New creative groups were established in Brno, Group A (1963, Josef Berg, Istvan, Jan Novák, Píňos, Pololánik, Pavel Blatný, Kohoutek, Miloš Štědroň and Parsch) and in Prague, the Prague New Music Group (1965, Vostřák, Vladimír Šrámek, Komorous, Kopelent). Kučera worked in the artistic group *Syntéza* ('Synthesis'), P. Kotík in the *QUaX Ensemble* and Ladislav Šimon in the *Sonatori di Praga*. L. Dadák and M. Báčorák were active as composers of experimental music in Ostrava. In the mid-1960s several composers adopted serial technique. Czech composers of electronic music and *musique concrète* (e.g. Kučera, Lukáš) preferred French methods to the systematization of the German Cologne School. Komorous and Kotík used live electronic techniques in combination with aleatory music in the style of Cage, while Kabeláč and Rychlík used a synthesis of several techniques. Eduard Herzog, Lébl and Kohoutek are among the most significant writers on new theories, important periodicals include *Hudební rozhledy* and *Opus musicum*, with *Konfrontace* (1968-70) and the collection *Nové cesty hudby* ('New paths of music', 1964, 1970) being devoted to experimental music.

After the federation of Czechoslovakia into the Czech and Slovak Socialist Republics in 1968, the Czechoslovak Composers Union was dissolved (1970); for Bohemia and Moravia, its functions were assumed by a new Union of Czech Composers and Concert Artists, with its headquarters in Prague and branches in Brno, Ostrava and Plzeň.

2 SLOVAKIA. The musical history of Slovakia, like that of Bohemia and Moravia, can be traced from the 9th century with Cyril and Methodius. One of the most important monuments of Gregorian chant, equal in importance to the Nitra Gospel Book (11th century, with ekphonic neumes), is the Bratislava Missal (c1341, with Klosterneuburg neumes). Like numerous liturgical manuscripts of the 15th and 16th centuries (e.g. the Spiš Gradual and Antiphoner, c1426, some five antiphoners from Bratislava and two large graduals from Košice, 15th to 16th centuries), the Bratislava Missal contains examples of indigenous liturgical music (sequences, tropes, rhymed offices etc) of which, however, there does not appear to have been a great quantity. Secular music in the Middle Ages was largely practised by minstrels, the *igric*, the earliest evidence of their existence and activity dates from the 13th century and is found only in secondary sources (records, chronicles etc).

Polyphony was cultivated chiefly in the larger towns such as Bratislava (also known as Pressburg and Pozsony), Levoča (Leutschau, Lőcse), Bardejov, Kriemnica and Spišské Podhradie, between the 14th and 17th centuries. The repertory up to the end of the 15th century consisted of a large number of antiquated pieces (organa, conductus, polytextual motets) and was almost exclusively sacred, the great musical collections from Levoča, Bardejov and Bratislava include a considerable number of works by Franco-Flemish, Italian and German composers (motets, masses and various vocal concertos), some of them in contemporary copies. The two major composers of polyphony in Slovakia were Johannes Schimbraczky (fl. 1635–48, organist in Spišské Podhradie), whose music was influenced by Lutheran German *musica poetica* (e.g. that of Michael Praetorius and Schütz), and Samuel Capricornus (music teacher and Kapellmeister in Bratislava, c1649–57), who developed the south German–Italian *stile concertato*. Zacharias Zarevutius (organist at Bardejov, 1625–65) and J. S. Kusser (Capricornus's successor in Bratislava, 1657–72) were also important.

By contrast with vocal polyphony, Baroque instrumental music drew more of its material from folk-song and dance. The most important collections, such as the Levoča (Lőcse) Virginal Book (c1670), the Vištoris manuscript (c1660), Anna Szarmay-Keczer's collection of songs and dances (1730) and the two Uhrovec manuscripts (1730 and 1742), contain, in addition to foreign dance suites, a large number of arrangements of folk-songs for keyboard, wind and strings, as well as for ad

lib groups, in which case the pieces were notated only in skeletal outline

This was paralleled in sacred music by the late high Baroque forms of the sacred aria and the pastorella (a particular type of the central European Christmas carol) for smaller vocal and instrumental ensembles, which were also greatly indebted to folk music. Most of the principal exponents of these forms were west Slovakian Franciscans, some of whom, such as Paulinus Bajan (1721-92) and Edmund Pascha (1714-72), were musicians of merit. If their music sometimes seems simple, even primitive, it is because it was intended for a broad, rural population. By contrast the music of Jozef Pantaleon Roškovský (1734-89) and Franciscus Budinsky contains marked Italian traits. Vernacular hymns, sung by the congregation in unison, played an important role in the period of the Reformation and Counter-Reformation, not only in the confessional conflict but also in the development of Slovakian language, literature and art music, some were transmitted orally, others in manuscript hymnbooks, but most in printed collections, such as the Protestant *Cithara sanctorum* (1636) and the *Cantus catholici* (1655).

The music of the Classical era was swiftly and favourably assimilated in Slovakia. Contemporary copies and even some autographs of works by the major composers are not uncommon in Slovak libraries. Haydn, Mozart, Beethoven, Liszt and Brahms played not only in Bratislava but also in other towns and noblemen's castles in Slovakia (Beethoven at Dolná Krúpa, Schubert at Železovce). In smaller towns the church, the church choir and local amateur societies remained the centres of musical life until the 19th century.

One of the leading classical composers then active in Slovakia was Anton Zimmermann, cathedral organist and master of music to Cardinal Josef Batthyány in the mid-18th century. Besides melodramas and a Singspiel, Zimmermann composed symphonies, concertos for various instruments and much chamber music, of which only a little has been published. His contemporary Georg Druschetzky, who also worked in Bratislava in the service of Prince Grassalkovich and the Palatine Archduke J. A. Jan, became famous for his solo, chamber and orchestral music for various wind instruments and for his operas and other music for the theatre. The outstanding pianist and composer Franz Paul Rigler (*d.* c1797) taught Hummel, a native of Bratislava. Other leading figures in the musical life of Bratislava were Henrik Klein (1756-1832), conductor of the St Martin's Church Music Society founded in 1828, and his successor Jozef Kumlik (1801-69). Well-known musicians outside the capital included the Zomb family in Kassa (now Košice) and František and Ludovít Skalník (1777-1841, 1783-1848) in east Slovakia, Ján Čaplovič (*b.* 1780) of Banská Bystrica, central Slovakia, and Augustín Smehlik (1770-1848) of Trenčín, west Slovakia.

The origins of modern Slovak musical nationalism can be traced to the late 18th century, or to the 1830s. The earlier date relates to the transcription of folksongs classified as 'hungarico-slavica' (songs of the Hungarian Slavs, i.e. the Slovaks), for instance in the keyboard collection (c1780) of Johann Fabricz of Štútník, east Slovakia, the later to the artless harmonizations of the same tunes by writers and patriots without any musical training (Martin Sucháň, 1832, Ladislav Füredy, 1837).

The most important Slovak musical nationalists did not emerge until the second half of the 19th century. The first of them to have been trained in both aesthetics and composition was Ján Bella, whose compositions do not realize the ideas about Slovak music expounded in his theoretical writings (1873). He succeeded in creating an organic synthesis of his professionalism and the spirit of Slovak national aspiration only in a few works of his earliest and latest (after 1920) creative periods.

Mikuláš Schneider-Trnavský, one of the younger adherents of nationalist, Romantic programme music, composed principally church music and lyrical songs for solo voice. Mikuláš Moyzes wrote classical chamber and orchestral works, and Viliam Figuš was the composer of the first Slovak opera, *Detvan* (1924). The most progressive member of this group, Friso Kafenda, who was also a pianist and teacher, devoted himself chiefly to the composition and interpretation of chamber music.

The professionalization of Slovak musical culture had profound and far-reaching effects. It meant in practice the establishment of various musical institutions on a national basis and started soon after the founding of the first Czechoslovak Republic in 1918, but was not completed until after World War II. It is characteristic of the development of Slovak music in the 20th century that while the first Slovak school of music (from 1927 the Music and Drama Academy in Slovakia and after 1940 the State Conservatory) was founded in 1919 and the opera house was opened in 1920, the Slovak Philharmonia was not established as a professional body until 1949 and the High School of Musical Arts was not founded until 1949. Since 1948 all musical activity in Slovakia has been financed by the state.

Contemporary Slovak music is represented by three generations of composers, whose professional organization since 1949 has been the Union of Slovak Composers. The best known of the earliest generation include Alexander Moyzes, Suchoň and Cikker, all three of whom studied under V. Novák in Prague. Although their styles and chosen genres are varied, all three have achieved recognition. Moyzes as the first Slovak symphonist (nine symphonies), Suchoň as the most strikingly individual personality of his generation, and Cikker as the leading composer of opera. Nearly all the members of the middle generation studied with Moyzes and have tried to balance the principal styles and techniques of the first half of the 20th century with the Slovak heritage. This generation includes František Babušek (1905-54), Jurovský, Očenáš, Julius Kowalski, Holoubek, Kresánek, Kardoš, Ferenczy and Ján Zimmer. The younger generation includes Ladislav Burlas (*b.* 1927), Hrušovský, Roman Berger (*b.* 1930), Zeljenka, Dušan Martinec (*b.* 1936), Kupkovič, Kolman and Hatrík. There is great diversity within the music of both the middle and younger generations: some are conservative, others have experimented with electronic techniques and *musique concrète*. 20th-century Hungarian musicians who settled in Slovakia include Alexander Albrecht and Štefan Nemeth-Šamorinsky (*b.* 1896), both of whom worked with Bartók.

The centres of musicological research in Slovakia are the Slovak Academy of Sciences (founded 1953) and the Musicological Seminar of the Comenius University (founded 1919) in Bratislava. The principal monuments of Slovak music are held in the music department of the Slovak National Museum in Bratislava, in the Matica Slovenská collection in Martin, Central Slovakia, and in

numerous other national, regional and municipal archives and libraries.

After the federation of Czechoslovakia into the Czech and Slovak Socialist Republics in 1968, the Czechoslovak Composers Union was dissolved (1970), for Slovakia, its functions were assumed by a new Union of Czech Composers and Concert Artists, with its headquarters in Bratislava and a branch in Košice

II. Folk music

- I Bohemia and Moravia (i) Sources (ii) Bohemia and west Moravia (iii) East Moravia 2 Slovakia (i) Sources (ii) Historical styles (iii) Regional music areas (iv) Folk song genres (v) Cross-cultural relations (vi) Instruments and instrumental music

I BOHEMIA AND MORAVIA. Czech folk music in general shows two distinctive styles. In Bohemia and the adjoining part of Moravia bordering on Germany and Austria, the folksong melodies have strong west European features, for example, regular melodic construction, definite tonality, well-defined rhythmic periods and a symmetrical form. By contrast the folksongs of the eastern part of Moravia and Silesia, bordering on Slovakia and Poland, show a free construction

melodically, harmonically and rhythmically, reminiscent of west Carpathian music culture. These stylistic differences in Czech folk music have arisen as a result of cultural and economic development during the 17th and 18th centuries. After the Thirty Years War, as the Counter-Reformation dominated the western Czech regions, Bohemian culture came under the influence of western Europe while the eastern regions of Moravia and Silesia, particularly the mountain regions, remained almost untouched by Western influences. If occasionally they have assimilated Czech (more frequently Slovak or Polish) songs, they have tended to adapt these tunes to their own taste

(i) *Sources*. Among the Czech folksongs collected and edited systematically since the beginning of the 19th century, only a few groups are of earlier origin. Among these are the *koledey*, ritual carols sung at Christmas, the New Year and Easter. They are accompanied by archaic rites to secure longevity and fertility, ceremonies which indicate a pre-Christian origin. Melodic features related to those of the *koledey* may also be found in Czech harvest and wedding songs, though in comparison with those of the south and east Slavs, they appear to be simpler, less varied and from a later period. Some melodies, which can be traced back to the 14th and 15th centuries, have survived as melodic types in religious songs of later origin. The number of these songs clearly traceable to folk origins, however, is comparatively small, and it does not seem justifiable to draw conclusions from these about the general characteristics of folksong at that time, furthermore, secular melodies used for religious songs were often subject to change.

The Czech reformation of the 15th century, and above all the Hussite movement in Bohemia, resulted in a hitherto unparalleled cultivation of religious songs and the creation of songs expressing the new ideology. It also contributed to the rapprochement between village and town leading to the development of such song types as lyrical, political and students' humorous songs; these flourished mainly in the 16th century. The majority of folksongs and dances collected in the 19th century nevertheless consists of rural material, selected from a much wider repertory. The basic fund of these songs survived from the 18th century with melodic types frequently rooted in instrumental dance music, especially in the songs from Bohemia. (In the earliest manuscript collection of Czech folksongs from Bohemia (1819-20), from which Rittersberk drew some of his material, more than 80% are dance-songs or songs sung to the dance.) These are essentially diatonic, and their melodic characteristics are on the whole identical with those of Baroque and Classical music, with which the Bohemian people came into close contact in the 18th century.

The documentation of Czech folksong carried out in the 19th century is in the archives of the Institute of Ethnography and Folklore of the Czechoslovak Academy of Sciences in Prague and Brno. They contain over 90,000 manuscripts and some hundreds of sound recordings of songs and music from both Bohemia and Moravia. The results of the work of Czech ethnomusicologists and dance folklorists are published mainly in the periodicals *Český lid* and *Národopisné aktuality*; these usually include summaries in several languages.

ii) *Bohemia and west Moravia*. In contrast to the songs

of east Moravia, Bohemian melodies mostly have a dance character, influenced by instrumental music (e.g. chordal motifs and instrumental legato, see ex.1). This close relationship to dance music reflects the habit of the

Ex 1 Bohemian dance-song (Erben, 1862: 4)

Bohemians of furnishing their instrumental dance music with words and of singing while dancing. One tune often has many texts, because the words to these songs were usually written to suit existing music.

Until the mid-19th century most of these songs were in triple time, later, with the growing popularity of the polka, melodies in duple time began to be equally common. Only a few Czech melodies show mixed metres as a result of combining dance-steps, as occurs in Germany. According to the rules of Czech prosody all songs begin metrically with a heavily accented beat. An initial upbeat is virtually unknown. One of the characteristic features of both Czech and east Moravian songs is the rhythmic prolongation of the last two notes of a line, particularly the last line of a stanza, so that the final note occurs on the strong beat of the last bar, giving the melody a metrical regularity (see ex 2). This practice was observed as early as the 15th century, and the Bohemian theorist Jan Blahoslav, in the second edition of his treatise *Musicus* (1569, see Quorka, 1953), reproached rural singers for using it.

Ex 2 Bohemian song (Erben, 1862: 4)

The harmonic feeling of Czech folksongs from Bohemia and west Moravia is dominated by the major triad. Modulations in the strict sense of the word are exceptional. Most songs are monophonic, though in some cases a second voice is added in 3rds or 6ths. The overall structure, mainly based on the repetition of identical phrases (either at the same pitch or in sequence), consists of 16 bars divided into four four-bar phrases, these can be further subdivided into two-bar sections. The opening of the second section of a melody, designed as a contrast to the first, is usually constructed on the repetition of the third and fourth bar only (occasionally also the seventh and eighth). In south Bohemia, close to the Moravian border, there also occur songs of ten, 12 and 14 bars, generally indicating ancient melodic types.

The character of the tunes is to a certain extent determined by the instruments on which they are played. The most important instrument associated with Czech songs and dances is the *dudy* (bagpipe, called *gajdy* in Moravia, see fig 1), known in Bohemia since the 13th century. It was used to accompany singing, either alone or with other instruments. The popular rustic band consisted of a clarinet (E♭), violins and a bagpipe, a combination of instruments still used in the Chod district of west Bohemia. The clarinet usually plays the melody, the violins add a second part and the bagpipe

with its variable drone creates the impression of a tonic and dominant pedal point. During the ensuing repetitions the clarinet and bagpipe introduce variations of the melody, while the violins play the accompaniment. A second important instrumental group consisted of string instruments, sometimes complemented by the flute or clarinet. As a rule these bands had only three to five members. Since the second half of the 19th century they have been replaced more and more by small bands of wind instruments and during the 20th century by popular dance bands including saxophones.

1. *Dudy* or *gajdy* (bagpipe)

Although the Czech people were repeatedly forbidden to perform the jumping, chasing and round-dances which are part of their various folk customs, many of these dances have survived, especially in central and east Moravia. By the end of the 18th century there was in Bohemia an increasing number of couple-dances, which continued into the 20th century. The prototype of duple-time Czech dances is the *obkročák* ('circular step'), in which the dancers turn on the ball of each foot, this figure being interrupted by a short hop. Other dances derive from the *obkročák*, either by transforming the hop into an upwards leap (*vtřák*, 'drill step') or by performing two leaps (*skočná* ('hopping step') or *třasák* ('trembling step')). There are also several other less clearly differentiated types.

The dances in triple time developed more independently, as, for example, the *sousedská* (a quasi-ländler) and *do kolečka* (round-dance). Great popularity was achieved by the *rejdivák* and the *rejdivačka* ('romping' dances), generally performed in succession like a man

section and trio, the *rejdvák* in 3/4 at a moderate tempo and the *rejdočka* in 2/4 at a very lively pace (see ex.3). This combination became so popular that it developed into the chief rival of the waltz and the galop. The *mateník* ('muddling' dance) combines the dance steps of the *obkročák* and the *sousedská*, to which the melody is also adapted

Ex 3 *Rejdvák* and *Rejdočka*, Bohemia (Erben 1862-4)

The polka, although of sophisticated origin, soon took root in the towns and villages of Bohemia, probably because of its simple expressiveness and sprightly rhythm. The turnant occupies a special position among Czech dances. Its text concerns an ostentatious peasant and consists of sections of two-syllable metric feet, the dancers' steps consistently follow the 3-4 metre of the melody. During the 19th century an intensive exchange of dances developed between town and country. Minuets, quadrilles, mazurkas, ecossaises and other dances penetrated the folk repertory, along with the 'figural' dances (combining more than one dance-step in a fixed pattern), which were usually connected with a certain type of melody and a certain manner of dance performance.

(iii) *East Moravia* In the central region of Moravia, in the Hana district, the songs are mostly similar to the Czech songs, except for a harmonic feeling which occasionally suggests an earlier origin, as with some of the dances. The songs of the south-eastern and eastern districts (Moravian Slovakia, Valachia and Lachia) have a distinct character of their own, however, corresponding to the ethnographical characteristics of the regions. Here too Western influences can occasionally be traced, though less so in the south and east.

In contrast to the Czech songs of Bohemia and west Moravia, east Moravian melody frequently shows the use of non-diatonic scales, arising from augmentation and diminution of diatonic intervals by a semitone, or at times by a smaller interval. As a result the music is richly chromatic. The sharpened 4th is common, resulting, in the case of minor keys, in a characteristic augmented 2nd. The intervals of a 4th and a 5th frequently occur at the opening of Moravian songs, and sometimes also in the middle of a melody. Another typical feature of south-eastern Moravian song is the presence of fine ornamentation centred on certain notes. Moravian tunes have a tendency to be in the minor mode but seldom make use of the same scale throughout. Many melodies use particular scales that possibly originated in the natural scales of some shepherds' pipes; they may alternatively be a legacy from an ancient (pre-harmonic) melodic style. Typical of these songs is the apparent shifting of tonal emphasis from the first degree of the scale to the flattened 7th, also characteristic of many other east Slavonic songs, especially Ukrainian.

Bohemian and east Moravian folksongs also differ rhythmically. The lyrical rhythm of Czech songs in 3/4, divided into a crotchet and minim (ex.4a), is shortened

in south-east Moravia into pointed rhythmic figures, for example 2/4 with a quaver or semiquaver at the beginning of the bar (exx.4b and c) and its inverted form (as in exx.4d and e), a rhythmic abruptness often underlines the performance (cf ex.5a from Bohemia with ex.5b from Moravia). The development of pointed or syncopated rhythm in Moravian songs could well have been influenced by east Moravian dance music with its abrupt springing rhythms in which the accent falls on the second and fourth quavers of the bar (in 4/8 time), in the western regions, the main accent usually falls on the first note of the bar. The style of performance of these melodies is also distinctive: they are sung initially in a free lyrical manner with frequent use of rubato and melismatic figurations (ex.6a; though apparently in 7/8, the melody is written in 4/8 with septuplets because the instrumental accompaniment follows a regular 4/8 into which the vocal line fits), later they are sung with a clearly marked rhythmic and formal structure (ex.6b). Singers usually adopt the slow drawn-out style of performance with figurations of triplets, quintuplets or septuplets when they sing in the open air. The same song

when sung indoors is in a strict, regular rhythm

East Moravian songs often give the impression of being unfinished because of a tendency to end on the fifth degree of the scale, combined with the weakness of the leading note and the fluctuation between the major and minor 3rd of the tonic chord (see Sychra, 1948). Janáček divided the east Moravian tunes into three groups according to their melodic types: asymmetrical melodies of a rhapsodic character, periodized only by prolonged final notes at the end of the stanza; songs based on a fixed rhythmic motif which is repeated under the continually changing melody (this type approaches the folkdance); and songs with a fixed form (e.g. *ABA*). A characteristic feature is the interjection of syllables such as *ej*, which provide a kind of rhythmic filling-out, sometimes also serving as an element of retardation. This particular feature, among others, draws the east Moravian songs close to Slovakian folksong. Lachian songs provide the transition between Czech and Slovak tunes, they also show Polish influences, particularly in their rhythm.

Songs for outdoor performances are usually sung by groups of girls with well-blended voices, clear intonation and a metallic timbre. There are no apparent dynamic effects, and the melodies end with a full, intense sound on their long final notes. In the Valachian districts harvest songs of improvisatory character as well as shepherd songs sung by girls and boys were still being performed in the first half of the 20th century. In the plains below the Carpathian mountains (in Moravian Slovakia) the girls and young men still sing their drawn-

out love-songs. The melodic ornamentation in these songs is performed with natural ease, and the performer expresses himself, making extensive use of rubato. The metre is strongly stressed only in dance-songs or related melodies.

The earliest known combination of instruments used to accompany dance in the eastern Moravian regions consisted of one or two violins and a bagpipe. Shepherds' pipes, however, were played solo. Later the bagpipe was replaced in the instrumental group by a small double bass (originally with three strings). Together with the second violin, it produced an unceasing rhythmic tension by accenting the second and fourth quaver of each bar while the first violinist adorned the vocal melody with abundant figurations, usually on a higher pitch.

The dulcimer was a later addition to the string band, enriching the interpretation of the song mainly by its capacity for harmonic modulation. It was known in Bohemia as late as the 17th century, but during the first decades of the 19th century disappeared there altogether. In Moravia it became so popular that it came to be included with string instruments and clarinet in the typical folk music ensemble (see fig. 2). The formation of brass bands after 1860 threatened the existence of dulcimer bands. Only as a result of the awakened interest in folk music, supported mainly by amateur groups established in all Czech regions after 1945, have dulcimer bands been reorganized.

Among the dances of south-east Moravia, the most popular is the *sedlácká* ('peasant' dance) and its earlier,

2. Moravian dulcimer band

more florid form the *starosvětská* ('old world' dance). The *sedlácká* belongs to the group of round-dances in 2/4 which can be performed to songs of similar metre. At the beginning of this dance the young men are placed in front of the band and sing a long-drawn-out song, while the girls come to fetch them for the dance. As soon as the song is finished the men begin to sing another song in a strict dance rhythm, and only then does the dance begin. A sung stanza always alternates with a danced stanza. The male dancers move along in strictly measured rhythms, always introducing new variations, while the girls turn round on the spot. This is mainly a solo dance, in which the dancer can show his skill. The singing becomes increasingly forceful and vigorous as the dance progresses and ends on a powerful climax. The *starosvětská* differs from the *sedlácká* in its calmer tempo and greater variety of dance figurations. The *vtěná* ('drilling' dance) of southern Moravia begins like the *skočná* ('leaping' dance), the dancer jumps into the air, then whirls round with his partner and slaps his thighs. The dancer's skill is shown particularly in the *rehunk* ('recruiting' dance), in which the melody not only keeps up with the dance-step, but expresses the whole mood of the dance - obstinacy combined with a healthy and buoyant optimism.

A popular couple-dance is the *danaj* (named after its refrain, '*danaj, danaj*'), in a rhapsodic form with triplets in 2/4 time. The *oufava* ('stepping back' dance), a slow triple-time dance of the Hana district, is one of the earliest in origin. It is performed at weddings and other ceremonial occasions, and reflects the quiet, well-balanced temperament of the people of Hana. In the east Moravian regions there are many forms of the *gulaná* or *točená* (round-dances) with figurations similar to the *sedlácká*. A well-known dance in the Valachian and Lachian districts is the *starodávny* ('old-time' dance), a walking-dance similar in style to the polonaise. Turning in pairs, a feature of the *starodávny*, is also common to the *starosvětská*, the *danaj* and the *gulaná*, all these dances apparently developed from the same basis. They usually begin with a solo dance for the man during which the woman allows herself to be turned by her partner, and continue with the common turning-dance in which the couples move slowly forward.

Apart from the *starodávny* there are many other dances with richly varied movements found in the Beskid mountains. Short and fragmentary motivic dialogues are repeated in ostinato manner, mainly at a quick pace in the form *AB* or *ABA*. Rhythmic diminution occurs in various dances like the *kožuch* ('fur coat'), a trio dance performed in the manner of a contredanse. They generally modulate in 5ths to the dominant and in 4ths back to the tonic, terse, sudden modulations occurring frequently. Janáček often made use of such characteristics in his compositions, as did Smetana in his Czech dances.

2. SLOVAKIA. Slovakia is situated at the intersection point of western and eastern European cultural areas. This is reflected in its folk music, which is based on east European elements but contains many features of west European origin, especially in the newer style. Slovak folk music has served as a bridge between the folk music of the two areas by introducing styles and elements of

east European melodies and harmonic and tonal principles to Hungary, the Ukraine and other areas. Through transformation and assimilation, it has acquired a remarkable stylistic variety. Bartók, referring to central European folk music in a letter of 1911 (see Baník), wrote 'in this country, it seems, the Slovak people is the richest in folksong. In almost every village they know different songs'

(i) *Sources.* The sources for Slovak folk music are manifold. In the Middle Ages there was a social group of folk epic singers called *igric* or *igrec* ('player') who performed mainly in villages but also at court. They can be traced in 12th- to 18th-century sources, which describe various ordinances, prohibitions and penalties against them. 15th- and 16th-century sources show greater interest in folksongs and were frequently cited in editions of spiritual songs (e.g. J. Silván) and to a lesser extent in folkdance music: many central European sources mention such dances as the *haiduc* and *ungar-esca*.

Collecting on a large scale began in the 17th and 18th centuries, some results of this activity being the Vietoris manuscript, a collection of harpsichord pieces (see Burlas, Fišer and Hořejš), a collection by Anna Szirmay-Keczer of violin pieces (see Kresánek, 1967) and one from Uhrovec containing almost 800 melodies (see Elschek, 1966, *Hudobnovedné štúdie*). In the 19th century such groups as the Friends of Slovak Songs began systematically collecting and editing folksongs, they collected about 5000 Slovak folksong melodies including 2000 published in the *Slovenské spevy*. Similar work was done from the 1870s onwards by the Matica Slovenská. Among later important collectors were Bartók, Bím, Halaša, Janáček, J. E. Jankovec and J. Kresánek. After 1950 extensive fieldwork was started by the ethnomusicology department of the Institute of Musicology of the Slovak Academy of Sciences, and in the folk music department of Bratislava radio. 16,000 Slovak folksong melodies had been published by 1974, there is also a stock of 50,000 folk music transcriptions and more than 60,000 recorded folksongs and instrumental melodies in the archives. Study is aided by computers. Historic, genetic and regional studies have been supplemented by basic methodological studies in folk music analysis, systematization, comparison and cross-cultural relations. Electronic melographic devices are used for transcription, as are graphic and written kinetic dance notations. Instrumental folk music, folk instruments and folkdance receive great attention and are widely documented on film.

(ii) *Historical styles.* The many different styles of contemporary Slovak folk music may be classified according to their historical strata or regional characteristics. (Style in this context refers to a group of melodies or melodic types with a similar or identical musical structure.) These are discussed in chronological order.

The 'magico-ritual style', whose recitative-like melodies have a tonal skeleton of a 2nd or 3rd, is represented by about 1000 songs, 1.5% of all the Slovak folksongs collected. 51% of them are in a free melodic form based on simple motivic formulae and short repeated lines; 31% show two- or four-section structures with four to six syllables a line. Melodic structure and content are largely determined by the texts. These songs are connected with ceremonies for the

winter and summer solstices and with harvest and funeral rites. Children's songs and play songs are also found in this style, which is similar to eastern Slav ceremonial songs and more generally to the European children's repertory and non-European tribal songs. Melodic types are not clearly differentiated; they consist of static formulae moving around a tonal skeleton, as shown in ex 7. All transcriptions are of recordings in the sound archives of the Slovak Academy of Sciences.

Ex 7 Spring ceremonial song. Rožňava district, rec. M. Danková, transcr. A. Elscheková

The 'peasant style' is characterized by the interval of the 4th which acts as the skeleton or frame of the melody: the central tone and the note a 4th above are the most important notes of the melody. 4 to 5% of collected Slovak folksongs (about 3000 melodies) belong to this 4th-tonal style. The frame of a perfect 4th is sometimes extended to more complicated forms, such as that juxtaposing two 4th frames, authentic and plagal; this is common in the '5th formation' of dance-songs (i.e. a phrase repeated a 5th lower). Ex 8 is representative of this style, with rhythmically expanding cadences (i.e. note values increasing towards the end of a phrase). It cannot be organized into regular bars and, as in 75% of the songs in the peasant style, it has four sections. 62% of these four-section melodies are isometric with six-syllable lines, their form varies (e.g. *AABB*, *ABAB*, *AABC* or *ABCD*). The tempo of performance is crotchet = c100, the prevailing durational values being a crotchet and a quaver. Types of song in this category are harvest and hay-making songs, wedding and christening songs and laments and lullabies. The most beautiful and characteristic melodies are the *trávnice*, the hay-making or meadow songs, whose texts are predominantly based on subjects drawn from nature, as in ex 8.

Ex 8 Hay-making song, Liptovský Mikuláš district, rec. and transcr. A. Elscheková

The 'shepherd style' developed between the 14th and 18th centuries, with a melodic structure built on the framework of a 5th. It represents 30% of the collected Slovak folksong repertory. This style is partly a continuation of earlier traditional Slovak peasant styles and partly the result of acculturation from the period of the 'Valachian colonization'. The mountain regions of central and north Slovakia were sparsely inhabited and economically insufficiently exploited. The nobility therefore encouraged sheep-rearing by giving various rights and privileges to shepherds when they settled in these

regions. These privileges brought to Slovakia Valachian shepherds from Romania (13th to 15th centuries), the Ukraine (15th to 16th centuries) and the northern side of the High Tatra mountains (17th to 18th centuries). Every wave of immigration brought new cultural elements which were assimilated and transformed, as the mountain areas were also settled by Slovaks from the plains and lowlands. This new economic, social and cultural development resulted in the Valachian musical style.

The social and economic hardship of the 17th century, deepened by the Turkish wars, brought misery to the country and greater oppression for the serfs; the result was an increase in feudal warfare. One of the most spontaneous forms of protest against the ruling class was flight into the mountains where bands of robbers were formed. The songs and dances that arose out of these circumstances greatly influenced the shepherd culture and indeed represent some of the most beautiful examples of this style.

The shepherd style is characterized by the following structural features: the intervals of a 5th, or a 3rd and a 5th, form the framework of the music, remaining unchanged throughout; the melodic line is usually descending, augmentation of note values takes place as the melodic line proceeds, with notes of longer value at cadences; 62% of the melodies are in the F mode, robber songs are often in the G mode, and the C and D modes are also fairly common, closed forms are unknown, but there is a tendency towards periodic forms, in which a phrase is repeated with slight variation, for example A^4B or ABB' . In later examples of the shepherd style, the characteristic range of a 5th is expanded, probably as a result of the influence of instrumental music (on the bark horn, flute and the string ensembles) and polyphonic singing. Contact with more recent songs or songs of Western origin has also exerted some influence.

In 55% of these songs the melodic stanza consists of four six-syllable lines, of which the second and fourth are rhythmically augmented so that lines one and three are of two bars, and lines two and four of three bars (see ex.9). The robber dance-songs are built on conjunct or overlapping 5th structures, authentic (ex.10a), plagal (ex.10b) or a tone apart (ex.10c). These melodies consist

Ex 11 Shepherd's song, Púchov district, rec. H. Polomiková, transcr. O. Elschek

Signific. strong change of vocal register

The origin of melodies constructed on a 5th is probably connected with the earlier 4th-tonal types, as transitional types are common. The interval skeleton of a 5th was extended to 3rd-5th and further to 4th-6th structures. Two- and three-part homophonic singing, in which, however, both heterophony and polyphony may occur, is another characteristic feature of this style.

Besides robbers' and shepherds' themes there are narrative, ballad and love motifs, as well as songs connected with weddings, christenings, harvest and other such events. Dance-songs are typical of the shepherd style, for example the *haiduc* (robber) dance *odzemok*, the bear dance and sheep dance, as well as the Christmas carols and songs to Christmas plays enacted by shepherds.

The last stage of Slovak folk music development consists of a harmonic-melodic style referred to as the 'new song style'. This style, which is still developing, originated in the 16th and 17th centuries, attaining stability and its principal features in the 19th century. The birth of the new style was accelerated by various factors: the influence of Baroque art and popular music; folksongs of Western (German) origin; the market songs from Poland, Bohemia and Moravia, and, in the late 19th century, the urban music of Hungarian gypsies.

The final note of a melody functions also as the main note of an arched melodic structure, in what is termed 'contrary fifthing', that is, the transposition of a phrase (A) a 5th higher (A^4); this arises from the new (to this tradition) tonal relationship of the tonic and dominant. The formal types AA^4BA and AA^4BA became very common, showing a preference for a closed formal structure with the repetition of the first phrase at the end. The syncopated or 'pointed' rhythm (see ex.12) appears in about 30% of the new songs and is applied in a free, often improvised manner. Isometric and bimetric

Ex 9 Rhythmic and metric construction, shepherd-style songs, rec. and transcr. A. Elscheková

Ex 10 Overlapping 5th-tonal tr

(a) (b)

of five or six lines with the form ABC , repeated a 5th lower, and a bimetric syllabic structure, for example $8 + 6 + 6 + 8 + 6 + 6$. 20% of the shepherd songs show such a bimetric structure, as in ex.11 ($6 + 6 + 7 + 7$ syllables). The example is rhapsodic in character, and shows how the melody may be subtly varied from one stanza to another.

Ex 12 Syncopated or 'pointed' rhythm

structures occur approximately equally in four-line melodic stanzas. It is characteristic for the third line to have a different number of syllables from the other three (e.g. 12 + 12 + 10 + 12 or 14 + 14 + 12 + 14) and to employ some rhythmic and metric contrast. The number of syllables has increased beyond the six to eight of the earlier styles and now lies between eight and 25 syllables to a line, thus allowing a new type of longer melody. In contrast to the smooth melodies with small intervals of the earlier styles, melodies of the new style show a free use of large intervals (see ex 13)

Ex.13 Young men's song, Rožňava district, rec. J. Hlaváč, transcr. A. Lischeková

Note-heads in brackets indicate variants in the melody

Another aspect of these new songs is their changed thematic content and social function. Representative genres are ballads, love-songs, military and recruiting songs and humorous, social and emigration songs. This new song style at present constitutes 60 to 70% of the collected Slovak folksong repertoire.

Folk music of the 20th century shows some new elements: for example, in the richness of polyphonic singing in all parts of Slovakia, and in the merging of traditional forms with modern popular dance-songs of the 1930s and 1940s. Another significant change is the emotional style of performance. The texts of the songs are closely related to everyday life.

In the 1940s and 1950s new folksong genres came into use: songs about the Slovak national rising, partisan songs, songs about the cooperatives in the villages and about industrialization and the events changing rural social structure. The texts of these new genres of folk poetry are sung to traditional melodies selected from the earlier and new styles. This technique of singing new texts to older melodies was also common in the revolutionary work songs of the 19th and 20th centuries. There has been a conscious revival of folksong and music in ensembles in towns, schools and among young people as well as on radio and television programmes.

(iii) *Regional music areas.* Different music areas or dialects have developed in response to particular regional, cultural, social, geographical and musical conditions. They consist of a special configuration of the known historical styles, whereby individual stylistic elements are integrated in a relatively new formation. There are four main regions, which are subdivided into the microstyles of smaller regions, valleys and villages.

The significant feature of west and south Slovakia is that the earliest magico-ritual and 4th-tonal peasant styles are found in their most typical and developed

form. This is because from the 6th century this region was the oldest central cultural area of the western Slavs. The shepherd style plays an inferior role there. The new song style predominates though it shows many common elements with the melodic formulae of the earlier styles, for example, melodies of small range with five to six notes, two- or three-line structures and short motifs. The influence of western European elements is strongest in this area: 8% of the region's melodies originate in the earlier styles, 30% are 5th-tonal but without clear connections with the shepherd style and 60% belong to the new repertoire.

The mountain regions of north and central Slovakia constitute the largest and richest music area: 60% of the songs there originate in the shepherd style, and in some villages of north Slovakia (e.g. Terchová) almost 60% of the songs are in the F mode. In the north the 'Podhalian tonality' (d-f#-g a b-c#-d'-e'-f'), based on the natural scale of flutes without finger-holes, is characteristic, while the G mode is favoured more in central Slovakia. The origin of these modes in Slovak folk music is connected with folk instruments (the shepherds' horn, flutes without finger-holes and the *fujara*, a fipple flute with three finger-holes). In this region part-singing and parlando performance play an important role.

East Slovakia forms the third music area: 80% of the songs are performed in *tempo giusto*. The melodic structure is characterized by repetition, transposition and the sequential repetition of miniature motivic formulae. An important aspect of these songs is their use for accompanying dance. The melodies on the whole are longer and have a greater range than in other areas. Cadences of a 4th are typical and therefore hypomodes (i.e. plagal) predominate. Closed forms such as *AABA* or *ABBA* are most common. The rhythm is organized exclusively in two-beat bars, as is characteristic of 90% of Slovak folksongs. In east Slovakia, the alternation of 2/4 and 3/4 metres occurs in the *karický*, a round-dance performed by girls. In this region archaic tonal elements are coupled with a feeling for harmony and modern formal principles.

The regions of Gemer and Spish are characterized by their mixture of musical styles. They are situated between the north and central mountain regions and the east Slovakian region, thus there is an integration of elements of the shepherd style with east Slovakian modern folksong style. More than 20% of Gemer songs show hypomodal features. In Spish remarkable rhapsodic melodies alternate with dance in *tempo giusto*. The fluctuation between fixed metric and free performance has resulted in many 5/8 and 7/8 melodies; they are performed slowly in a rhapsodic and declamatory manner.

In all the regions mentioned the predominance of one style is the result of stylistic integration due to the co-existence of other regional and historical styles. These are not isolated from each other, the cross-currents between the different styles being a typical feature of Slovak folk music.

(iv) *Folksong genres.* Slovak folksongs cover a wide variety of functions and thematic content. In general there is no static dependence of a single text on a single melody, but certain text groups are connected with a melodic type or style. A firm connection between music and texts exists only in a few old-style songs and in the

popular or composed songs of the 19th century. Individual performers may tend to relate certain melodies to specific texts, but this is not an indication of regional practice. Some songs are performed only during their respective ceremonies or events, among them songs for the ceremonies of 'burying winter' (*morena, smrti, kyselica*), the advent of spring and summer (St John's Day), laments, Christmas carols, lullabies, harvest and wedding songs. These song genres are homogeneous both in musical and textual structure although there are melodies of great historic and typological variation among them. Their function, performance and similarity of content give them common unifying features.

Other characteristic Slovak folksong genres are shepherds' songs, robbers' songs, dance-songs, hay-making songs, lyrical love-songs, ballads, military songs, songs of emigration to America, evening songs sung by young men, children's songs and humorous songs. In general there is a preference for the Slovak lyric and lyric epic genres over narrative forms. The main occasions for singing are weddings and spinning-bees, where a wide song repertory is performed. Singing for oneself, in the family, at home or in the fields and mountains remains the most important performing basis for Slovak folksongs.

(v) *Cross-cultural relations*. As Slovakia is in central Europe, it has come into close cultural contact with its nearest neighbours and also with wider areas of east and south-east Europe. The earliest musical styles show similarities to the magico-ritual melodies of the east and south Slavs (Ukrainians, Bulgarians, Serbs, Croats and Slovenes), indicating that they are remnants of a common Slav folk music style. The 4th-tonal peasant style (see §2(ii) above) shows some relation to this ancient Slav style but can be qualified as the first stage of development of specifically Slovak folk music. The 15th- and 16th-century musical style was built on this basis. Economic conditions and migrations, however, led to the introduction of foreign music, partly from east Europe and the Balkans, and partly through the German miners' colonization in the 13th and 14th centuries. Under these new influences there arose a new style, which would be expected to be heterogeneous, but since the beginning of the 18th century (according to historical sources) it has, in fact, been one of the most homogeneous Slovak folk music styles in which it is difficult to differentiate single elements of foreign origin (Romanian, Ukrainian etc.). This form of the shepherd style was brought from Slovakia to the Tatra region of south Poland and to south-east Moravia by Slovak colonists in the 18th century. After the defeat of the Turks, more colonists travelled in thousands to south-east Europe to settle depopulated areas, especially north and south-east Hungary, west Romania, north Serbia and Croatia and Bulgaria. In this way new areas of Slovak culture were established which developed relatively independently in the 19th and 20th centuries as a result of cultural contact with their foreign ethnic surroundings.

During the 18th century Slovakia played a central role in the distribution and transformation of the new style. Important new relationships supplemented the older ones, and Bartók, characterizing these relations in 1934, estimated that 38% of Hungarian folk melodies

were of Slovak-Moravian origin (although 15% of Slovak folksongs developed under the influence of the new Hungarian music style). Cross-cultural relationships vary regionally within Slovakia: the folk music of west Slovakia has a close affinity with that of south Moravia; east Slovak folk music is related to that of west Ukraine; and cross-influences between Slovak and Hungarian folk music can be seen mainly in south Slovakia and north Hungary. The regional development of Slovak folk music is partly based on these ethnically differentiated relationships.

(vi) *Instruments and instrumental music*. There are more than 160 different instruments in use in Slovakia, spread over the central and western territories. The richest is the acrophone group with a predominance of fipple flutes, of which 28 types have been discovered. These include flutes without finger-holes and others with two, three, five or six holes; they are made of wood, bark or metal with a single or double bore. The most typical is the *kancovka* (end-blown flute) without finger-holes, where closing and opening of the end and overblowing

3 Slovak fujara (fipple flute, left) and dvojanka (double fipple flute)

are used to change the pitch. A rare European folk instrument of the fipple flute group is the *fujara* which is more than 180 cm long and has three finger-holes (fig.3). The little shepherds' flute with six finger-holes is widely distributed over the country and has its own typical repertory and playing technique. The *dvojanka* (a double fipple flute; fig.3) and the transverse flute are both played with great virtuosity and expressiveness.

The single reed is found in the *drček* and *fanfarka* (clarinet-like instruments) and in the *gajdy* (bagpipe), which always has a long bass drone pipe and a chanter with five or six finger-holes. The most common form of bagpipe has a double chanter, that is, a counter-pipe joined to the melody pipe. A rarer type of bagpipe has two supplementary drones ('little drones'), so that these instruments can produce four- or five-part music. Some double-reed instruments are played by children, especially the *trubka* made of various materials, such as bark or corn stalks. Bark and wooden trumpets are found all over Slovakia but are becoming more rare.

There are about 40 different idiophones in Slovakia, some of which are regarded as musical instruments proper, others merely as children's toys. Membranophones are very rare.

Bowed string instruments used are the violin and double bass, the short *oktávka* (octave-violin), *shlopecok* (scuttle-shaped violin) and *kárová basa* ('bark bass'), a double bass whose ribs are of bark. Struck and plucked string instruments are the *cymbal* (dulcimer) and zither.

Instruments are played solo, in combinations such as bagpipe and flute or bagpipe and violin, or in diverse ensembles of bowed string instruments consisting of first and second violin, counter-violin or viola and the double bass. In east and south Slovakia this ensemble is completed by the dulcimer and in west Slovakia by the clarinet or trumpet. Brass bands with about eight members play as folk music ensembles in the villages of west Slovakia.

Solo instrumental genres serve various functions. They may act as a signal (horns, bone flutes, rattles), as an acoustic accompaniment to ceremonies (clappers, rattles, bells), and above all in a purely aesthetic function for self-entertainment (*fujara*, flutes). The only solo instrument used for dance accompaniment is the *gajdy*. All the string ensembles serve for entertainments in which dance predominates but singing and other forms of entertainment are also included.

Instrumental music mainly derives from the song repertory. Pure instrumental melodies are rare, although

the vocal melodies are substantially transformed in motivic content, melismatic variation and rhythm, and often have a shifting tonal basis when played on instruments (see ex.14; the central note in this example moves between *a'* and *g'* while the melody is built on the 4th-6th-tonal frame of *a'-d''* (*f#''*)).

Ex 14 Robber dance-song, played on *fujara*, Zvolen district, rec. J. Rybar, transcr. O. Fiešček

A regional style of ensemble playing has developed in Slovakia. Its special characteristics include a richly ornamented leading voice performed on the first violin sometimes supported by a second violin playing in 3rds or presenting a new decorated melodic line, as in ex.15, where there are two main melodic voices. The other bowed instruments supply a chordal harmonic accompaniment. The *cymbal* (when used) provides both melody and harmony in arpeggiated figurations, enriching the instrumental colour of the ensemble.

Czechowicz, *B. (fl 2nd half of the 17th century) Polish composer. His first name is unknown. His two four-part settings of *Sub tuum praesidium* survive at Kraków Cathedral (the soprano part is missing), and the inventory of a Franciscan monastery at Przemyśl refers to a five-part *Missa super 'Stella coeli'* by him, but it is no longer extant. He is known to have worked in Kraków

 MIROSLAW PIETRZ

Czech Quartet. Czech string quartet. It was formed in 1891 by pupils of Hanuš Wihan at the Prague Conservatory, and its original members were Karel Hoffmann (*b* Prague, 12 Dec 1872, *d* Prague, 30 March 1936), Josef Suk (i) (*b* Křečovice, 4 Jan 1874; *d* Benešov, 29 May 1935), Oskar Nedbal (*b* Tábor, 26 March 1874, *d* Zagreb, 24 Dec 1930) and Otto Berger (*b* Slatina nad Úpou, 22 Jan 1873; *d* Machov, 30 June 1897). Berger left in 1894 and his place was taken by Wihan (*b* Police, 5 June 1855, *d* Prague, 1 May 1920), who was himself replaced in 1914 by Ladislav Zelenka (*b* Modřany, nr. Prague, 11 March 1881; *d* Prague, 2 July 1957). Nedbal was replaced by Jiří Herold (*b* Rakovník, 16 April 1875, *d* Prague, 13 Nov 1934) in 1906. The original four first appeared as the Czech Quartet in 1892, and in 1893 made a successful visit to Vienna; their success there brought wider tours, including visits to Russia in 1895 and Britain in 1896. After World War I they began to teach at the Prague Conservatory; their last foreign tour was made to the Netherlands in 1931. An attempt to replace Suk on his retirement in 1933 failed, and the group disbanded with a concert in honour of Suk's 60th birthday on 4 December 1933. The Czech Quartet became a model for all Czech chamber groups. Wihan, their tutor and for 20 years a member of the quartet, brought to the group his great experience of chamber playing, particularly emphasizing phrasing and precise rhythm. The

success that the quartet achieved throughout Europe was mainly due to their remarkable unity, freshness of approach and expressive range. Their activity led to the formation in Prague of the Czech Society for Chamber Music and had a strong influence on the work of Czech composers. Reger dedicated to them his Quartet in F-minor op. 121. Their extensive repertoire included all the standard literature, and modern works, particularly by Czech and Slovak composers. They made a number of gramophone records.

AILENA NÍMCOVA

Czeczott [Czeczot, Danilewicz-Czeczot], **Witold** (b Boracín, nr. Nowogródek, 20 Dec 1846, d Pińsk, 24 Jan 1929) Polish composer and pianist. He studied with Żeliński at the Institute of Music in Warsaw, and with Liszt in Weimar, concluding his studies at the Brussels Conservatory. In 1869 he also completed a law course at St Petersburg University, and studied further in Heidelberg, where he gained his doctorate in 1871. In 1878 Czeczott entered a seminary in Warsaw, becoming a priest after three years. In 1883 he was made professor at the theological seminary in St Petersburg. From then he worked mainly as a priest, as well as publishing many articles and theological and literary works. His activity as a musician was incidental, belonging to the early period of his life. In his youth, Czeczott often gave concerts as a pianist, and also composed chamber works, piano music and songs, some of which are in print. His compositions include a string quartet, variations, polonaises for piano, a Suite op. 3 for piano and songs for voice and piano.

ZOLIA CHŁECHUŃSKA

Czegert, Josef. See SEGER, JOSEF

Czekanowska [Kuklińska], **Anna** (b Lwów, 25 June 1929). Polish ethnomusicologist. She studied musicology with Chybiński and statistical methods with Jan Czekanowski at the University of Poznań (1947–52). She also studied theory of music and methodology under Chomiński at Warsaw University. In 1958 she took the doctorate at Warsaw University with a dissertation on the songs of the Biłgoraj region, and in 1968 she completed her *Habilitation* at the same university with a dissertation on Slavonic folksong. Since 1969 she has been reader and head of the ethnomusicological department at Warsaw University, where she was appointed director of the Institute of Musicology in 1975 and professor in 1976, and since 1972 she has been head of the working group on the ethnogenesis of the Slavonic people at the Polish Academy of Sciences. Her main

research interests are Slavonic music, its origin and development, and the methodology of contemporary ethnomusicology.

ZYGMUNT M. SZWYŃKOWSKI

Czernohorsky, Bohuslav Matěj. See ČERNOHORSKY, BOHUSLAV MATĚJ

Czerny, Carl (b Vienna, 21 Feb 1791, d Vienna, 15 July 1857) Austrian piano teacher, composer, pianist and writer on music. As the pupil of Beethoven and the teacher of Liszt he occupies a unique position among 19th-century pianists, not only as a transmitter of ideas from one great master to another but also by virtue of his extraordinary productivity during the decades that embraced the most dramatic changes in technique and literature for his instrument.

He came from a musical family, his paternal grandfather was a violinist and city official in Nymburg (Nymburk), near Prague, and his father, Wenzel, was an organist, oboist, singer, piano teacher and piano repairman. When he was six months old he was taken to a Polish estate where his father had assumed a position as piano teacher, the family remained there until 1795, returning to Vienna to avoid the political unrest in Poland. His early musical education, supervised by his father, consisted mainly in learning works by Bach, Mozart and Clementi. He could play the piano at the age of three, began to notate his own musical ideas by seven and had developed a fine musical memory by ten. Further instruction, especially in literature and languages (Italian, French and German), were given by some of his father's needier pupils in exchange for music lessons.

With the assistance of his father's friend Wenzel Krumpholtz, the ten-year-old boy was taken for an interview with Beethoven. Krumpholtz, violinist in the Court Opera orchestra and for a long time an admirer of Beethoven's compositions, improvisations and manner of performing, had coached the young Czerny beforehand on many of Beethoven's own works and ideas

Carl Czerny lithograph by S. Parmenter

about tempo, expression, dynamics and phrasing. Having accepted Czerny as a pupil, Beethoven concentrated on material in C. P. E. Bach's *Versuch* and on legato playing, which was particularly appropriate for the forte piano as opposed to the Mozartian non-legato style of playing. Czerny was nevertheless deeply impressed by the clarity and precision of the latter style when, several years later, he heard Mozart's and Clementi's pupil Hummel perform at one of the *musicales* given by Mozart's widow.

In 1800 Czerny made his public debut as a pianist in the Vienna Augarten concert hall, performing Mozart's C minor Concerto. He gained special renown for his interpretation of Beethoven's works, playing the C major Concerto in 1806 and giving an early performance of the 'Emperor' Concerto in 1812; and for several years beginning in 1816 he gave weekly programmes at home devoted exclusively to Beethoven's piano music, programmes which Beethoven himself sometimes attended. He was able to play all Beethoven's piano music from memory, he had done so 'once or twice each week' in 1804-5 for Prince Lichnowsky, to whom Krumpoltz had introduced him. One of his most valuable legacies is a commentary on the interpretation of these works based on his observations of Beethoven's own performances and on his studies. His autobiography and chapters 2-3 of the supplement to op.500 contain some of the most enlightening of these observations. Although Czerny's playing was held in high esteem by the critics (Schilling described it as 'uncommonly fiery' and Hanslick considered him the most important of the native Viennese pianists after Hummel and Moscheles), he gradually lost his taste for performing in public, explaining that his 'playing lacked that type of brilliant, calculated charlatanry that is usually part of a travelling virtuoso's equipment'. The single

planned concert tour, for which he had made arrangements in 1805, was cancelled on account of political unrest.

Physical frailty and natural preference led him to spend his entire life quietly in Vienna. He nevertheless kept in contact with all the significant figures of the musical world who came to Vienna to win professional acclaim. As well as Prince Lichnowsky, Hummel and Beethoven's intimate circle, Czerny became a close friend of Mozart's son and of the piano manufacturer Andreas Streicher, and in 1810 he met Clementi, whose teaching methods and compositions he so admired that, as a gesture, he entitled his op.822 *Nouveau Gradus ad Parnassum*. One of Chopin's first visits on his arrival in Vienna in the summer of 1829 was to Czerny, with whom he frequently played duets and whom he considered to be 'warmer than all his compositions'.

Czerny began his distinguished career as a piano teacher at the age of 15. As well as Beethoven's nephew Karl he numbered among his pupils virtuosos and child prodigies (many of them young girls) including Döhler, Kullak, Jaëll, Thalberg, Stephen Heller, Ninette von Belleville-Oury, Leopoldine Blahetka and Liszt. Liszt's father had brought him to study with Czerny at the age of nine (1820), and although his playing was 'completely irregular, careless and confused' he was an excellent sight-reader and improviser. Recognizing Liszt's enormous natural talent, Czerny concentrated on harnessing these gifts by making him work intensively on Clementi's sonatas, as well as pieces by Bach, Beethoven and Hummel. While Liszt was impatient with the disciplined ways of his teacher, as a renowned virtuoso he gratefully and frequently acknowledged that he owed his 'talent and... success' to Czerny. He regularly performed Czerny's Sonata no 1 in A♭ op.7 and dedicated the *Transcendental Studies* to him. Although Czerny's soaring reputation as a teacher attracted such large numbers of pupils that he was obliged to become highly selective, he taught as much as ten hours a day, occupying himself at other times with composing, apparently at a feverish pace.

As Beethoven's pupil he acquired experience in proof-reading, arranging (mostly for solo piano and piano duet) and constructing scores from orchestral parts (by 1802 he had copied the scores of several Mozart and Haydn symphonies, as well as Beethoven's first two symphonies and C major Concerto); these skills contributed to his exceptional speed and facility in notating musical ideas. The ease with which he improvised explains further his remarkably prolific output of over 1000 works. In an autobiographical sketch of 1824, he maintained that between the Variations for violin and piano op.1 (1806), on a theme by Krumpoltz, and the Rondo for piano duet op.2 (1819), dedicated to Diabelli, he had written many works, including operas, but that since these works were immature 'nothing became known'.

Czerny composed in all forms, but it is in his thousands of studies and exercises that he made his most significant contribution. These are the result of his industry and his uncanny ability to codify and systematize the diverse styles and techniques for the piano at a time when the mechanics of the instrument – and its capabilities – were in a highly fluid state. His *Complete Theoretical and Practical Pianoforte School* op.500, published in 1839 and dedicated to Queen

Victoria (with whom he had played duets two years earlier), summarizes these styles and techniques. His collection of exercises and studies ranges from the easy and progressive to the virtuosic and the specialized. Other studies exploit the prevailing salon, bravura and characteristic styles; op.400, dedicated to Mendelssohn, is a school of fugue playing.

The panoramic scope of Czerny's writings on music is partly illustrated also by such diverse titles as *Letters to a Young Lady on the Art of Playing the Pianoforte* (to a fictitious 12-year-old Miss Cecilia), *Letters on Thorough-bass, Umriss der ganzen Musikgeschichte* op.815 (Mainz, 1851, a prototype for more recent 'tables'), a three-volume *School of Practical Composition* op 600 (1839) and a *School of Extemporaneous Performance* opp 200, 300. This last-named treatise, though generally unknown, sheds important light on 19th-century performing practice as well as the contemporary vocabulary of piano improvisation. Czerny's editions of the keyboard works of such composers as Bach and Domenico Scarlatti bring into sharp focus a 19th-century view of these works and are fascinating studies in the musical practice of his time. Hundreds of arrangements of works by Handel (*Messiah*), Haydn (*The Creation* and a number of symphonies), Mozart (symphonies), Schubert, Beethoven, Spohr, Cherubini, Donizetti and Mendelssohn bear further witness to this broad range of interests and activities.

Czerny's propensity for imitating and even caricaturing the diverse technical and expressive styles of his time explains the importance of his studies and his formidable reputation as a teacher; yet these very attributes, when pressed into service by Czerny the composer, resulted in an output that was highly fashionable but for the most part mediocre and unimaginative. Czerny himself admitted that, apart from a few serious works such as the piano sonatas, most of his compositions were modishly trivial.

His last will and testament (signed on 13 June 1857, a month before his death) reflects his life of solitude, his thoughtfulness, kindness and attentiveness. Apart from the money which he bequeathed to his housekeeper and her brother and which he set aside for the performance of a Requiem mass (or one of his own late masses) on the anniversary of his death, he distributed his estate evenly among the Gesellschaft der Musikfreunde, the Society for the Support of Needy Musicians, the Institute for the Deaf and Dumb and the Monks and Nuns of Charity in Vienna.

An ambiguous element in his feelings towards Beethoven is revealed in his autobiographical sketch of 1824, in which he maintained that his father was his only teacher in piano playing as in other branches of music.

A catalogue of his works, up to op.798, and a listing of unnumbered works, editions, arrangements, and works in manuscript or in progress appears in Cocks's English edition of op.600. This catalogue is extended to op.861 in Pazdirek and in a less complete form in Steger. Mandyczewski has provided a brief description of the unpublished works, manuscripts and sketches for a satirical epos and other literary essays in the archives of the Gesellschaft der Musikfreunde. For a discussion of Czerny's *School of Practical Composition* and its approach to analysis and form, with examples, see ANALYSIS, §II, 2 and 3

WORKS (MSS in A-Wgm)

PIANO SOLO

Sonatas no 1, Ap, op 7, no 2, a, op 13, no 3, f, op 57, no 4, G, op 65, no 5, E, op 76, no 6, d, op 124, no 7, e, op 143, no 8, F#p, op 144; no 9, b, op 145, no 10, Bp, op 268, no 11, Dp, op 730, 1 unpubd, 2 other unpubd sonatas, mentioned in Mandyczewski, 'Sonate à la Scarlatti', 1 movt, op 788
28 sonatinas 2 as op 49, 3 as op 104, vn, vc ad lib, 3 as op 158, 6 as op 163, op 167, 3 as op 349a, 6 as op 410, 4 as op 439
Numerous variations, potpourris, dances and character pieces

OTHER INSTRUMENTAL

For pf 4 hands 6 sonatas, op 10, C, op 119, G, op 120, F, op 121, f, op 178, Bp, op 331, 8 sonatinas, 2 as op 50, 3 as op 156, 3 as op 158
For vn, pf 3 sonatas, b, op 686, 2 unpubd, 5 sonatinas, 2 as op 51, 3 as op 390
Chamber 8 pf trios, F#p, vn, vc/hn, pf, op 105, A, op 166, E, op 173, C, A, op 211, a, op 289, 2 unpubd, 1 str trio, unpubd, mentioned in Mandyczewski, 7 pf qts, c, op 148, F, G, op 224, C, f#p, F, op 262, 1 unpubd, Qt, C, for 4 pf or lor pf, pf 4 hands, orch/str qt, op 230; Qt, 4 pf, op 816, 5 str qts, mentioned in Mandyczewski
Orch 6 syms, c, op 780, D, op 781, C, d, E#p, B, unpubd, 1 other unpubd sym, mentioned in Mandyczewski, 6 ovs, unpubd, 6 pf cones F, op 28, C, pf 4 hands, op 153, a, op 214, 3 unpubd, mentioned in Mandyczewski, 2 pf concertinos, C, op 78, C, op 210, 3 cadenzas to Beethoven's C major Pf Conc, op 315
Miscellaneous hundreds of pieces and arrangements, for pf 2 8 hands, 2 pf, pf and chamber ens, incl variation sets, potpourris, rondos, caprices, divertimentos, impromptus, fantasias, souvenirs, toccatas, romances, polonaises, waltzes, marches

SACRED CHORAL

Graduals and offertories. Graduale pastorale, op 154, Offertorio pastorale, op 155, 6 Gradual, op 318, Gradual, op 666, Salve Regina, off op 726, Offertory, op 737, Offertory, op 757, Offertory, op 760 Offertory, op 812, Salvos fac nos Domine, gradual, without op no 106 unpubd graduals and offertories
Other sacred Ave maris stella, hymn, op 743, De profundis, ps, op 784, Pange lingua, hymn, 6 settings, op 799, 11 masses, 2 Te Deum, cantatas, unpubd, other unpubd sacred works, mentioned in Mandyczewski

EXERCISES AND STUDIES

(for pf 2 hands unless otherwise stated)

100 Exercises in Progressive Order, op 139, Grand Exercise on the Shake, op 151, Grand Exercise in All the Keys, Major and Minor, op 152, 48 études en forme de préludes et cadences, op 161, 40 études célèbres de la vélocité, 2 pf, op 229b, 50 Duet Studies, op 239, Grand exercice de la gamme chromatique op 244, Grand exercice des gammes en tierces et des passages doubles op 245, 101 Progressive Exercises, op 261, 10 exercices, for beginners, op 277, School of Velocity, op 299

Czerný, Jiří. See ČERNÝ, JIŘÍ

Czerný, Joseph. Austrian music publisher, the firm of CAPPI bore his name from 11 April 1828 to 7 May 1831

Czerny-Stefańska, Halina (b Kraków, 31 Dec 1922) Polish pianist, mother of Elżbieta Stefańska-Lukowicz. She studied first with her father, then with Turczyński and from 1946 with Drzewiecki. In 1949 she was joint winner of the Chopin International Competition in Warsaw. She gives concerts in many countries, often appearing with her husband Ludwik Stefański in works for two pianos, and with her daughter in works for two pianos or piano and harpsichord, and has made many gramophone recordings both in Poland and abroad. She has won the State Prize (first and second class), the Commander Cross and the Star of the Order of the Polish Revival and many other state awards, and has served on the juries of several international piano competitions.

MIECZYSLAWA HANUSZEWSKA

Czerwenka, Oscar (b Linz, 5 July 1924). Austrian bass. He studied privately, and made his début at Graz in 1947 as the Hermit (*Der Freischütz*). In 1951 he joined

the Vienna Staatsoper as a principal bass. He specializes in *buffo* roles, his most famous being Baron Ochs, which he sang at his only Glyndebourne appearance in 1959, and at the Metropolitan Opera in 1961. His voice is a full, rounded bass, and his interpretations are perhaps more notable for good humour than subtlety. He can be heard to advantage as Abu Hassan on the recording of *Der Barbier von Bagdad* conducted by Leinsdorf. He was appointed a Vienna *Kammersänger* in 1961.

AIAN BLYTH

Czerwiński, Wilhelm (b Lwów, 1837, d Lwów, 13 Feb 1893). Polish composer, teacher and pianist. He received his musical education in Vienna, where he studied composition with Fischhof, Sechter, Hellmesberger the elder and Nottebohm. He studied the piano with Mikuli in Lwów, with Liszt in Weimar and with Jaell in Paris. From 1857 he appeared as a pianist in Germany, Switzerland and the south of Poland, without much success. He then settled in Lwów and devoted himself to composing and teaching, eventually establishing a school of music. Czerwiński's compositions include a symphony, a piano concerto, a cello sonata, songs without words, nocturnes, mazurkas and polonaises for piano, an opera, an operetta, a cantata, and numerous songs. During his life, only his piano music achieved much popularity, mainly in Vienna, where some of it was published. His song *Marsz sokolów* ('March of the falcons') was also widely known in Poland. The remaining works, technically defective and rarely performed even in his lifetime, are now completely forgotten

Cziak, Benedikt. See SCHACK, BENEDIKT

Czibulka, Alphons (b Szepes Várallya [now Spišská Nová Ves, Czechoslovakia], 14 May 1842, d Vienna, 27 Oct 1894) Hungarian bandmaster and composer. At the age of 15 he was performing as a pianist in Russia, then became a music teacher, and was later conductor in Wiener Neustadt (1864-5), Innsbruck, Trieste and at the Carltheater in Vienna. He then entered military service, finally becoming bandmaster of the 19th Austro-Hungarian Infantry Regiment, and in 1880 he and his band won first prize in a band contest in Brussels. During the 1880s and early 1890s he conducted 'Monster Concerts' in the Prater in Vienna, and he composed much successful dance and salon music and also some operettas. He was unusually fond of the gavotte as a dance form, and the *Stephanie-Gavotte* remains his best-known composition. For Bosworth & Co. he arranged dances on themes from Sullivan's *The Yeomen of the Guard* and *The Gondoliers* at the time of their productions in German

ANDREW LAMB

Cziffra, György [Georges] (b Budapest, 5 Nov 1921) French pianist of Hungarian birth. He received his earliest training from his father, who was also a pianist. He made his first public appearance at the age of five in a circus, where he played improvisations on popular airs requested by the audience. In 1930 he took up serious study at the Liszt Academy in Budapest with Dohnányi, and between 1933 and 1941 gave many successful concerts and recitals in Hungary, and in Scandinavia and Holland. He was conscripted into the army in 1941 before completing his course at the academy, and captured as a prisoner-of-war. After his release in 1947 he resumed his studies, working with Ferenczi, and earned his living playing the piano in bars in Budapest. In 1950 he was again imprisoned, this time for his political beliefs, and freed in 1953. He resumed his concert career, and in 1955 was awarded the Liszt Prize, the first occasion on which it had been given to a non-composer. During the October Uprising in 1956 he escaped with his wife and son to Vienna, where his recital début a month later met with immediate acclaim. In December the same year he travelled to Paris and played with great success at the Théâtre du Châtelet, he made France his home, and took French nationality. Cziffra's playing is noted for its dazzling technical vir-

tuosity, precise, clean lines and fiery energy – above all in the 19th-century repertory, especially the music of Schumann, Chopin and Liszt. He has made many records, most memorably of the works of these three composers, and of a number of his own paraphrases and arrangements in the style of Liszt. In May 1969 he founded the piano competition in Versailles that bears his name. His son György Cziffra is a conductor, and on occasion father and son have collaborated in concertos.

DOMINIC GILL

Czyż, Henryk (b Grudziądz, 16 June 1923) Polish conductor and composer. He studied law and philosophy at Toruń University and graduated from the Poznań Conservatory with diplomas in conducting and composition (1952). He made his conducting début with the Polish National Radio Orchestra in 1948, but it was not until the mid-1960s that his career took flight. In 1962 he conducted a triple bill of works by Debussy, Honegger and Stravinsky at the Warsaw Opera, and in 1965 he directed the first performance of Penderecki's *St Luke Passion*, which he also recorded. This led to engagements, often in programmes of modern Polish music, throughout Europe and the Americas. From 1971 to 1974 he was principal conductor in Düsseldorf. His compositions include the musical *Białowłosa* (Warsaw Opera, 1962) and *Doglover's Dilemma* (Kraków Opera, 1967), an *opera buffa*.

Daça, Esteban. See DAZA, ESTEBAN

Da capo (It. 'from the head') An instruction, commonly abbreviated D.C., placed at the end of the second (or other later) section of a piece or movement, indicating that there is to be a recapitulation of the whole or part of the first section. The word 'fine' (end) or a pause sign marks the point at which the recapitulation ends. If the recapitulation is to start later than the beginning the starting-point is marked with a special sign and the end of the second section is marked 'dal segno' (D.S., 'from the sign'). The principle of recapitulation, which may be summarized by the formula *ABA*, was observed by composers before the sign 'da capo' was used as a way of avoiding the labour of writing out the first section again. The term is nowadays used equally as an adjective (a 'da capo section') or a noun (the 'da capo of the first section').

Examples on a small scale from Monteverdi are the madrigal *Si ch'io vorrei morire* (1603), the shepherd's recitative at the opening of Act 1 of *Orfeo*, and the aria 'Lieto cammino' sung by Telemachus in Act 2 of *Il ritorno d'Ulisse*. The da capo aria became the standard form in the cantata and the *opera seria* of the late Baroque period (see ARIA); it was generally understood that the repeated section would be ornamented. The form was also used by analogy in Baroque instrumental music, for example in the first movement of Bach's Violin Concerto in E. Sometimes sets of variations (e.g. Bach's Goldberg Variations) had a da capo of the theme at the end. In the Classical symphony 'da capo' was regularly indicated after the trio of a minuet or scherzo. It was traditional to omit internal repetitions when recapitulating the first (or main) section, but composers sometimes made sure of this by writing 'D.C. senza ripetizione'. If a coda was to follow the recapitulation this was indicated by 'D.C. e poi la coda'. The scherzo of Beethoven's Third Symphony is one of the first examples of a recapitulation (with modifications) written out in full.

JACK WESTRUP

D'Accone, Frank A(nthony) (b. Somerville, Mass., 13 June 1931). American musicologist. He received BMus and MMus degrees from Boston University, where his

teachers included Geiringer and Gardner Read. At Harvard University he took the MA in 1955 and PhD in 1960, studying with Nino Pirrotta, A. Tillman Merritt and Walter Piston. From 1960 to 1968 he was on the faculty of the State University of New York at Buffalo. In 1968 he was appointed professor of music at the University of California at Los Angeles, and during the academic year 1972-3 he was a visiting professor at Yale University.

D'Accone is primarily interested in Florentine music of the 14th, 15th and 16th centuries. His seven-volume edition of this music for the American Institute of Musicology constitutes a major source for students of the period. His articles in scholarly journals have covered a wide variety of topics, ranging from individual composers, such as Isaac and Pisano, to the musical activity in specific institutions, such as S. Giovanni and the Baptistry. These writings combine to give a broad view of the musical scene in Renaissance Florence.

PAULA MORGAN

Dach, Simon (b Memel, East Prussia [now Klaipėda, Lithuania, USSR], 29 July 1605; d Königsberg [now Kaliningrad], 15 April 1659). German poet Born into a poor but educated family, he attended school at Königsberg, Wittenberg and Magdeburg. In 1626 he matriculated at the University of Königsberg, the outpost of German culture in East Prussia where he spent the rest of his life. He was at first a teacher at the cathedral school and from 1639 a professor of poetics at the university. He supplemented his meagre income by writing a steady stream of occasional poems usually intended to be sung - for weddings, baptisms and funerals. He was a close friend of HEINRICH ALBERT, who set many of his poems to music: indeed, nearly 70% of the texts in Albert's eight books of *Arten* are by him. Albert also composed the music (now lost) for two dramatic allegories by him, *Cleomedes* (1635) and *Sorbusa, oder Prussiarthus* (1645). Albert and Dach were at the centre of an intimate circle of friends known after their meeting place in a suburban garden as the Kürbs-Hütte ('Pumpkin Hut'). Unaffected by the Thirty Years War that ravaged other parts of Germany, this group, which included Dach's patron Robert Rotherthim, Valentin Thilo, CHRISTOPH KALDENBACH and other, lesser poets, devoted themselves to poetry and music, particularly the Baroque lied. Just as, from the musical point of view, Albert is considered the father of the German lied, so Dach is his poetic counterpart. Lieder normally originated in actual occasions: they are secular if written for events such as weddings and birthdays, and sacred songs, reflecting on eternal life, if occasioned by deaths and funerals. Dach's most famous Low German love-song, *Anke van Tharaw*, was long considered spurious but has recently been convincingly reattributed to him (see Ljungerud). Over a century later Herder provided a shortened High German version, *Ännchen von Tharau*, of which P. F. Silcher made a somewhat sentimental setting that has been popular to this day.

The standard edition of Dach's poetry is the four-volume one by W. Ziesemer (*Simon Dach Gedichte*, Halle, 1936-8); an anthology of musical settings of the period is provided in *Preussische Festlieder zeitgenössische Kompositionen zu Dichtungen Simon Dachs*, ed. J. Müller-Blattau (EDM, 2nd scr., *Ostpreussen und Danzig*, i, 1939).

TRAUTE MAASS MARSHALL

Dachstein, Wolfgang [Egenolf] (b Offenburg an der Kinzig, c1487; d Strasbourg, 7 March 1553). German composer and organist. He belonged to a family of theologians and musicians that had originally come from Dachstein, near Strasbourg. In the summer of 1503 he began his studies in theology at Erfurt University, and was a contemporary of Luther. By about 1520 he had taken the vows of the Dominican order and was organist of Strasbourg Minster, after which date he appears to have remained in the city for the rest of his life. On 11 March 1521 he left the minster to take up the post of organist at St Thomas's, succeeding Christoph von Konstanz and Othmar Luscinus. In

1523 he was converted to Protestantism. He retained his post at St Thomas's even after, in 1541, he once again became organist at the minster. In 1542 he and Matthias Greiter became teachers at the Gymnasium Argentense. During the suspension of Protestantism in Strasbourg from 1549 to 1560, Dachstein reverted to Catholicism so that he could keep his position at the minster, which had also gone back to the old faith. A pamphlet by him directed against the magistrate of the city resulted in his dismissal from St Thomas's in 1551. His son, Bernhard, was organist at Hagenau (now Haguenau) from 1576 to 1585.

The *Strassburger Kirchenamt* of 1525 contains three psalm melodies by Dachstein: *O Herr, wer wird Wohnungen han* (Psalm xv), *Der Toricht spricht Es ist kein Gott* (Psalm liii) and *An Wasserflüssen Babylon* (Psalm cxxxvii). The second melody to *Aus tiefer Not schrei ich zu dir* (Psalm cxxx) and the hymn *Ich glaub, darum red ich* are probably also by him. The best-known and most important work is *An Wasserflüssen Babylon*, which served as a rhythmic model for the melody used in the Genevan Psalter. The only extant polyphonic composition by him is the song, *Ach Elselin, ach Elselin wilt mit mir in die eret* (in *CH-Bu F.X.1.4*).

LUCRECIA R. KASILAG

Dadelsen, Georg von (b Dresden, 7 Nov 1918). German musicologist. He studied musicology from 1946 at Kiel University, the Humboldt University, Berlin, and the Free University of Berlin, with Blume, Vetter, Gerstenberg and Reinhardt; as subsidiary subjects he studied German philology with W. Kohlschmidt and H. Kuhnisch, and philosophy with Liselotte Richter and H. Leisegang. In 1951 he took a doctorate at the Free University of Berlin with a dissertation on archaic style and techniques in 19th-century music. He was an assistant lecturer in the musicology institute of Tübingen University (1952-8) and conductor of the university

orchestra (1953–9). In 1958 he completed his *Habilitation* in musicology at Tübingen University with a dissertation on the chronology of Bach's works. He was subsequently professor of musicology at Hamburg University (1960–71), and in 1971 was appointed professor of musicology at Tübingen University. He became general editor of the series *Das Erbe deutscher Musik* in 1959, director of the Bach Institute at Göttingen in 1962 and general editor of the selected musical works of F. T. A. Hoffmann in 1971. His chief subject of research is Bach, on whom he has produced definitive works making use of source research into MSS, watermarks, etc. This has led him to general questions of editorial method and criticism of style and authenticity.

HANS HEINRICH FUGEBRECHT

Daff [daff]. Arabic and Turkish term which, with its variants, is used for many types of FRAME DRUM throughout the Near East and north Africa. These are mostly circular, but octagonal and rectangular forms are also common. The heads are glued or nailed on, or stretched over the frame with a network of cords, sometimes jingles or snares are added (see ARAB MUSIC, fig. 3). In pre-Islamic Arabia frame drums were called *dā'ira*, a name that was adopted throughout the Islamic world (including Muslim Spain) and is still widely used to specify circular drums in the Middle East, parts of India and the east coast of Africa. The term 'daff' and its many variants are related to the ancient Hebrew *tof* (or *toph*). Other terms for frame drums, notably *TAR*, *BENDIR* and variants of these, are used together with *daff* in north Africa and, in the case of *tār*, as far east as the Arabian Gulf region. Historically the *daff* has been played by women, and still is except in parts of north Africa. In some Arabic areas the name *daff* is restricted to rectangular and octagonal double-headed drums with snares. In Brazil, Portuguese settlers call their frame drums *daff*. The Turkish variant is called *def*, and those with jingles, *zilli def*; gypsy musicians play both types and women singers generally use the *zilli def*.

Daffner, Hugo (b. Munich, 2 June 1882; d. Dachau, 9 or 10 Oct. 1936). German musicologist, composer and journalist. He studied art, literature and music history at the University of Munich, from which he received the DPhil in 1904 after study with the musicologists Sandberger and Kroyer. Turning his attention to composition, Daffner studied with Thuille at the Munich Akademie der Tonkunst and also with Reger. A number of his compositions were published in the years preceding World War I, during which he supported himself as a music journalist with the *Königsberger allgemeine Zeitung* (1907–8) and the *Dresdner Nachrichten* (from 1909). After the war he returned for a while to the former post, but then he began the study of medicine and received the MD in 1920. He settled into medical practice in Berlin in the mid-1920s. Among his continuing humanistic interests, Daffner was in 1914 among the founders of the German Dante Society, whose yearbook he edited from 1920 to 1925.

WILLIAM D. GUDGER

Dagincour [Dagincourt, d'Agincourt], **François** (b. Rouen, 1684, d. Rouen, 30 April 1758). French composer, organist and harpsichordist. He was a pupil of Jacques Boyvin, the organist of Notre Dame, Rouen, and later of Nicolas Lebègue of St. Merry in Paris. At the age of 17 he succeeded Pitaïs as organist of Ste. Madeleine-en-la-Cité; five years later, on Boyvin's death, he returned to Rouen to inherit his master's post at Notre Dame. At the same time he was organist of the royal Abbey of St. Ouen, and later also of St. Jean in Rouen. In 1714 he became one of the four organists of the Chapelle Royale in place of Louis Marchand, who had left the country under a cloud. According to a lease dated 24 August 1730, Dagincour and his wife Anne Poisson occupied a house near the Auberge de Ste. Catherine in the rue Bras de Fer, Rouen. By 1733 he had moved to the rue des Chanoines, where, after 52 years of faithful service at Notre Dame, he died.

Dagincour's surviving compositions consist of no more than three short songs from a pair of anthologies published by Ballard of Paris in 1713 and 1716, a manuscript collection of versets for organ (manuals only), and a single book of *Pièces de clavecin* (1733), of which only three copies are known.

The songs, in the fashionable pastoral-amorous style of the day, are slight yet melodically sensitive, and at times more poignant than the conventional versets would lead one to expect. The only source of the organ pieces is a small manuscript of 64 pages copied by Pere Pingré

(1711–96), a member of the Academy of Sciences in Rouen and later librarian of Ste Geneviève in Paris. The first half of the volume is devoted to the 46 'Pièces d'orgue de Mr. D'Agincourt', grouped according to their 'tone' or mode, and these are followed by 42 similar pieces by unnamed composers. The Dagincour versets range in length from nine bars to over 50; and though small in scope, their unexpected harmonies and irregular phrase lengths give them an attractively individual flavour.

The *Pièces de clavecin*, dedicated to the queen, are Dagincour's most considerable achievement. There are 43 pieces in all, grouped into four *ordres* or suites (D minor, F major, D major and E major), these are headed by an unusually informative preface in which the composer stated that he was preparing a second volume (neither manuscript nor printed edition has survived), that the engraver (Fr. du Plessy) stayed with him while working, in order to ensure accuracy, and that one of the pieces (*La moderne in Ordre IV*) was written in a different style from the rest at the request of several of his friends. It is, in fact, not unlike some of the display pieces of his pupil Duphy, and is also exceptional in containing indications for changes of manual. The remaining pieces are in the more conservative style of François Couperin, to whom Dagincour paid tribute both in his preface and in the beautiful allemande, *La Couperin*, in *Ordre IV*. They range in mood from the light-hearted *Les dances provençales (Ordre I)* to the majestic rondeau, *La Princesse de Conty (Ordre IV)*, but the most characteristic are the introspective pieces, such as *L'agréable (Ordre III)*, *L'harmonieuse* and *Les tourterelles* (both from *Ordre IV*), which combine gravity with a touching tenderness, and show that Dagincour was more than a mere imitator of his great predecessor.

HOWARD FERGUSON

Dagues, Pierre. French composer of the 16th century; he probably contributed some psalm settings to a collection edited by PIERRE VALLETTE.

Dahl, Ingolf (b Hamburg, 9 June 1912; d Frutigen, nr. Berne, 6 Aug 1970). American composer, conductor, pianist and music educationist. Of Swedish-German parentage, Dahl began his formal musical education at the Cologne Hochschule für Musik under Philipp Jarnach and Hermann Abendroth, then fled the Nazi regime to continue his studies in Switzerland at the Zurich Conservatory under Volkmar Andreae and Walter Frey and at the University of Zurich. Later he studied composition with Nadia Boulanger in California.

His professional career began with coaching and conducting at the Zurich Stadtooper. In 1938 he left Europe for the USA and settled in Los Angeles. From then on

the range of his musical activities and involvements was immense, including work for radio and film studios, composing, conducting, giving solo piano concerts and lecturing. He joined the faculty of the University of Southern California in 1945 and remained there until his death. Among his better-known former students are the conductor Michael Tilson Thomas and the composer Frederick Myrow.

In addition to teaching composition, conducting and music history at the university, he also directed the university's symphony orchestra (1945–58), performing much contemporary music in addition to the standard repertory. Among the American composers he included in his programmes (often in first performances or at least in West Coast premières) were Copland, Diamond, Foss, Ives, Piston and Ruggles. He also introduced important European compositions to the West Coast, such as Berg's Chamber Concerto and Allenberg Songs, Schoenberg's *Pierrot lunaire*, Hindemith's *Marienleben* and Stravinsky's *The Wedding and Persephone*. At the same time he pioneered performances of early music with the university's collegium musicum, which he directed. He was also instrumental as planner, pianist and regular conductor of the Concerts on the Roof and the Monday Evening Concerts, both in Los Angeles. Dahl also lectured widely throughout the USA, particularly on 20th-century music.

One of his most celebrated courses at the university was on Stravinsky's music, a subject of which he had intimate knowledge due to years of close collaboration with the composer. For example, he assisted in the English translation of Stravinsky's Norton Lectures at Harvard University, *Poetics of Music*; he arranged the two-piano version of *Dances concertantes*, he made the piano reduction of *Scenes de ballet*, and he wrote articles and programme notes on Stravinsky's music with the latter's cooperation.

In 1949 Dahl was a member of the faculty of the Middlebury Composers' Conference at Middlebury, Vermont. In 1952 he organized and headed the Tanglewood Study Group at the Berkshire Music Center and continued to direct it for four more years. In 1961–2 he appeared in Munich, Nuremberg and West Berlin in concerts sponsored by the American State Department. He was musical director and conductor of the Ojai Festivals from 1964 to 1966. He was also musical director of the Young Musicians' Foundation of Los Angeles from 1965 to 1968. He conducted the Los Angeles Guild Opera Company during its spring season of 1969 and returned to conduct the symphony orchestra of the University of Southern California for the 1968–9 season.

Dahl received numerous awards, among them two Guggenheim Fellowships (1952 and 1960), two Huntington Hartford Fellowships (1954 and 1958), the 1948 Publication Award of the Society for the Publication of American Music, an award and a \$1000 grant from the National Institute of Arts and Letters (1954), the 1964 Alice M. Ditson Fund Award for Composers, the Excellence in Teaching Award from the University of Southern California (1967), a grant for composing from the US Government's National Endowment for the Arts and the ASCAP Stravinsky Award. From 1965 to 1968 he was a member of the National Policy Committee of the Contemporary Music Project of the Ford Foundation, and in the summer of

1969 he was the featured composer at the East-West Music Festival in Honolulu.

Although Dahl wrote music from an early age, his output was fairly small; his varied career provided little time for composing, and he wrote slowly and meticulously. Though his work reflected the changes in his musical environment, the individuality of his style remained strong. His early works exhibit the dissonant and densely polyphonic texture typical of German expressionism in the 1920s. The impact of America and, later, his collaboration with Stravinsky resulted in increasing clarification of texture, a trend towards diatonicism and a pronounced interest in timbre and instrumental virtuosity. Dahl also used serial techniques in his music, beginning with the Piano Quartet (1957), and evolved large, imaginatively conceived structures held together by motivic and tonal inter-relationships and complex but compelling harmonic forces. This development led to his remarkable Sinfonietta for concert band (1961) with its unabashed leanings towards Stravinsky, then reached another peak in his formidable, almost neo-Romantic *Aria sinfonica* of 1965. Thereafter Dahl's works exhibit a steadily increasing concentration: leaner instrumentation, compact forms and a stern focus on essentials.

KURT STONE

Dahlhaus, Carl (b. Hanover, 10 June 1928). German musicologist. From 1947 to 1952 he studied musicology at the universities of Göttingen (under Gerber) and Freiburg (under Gurlitt); he took the doctorate at Göttingen in 1953 with a dissertation on the masses of Josquin. From 1950 to 1958 he was adviser on productions to the Deutsches Theater in Göttingen, and from 1960 to 1962 he was an editor for the *Stuttgarter Zeitung*. From 1962 he worked for the Institut für Musikalische Landesforschung at Kiel University, where in 1966 he completed his *Habilitation* with a fundamental study on the development of tonality. In the same year he was appointed research fellow at Saarbrücken University and in 1967 professor of music history at the Technical University in Berlin. He was visiting professor at Princeton University in 1968; in the same year he was elected vice-president of the Gesellschaft für Musikforschung. He has been an instructor on several occasions for the summer courses on contemporary music in Darmstadt. He is chief editor of the Richard-Wagner-Gesamtausgabe, editor of the *Personenteil* of Riemann's *Musik Lexikon* and co-editor of the *Neue Zeitschrift für Musik* (1972) and *Archiv für Musikwissenschaft* (1973-)

Dahlhaus's writings cover a broad spectrum, but centre mainly on theory, analysis, music aesthetics and its history. In addition to 15th- and 16th-century music, particularly that of Josquin, he has written numerous analytical and interpretative studies of modern and contemporary music. He has been an important stimulus to research into 19th-century music, notably through his editorship of the anthology *Studien zur Trivialmusik des 19. Jahrhunderts* (1967). His writings and editorial activities on Wagner's music have brought about a renewal of Wagner scholarship. A constant theme of Dahlhaus's writings and research is the present conception of music and its place in the modern world.

HANS HEINRICH EGGBRECHT

Dahm, Johann Jacob (b Kempenich, Eifel, d Mainz, 10 July 1727). German organ builder. He spent the first part of his life in Würzburg, where he married in 1682, and was probably apprenticed to Nikolaus Will, he is also said to have worked in Bamberg. In response to a summons from the prince archbishop of Mainz, Lothar Franz von Schönborn, to Dahm and other Franconian artists, he settled in Mainz, where on 12 May 1698 he was made a freeman of the city. Seven years later he was engaged as organ builder for the cathedral chapter there. His style was influenced by the organ-building Schleich family from Frankfurt am Main, and he built an organ for the Karmeliterkirche in Frankfurt as well as several instruments in Mainz, including those at the Sebastianskapelle (c1700), Liebfrauentstiftskirche (c1707), Dahlheimer Kloster (c1709, removed to Bretzenheim in 1803), St Nikolaus (in Mainz-Mombach, 1715), St Emmeram (1719) and Reichklarenkloster (1720). His organ in Mainz Cathedral (1701), with its beautiful Baroque case and its pipes surrounding the housing on three sides, is sublimely majestic. Dahm is an important figure in the Mainz organ-building tradition, which also produced the distinguished Joseph Gabler.

WALTER HÜTTEL

Dahmen [Damen]. Dutch family of German extraction, of whom many achieved distinction, mainly as flute, horn or string players. Wilhelm (b Duisburg, 1731; d Harlingen, 11 Nov 1780), a versatile musician who was primarily a teacher, had a large family of sons, of whom five were specially important. Herman (baptized Sneek, 26 Sept 1755; d Rotterdam, 29 Aug 1830) and Wilhelm (b Harlingen, 1769; d Spain) were both noted horn players who visited London: the latter died as a British soldier in the Peninsular War; Herman also

composed music for two violins (opp.3, 4, 5, 8) and for orchestra (opp.8, 13). Peter (b Deventer, c1757; d Sneek, 1835) composed chamber music which was published mainly in England. Johan Arnold (i) (baptized The Hague, 9 March 1766, d London, 1794) was a cellist and composed a number of works for strings. Arnold (baptized Harlingen, 19 May 1768; d Amsterdam, 17 Dec 1829) was a teacher (his pupils included L.P.F. Drouet) and a celebrated flautist.

In the next generation, Herman's sons include Wilhelm Hendrik (b Amsterdam, 27 March 1797; d Nijmegen, 15 Dec 1847), a distinguished violinist and esteemed teacher; Jacob (b Amsterdam, 4 May 1798; d Amsterdam, 12 Jan 1875), a violinist (court employee at The Hague in 1829) and composer of chamber music (opp.16, 17 and 19 are known); Johan Cornelis (baptized Rotterdam, 18 Jan 1801, d Rotterdam, 16 Feb 1842), who also played string instruments and was an admired teacher; Herman Jacob (b Rotterdam, 9 Nov 1805, d Utrecht, 4 July 1881), who led the Utrecht orchestra, 1825-75; and his twin brother Johan Arnold (ii) (b Rotterdam, 9 Nov 1805, d The Hague, 6 May 1853), who was a teacher and horn player in the court orchestra at The Hague. 1829-41. Of Arnold's sons, Johan Arnold (iii) (b Amsterdam, 3 Aug 1805; d Amsterdam, 28 Oct 1834) and Pieter Wilhelm (b Amsterdam, 5 Aug 1808, d Amsterdam, 20 June 1886) were solo flautists, the former (who also composed chamber music for flute and strings) at the French Opera, Amsterdam, and in The Hague, the latter at the Park Concerts, Amsterdam, and Hubert (b Amsterdam, 5 Dec 1812, d Amsterdam, 21 Dec 1837), who played the cello in the French Opera orchestra, his compositions, the opera *Azulais*, four overtures and solo instrumental works, achieved some popularity. Pieter Wilhelm's son Johan Francis Arnold Theodor (b Amsterdam, 2 Aug 1837; d Sloten, 1912) was probably the most distinguished flautist of the family and a fine pianist. He made his debut at the age of 15 and later played in the Park Orchestra, transferring to the Concertgebouw on its foundation.

Two other members of the family achieved distinction: Jacob Arnold Wilhelm (b Amsterdam, 9 Feb 1871) and Jan (b Breda, 30 June 1898) both led the Concertgebouw, and the latter the Berlin Philharmonic, Dresden Opera and Göteborg orchestras as well.

PHILIP BATE

Dahomey. See BENIN.

D'Alamanya, Johan. See ALAMANI, JO.

Delavayrac [D'Alayrac], **Nicolas-Marie** (b Muret, Haute Garonne, 8 June 1753, d Paris, 26 Nov 1809). French composer. He composed nearly 60 *opéras comiques* that became extremely popular in both France and the rest of Europe. Although his works are chiefly remembered for their many sentimental *romances*, they also contain music of dramatic strength.

1. LIFE. Delavayrac's father was a king's counsellor and a wealthy aristocrat either by birth or through personal ennoblement. Nicolas' musical talents were partially cultivated at Toulouse College where he went from the age of eight, and, on his return to Muret six years later, in singing lessons and playing the violin in a local orchestra. He was obliged by his father to study law, and had

qualified in this by the age of 21. In 1774 he went to Versailles, where a commission had been obtained for him as a sub-lieutenant in the personal guard of the Count of Artois, later Charles X. In Paris Dalayrac encountered influential musicians and musical amateurs such as the Baron de Bésenval and the Chevalier de Saint-Georges; he later received composition lessons from Honoré Langlé. Grétry reported in his *Mémoires, ou Essais sur la musique* that Dalayrac was admitted to his study, but was not a formal pupil.

Dalayrac's earliest compositions were violin duos and string trios and quartets, some of which are lost. Published under an Italian pseudonym, the quartets were very popular; Pixérécourt related how the composer's identity was found out. Surviving sets of quartets start with op.4; the earliest known publication date for any Dalayrac work is 1777 when the *Gazette de France* of 28 November announced 'Six [unidentified] quatuors concertants'. Pixérécourt wrote that Dalayrac was a member of the masonic Lodge 'Neuf-Socurs' and that in 1778 he composed music both for Voltaire's masonic reception and for that of Franklin at Mme Helvétius's. This has been neither substantiated nor disproved.

In 1781 Bésenval asked Dalayrac to set two stage works to music for private performance. *Le petit souper* and *Le chevalier à la mode*. These were well received, and the following year, under the protection of Marie-Antoinette, *L'éclipse totale* was given at the Comédie-Italienne. Before the Revolution Dalayrac's major successes were *Nina*, *ou La folle par amour* (1786), *Azéma*, *ou Le nouveau Robinson* (1786) and *Les deux petits Savoyards* (1789). Like most of the remainder, these were printed in full score. Beethoven possessed a copy of *Les deux petits Savoyards*. *Nina* is important both for the universal popularity of the romance, 'Quand le bien-aimé reviendra' (mentioned in Berlioz's *Mémoires*), and for its concentration on the sentimental story, comic elements being excluded altogether. It may have been the first *opéra comique* of this type.

The tale concerns a girl, Nina, who becomes unbalanced when her father insists on separation from her lover, Germeuil. Believing Germeuil to be dead, Nina, dressed in white, goes daily to the same place, to await his return. When he does return he is welcomed as a son by Nina's distraught father. The crisis of the story involves Nina's dramatic recovery. As in Act 3 of *Tristan und Isolde*, a shepherd's tune (oboe solo) is used to distract the sick protagonist. The simple emotionalism of the story was still gratifying audiences in the 1820s in a ballet version at the Paris Opéra, although the subject matter had originally been considered so innovative that the piece was tried out in private. (E. J. Dent stated that the source of the libretto was French; but a girl crazed through thwarted love appears, also wearing white, as Maria of Moulins in Sterne's influential masterpieces, *Tristram Shandy* and *A Sentimental Journey*.)

From about 1790, Dalayrac was obliged to spell his name in non-aristocratic fashion (rather than D'Alayrac). In 1792 he married the actress Gilberte Sallarde, who later, during the Directory and Consulate, presided over a lively salon. In the difficult days of 1793-5 Dalayrac's purely musical popularity seems to have guided him safely through. He wrote one or two Republican songs, but his most usual contribution by far was the indirect one of adapting popular operatic tunes to Republican words; his 'Veillons au salut de l'empire' (originally from *Renaud d'Ast*, 1787) was a

favourite revolutionary melody. In 1795 he was a co-signatory with the foremost Parisian composers in a prospectus advertising the sale of Republican music. Yet his success set him somewhat apart from the 'Conservatoire school' (Méhul, Cherubini, Gossec etc) and he could afford not to join the Conservatoire staff.

In the 1790s Dalayrac's operas were influenced by the gothic taste for castle prisons, the dark and the frightful. *Camille* (1791) portrays a wife unjustly imprisoned the subject (set also by Paër, who also composed a successful *Nina*) may have inspired Lewis's novel *The Monk* (1795). Dalayrac's *Léon, ou Le château de Monténéro* (1798) is based on Mrs Radcliffe's *The Mysteries of Udolpho*, the *Magasin encyclopédique* expressed surprise at seeing a plot more fit for melodrama on the stage of the Salle Favart. From the outset Dalayrac's work had wide appeal, and for good musical and dramatic reasons. Even England's second Viscount Palmerston was captivated: 'Aug 6th [1791]: Saw a French opera called *Raoul de Crequi*, extremely interesting and admirably acted'.

In 1798 Dalayrac was awarded membership of the Swedish Royal Academy (Pixérécourt reproduced the awarding letter), which indicates something of his European reputation. In 1804 he was made one of the first members of the Légion d'honneur. He continued composing successfully; in 1809 he put particular effort into *Le poète et le musicien*, which was to have been given on Napoleon's coronation anniversary (4 December), but he caught a fever and died before the destined day. The work was first mounted in 1811.

Although Dalayrac never left France, his operas were very popular abroad, especially in Germany, Scandinavia and Russia, a few were adapted in England. Records of their performances in Vienna show that there, as in Paris, his work was accepted as the logical continuation of Grétry's. Beethoven played in the orchestra for *Nina*, *Azéma* and *Les deux petits Savoyards* in Bonn. Weber wrote a critique of *Léheman* (played in Germany as *Macdonald*) and mounted *Adolphe et Clara* and *Les deux petits Savoyards* in Prague in 1814.

In Paris Dalayrac was often admired as well as liked by his peers. When in 1798 the *Courrier des spectacles* criticized *Léon* for 'superflues', H. M. Berton sprang to its defence in a public letter. 'One of the things which most struck the actors and orchestra of the Théâtre Favart . . . was that the music does not at all resemble Dalayrac's other productions'. Pixérécourt stressed the composer's modest, friendly nature and his restrained style of living. That Dalayrac never received a government annuity was ascribed by Pixérécourt to his retiring disposition. A marble bust of the composer, funded by subscription, was placed in the foyer of the Opéra-Comique in 1810.

2 WORKS. To be accorded a biography by the famous Pixérécourt was not, in Dalayrac's case, the mere result of personal friendship. Dalayrac possessed considerable skill not just in selecting suitable librettos, but in successfully determining the delicate balance between music and words that *opéra comique* requires. He was ready to cast aside the most painstakingly written music if it was seen to hold up the action inappropriately, and was nicknamed 'Le musicien poète'. He showed a marked fondness for the operatic ensemble; his often contain entries, exits, conversations and counter-conversations,

chorus work and recitative, and were often designed to raise dramatic tension. In *Nina* dramatic irony is expressed at length in the duet between Nina's father and Germeuil. Dalayrac was prone to exploit sentimental situations in order to depict human affection; but sometimes, as in *Camille*, he achieved greater depth, so far as the context allowed: in Act 2, the duet between husband and wife expresses well the conflicts between mutual affection and genuine mistrust. The operas, like Méhul's, vary to some extent their musical idiom in conformity with the subject matter, be it gothic, oriental, chivalric or comic; but Dalayrac's success in this direction is far more limited than Méhul's, whose works appear the more Romantic by comparison. Several works, notably *Léon* and *Léhéman*, make subtle use of reminiscence motifs. In *Léhéman* the romance 'Un voyageur' is used throughout (as are other themes) to articulate the drama.

Dalayrac's stage music pleased audiences because it possessed the intrinsic merits of audibly strong (but not dull or unadventurous) harmonic structure and of many melodies of high quality. He made perhaps his most lasting contribution to opera in the essentially melodic form of the *romance*. These are outwardly simple, but word-setting and melody-line may be subtle; the appeal of this type of solo was especially felt by Weber. Dalayrac's melodies generally combine traditional French care in observing prosody with free, modern use of wide intervals. His musical style gradually became more lightweight. In contrast to the obvious influence in *Nina* of Gluck's melodies, shorter phrases and (typically) triplet accompaniment figures mark the later operas. This Italianism was criticized in 1813 by Martine, 'partisans praised Dalayrac for "Italianizing" his melody in the works of this last period, and it is precisely this which makes them usually inferior to his earlier ones'. In early operas such as *Sargines* (1788), however, Dalayrac evolved a new style that looked forward both to the Revolution and to Beethoven; it is characterized by rhetoric, military rhythms and instrumentation, thickened orchestral spacing and repeated semiquavers.

The orchestration of Dalayrac's operas is imaginative and successful in its dramatic context; without indulging in excessive noise or experiment it is resourceful. Woodwind solos are favoured, including those for bassoon, and (often in *romances*) muted strings. *Col legno* is used in *Une heure de mariage* (1804). *Lina* (1807) provides possibly the first printed indication anywhere in a full score of soft-ended timpani sticks, in calling for 'baguettes garnies'. In *Léhéman* offstage trumpet-calls in the first finale announce the capture of Léhéman's ally by enemy troops; this 'warning' technique may have attracted Méhul, who used it in *Hélène*, and from *Hélène* it passed to *Fidelio*.

Dalayrac's only published writing was *Réponse de M. Dalayrac à MM les directeurs de Spectacles* (Paris, 1791); he left some unpublished, including 'La folle de St Joseph: anecdote qui a fourni le sujet de Nina, ou La folle par amour' (other writings are listed in *MGG*).

DAVID CHARLTON

Dal Barba, Daniel [Daniele] (Pius) (b Verona, 5 May 1715, d Verona, 26 July 1801). Italian composer, violinist, singer and librettist. In 1741 he began his 40-year career as a violinist and teacher in Verona. His singing début there in Pietro Chiarni's *I fratelli riconosciuti* (1743) was followed by a leading part in *Il Siroe* (1744) and in his own opera seria *Il Tigrane* (1744) and during a stay in Venice in 1746-7, he sang in several *opere buffe* (Teatro S Angelo) and composed a parody, *Il gran Tamerlano* (Teatro Vendramin). Appearances in the Trent summer opera productions *Artaserse* and *Il Demetrio* preceded a two-year post at the Trent Bishopric.

In 1749 Dal Barba succeeded Domenico Zanata, former *maestro di cappella* at Verona Cathedral, as *maestro di cappella* of the Filarmonica and Filotima academies in Verona. These lucrative positions resulted in the composition of a considerable number of masses and hymns. Except for a three-year absence, he remained *maestro* of the Accademia Filotima until its dissolution under Napoleon in the 1790s. Several operas and intermezzos also came from his association with the Accademia Filarmonica. He composed his own libretto for *Il finto cameriere* (Verona, 1749). In 1752 he contributed, along with members of the Veronese nobility, to a poetic anthology in honour of the new Venetian doge. Dal Barba met Leopold and Wolfgang Mozart at the Accademia Filarmonica in January 1770. Leopold noted in a letter (11 January 1770) that he 'sang extempore the most beautiful verses about Wolfgang'.

Having been nominated temporary *maestro di cappella* at the cathedral in April 1762, Dal Barba succeeded to the post on the death of Gerolamo Zanata in 1770. In addition to composing a large quantity of masses, hymns and motets, he taught counterpoint and thoroughbass in the school of acolytes. He retired from this position in 1779, but continued composing until 1791.

Dal Barba's 12 violin sonatas, composed about 1747 and dedicated to a Venetian patron, typically display his lyrical style. In these pieces ornate melodies are usually balanced within bipartite structures. Sacred compositions often include strings and wind, and contrast declamatory choral and arioso solo sections. His works display not only technical competence, but an intimate familiarity with current idioms and popular taste.

WORKS

OPERAS

(music lost, printed libretto sources listed)

- Il Tigrane* (opera seria, 3, ?Goldoni), Verona, Filarmonico, carn 1744, *I-VEc*

MICHAEL DUBIAGA JR

Dalberg, Johann Friedrich Hugo, Freiherr von (b Herrnsheim, nr Worms, 17 May 1760; d Aschaffenburg, 26 July 1812). German author, amateur composer and aesthetician. Born into a noble family, he was tutored at home and then received theological training at Göttingen. Though physically deformed, he was a virtuoso pianist by the time he reached Göttingen. He became a canon at Trier, Worms and Speyer, and a privy counsellor to the Elector of Trier, but he was able to devote most of his time and energy to scholarly pursuits including music. He studied composition with Ignaz Holzbauer and travelled extensively in Italy and England. His works about music and his compositions were published regularly in his lifetime and were regarded seriously by professionals.

Dalberg's writings cover such diverse subjects as meteorology, penal law and translations of works on oriental subjects. This wide range of interests that hints at the dilettante is also reflected in his writings on music. Their topics include the music of India, ancient Greek music, newly invented instruments and the history of harmony, and there is an important series of fanciful, highly imaginative works that reflect the aesthetic attitudes of early German Romanticism. Many of the latter reflect a strong interest in the nature of musical inspiration and its relation to the inner world of the artist. The earliest of these works appeared in the 1780s and establishes Dalberg as one of the first musical Romantics. His *Blicke eines Tonkünstlers in die Musik*

der Geister (1787) pictures an artist sick and discouraged, turning to his piano and finding on it

Pergolesi's *Salve regina* as though sent by an angel I sang through it and the heavenly 'O dulcis, o pia, etc.' filled my soul with such an exalted feeling of devotion and soft melancholy that I dissolved into tears.

The book about the Aeolian harp is in the form of an allegorical dream that evokes an atmosphere similar to that found in many of E. T. A. Hoffmann's writings about music.

Dalberg's compositions were generally for piano, for chamber ensemble or for solo voice with accompaniment. Many of them were reviewed in contemporary journals, where they were received with respect but with occasional comments suggesting technical shortcomings.

WORKS

VOCAL

(all for 1v kbd, unless otherwise indicated)

- Sacred Eva's Klagen beim Anblick des sterbenden Messias, declamation (Klopstock), with insts (Speyer, 1783-4). Der sterbende Christ an seine Seele, with insts (Dresden, 1787).  HOWARD SERWER

Dalby, (John) Martin (b Aberdeen, 25 April 1942). Scottish composer. After three years as a viola player in the National Youth Orchestra he won a scholarship in 1960 to the RCM in London. There he studied composition with Howells and the viola with Riddle. Further scholarships enabled him to spend two years in Italy, during which time he toured Europe and North Africa with an Italian chamber orchestra. Already he was showing himself to be a fluent composer in a con-

ventional idiom, which was employed to fastidious and sensitive effect in his *Eight Songs from the Chinese*. With his Piano Trio (1967), commissioned by Glasgow University, he reached a stylistic turning-point. The work revealed a tough new intellectual force, sharper-edged and more abstract. Already it had been signalled by his *Waltz Overture* (1965), a succinct and witty tribute to the Second Viennese School, and it was to be developed in his *Symphony* (1970) and *The Tower of Victory* (1973), both written for the Scottish National Orchestra. The latter, a tone poem inspired by an Indian legend, atmospherically explores the sonorities of lower-pitch instruments.

Dalby has stated that he regards each of his works as an adventure (for himself as much as for his performers and listeners). The *Concerto Martin Pescatore*, written in 1971 for the Academy of St Martin's-in-the-Fields, is thus an adventure for strings, and the trumpet-biased *Cancionera para una mariposa*, one of a group of works based on old Spanish music, is a kind of 'classical' parallel to the sound world explored by the jazz musician Miles Davis in his *Sketches of Spain*. Dalby's vocal and choral music, especially the mystical *The Keeper of the Pass* (1971) and *Orpheus* (1972), likewise makes creative use of many of the modern sounds and techniques. His *Whisper Music* (1971), with its delicate sprays of woodwind, trumpet, harp, percussion and cello tone, ranks high in his chamber output.

Apart from composing, Dalby has worked in other areas of music. From 1965 to 1971 he was a BBC radio producer in London, in 1971 he was appointed Cramb Research Fellow in composition at Glasgow University and the following year he became the BBC's head of music in Scotland.

Dale. English family of music publishers, music sellers and instrument dealers, established in London

(1) **Joseph Dale** (b 1750; d London, 1821). He founded a business in 1783 at his private house, and from there issued his first publications, including a number of operas such as Shield's *Rosina* and *The Flicht of Bacon*. A music catalogue of 1785 announced that the copyrights and plates of these and other works had recently been purchased from WILLIAM NAPIER; at about the same time he also purchased plates and copyrights from Charles Bennett, once the property of John Welcker. In January 1786 he moved to premises

previously occupied by Samuel Babb, whose trade stock and large circulating music library Dale purchased. In 1805 he took his son William into partnership and the firm became known as Joseph Dale & Son (or Joseph & William Dale). The partnership was dissolved in 1809, when William set up in business for himself, Joseph continued alone in the firm until his death.

Joseph Dale was also a musician, and served as organist of St Anthony and St John the Baptist, Watling Street (1805). He composed concertos and sonatas, and arranged vocal airs with variations for the harpsichord or piano. He also took out letters patent for improvements to the tambourine. His firm, particularly in its early years, issued music of every description, including the operas of Storace and others, piano music by Clementi, Dussek, Kruppholtz and Steibelt, collections of English and Scottish songs, country-dance music and vast quantities of sheet music.

(2) **William Dale** (b London, ?1780-85, d ?1827) Son of (1) Joseph Dale. He was in partnership with his father from 1805 to 1809, when he set up his own business as publisher, music seller and instrument dealer, issuing mainly sheet music. Elspeth Dale, presumably his widow, continued the business from 1827 until about 1832, it was then succeeded by Dale, Cockerill & Co., and in 1837 by G. Gange & Co., piano manufacturers and music sellers.

(3) **James Dale** (fl c1800) Perhaps a brother of (1) Joseph Dale. He was a composer of sonatas and other works for piano, some of which were printed and published by him about 1800.

WILLIAM C. SMITH/PETER WARD JONES

Dale, Benjamin (James) (b London, 17 July 1885, d London, 30 July 1943) English composer and educationist. He studied at the RAM under Corder and was quick to show his talent: an overture inspired by Macaulay's *Horatius* was performed when he was only 14. His first published and still best-known work is the Piano Sonata composed in 1902 when Dale was still a student. Another notable success was his Suite for viola and piano (1906), the last two movements (Romance and Finale) were afterwards orchestrated, and the Romance became one of the most popular pieces in Tertis's repertory. The Phantasy for viola and piano (1911) was prompted by Cobbett, while the Introduction and Andante for six violas (1911) was written for Tertis's pupils.

In August 1914 Dale was in Germany and was interned until March 1918. His health was impaired and on returning home he wrote little; but a journey round the world in 1919-20, occasioned by an examining visit to Australia and New Zealand, seems to have had a stimulating effect, for in 1921-2 he composed a Violin Sonata and in 1923 the festival anthem *A Song of Praise*. His last work, *The Flowing Tide*, though not completed until the year of his death, was sketched in 1924. In later years Dale was greatly occupied with educational work, particularly in connection with the RAM and the Associated Board. This, together with his fastidious and self-critical approach, kept his output small. Corder once remarked that Dale had written

'fewer and better works than any English composer of his generation', but his remarkable early promise was largely unfulfilled.

EDWIN EVANS (with others)/HUGH OTTAWAY

Dale [née Richards], **Kathleen** (b London, 29 June 1895). English musicologist, composer and pianist. Her music studies were pursued privately with York Bowen and Fanny Davies for piano and with Benjamin Dale (whom she later married) for composition. From 1926 to 1928 she studied Swedish language and literature at University College, London, and she has since published translations from that and other languages (e.g. Redlich's *Claudio Monteverdi* and Reifling's *Piano Pedalling*). She taught theoretical subjects at the Matthay School (1925-31) and taught and lectured for the Workers' Educational Association (1945-50, 1957). She served on the council of the Society of Women Musicians (1920-25, 1946-9) and acted as Ethel Smyth's musical executor in 1944. Kathleen Dale's writings are mainly in the field of keyboard music, though she has also written a biography of Brahms and has written personal reminiscences of Ethel Smyth and Marion Scott. She edited Schubert's E minor Piano Sonata for its first complete publication (1931), and some of his songs.

Kathleen Dale was most active as a pianist early in her career, broadcasting frequently during the period 1927-31. Her compositions, published under her maiden name, are mostly in small forms and include partsongs, duets for two violins, pieces for violin and piano and for piano solo and duet.

FRANK DAWES

D'Alembert, Jean le Rond (b Paris, 16 Nov 1717; d Paris, 29 Oct 1783). French philosopher, mathematician and man of letters. He was the illegitimate son

of the licentious Marquise de Tencin, mistress of a great salon, who abandoned him on the steps of St Jean le Rond, near Notre Dame. He was brought up in the house of a glazier, and his father, the lieutenant-general of artillery Destouches, arranged for his education at the Collège Mazarin. A brilliant pupil, he declined to study theology and chose law, and graduated as advocate in 1738; but already mathematics were absorbing more of his energies. His first mathematical publication appeared in 1739, and his *Traité de dynamique* (1743) was a work of major importance in the field. A sceptic or agnostic in religion, he became one of the leading *philosophes* and was Diderot's chief assistant at the inception of the *Encyclopédie*. Although mainly concerned with the sciences, he contributed articles on many subjects; his liberal political views, expressed in the article 'Genève', led to a ban on the publication in 1759. D'Alembert also wrote the *Discours préliminaire* (1751) in which he summarized the state of human learning, classified the arts and sciences, and traced them to their origins with the intention of showing their rapid growth since the Renaissance and of demonstrating the order and connection of human knowledge. The lucidity of his literary style was generally admired, but his subordination of religion led to attacks from the Jesuits. He was a member of the Académie Française from 1754 and its permanent secretary from 1772 until his death.

D'Alembert's scientific clarity of thought is apparent in his writing on music which, however, suffers from his aesthetic prejudices. His most important musical publication was his *Eléments de musique théorique et pratique suivant les principes de M. Rameau*, an outstanding work of elucidation which was widely read for over 50 years, it was translated into German by Marpurg in 1757. In 1759 D'Alembert published an important essay, *De la liberté de la musique*, and before he left the *Encyclopédie* in 1758 he had written or collaborated in nearly 30 musical articles. Some, such as 'Acoustique', reflect his scientific interests. In the articles on theoretical questions D'Alembert tried to do justice to Rameau's views but could not accept his speculative derivation of geometry from musical laws. He was reluctantly drawn into controversy with Rameau, whose 'Lettre à M. d'Alembert sur ses opinions en musique insérées dans les articles Fondamental et Gamme de l'Encyclopédie' (*Code de musique pratique*, 1760) accused D'Alembert of inconsistency but added no cogent arguments in support of his own case. Rameau's hostility was mostly directed at Rousseau, and D'Alembert closed his own part in the controversy with his 'Lettre à M. Rameau' (*Mercur de France*, March 1762). He played little direct part in the Querelle des Bouffons, but summarized it admirably in *De la liberté de la musique*. This essay, mainly an attack on French music at the expense of Italian, is, like other miscellaneous writings of D'Alembert, full of praise for Rameau.

D'Alembert's musical aesthetic suffers from the limitations of 18th-century rationalism. He set little store by apparently inarticulate instrumental music: 'music is a kind of language made to produce feelings in the soul' (*Fragment sur la musique en général*). Music, he felt, is an art of imitation, and 'music which does not paint is just noise' (*Discours préliminaire*). His insistence that particular instruments were confined to particular affections led him to consider the very idea of a

flute sonata 'une bizarrerie', since it must include fast music and the flute can only express sadness or tenderness. His ideas on opera, however, are representative of the best in Encyclopedist thought: that French music should be changed, or abandoned, in favour of Italian, but that the dramatic structure of French opera was better and should be preserved. These ideas were variously put into practice, amid renewed controversy in which D'Alembert played no significant part, by Marmontel with Piccini, and by Gluck. Some of D'Alembert's articles (including 'Fondamental' and 'Gamme') were reprinted in the *Encyclopédie méthodique* (1791).

Dalhart, Vernon [Slaughter, Marion Try] (b. Jefferson, Texas, 6 April 1883; d. Bridgeport, Conn., 14 Sept 1948). American baritone. For several years he sang popular music and light opera in New York, making numerous recordings. In 1924 he experimented with the hillbilly idiom and recorded such songs as *Wreck of the Old 97* and *The prisoner's song*, which was enthusiastically received. Thereafter he recorded only country songs, for virtually every record company and under many pseudonyms. Although he recorded every type of country song, he excelled in moralistic ballads that describe dramatic and generally tragic incidents (e.g. *The*

death of Floyd Collins and The fate of Edward Hickman).

Dall'Abaco, Evaristo Felice (b. Verona, 12 July 1675; d. Munich, 12 July 1742). Italian composer. He was born into a family of high social standing, his father being a jurist. As a youth he learnt the violin and the cello, possibly under Torelli until the latter's removal to Bologna in 1685. In 1696 Dall'Abaco went to Modena, where his services as a musician were much in demand despite his not being attached to the court orchestra. His noted penchant for the French style may date from his Modena days, since the director of the orchestra, Ambreville, was French. After 19 September 1701 no further trace of Dall'Abaco exists in Modena, and the next record of him is early in 1704 as a cellist in the Bavarian court, where one of his colleagues was J. C. Pez. The defeat of the reigning elector, Maximilian II Emmanuel, in the War of the Spanish Succession forced him to flee to the Netherlands, where he brought a large retinue including many of his own musicians. Setting up court in Brussels, Maximilian continued to patronize the arts extravagantly, but further French reverses caused him to withdraw to Mons in 1706. The capitulation of Mons following the battle of Malplaquet in 1709 sent the elector back to France, and a relatively impoverished court was established in Compiègne by grace of Louis XIV. Throughout these unsettled times Dall'Abaco remained at the elector's side. He had married Marie Clémence Bultinck in the Netherlands, and their son Joseph-Marie-Clément was born in 1709 or 1710.

Dall'Abaco must have deepened his acquaintance with the French style after prolonged residence in the Low Countries and France, though it was only after Maximilian's eventual triumphant return to Munich in April 1715 that specifically French traits began to creep into his published music. Dall'Abaco's loyalty and competence were rewarded by his appointment as Konzertmeister in the reconstituted court orchestra and his elevation to the rank of electoral councillor in 1717, a fact proudly advertised on the title-page of his fifth publication, a set of concertos for various combinations. He also participated as a soloist in so-called 'academies', the precursors of the musical soirées of the 19th century, some of which were held at his own house. Dall'Abaco remained in the service of the Bavarian court after Maximilian's death in 1726 and the accession of the new elector, his son Karl Albrecht. Though a music lover like his father, the new elector favoured a more up-to-date style of music than his Konzertmeister would, or could, supply, with the result that Dall'Abaco's musical activities became increasingly relegated to the background. A second set of concertos, published by Le Cène in 1735 as Dall'Abaco's op. 6, is the sole proof of his continued creative work during this final phase. He seems to have retired on a pension in 1740.

Dall'Abaco's surviving output is restricted to the 66 works published in his lifetime as opp. 1–6. Like Corelli, he seems to have taken unusual care in preparing his

works for publication. The result is a consistently high standard of craftsmanship allied to an original and inventive turn of mind, which shows itself in individual details no less than the broad design. Although the musical materials Dall'Abaco worked with are accurately described as post-Corellian, he did not hesitate to adapt or embroider them for special effect. His movements, whether binary or unitary, are generally long and restate material systematically, using large units. The French influence in his music does not often extend to harmony, melodic style or ornamentation, but is seen in the occasional adoption of the rondeau form and in French dance movements, such as the *passepied*, with no traditional cultivation in Italy, and in a marked fondness for the parallel key (also, more unusually, its satellite keys). Thus an excursion to G major in the course of a movement in E major, such as occurs in the opening movement (*Ciaccona*) of the 12th sonata in his op. 1, is no novelty for him.

Although nominally *da camera*, the 12 op. 1 sonatas for violin and cello (which can also be performed as keyboard solos) contain a mixture of abstract and dance movements, mostly in the Corellian four-movement sequence 'Da camera' thus no longer denotes a distinct sub-genre, still less a prescribed context of performance, though its connotations are appropriate to the medium. The 12 *Concerti a quattro da chiesa* op. 2 are roughly equivalent to contemporary concertos by Albinoni and Albicastro in that they reconcile their adoption of forms taken over from the sonata with the need for display passages allotted to a first or principal violin (more rarely cello) part. Frequent *forte* and *piano* indications stand in lieu of 'solo' and 'tutti' cues, and one might easily believe that they were intended as such, were it not for the ubiquity of Dall'Abaco's habit of marking dynamics carefully. (The question is not whether soloists should be extracted, but rather whether ripienists should be added.) The 12 *Sonate da chiesa e da camera a tre* op. 3 show the same mixture of abstract and dance movements as op. 1, though the former are concentrated in the first six sonatas. They continue along the same stylistic path, as do the 12 sonatas for violin and cello in op. 4, which reproduce the formulae of op. 1. The six *Concerti a più istrumenti* op. 5, which include one concerto with two obbligato flutes and another with obbligato oboe, testify in their cautious way to the Vivaldi vogue of the 1710s. The final set of concertos, op. 6 (presumably not to be identified with a second book of concertos, the projected complement of op. 5), consolidates this more advanced style, introducing a few *galant* touches.

MICHAEL TALBOT

Dall'Abaco, Joseph-Marie-Clément [Giuseppe Clemens] (*b* Brussels, baptized 27 March 1710; *d* Arbizzano di Valpolicella, 31 Aug 1805). Netherlands composer and cellist of Italian descent, son of Evaristo Felice Dall'Abaco. He was at first a pupil of his father, with whom his career has often been confused. The latter, employed at the Munich court, apparently sent his son to Venice to further his musical education, but on his return the young man could not find work in Bavaria, and on 29 March 1729 (not 1719) joined the electoral chapel at Bonn as *Titular-Kammerdiener und Hofmusikus mit dem Violoncell*. On 26 August 1738 he was appointed director of the court chamber orchestra (It was his father, not he, who was made a member of the Electoral Council at Munich.) In spite of his Bonn appointment he was able to travel, going to London and other English towns in 1740, and apparently to Vienna in 1749 when a work by him for five cellos was performed. In 1753 he left the court to go with his wife, Thérèse Cosman, to her family home at Verona. He seems to have remained in contact with the Munich court, and on 22 September 1766 (according to Vannes) was created a baron. He died on his estate in Arbizzano di Valpolicella at the age of 95.

Dall'Abaco's cello sonatas, despite the advent of the new *galant* and pre-Classical styles, retained the gravity of the Baroque and the broad melodic span inherited, through his father, from Legrenzi, Bassani, Vitali and Lully (nearly 40, including many autograph and a few anonymous ones, are in *GB-Lhm*, three in *D-Bds* and one in *A-Wgm*, he also wrote a cantata for the Bonn court, apparently now lost). His reputation however was mainly as an instrumentalist, and his fame as a composer did not match his father's.

PHILIPPE MERCIER

Dalla Casa, Girolamo [Girolamo da Udine] (*b* ?Udine, *d* Venice, c. Aug 1601). Italian composer and instrumentalist. Together with his two brothers Giovanni (*b* ?Udine; *d* Venice, 25 April 1607) and Nicolò (*b* ?Udine; *d* Venice, 8 Feb 1617) he formed the first permanent instrumental ensemble at St Mark's, Venice, where they were appointed on 29 January 1568. They were apparently brought from Udine, although according to local records they were not town musicians there. In Venice they gradually added to their number until in the 1580s Girolamo was named *capo de' concerti* at the basilica, acting as head of a substantial group of players who were to inspire the canzonas and sonatas of Giovanni Gabrieli. The brothers, with Giovanni Bassano, were, however, always regarded as a special salaried nucleus to whom others could be added, and some of Gabrieli's works include concertante parts clearly written for them. Thus they became virtually the first concertino (as opposed to the ripieno) in a concerto grosso. Nicolò published a volume of *Canzoni et madrigali à quattro voci, libro secondo* (Venice, 1591)

and one five-part madrigal appeared in a collection (*RISM* 1593¹).

Girolamo is particularly important as the author of *Il vero modo di diminuir, libri I et II* (Venice, 1584), a treatise on ornamentation which gives many examples of embellished melodic lines from motets and madrigals as performed in Venice in the later 16th century. His figuration relies a great deal on scalewise movement and regular motion in quavers and semiquavers and applies the *gruppo* (or trill) at cadences (two examples in E.T. Ferand *Improvisation in Nine Centuries of Western Music*, Mw. xii, 1956, Eng. trans., 1961, 57ff). In contrapuntal works the themes are usually left unadorned so that the phrase structure is clear, a method abandoned by certain later writers. Although some part-books of his motets are lost and it is impossible to complete them, those that remain show that he applied ornaments to his own music more modestly than his treatise might suggest.

DENIS ARNOLD

Dall'Aglio, Bartolomeo (*fl* Este, 1626-7). Italian composer and organist. In 1626-7 he was organist of Este Cathedral, as is stated on the title-page of his only known publication, *Messe a quattro voci, una concertata a voce piena e due a voci pari con alcuni motetti a una, due, tre, & quattro, con il basso per sonare*. . . *libro primo* (Venice, 1627, the dedication is dated 22 December 1626). Its contents are typical of the large amount of concertato church music for small forces written by provincial musicians for local use in early 17th-century Italy.

GIUSEPPE VECCHI

Dalla Gostena, Giovanni Battista. See DELLA GOSTENA, GIOVANNI BATTISTA.

Dallam [Dalham, Dallans, Dallow]. English family of organ builders.

(1) **Thomas Dallam** (*b* Lancashire, c. 1570; *d* after 1614). He was apprenticed in London to a member of the Blacksmiths' Company, of which he afterwards became a liveryman. In 1599-1600 he made a journey to Constantinople with a mechanical organ-and-clock for the Sultan, described in the state papers as 'a Great and Curious present . . . which will scandalise other nations, especially the Germans'; Dallam's diary, relating the adventure, was published by the Hakluyt Society in 1893. In 1605-6 he moved to Cambridge, having been employed to build a new organ for King's College (see Hopkins and Rimbault). In 1613 he built a two-manual organ for Worcester Cathedral, to the design of

Thomas Tomkins, and a 'fair large and very serviceable double organ' costing £300 for the Chapel Royal at Holyrood, Edinburgh (Inigo Jones designed its case in 1617); in 1613-14 he built a new organ for Eton College. His daughter Katherine married the organ builder Thomas HARRIS.

(2) **Robert Dallam** (b Lancaster, 1602; d Oxford, 31 May 1665). Son of (1) Thomas Dallam. Like his father, he was a member of the Blacksmiths' Company. He built an organ for Durham Cathedral between 1624 and 1627, and new organs for York Minster (1632, two manuals, 14 stops), St John's College, Cambridge (1635; the case survives, now at St Mark's, Old Bilton, Warwickshire), and Lichfield Cathedral (1636). In 1642, with other members of his family, he left England and settled at Quimper; several Dallam organs or their cases survive in Brittany. In 1660, following the Restoration, he sold his share of the business in Brittany and returned to England. In 1661-2 he drew up an elaborate scheme for New College, Oxford, for a new organ of two manuals and 24 stops, with mutations, mixtures and reeds in the French style - an advanced specification for its date. He finally built a smaller organ for the college in 1663.

(3) **Ralph Dallam** (d Greenwich, Aug or Sept 1673). Son of (1) Thomas Dallam. While in Brittany with his family, he described himself as 'organist to the Queen of England', referring to Queen Henrietta Maria, which implies that, like his nephew Renatus Harris, he was a Catholic. In England after the Restoration he built organs for St George's Chapel, Windsor, St John-at-Hackney, London, and the parish churches at Rugby and Lyme Regis. He died while building the organ at St Allege's, Greenwich (begun by him in February, 1672), the instrument was finished by his partner, James White.

(4) **George Dallam** (fl 1672-86). Son of (1) Thomas Dallam. He lived in 'Purple Lane' ('Portpool Lane'), London, in 1672, in 1686 he added a Chaire organ to Harris's instrument in Hereford Cathedral.

Dalla Pergola, Domenico Evangelisti. See EVANGELISTI
 DALLA PERGOLA, DOMENICO.

Dallapiccola, Luigi (b Pisino d'Istria, 3 Feb 1904, d Florence, 19 Feb 1975). Italian composer, pianist and writer, the principal pioneer of dodecaphony in Italy.

1 LIFE. The seeds of Dallapiccola's intense concern for liberty were sown early: born of Italian parents in a disputed territory (then part of the Austrian empire), he was still a child when the grimmer political realities of the time first affected him. In 1916 his father's school was closed by the Austrian government, and in March 1917 the family was interned at Graz, being suspected of Italian nationalism. Only after the war (21 November 1918) could they return to Pisino, Istria having been transferred to Italy.

During these early years Dallapiccola's musical education was inevitably disordered. Already in 1912-16 he was learning the piano and even trying to compose. In Graz, where he no longer had access to a piano,

his musical horizons nevertheless expanded: he went regularly to the local opera house, where he was impressed by the works of Mozart and Wagner. It was after a performance of *Der fliegende Holländer* in 1917 that he became fully aware of his vocation as a composer. Back in Istria, he was by 1919 growing discontented with the small-town limitations of Pisino. He therefore made weekly visits to Trieste to study the piano and harmony, the latter under the composer Antonio Illersberg; and he also travelled more widely: it was at Bologna that he came to know of Debussy, whose music (notably some of the piano pieces, *Pelléas* and *Ichéris*) soon began to obsess him. So strong, indeed, was Debussy's impact that in 1921 Dallapiccola stopped composing and did not start again until 1924, to give himself time to absorb this important influence. At about the same time as his discovery of Debussy, Illersberg aroused in him an enthusiasm (shared by many important Italian composers of the day) for early Italian music, notably that of Monteverdi and Gesualdo.

In 1922, having finished his general education, Dallapiccola moved to Florence, where he became a private piano pupil of Ernesto Consolo, entering the conservatory as a student of harmony and composition in the following year. His first composition teacher there (1923-4) was Roberto Casiraghi; later (1929-31) he attended the class of Vito Frazzi, a disciple of Pizzetti. In 1924 he had another crucial experience (not destined to bear fruit in his own works till many years later) when a performance of *Pierrot lunaire*, at a concert organized by Casella's *Corporazione delle Nuove Musiche*, first brought him into contact with the music of the Second Viennese School. Soon afterwards, having gained his diploma as a pianist, Dallapiccola began teaching and giving recitals - notably, from 1930, in duo with the violinist Sandro Materassi. In 1930 he visited Vienna and Berlin, in the former city Mahler's First Symphony came as another major revelation to him. In 1930-31 he taught the piano at the Florence Conservatory, as Consolo's substitute during his final illness, but it was not until 1934 that he gained an official teaching post, that of professor of 'pianoforte complementare' (i.e. the piano as a secondary study) at the same Conservatory. He remained in this post until his retirement in 1967.

The mid-1930s were a particularly important period in Dallapiccola's development. His musical horizons continued to broaden, by now the music of Busoni, Berg and Webern had entered his field of vision, and he got to know Berg personally in 1934. Meanwhile he was himself becoming known as a composer, greatly helped by Casella's propaganda on his behalf: though more naturally in sympathy with G. F. Malipiero (a hearing of whose *Torneo notturno* in 1932 was yet another important milestone in his experience), Dallapiccola nevertheless retained a profound sense of gratitude to Casella for all he did to further his career, like those of so many other young musicians, in that period. Meanwhile important developments were taking place in Dallapiccola's inner life, with profound repercussions on his music. His preoccupation with liberty, which had lain comparatively dormant since its first awakening in his troubled childhood, was suddenly reawakened with burning intensity by the impact of Mussolini's Ethiopian campaign and the Spanish Civil War. As he himself put it, 'the world of . . . carefree serenity closed for me, and without the possibility of return . . . I had to find other

timber in other woods' Soon afterwards, a mood of impassioned political protest found expression in his music, especially in the *Canti di prigionia* and *Il prigioniero*. The former was first conceived when Mussolini adopted Hitler's race policies (thus threatening the safety of Dallapiccola's Jewish wife), while both works gained still greater urgency under the cumulative experience of World War II. Dallapiccola's refusal at this time to bow to the dictates either of fascism or (in due course) of the occupying Nazis inevitably handicapped his career. But only for a short while was he forced to withdraw entirely, first (October 1943 to February 1944) into the relative safety of the village of Borgunto, outside Florence, and then (March to September 1944) into hiding in various apartments in Florence, including that of Materassi. Otherwise he managed to go on giving recitals, though only, as a matter of principle, in countries not occupied by the Nazis, notably Hungary and Switzerland. He nevertheless seized the opportunity, when passing through Austria in 1942, to meet Webern.

After 1945 Dallapiccola's life was relatively free from external disturbances. A few obstructive antagonisms survived from the war years, but on the whole he had little difficulty in resuming all his old activities and in adding a few new ones: for example, for two and a half years from 1945 he regularly wrote for the Florentine periodical *Il mondo* (soon renamed *Il mondo europeo*). In 1946 he played a major part in getting Italian composers readmitted to the ISCM, at whose first postwar festival the *Canti di prigionia* at last came before a big public, revealing Dallapiccola's major stature to the world at large. During the 1950s his travels abroad became even more wide-ranging: in 1951 Koussevitzky invited him to give a summer course at Tanglewood, and thereafter he visited the USA regularly, sometimes for quite long periods. He continued to travel in western Europe too, and his easy command of German, French and English, combined with his wide culture and his warm humanity, won him international success as a lecturer and so assisted the spread of his music. By the time of the première of his opera *Ulisse* (1968), the eyes of the whole musical world were upon him; and if the critics may not on that occasion have been unanimous in their praise, that première may nevertheless be regarded as the climax of Dallapiccola's postwar career. After *Ulisse* he composed only intermittently: for several months after completing the work he concentrated instead on assembling and adapting his most important lectures and writings for the volume *Appunti, incontri, meditazioni*. In 1972 a brief crisis in his health persuaded him to curtail his travels and public activities and lead a more sedentary life. Thereafter he completed no more compositions, though a few fragments have survived, among them a sketch for the opening of a vocal work, left on his piano a few hours before his death.

2. WORKS. Dallapiccola's music of the 1920s (apart from one movement printed in revised form in a periodical) is unpublished and long since repudiated. It was not available for study during the greater part of his life, and even now (in accordance with his wish that these pieces should not be performed) it is accessible only under strict protective controls. Nevertheless, as well as reflecting various influences these juvenilia already sometimes reveal his emerging personality: the last two songs in *Dalla mia terra* contain early manifestations of his

interest in organized counterpoint; while the tense, passionate side of his nature is evident, for example, in the *Due laudi di Fra Jacopone da Todi*. Dallapiccola was still, however, worlds away even from rudimentary dodecaphony, and the same is true in his works of the early 1930s. Some of his pre-1935 music is almost completely diatonic - consciously archaic in its modal polyphony, and indebted to that 'neo-madrigalian' tradition established before World War I in the choral music of Pizzetti. Dallapiccola's most important essay in straight neo-madrigalism is the first pair of *Cori di Michelangelo Buonarroti il giovane*.

Alongside these explicitly 'archaic' compositions Dallapiccola was writing others juxtaposing diatonicism with a quite bold and intense chromaticism. Although the results are sometimes damagingly eclectic (this is the case in the uneven though imaginative *Partita*), hindsight reveals that he was groping towards his mature style from several directions at once. Moreover, his feeling for soft, evocative, multi-coloured instrumentation was evident from an early stage: his characteristic blend of Debussian sensuousness and Busonian ethereal contemplation led D'Amico to write (in 1947) of the 'soft and starry clime' of many of Dallapiccola's calmer, more lyrical textures.

Dallapiccola's development in the mid-1930s is epitomized in the stylistic changes between the first pair of *Cori di Michelangelo* and the last; although the three pairs were intended to be performed together, they do not form a homogeneous whole. The sombrely evocative *Coro degli Zitti*, in particular, is utterly remote from the radiant archaisms of the first pair. Some passages recall, in their rhythm and harmonic movement, the Sarabande in Busoni's *Doktor Faust*, while Dallapiccola's chromatic tendencies, though still interacting with diatonic elements, for the first time reveal his awareness of the Schoenberg school: this *Coro* makes sporadic but obviously deliberate use of two 12-note series.

Several years, however, elapsed before Dallapiccola began to use series systematically, rather than incidentally as melodies. In the beautiful *Tre laudi* the vocal line starts with a 12-note phrase (accompanied by a B major triad) followed by its retrograde; but this symmetrical serial unit is followed by a diatonic instrumental canon. Even so, modal and chromatic elements have achieved an inner equilibrium (as they have not yet in some earlier works), which makes such juxtapositions acceptable. Furthermore, the diatonic jubilation of the second *laude*, being dissonantly contrapuntal rather than triadic in basis, no longer has the down-to-earth, carefree quality still found, for example, in the *Coro dei Lanzì briachi* or the *Musica per tre pianoforti* - cf. Dallapiccola's remarks, quoted earlier, about the impact on him of Mussolini's Ethiopian campaign. He was in fact exaggerating slightly in claiming that the 'world of carefree serenity' was now closed to him permanently. Nevertheless, the few post-1935 works which do re-enter that world are special cases, such as the disarmingly euppeptic *Piccolo concerto per Muriel Couvreur*, dedicated to a child. The serenity to be found in Dallapiccola's other later music is, by contrast, of a different, usually more contemplative or other-worldly kind.

Dallapiccola's first stage work, *Volo di notte*, re-uses material from the *Tre laudi*. This transference of music originally associated with medieval religious texts to an

Luigi Dallapiccola in 1969

opera about night flying in the Andes is less incongruous than it may seem, for Dallapiccola's libretto contains a strong element of religious symbolism. When, at the climax, the pilot Fabien rises above the storm and, just before death, glimpses the infinite, eternal beauty of the stars, his experience has mystical connotations: for Dallapiccola the stars were a symbol of God (the same equation recurs, with a significant musical quotation from the earlier opera, in the final scene of *Ulisse*). *Volo di notte*, though richly imaginative, is rather mixed in style, the passages which do not derive from the *Tre laudi* sometimes reach out far into the realms of Bergian atonality, with at least one full 12-note chord.

In subject matter, the opera reflects Dallapiccola's growing concern about the predicaments of modern man. From there it was a short step to his first piece of overt 'protest music' *The Canti di prigionia*, which can be rated among his highest achievements, are nevertheless in some ways atypical - the accompaniment, entirely for non-sustaining and semi-sustaining instruments, is closer to Stravinsky's *The Wedding* than to the soft, clarinet-and-violin-dominated textures usually associated with the composer; in the *Canti* the only truly sustained notes are those of the voices, the effect being powerfully symbolic of humanity clinging to life amid menacing destructive forces. Nevertheless, the work follows on from the *Tre laudi* in co-ordinating modal elements (including fragments of the *Dies irae*) with two 12-note series. The latter are mostly confined to the more turbulent sections, in which the eruptively emphatic side of Dallapiccola's nature makes an unprecedentedly powerful impact. At the other end of the work's emotional spectrum there are passages, such as the middle section of the central movement, where modal lines interlace in textures of truly celestial calm: here, like Fabien, the music 'rises above the storm'.

giving a glimpse of the ultimate beauty which lies beyond, with its promise of liberation in the hereafter.

The second outstanding piece of 'protest music', *Il prigioniero*, is more pessimistic. Here the idiom is wholly dodecaphonic (though several series are employed and free use is made of octave doubling etc): the series often, however, contain diatonic, even pentatonic segments, which are prominently featured to symbolize the liberty for which the prisoner yearns, spurred on by the gaoler's golden promises. In the end this liberty is revealed as illusion (there is an insubstantial, mirage-like air about the liberty music throughout) and the work ends with a gaping question mark. Despite these differences, *Il prigioniero* can be regarded as, in many respects, a sequel to the *Canti di prigionia*, from which the opera's last choral section quotes. But *Volo di notte*, too, is an important predecessor: both operas owe a fair amount to Berg's influence - refracted, however, through Dallapiccola's profoundly Italian personality.

Dallapiccola has written that 'if one side of my nature demanded tragedy, the other attempted an escape towards serenity'. Nowhere is the truth of this remark more apparent than in his music of the 1940s, for it was between his two great 'protest' works, and during the worst years of the war, that he wrote two notable compositions which seek refuge in the remote, stable world of classical literature and mythology. *Marsia* is his last purely original work featuring straight diatonicism, to which he subsequently returned only in pieces on themes by Paganini and Tartini. *The Liriche greche*, by contrast, are his earliest wholly dodecaphonic composition, but Dallapiccola's dodecaphony, here as in *Il prigioniero* (though to very different effect), has diatonicism absorbed into it, inherent in the interval structures of the series. This fact, combined with the continued 'soft and starry' quality of the instrumentation, places these exquisite songs firmly in the line of succession of the *Tre laudi* and worlds away from the Schoenbergian spirit.

If Dallapiccola's serial methods of the 1940s were unorthodox, and in some ways naive, the 1950s saw a marked refinement in his technique: 'crudities' such as octave doubling were eliminated, his rhythms became more flexible, his lines more angular, his textures more intricately organized. *Job*, though relatable in some ways to *Il prigioniero*, is his first major work based largely on a single series, and his immediately subsequent compositions show increasing signs of Webern's influence. The extent (and limitations) of this new influence can be seen if one places the *Goethe Lieder* alongside the Austrian composer's similarly scored op. 16 canons: Dallapiccola's contrapuntal processes are comparable though less rigid, and he obviously learnt much from Webern's rhythmic and melodic methods; yet the fact that even here the basic series contains diatonic segments (one of five notes, one of six) is itself enough to prevent the result from sounding like Webern, and to establish a link with Dallapiccola's pre-1950 music. Nor had he lost sight of his earlier debt to Busoni: the *Piccola musica notturna* (perhaps his most perfect instrumental work) is a latter-day, dodecaphonic counterpart to the older composer's *Berceuse élégiaque*.

From the mid-1950s Dallapiccola's style reached a state of stability: the new Webernian influence became absorbed, like its predecessors, into a personal language now of exceptional sensitivity, which thereafter changed

very little. This stylistic stabilization entailed sacrifices. gains in refinement are offset by losses in dramatic impetus, and it is no accident that Dallapiccola's most universally accepted later pieces have on the whole been short and lyrical. Probably the most perfect embodiments of his late manner are the numerous further pieces for solo voice with instrumental ensemble, pieces whose ancestry can still be traced back, through the *Liriche greche*, to the *Tre laudi* and beyond. The basically unchanging style of these later vocal works does not prevent them from giving apt expression to widely varied texts: compare, for instance, the *Cinque canti*'s picturesque word-painting with the subdued philosophizing of the *Parole di San Paolo*, or with the alternations between mystical contemplation and fierce, incandescent emphasis in the superb *Concerto per la notte di Natale*. Nor are there signs of declining inspiration even in such very late pieces as the *Commiato*, or the disarming *Sicut umbra* in which Dallapiccola's star fixation shows itself in a new way: musical figures are devised so that they look on paper like well-known constellations, while sounding as 'soft and starry' as ever.

Dallapiccola's larger pieces of his last 25 years proved more controversial. The set of *Canti di liberazione*, his third major composition on the theme of liberty, is the subtlest of the three in texture and rhythm. For this very reason, however, the work is less immediate in impact than are the *Canti di prigionia* and *Il prigioniero*, taken as a whole it lacks those pieces' overwhelming urgency, despite many impassioned pages. In *Ulisse* (his largest and most ambitious composition), too, it would be a mistake to look for the dramatic tension of *Il prigioniero* (the idiom is that of the post-1955 songs writ large). After its première the opera was criticized for its lack of theatrical qualities and for the uniformly slow pace underlying long stretches of the music. Later performances have, however, revealed that a less naturalistic, more stylized and oratorio-like production can make a much more favourable impression; and in any case several individual scenes (including the whole prologue) show imaginative qualities of the highest order. Being essentially a restrained philosophical meditation on modern man's search for a meaning to existence, *Ulisse* is never likely to be popular. But it will surely be remembered, and time may even put it in the same category as, say, *Doktor Faust*. Moreover, in bringing together on a large canvas many characteristics seen separately in the preceding smaller pieces, the opera forms a culminating point in Dallapiccola's output.

JOHN C G WATERHOUSE

Dall'Aquila, Marco [Adler, Marx vom] (b c1480; d after 1538). Italian lutenist and composer active in Venice. In 1505 the Signory granted him a ten-year privilege to publish lute tablatures in competition with Petrucci. Although no publications issued under this licence are known, the main source of Dall'Aquila's works (*D-Mhs* 266) may have been copied from a printed tablature now lost. His reputation was such that in about 1524 Pietro Aaron consulted him on a question of music theory, to the amazement of Giovanni Spataro who doubted whether a 'musician [Aaron] should seek to have the light of intelligence from a strummer of instruments'; Pietro Aretino, in a letter from Venice dated December 1537, mentioned 'my master Marco Dall'Aquila'.

Stylistically and chronologically Dall'Aquila stands

slightly before Francesco da Milano, his junior by some 15 years. Although his prelude and two of the ricercars emulate the quasi-improvisatory abstract pieces by Petrucci's lutenists (published between 1507 and 1511), most of his ricercar-fantasias are mature examples of the point-of-imitation and dialogue style that Francesco later brought to a 'classic' phase. Dall'Aquila preferred the structural repetition of the frottola and Parisian chanson to the traditional continuously evolving form. His pieces are exceptional for their exploitation of figures, idioms and sonorities suited to the lute: a *ricercar senza canto* uses only the five lowest courses; another *ricercar* begins with brilliant passage-work on the lowest course, then the next highest course is added in a duo, and gradually the other courses are introduced until all strings are brought into simultaneous play.

In the preface to Francesco da Milano's 1536 lute publication, Francesco Marcolini cited him, Dall'Aquila and Alberto da Ripa as the three worthy successors of Giovanni Maria Alemanni (Hebreo) and Giovanni Angelo Testagrossa in the founding of a new style of lute music, an assessment fully justified by Dall'Aquila's compositions.

WORKS

- 3 fantasias in 1536¹⁰ (repr. 1552²⁹, 1552³¹), 1 ed. in GMB
14 ricercar-fantasias, 6 chanson intabulations (incl. Passereau's Il est bel et bon and Janequin's La bataille), 1 prelude, 1 setting of the traditora dance formula, *D-Mhs* 266

ARTHUR J. NESS

Dall'Argine, Costantino (b Parma, 12 May 1842; d Milan, 1 March 1877). Italian composer and conductor. His father, Luigi Dall'Argine (b Parma, 24 March 1808; d Parma, 11 Jan 1869), was a tenor and a conductor. Costantino began to study composition at Busseto and continued at the Milan Conservatory. He became famous for his ballets, most first performed at La Scala, which owed their success to a facile brilliance conforming to the taste of the day. One of the most successful, *Brahma*, was taken up by critics and acclaimed as a symbol of traditional Italian music in opposition to Boito's avant-garde cultural tendencies when it was performed with each of the halves of *Mefistofele* on its stormy revival at La Scala on 7 and 8 March 1868. Dall'Argine's unwise, and unsuccessful, attempt to set *Il barbiere di Siviglia* aroused sharp but short-lived controversy, followed by rapid and complete oblivion for this mediocre score. Dall'Argine dedicated it to Rossini himself, as though to excuse his boldness (Rossini's reply is printed by Fétis). Dall'Argine had a successful career as a theatre conductor in Italy, Egypt, Spain and the USA.

WORKS

- More than 30 ballets, mostly perf. Milan, many pubd in pf arr. (Milan), 3 operas, incl. *Il barbiere di Siviglia* (C. Sterbini), Bologna, 1868, vocal score (Bologna, c1870); dances, marches, pf. songs; others

FRANCESCO BUSSI

Dalla Rizza, Gilda (b Verona, 2 Oct 1892; d Milan, 4 July 1975) Italian soprano. She studied with Alerano Ricci at Bologna, making her début there as Charlotte in *Werther* (1912). Early successes in the Italian provinces and South America brought her to the attention of Puccini, who wrote for her the part of Magda in *La rondine* (first performance, Monte Carlo, 1917). She was also the first Italian Suor Angelica and Lauretta in *Gianni Schicchi* (Rome, 1919), but at the first Covent Garden performances (1920) failed to repeat her successes in these roles. After a performance of *La fanciulla del West* at Monte Carlo in 1921 Puccini said 'At last I've seen my Fanciulla'; although he wrote Liù with her in mind, it was created by another singer. Toscanini, a great admirer, engaged her from 1923 for La Scala (she had first appeared there in 1915, as Jaroslava in *Prince Igor*) where her Violetta caused a sensation. Of the 58 roles in her repertory, 13 were creations, including Giulietta in Zandonai's *Giulietta e Romeo* and Mariella in Mascagni's *Il piccolo Marat*, she was the first Italian Arabella at Genoa in 1936. She retired from the stage in 1939, but played Angelica once more during the 1942 Puccini celebrations at Vicenza. She taught at the Benedetto Marcello Conservatory, Venice, and privately, numbering among her pupils Elena Rizzieri, Gianna D'Angelo and Anna Moffo. A beautiful woman, generally considered a great singing actress, she was called the 'Duse of the Lyric Theatre'. Unfortunately her records give an inadequate impression of her theatrical impact. She was married to the tenor Agostino Capuzzo.

HAROLD ROSENTHAL

Dall'Arpa, Giovanni Leonardo. See ARPA, GIOVANNI LEONARDO DELL'.

Dallas. American city in Texas. It is a centre of mercantile industry and finance and one of the most important cultural centres in the south-west USA. The city's formal musical life began with Gilbert and Sullivan's *Iolanthe*, which opened the first Dallas Opera House on 15 October 1883, the house served itinerant musicians, acting troupes and touring opera companies for some years. In 1913 a committee appointed by the chamber of commerce invited the Chicago Opera Company to visit the city and for about 20 years Texans heard such singers as Garden, Tetrassini, Dalmore's and Shalyapin. During the 1930s Fortune Gallo took his San Carlo Opera to Dallas, and in 1939, under the auspices of the Dallas Grand Opera Association, the Metropolitan Opera included Dallas in its annual tour. The Metropolitan company has continued to give about six performances each spring (except for 1941-3 and 1961).

In 1957 the Dallas Civic Opera was founded with Lawrence Kelly, former manager of the Chicago Lyric Theatre, as general manager, and Nicola Rescigno as musical director. A performance of *L'italiana in Algieri*, designed by Zeffirelli and starring Simionato, in the State Fair Park Music Hall (capacity 4100) on 12 November 1957 inaugurated the company's activities; using international and local casts it presents a wide repertory. Callas played Medea in 1958, the year the Dallas Civic Opera established an annual autumn season of three or four productions. In the next 17

seasons the company produced 44 different operas, including the American premières of Handel's *Alcina* and Monteverdi's *L'incoronazione di Poppea*. Many singers have made their American operatic débuts in Dallas, including Sutherland (in *Alcina*), Alva, Berganza, Dernes and Olivero. In 1974 Kelly died and Rescigno was appointed general director the following year.

The Dallas SO was founded in 1900 as the Dallas Symphony Club under the direction of Hans Kreisig, an itinerant German-born pianist and conductor; an ensemble of about 35 musicians, it continued under various conductors (Walter Fried, 1905-11 and 1918-24, Carl Venth, 1911-14, Paul VanKatwijk, 1925-38; Jacques Singer, 1938-42) until it was reorganized as a full-size orchestra under Antal Dorati in 1945. Walter Hendl conducted the orchestra from 1949 to 1958, followed by Paul Kletzki from 1958 to 1961, the year in which Georg Solti was appointed senior conductor. He soon left after disagreements with the symphony board, and was replaced in 1962 by the former assistant conductor, Donald Johanos, who remained until 1970. Anshel Brusilow then tried unsuccessfully to combine the orchestra's popular and serious appeal, and was replaced in 1973-4 by Max Rudolf. A million dollars in debt, the orchestra suspended its activities in March 1974, but it was able to resume concerts in February 1975 under its guest conductor Louis Lane. Eduardo Mata was appointed principal conductor from 1977 with Kurt Masur as principal guest conductor from 1976. The Dallas SO season usually includes 15 or 16 programmes given two or three times each. Until 1973, when the orchestra moved to the State Fair Park Music Hall, concerts were given in the McFarlin Memorial Auditorium (capacity 2500) at Southern Methodist University.

Other musical activities in Dallas include concerts sponsored by the Dallas Chamber Music Society (1942), a recital series sponsored by the Dallas Civic Music Association (founded 1930), and a 12-week season of summer musicals (begun in 1941) in the State Fair Music Hall. The 180-voice Grand Chorus (1942) from nearby North Texas State University frequently appears with the Dallas SO, and the university's opera workshop also presents performances in the city. The Lyric Theatre of Southern Methodist University, founded in 1950, performs two to four operas a year and gives concert performances of American one-act operas. Fort Worth, 48 km from Dallas, is the home of the Texas Boys Choir and the Fort Worth Opera Association, both founded in 1946.

SUSAN THIEMANN SOMMER

Dalla Tavola, Antonio (b Padua, d Padua, 10 June 1674). Italian composer. He was a monk. In 1634 he was director of music to the town of Montagnana in the Veneto and in 1640 *maestro di cappella* of the Cappella Santa, Padua. He published a book of masses for three to eight voices and continuo (Venice, 1634) and wrote music for *L'amor pudico, a torneo a cavallo* by Pio Enea degli Obrizzi produced at Padua in 1643.

Dalla Viola [della Viola, de la Viola, Viola]. Italian family of musicians, active at Ferrara from about 1470 to about 1570. The relationship between them has not been firmly established. Apart from those discussed below, Andrea dalla Viola served the Ferrarese court

from 1470 to 1506, and his brother, Zampaulo, was a court instrumentalist from 1478 to about 1500, and still active in 1512. One of Andrea's sons, Agostino, also known as Agostino da Ferrara, was a well-known singer and instrumentalist at the court from about 1497 to 1522.

(1) **Alfonso dalla Viola** (b Ferrara, c1508; d Ferrara, c1573). Composer and instrumentalist, possibly the illegitimate son of Agostino dalla Viola. He was in charge of the Duke of Ferrara's *musica da camera segreta* from 1528, and served the Este family for 40 years as a performer and composer. From about 1563 to 1572 he was *maestro di cappella* at Ferrara Cathedral. His fame as an instrumentalist is recorded by Messisbugo and other contemporary writers, including Luigi Dentice (*Due dialoghi della musica*, 1553) who described him as 'no less a marvel in counterpoint and composition than in playing the *viola d'arco* in concert'. He is said to have composed music for the wedding of Ercole II d'Este to Renée of Lorraine in 1528. He also provided music for performances at Ferrara of a number of plays, chiefly classical pastorals, over a long period, from about 1541 to 1567 (but he did not write the 'opera' credited to him by Berlioz in *Les soirées d'orchestre*). Of this music for plays one fragment survives: a copy of Beccari's *Sacrificio* (printed in 1555) contains some manuscript pages with Alfonso's setting of a strophic invocation to Pan, a solo bass line said to have been sung and accompanied on the *lira* by (2) Francesco Viola's brother, Andrea, in a performance of the play in 1554. This source also contains chordal ritornellos for this scene and a four-voice canzone serving as a musical finale. The style of the music is close to the simpler pieces in surviving Florentine *intermedi* of the period. Many of Alfonso's madrigals have bass lines only slightly less declamatory than that of the invocation to Pan, its importance as an example of early monody has been exaggerated.

Alfonso's madrigal books include a few settings of Ariosto, whom he apparently knew, as well as Petrarchan verse typical of the period. The music is expertly written, showing full awareness of the style cultivated by Verdelot and Arcadelt, and has touches of individuality in declamation and tone colour. *Quando per dar al mio languir* shows that the new 'chromatic' madrigal, with its short note values, was known in Ferrara by 1540, but there is little suggestion in Alfonso's music of the style of Willaert or Rore.

Music for plays: *Orbecche* (Cinzio), 1541, lost; *Il sacrificio* (Beccari), 1554, frag. in *I-Fn*, ed. in Osthoff, II, 84; *Aretusa* (Lollio), 1563, lost. Lo sfortunato (Argenti), 1567, lost

(2) **Francesco Viola** (b Ferrara; d Ferrara, March 1568). Composer. He sang at Ferrara Cathedral from about 1522 to 1526, under Willaert's direction. His presence at the court musical establishment is documented from 1533. He taught Ercole II and was also patronized by Ercole's brother, Cardinal Ippolito II, who got him out of prison in 1539 and took him to Rome. In 1540 Francesco wrote music for an allegorical triumph designed by Benvenuto Cellini, in honour of Pope Paul III. Returning to Ferrara, he collaborated with Antonio dal Cornetto and Jacques Brunel in the *Concerto della comedia* (music for *intermedi*) in honour

of Pope Paul's entry to Ferrara. In 1553 he received a benefice from Ercole II. He accompanied Prince Alfonso d'Este to Venice in 1558, and edited and wrote the dedication to Willaert's *Musica nova*, published under Alfonso's patronage in 1559. In that year he succeeded Rore as *maestro di cappella* in the establishment of the prince as Duke Alfonso II. The text 'Inclitae Ferrariae Alphonso Duci quinto laeta longa secula' in the tenor of the *Sanctus* in Francesco's *Missa 'Veni Sancte Spiritus'* celebrates Alfonso's accession. Francesco visited Venice in the duke's company in 1562, he became a member of the *Accademia dei Concordi*, and figures, along with Willaert, as an interlocutor in the *Dimostrazioni harmoniche* of Zarlino, who described him as his particular friend. Francesco's compositions have yet to be thoroughly studied.

Dallery. French family of organ builders. Charles (b Buire-le-Sec, 23 Jan 1702; d Amiens, 10 Jan 1770) built the organs at the Abbaye de Corbie (1733) and the Abbaye d'Auchin (later moved to St Pierre, Douai) and restored the organ in the Abbaye de Clairmarais, now at Aire-sur-la-Lys, Pas-de-Calais. Pierre (b Buire-le-Sec, 6 June 1735; d Paris, 1801), nephew and pupil of Charles, worked with his uncle and from 1767 to about 1778 was in partnership with François Henri Clicquot, with whom he built the organs at St Nicholas-des-Champs, the Sainte Chapelle and St Merry (all in Paris). He also built organs at St Lazare (Les Missionnaires), Arras (La Madeleine) and Ste Suzanne de l'Île-de-France. Pierre-François (b Paris, 1764; d Paris 1833), son of Pierre, was a pupil of Clicquot, with whom he worked from 1801 to 1807. He built the organ in the Eglise d'Albert, but mostly worked at repairing instruments. Louis-Paul (b Paris, 24 Feb 1797; d Paris 28 April 1870), son of Pierre-François, worked with his father until 1826; he built organs in the Sorbonne church (1825) and Notre Dame de Bonne-Nouvelle (1827), and repaired organs at St Germain-l'Auxerrois and St Nicholas-des-Champs, Paris, and St Ouen, Rouen. He was employed to simplify the mixtures in the famous Couperin organ at St Gervais in 1843 and did so without making any other important alterations.

GUY OLDHAM

Dalley-Scarlett, Robert (b Sydney, 16 April 1887, d Brisbane, 31 July 1959). Australian music collector, conductor and composer. He studied with Arthur Mason and Gordon Lavers in Sydney, and in 1912 was appointed choirmaster at the Anglican church and conductor of the music society in Grafton, New South Wales. After war service he went to London for further study with Bridge and Terry. He returned to Australia in 1919 and settled in Brisbane as choirmaster of St Andrew (1919-20), music director at All Saints and director of the ABC Choir (from 1937). In addition, he directed the University Choral Society (1920-30), the Australian Bach Festival, which he founded (1930), the Brisbane Handel Society (1933) and other organizations, besides serving as chief music critic on the *Courier Mail*. He was also founder and first president of the Queensland Guild of Australian Composers. In 1926 he received the MusB and in 1934 the MusD of the University of Adelaide.

Dalley-Scarlett made a name for himself in Australia principally as a promoter of Bach and Handel concerned with proper performing practice. He brought to performance, either in concert or on the radio, almost all of Handel's operas and oratorios. His library, owned since 1960 by the University of Sydney, included many Handel first editions, and he received the Handel Medal of Halle in 1939 for his services to Handel research. His compositions are almost all in manuscript and have not been studied, they too are deposited at the University of Sydney, with some in the ABC music library in Sydney.

ANDREW D. McCRIFID

Dallier, Henri (Edouard) (b Rheims, 20 March 1849; d Paris, 23 Dec 1934). French organist and composer. At the Paris Conservatoire he was an organ pupil of Franck, obtaining *premiers prix* for both fugue and organ playing in 1878. From 1879 to 1905 he was organist at St Eustache, Paris, where he established a high reputation for picturesque and imaginative improvisation. In 1905 he succeeded Fauré as organist of the church of La Madeleine, and played at Fauré's funeral there in 1924. From 1908 to 1928 Dallier taught harmony at the Conservatoire. His most admired compositions were the organ *Six grands préludes... pour la Toussaint* op.19 (Paris, 1891), *Cinq invocations à la Vierge* (1928) and a mass (1894). As well as numerous other organ and piano pieces Dallier wrote songs, a piano trio (1898), a string quartet, a piano quintet and a symphony, op.50 (1908).

Dallis, Thomas (fl 1583-98). English musician. His name is associated with the 'Dallis' Lutebook (*EIRE-Dtc* D 3.30/1), so called because of the Latin inscription on p.12 of the manuscript 'Incipi Nonis Augusti praeceptore Mro Thomas Dallis. Cantabrigiae Anno 1583'. He is mentioned in Thomas Whythorne's autobiography, on a slip of paper known as the 'musical scrap' dating from about 1592 or after. Here, among a number of other celebrated musicians, Bull and Dallis are named as the two doctors of 'lat[ic] tym' and Dallis is described as 'of Trinite kolley in Cambrij'. In 1594, Edward Johnson, in a *supplicat* to Cambridge University, requested that Dr Dallis and Dr Bull might be his examiners for his MusB degree from Gonville and Caius College. Finally, in Francis Meres's *Palladis Tamia* (London, 1598), on f.288v, 'Doctor Dallis' is included among the English musicians of the time who can be compared to the great ones of ancient Greece.

Dallis's music is simple and requires no great technical skill from the performer. The settings of psalms and other vocal pieces, mainly entabulations of the voice parts, have a predominantly chordal structure. The 'Fansye' is, however, a pleasant, though unexciting, example of the English contrapuntal style. It opens in the traditional manner with a 'point' which then passes in imitation to other voices. The nine pieces in the 'Dallis' Lutebook are his only known compositions.

Dall'Oglio, Domenico (b Padua, c1700, d Narva, Estonia, 1764). Italian violinist and composer. He was a pupil of Tartini at the latter's 'School of the Nations' in Padua, and in 1732 was appointed violinist at the basilica of S. Antonio there. Mooser conjectured that he may have begun his studies under Vivaldi in Venice, and that he was the son of a Pietro Dall'Oglio who was *maestro di choro* in the Ospedale della Pietà there, 1713-18. In 1735 Domenico took leave of his duties in Padua and travelled with his younger brother, Giuseppe, a cellist, to Russia where they remained for 29 years in the service of the Russian court. Court records make frequent references to his activities as a virtuoso violinist, composer and participant in court intrigue. He died on the journey home to Italy.

Most of Dall'Oglio's surviving compositions are instrumental (solo violin sonatas, symphonies and concertos). In the absence of the principal court composer, Francesco Araja, Dall'Oglio was called upon to contribute music for court ballets and for other festive occasions. He wrote a prologue for the performance of Hasse's setting of *La clemenza di Tito* under the title 'La Russia afflitta'. His string music reveals him as a master of the late 18th-century Italian virtuoso style. His work is replete with double stops and difficult passage-work in

the high positions. In his violin sonatas he favoured a three-movement form (slow fast-fast). The concertos, on the other hand, ordinarily begin with a brilliant Allegro followed by a Grave or Largo and conclude with another Allegro. The slow movements are frequently decorated with elaborate embellishments reminiscent of the Tartini school of florid melody.

His brother Giuseppe Dall'Oglio (c1710-c1794) served with him at the Russian court as a cellist; he married Marianna Madonis, daughter of a colleague in the orchestra. Giuseppe, who was travelling with Domenico when he died, spent some time in Berlin and then in Warsaw where he entered the diplomatic service of the King of Poland; he was later business representative of the Polish court in Venice.

Giovanni Battista Dall'Oglio (b Regio, 1739, d Modena, 1832) was not related to Domenico. A music theorist, he was a student of Padre Martini in Bologna, became organist at Rubiera in 1764, and spent the last part of his life in Modena where he had much to do with the organization of the music holdings of the Biblioteca Estense. He was a prolific writer on acoustics, the music of the ancients, and the relationship between music and mathematics (many of his studies were published in the *Memorie della Società italiana delle scienze* at Modena); he took a progressive view of the disciplines of music theory, particularly of counterpoint, and aligned himself with his contemporary Antonio Eximeno in the belief that the science of mathematics had little to do with the art of music.

VINCENT DUCKLES

Dallow. See DALLAM family.

Dallo y Lana, Miguel Mateo de (b c1650; d Puebla, Mexico, 1 Sept 1705). Mexican composer of Spanish birth. He began his career as *maestro* at Logroño. In 1684-5 he is recorded as choirmaster of the important collegiate church of S Salvador, Seville, where his reputation secured his appointment, on 17 December 1688, as *maestro de capilla* of the cathedral at Puebla in succession to Antonio Salazar. His staff, which included 16 choirboys, was strengthened in 1695 by the addition of the renowned organist Tiburcio Sanz de Izaguirre and his assistant, Juan de Rojas, both of whom had recently come from Madrid with the new organ for Mexico City.

In Puebla, Dallo y Lana composed villancicos for the Ss Trinidad convent and the cathedral, but his most important works of this type were settings (whose present location is unknown) of four villancico cycles by the celebrated poet Juana Inés de la Cruz, which were performed in the cathedral on four feast days in 1689-90. Their lively popular elements may be illustrated by the eighth villancico in the third cycle (for the feast of St Joseph, 1690), which is an *ensalada* containing a *jácara*, a *juguete* (a playful dialogue), an *indio* (i.e. including some Indian words) and a *negro* (or *negrilla*, with syllables imitating negro dialects and rhythms), this was followed by four villancicos for the Mass – a *la epistola*, *al ofertorio*, *al altar* and *al 'Ite missa est'*. The composer's Spanish reputation may account for the unusually wide dispersal of his villancicos in South American archives. For his liturgical works he employed a flowing, sometimes imitative polyphony that, in the Spanish manner, required a figured continuo for harp, organ and violone but did not generally use concertato effects. Polychoral works are balanced by the many compositions for six voices, alternating either three pairs of duos or duos with four-part choir. The continuing popularity of his psalm settings is attested in Puebla by the addition in 1844 of a fuller accompaniment to one of his works and in Mexico City by the late 18th-century addition of two doubling clarinets.

ALICE RAY CATALYNE

D'Almaine & Co. English music publishers, a continuation of the firm founded as GOULDING & CO.

Dalmas. Russian music publishing firm. The founder, H J Dalmas, was a member of the French opera troupe in St Petersburg. In 1802, with the help of Boieldieu, he opened a music shop which swiftly developed into one of the most stable Russian publishing houses of the early 19th century. Dalmas was particularly noted for his various journals of French and Italian opera excerpts, including *Le troubadour du nord* (1804-11) and *La muse cosmopolite* (1827-8). He also published collections of songs (among them *Nouveau choix d'airs russes, ukrainiens, kosaques, etc.*, 1816) and keyboard pieces, as well as a number of important individual works by Bortnyansky (the full score and parts of *Pevets vo stane russkikh voinov*, 1813), Cavos (a piano score of

the opera *Kazak-stikhotvorets*, c1812), Kozłowski (the score of the incidental music to Ozerov's *Fingal*, 1808) and others. In November 1812 the French troupe left St Petersburg, but Dalmas remained and took Russian citizenship. After his death the firm was put up for auction and bought (1829) by the publisher M. I. Bernard.

GEOFFREY NORRIS

Dal Monte [Meneghelli], **Toti** [Antonietta] (*b* Moghiano Veneto, 27 June 1893, *d* Treviso, 26 Jan 1975) Italian soprano. She studied the piano at the Benedetto Marcello Conservatory, Venice, but after a hand injury studied singing with Barbara Marchisio. She made her debut at La Scala, Milan, in 1916, as Biancafiore in Zandonai's *Francesca da Rimini*. In 1921 she was engaged by Toscanini to sing Gilda at La Scala, and from then she concentrated on the light soprano repertory, with occasional appearances in lyric roles. In the USA she sang with the Chicago Opera from 1924 to 1928. Her only Covent Garden appearances were in 1926 as Lucia and Rosina, after which she joined Melba's company for the latter's farewell tour. She was one of the last Italian divas to appear in old-fashioned Patti-like concerts. She retired in 1949 and after a brief period as an actress devoted herself to teaching.

HAROLD ROSENTHAL

Dalmorès, Charles [Boin, Henry Alphonse] (*b* Nancy, 21 Jan 1871, *d* Los Angeles, 6 Dec 1939) French tenor. He began his musical career as a horn player with the Colonne Orchestra and then with the Lamoureux Orchestra in Paris, where he was at first refused admission to the Conservatoire because he was 'too good a musician to waste his time in being a mediocre singer'. As a horn professor at the Lyons Conservatory in 1894 he continued his vocal studies and made his operatic debut at Rouen in 1899. He then went to the Brussels Opera, and in 1904 first sang at Covent Garden in *Faust*. He appeared in the British premières of Massenet's *Hérodiade*, Saint-Saëns's *Hélène*, Charpentier's *Louise* and Laparra's *Habanera*, as well as in the world première of Leon's *L'oracolo* (1905). He also made a special study of Wagner, under Franz Emmerich, and in 1908 sang Lohengrin at Bayreuth. One of the most valued singers in Oscar Hammerstein's company at the Manhattan Opera House, New York (1906–10), he sang regularly with the Boston and Philadelphia–Chicago companies, and as a member of the Chicago Opera (1910–18) where his roles included Tristan. He later taught singing in France and the USA. A sensitive musician and a colourful personality, he was also admired for his acting. Gramophone records show that his powerful voice was used with much technical accomplishment and a sense of style.

J. B. STEANE

Dal Pane [Da'l Pane, Da'lpiane], **Domenico** (*b* in or nr. Rome, c1630; *d* Rome, 10 Dec 1694). Italian singer and composer. At an early age he became a treble at S. Maria Maggiore, Rome. For five years he studied with Abbatini, whose first period of service as choirmaster there lasted from 1640 to 1646 (at Rome in 1677 he published two large-scale antiphons by Abbatini). In about 1650 he went to Vienna as a soprano castrato in the imperial court chapel, for which he composed madrigals in the old style; some of these pieces, in honour of various members of the imperial family, were for official occasions, and in 1652 he published a collection of them, dedicated to the Emperor Ferdinand III. In 1654 he returned to Rome, where he entered the service of the Sistine Chapel on 10 June and in the same year also became a singer in the household of the Pamphili family. During the later 1650s he was one of the best-known castratos in Rome. According to the evidence of Gualdo Priorato, Dal Pane took part in Marco Marazzoli's opera *La vita humana*, which was performed on 31 January 1656 in the Palazzo Barberini in honour of Queen Christina of Sweden. In 1658 and 1659 he sang at S. Luigi dei Francesi, where the patronal festival on 25 August was commemorated in splendid ceremonies with sumptuous music. He became *maestro di cappella* of the Sistine Chapel in 1669 and retired in 1679. In 1675, 1677 and 1682 he was a member of the second choir at the Oratorio of S. Marcello. Before this, at an uncertain date, Prince Giovanni Battista Borghese had entrusted him with the musical direction of the Corpus Christi celebrations that took place in the Borghese chapel at S. Maria Maggiore. Some of his madrigals were performed at the musical academy founded by Abbatini. Between 1679 and 1687 he probably received a benefice, whose income must have derived from a priory or abbey, since in 1687 he held the title of abbot.

Dal Pane contributed *a cappella* church music, for both single and double choir, to the papal chapel. Of this music, his parody masses based on motets by Palestrina were published in 1687 in choirbook form: the number of voices does not always correspond to the number in the original motet. Dal Pane shows himself, in his melodic development and contrapuntal technique, to be a master of the Palestrina style. In Holy Year 1675 he published a book of sacred concertos and one of motets. The concertos, which were composed for the above-mentioned ceremonies in the Borghese chapel at S. Maria Maggiore, demonstrate his familiarity with the concerted style. Besides considerable virtuosity in the solo parts, there is no lack of imaginative word-painting, chromaticism and affective figures. The balance between expressiveness and virtuosity is as noteworthy as the unflinching precise declamation of the text. In comparison the motets are less successful. There are few affective figures, on the contrary, virtuosity is now more pronounced. Dal Pane's two books of madrigals (1652, 1678), which are in the traditional five parts, with *basso seguente*, together with publications by composers such as Lodovico Cenci (1647), P. F. Valentini (1654) and Mario Savioni (1668), afford significant evidence of the survival of the old polyphonic madrigal until well into the 17th century. In the first book Dal Pane adopted a retrospective approach and followed the style of Palestrina. In illustrating the words he used chromatic writing sparingly; he preferred dissonant suspensions, and Phrygian cadences resolving in an old-fashioned

way on chords that include the minor 3rd. The general picture of him is that of a composer rooted in the Palestrina tradition, who also had experience of virtuoso singing that he was able to bring to bear on his handling of the concerted style, notably in the *Sagri concerti*

WOLFGANG WITZENMANN

Dal Pestrino, Giulio. See ABONDANTI, GIULIO

Dal Pozzo, Vincenzo [Puteus, Vincentius] (fl c1585-1612) Italian composer. The dedication of his first book of five-voice madrigals suggests that he was living in Pesaro about 1585. On 13 April 1586 he was appointed a singer at the Munich Hofkapelle under Lassus's direction, and served there as an alto until at least late 1587. In 1600 he was *maestro di cappella* at Imola Cathedral and in 1611 he held a similar position at Faenza. His extant works are firmly in the late Renaissance polyphonic tradition and show the influence of Lassus. His first book of motets, for three voices with basso continuo, is an interesting attempt to connect examples from the middle period of Lassus's work (e.g. *Liber mottetorum*, 1575) with elements of new Baroque technique (see Boetticher). Beyond Italy, Dal Pozzo's works were included in printed collections published in Strasbourg, Nuremberg and Munich. Particular evidence of his wide popularity is found in the Pelplin Tablatures (1620-30) which contain ten of his *Magnificat* settings.

Dalton, James (b Ipswich, 11 Nov 1930) English organist. He studied at the RCM, London, was an organ scholar at Worcester College, Oxford, then graduate assistant at Oberlin College, Ohio, and organist of Wesleyan University, Connecticut. In 1957 he was appointed organist of Queen's College, Oxford, where he designed with the builder the remarkable Frobenius organ built in 1965, one of the few continental organs in Britain. Egon Wellesz, Edmund Rubbra, Nicholas Maw, David Barlow and Hugh Wood have composed for it. A fastidious performer, Dalton has given recitals in Europe (including the USSR) and the USA. He is a Fellow of Queen's College and a lecturer in music for the university. He has published articles and reviews, mainly concerned with keyboard music and its interpretation, and edited an anthology of early English organ music.

STANLEY WEBB

Dalvimare [d'Alvimare], (Martin-)Pierre (b Dreux, Eure-et-Loire, 18 Sept 1772; d Paris, 13 June 1839) French harpist and composer. He came from a wealthy family, and showed natural talents for both music (he played keyboard instruments and the harp) and drawing. His connections obliged him to conceal his identity during the Revolution, from about 1797 he became known as a musician through his concert performances and publications. He joined the Opéra as a harpist in 1800, and became a member of Napoleon's private chamber orchestra in 1806; in the following year he was appointed harp tutor to Josephine. He produced *Le mariage par imprudence* (1809), but it failed, and thereafter he concentrated his efforts on the songwriting he had cultivated since the beginning of his career. An inheritance allowed him to retire to Dreux in 1812, where he continued to compose and paint. His music shows the competent use of current expressive devices, more successfully in slow than in sonata-allegro movements.

WORKS

(selective list, all published in Paris)

OPÉRAIC AND VOCAL

- Le mariage par imprudence (Jouy), Paris, Opéra-Comique, 4 April 1809 (1809)
 5e recueil de 6 romances, op 15
 6e recueil (1804)
 At least 5 other collections and 14 separate romances (1806-15), texts by Baillif, Chateaubriand, Coupin, de la Motte, Lemercier, Salverte
 Unpubd sacred music, mentioned by Fétis

INSTRUMENTAL

(for harp unless otherwise stated)

- Symphonic concertante, hn, harp, orch (1798), collab. F. Duvernoy
 Second concerto, c, harp, orch, op 30
 Duo, harp 4 hands, op 19 (c1803), 2 duos, harp, pf, opp 22, 31
 6 sonates, harp, vn ad lib, opp 2, 9, 3 sonates, harp, vn obbl, op 12
 (c1800), 3 sonates, op 14, 3 grandes sonates, op 18, Grande sonate,
 harp, vn obbl, op 33, other sonatas, lost, Scène, op 23
 At least 13 fantasias and variations on operatic, national and other airs

F. VAN DER STRAËTEN/DAVID CHARLTON

Dalza, Joan Ambrosio (b ?Milan, fl 1508) Italian lutenist and composer. He was the composer and arranger of Petrucci's *Intabolutura de lauto libro quarto* (Venice, 1508), in the preface of which he is called a 'milanese'. Unlike the compilers of Petrucci's previous lutebooks, in which intabulations of Franco-Flemish vocal music had predominated, Dalza presented original music that was almost entirely instrumental in origin. There are 42 dances, nine ricercares, five *tastur de corde*, four intabulations of vocal pieces, and a piece called *Caldibi castigliano*. Three of the dances are for two lutes. The book is significant for being the first to contain the *pavana* and for giving useful information about the grouping and linking of pieces. Following the explanation of the Italian lute tablature which appears in all Petrucci's lutebooks, there is a note that each of the *pavane* has its own saltarello and piva. The grouped dances, besides having a common modality, have harmonic and melodic similarities suggesting the dance improvisation practice of the time. Further grouping occurs in the free-form pieces, *tastur de corde* serve as preludes to ricercares, which in turn can be associated with the dances, while the *calata spagnola* on f 48v is followed by a short 'recercar detto coda'. In contrast to Spinacino, whose elaborately decorated chanson intabulations would appear to represent the performing practice of a skilled improviser, Dalza wrote in a deliberately unpretentious style, justifying his choice of simple pieces on grounds of public demand. 28 pieces are edited by H. Monkemeyer, *Die Tablatur*, vi viii (Hofheim am Taunus, 1967).

JOAN WESS

Dam, José Van. See VAN DAM, JOSÉ

Daman [Damon, Demaunde], William (b Liège, c1540; d London, 1591). Walloon composer. A register of aliens living in London dated 1571 refers to a 'William de Man' brought to England six years previously by Lord Buckhurst as his servant. Buckhurst was a great patron of music and supported an establishment of musicians 'the most curious which anywhere he could have'. Daman became one of Queen Elizabeth's musicians in 1579, and remained in royal service until

his death. An inventory of his goods was made on 2 June 1591 in the presence of his widow Anna and five children. Daman is chiefly remembered for his harmonizations of the church tunes from the Sternhold and Hopkins metrical psalter. His first publication was *The Psalmes of David in English Meter, with Notes of Foure Parties set unto them* (London, 1579) 'to the use of the godly Christians for recreating them selves, in stede of fond and unseemly ballades'. Daman had apparently been in the habit of composing a new harmonization each time he visited a friend's house, for the friend's private enjoyment. According to the preface of the first of the two later sets, these settings had then been published without his permission. Both of the later sets were published posthumously in 1591. *The Former Booke* comprises simple chordal harmonizations of 'all the tunes of David's psalms, as they are ordinarily sung in the church, the tune being in the tenor'; in *The Second Booke* the church tunes are in the upper part.

WORKS

PETER LE HURAY

Damance, Paul [Amance, Paul d'] (b c1650, d c1700) French composer. He belonged to the Trinitarians, an order founded in the 12th century for the redemption of captives, and was the organist at the order's monastery at Lisieux, Calvados. From his few surviving works we may deduce that his special concern was the provision of liturgical and organ music for religious communities in reduced musical circumstances.

Fétis alluded to some MS organ pieces in what is now the Bibliothèque Nationale, but only one short piece, a duo, exists there today in a volume of doubtful works by Lebègue (unless these are by Damance). The title hints at a direct or indirect link with Henry Du Mont, who published some two-part pieces entitled *Meslanges... contenant plusieurs chansons, preludes et allemandes pour orgue et pour les violes* (Paris, 1657), which he mentioned as suitable for nuns playing the organ 'en façon de duo', presumably because they would be more suitable for amateurs. A second link with Du Mont is found in the series of *messes en plain-chant musical* allied to the five similarly-entitled masses by that composer. As early as 1634 the French Oratorians had been pioneers in establishing *plain-chant musical*, a meretricious modernized arrangement of plainsong sung in unison, unaccompanied, in simplified notation and intended for use in country parishes and convents. Damance dedicated all his masses to specific convents in his locality.

WORKS

- 3 messes en plain-chant musical (Paris, 1687)
 6 messes des 1^e, 2^e, 5^e ton naturel, 5^e ton transposé et 6^e ton (Paris, 1701)

G. B. SHARP

Damascene, Alexander (b. ?mid-17th century, d. London, 14 July 1719). Countertenor and composer of French birth. He is described as a French Protestant in his letters of denization (22 July 1682). He was appointed to the King's Vocal Musick and made 'composer in his Majesty's private musick in ordinary' in 1689. On the death of Purcell in 1695 he succeeded to a place as Gentleman of the Chapel Royal, having been supernumerary since 1690. In his will he described himself as 'of the Parish of St Anne's, Westminster, Gentleman', bequeathing his estate to Sarah Powell, his daughter-in-law.

He was a prolific composer of songs, many of which were published in such collections as *Choice Ayres and Songs* (1684), *The Theater of Music* (1685-7), *Comes amoris* (1687-94), *Vinculum societatis* (1691) and the *Gentleman's Journal* (1692-4). Some were popular enough to be included in *Pills to Purge Melancholy* (1707-20). An instrumental piece entitled *Sir John Guise's March* is in *GB-Lbm* Add.22099

IAN SPINK

Damase, Jean-Michel (b. Bordeaux, 27 Jan 1928). French composer and pianist. Born into a musical family, his mother being the harpist Micheline Kahn, he showed precocious musical talent. His studies began at a very early age; when he was five he began to attend the Samuel-Rousseau courses in piano and solfège. He started to compose at the age of nine when, after meeting Colette, he set some of her poems. When he was 12 he became a pupil of Cortot at the Ecole Normale de Musique in Paris, and in the next year he joined Armand Ferté's piano classes at the Paris Conservatoire. His career as a young virtuoso followed an upward curve - in 1943 he was unanimously awarded the *premier prix* in piano at the Conservatoire. Two years later he entered Büsser's composition classes, and he began to study harmony and counterpoint with Dupré. At the age of 19 he won the first prize in composition with his Quintet, and his cantata *Et la belle se réveilla* won him the Prix de Rome. In the meantime his career as a pianist was flourishing; he appeared as soloist in the Colonne and Conservatoire concerts, and with the Orchestre National of the ORTF.

Damase's youthful compositional maturity helped to foster a considerable technical facility, and he has produced a great deal of music in a style that is attractive and elegant, remaining close to the traditions of the Conservatoire. All his works show a deep knowledge of the possibilities of instruments, and his orchestration is rich, full and varied. This idiomatic utilization of resources shows itself most notably in the chamber pieces and in the concertante works. Damase is a great lover of ballet and a close friend of several leading choreographers. His first ballet score was *La croqueuse*

de diamants, written for Petit and first produced at the Marigny Theatre in Paris on 25 September 1950. Damase arranged an orchestral suite and several piano pieces from the music, and he collaborated with Petit again on *Lady on Ice* (1953).

WORKS

(selective list)

STAGE

ANNI GIRARDOT

Dambis, Pauls (b. Riga, 30 June 1936). Latvian composer. He graduated from Utkin's composition class at the Riga Conservatory in 1962. From 1965 to 1969 he was a producer for Latvian television, and from 1968 deputy chairman of the committee of the Soviet Latvian Composers' Union. In addition, he has taken part in several folklore expeditions for the Latvian Academy of Sciences. He was a prizewinner in the Third All-Union Competition for Young Composers (1969) and was awarded the title Honoured Art Worker of the Latvian SSR in 1975. A composer of striking individuality, he is notable for his search for innovative means of expression in the timbre and texture of choral music, especially in works to freely interpreted Latvian folksong texts and arrangements of folk melodies.

WORKS

(selective list)

Dramatic Ikars [Icarus] (opera, J. Peters), 1970, Riga, 1976, *Vēstules nākamībai* [Letters to the future] (television opera, V. Oga), 1972, incidental music, film scores
Choral Conc - Requiem, oratorio, 1967, *Kurzemes burtnīca* [A Kurzeme notebook], 1967, *Zila planēta* [The blue planet], oratorio, 1967, *Sērđieņu dziesmas* [Orphans' songs], 1968, *Blēņu dziesmas* [Nonsense songs], 1969, *Stanza di Michelangelo*, oratorio, 1971, *Jūras dziesmas* [Songs of the sea], 1971, *Ganū balsis* [Voices of the shepherds], 1974, *Danču dziesmas* [Dance-songs], 1975
Song cycles *Sieviešu dziesmas* [Women's songs], 1966, *Vidzemes kalendāras dziesmas* [Calendar ritual songs from Vidzeme], 1968, *Itālijas dienasgrāmata* [An Italian diary], 1970
Inst. Sym., 1972, *Pf Trio*, 1974; 4 str. qts, 4 pf. sonatas

Principal publishers: Liesma, Muzyka, Peters, Sovetskii kompozitor JFKABS VITOLINŠ

D'Ambruys [Dambruys, D'Ambruus, Dambruus], **Honoré** (fl. 2nd half of the 17th century). French composer and singing teacher. He was trained by Michel Lambert, to whom he dedicated his *Livre d'airs avec les seconds couplets en diminution mesurez sur la basse continue* (Paris, 1685), which is interesting chiefly for

the embellishments announced in the title. Some 23 other *airs* by him appeared in eight issues of the *Mercurie galant* between 1682 and 1702, in books of *airs* published in Paris in 1660, 1670 and 1680 and in *Recueils d'airs sérieux et à boire de différents auteurs* published there between 1696 and 1702, there are also two in manuscripts (at F-Pn).

FRÉDÉRIC ROBERT

Damcke, Berthold (b Hanover, 6 Feb 1812, d Paris, 15 Feb 1875). German conductor, composer, teacher, critic and violist. After studying theology, and later music with Aloys Schmitt in Frankfurt am Main, he played the viola in the Hanover court orchestra (from 1834), he also continued his studies on the piano and the organ, and wrote some choruses for male voices and organ, studying further with Ferdinand Ries and J. N. Schelble. Later he conducted the music society and the *Liedertafel* in Kreuznach, where he composed an oratorio, *Deborah*. In 1837 he conducted the Philharmonic Society and the Gesangverein für Opernmusik in Potsdam, where he introduced his *Die Geburt Jesu* (1840) and Psalm xxiii and *Ave Maria* (1841). Moving to Königsberg in 1841, he conducted his opera *Kathchen von Heilbronn* (1845), he also played in Berlin in 1843. In 1845 he worked as teacher in St Petersburg (Berlioz recalled how he took the percussion part of the *Symphonie fantastique* on the piano). He lectured on music history in Brussels in 1855, and from 1859 acted as correspondent for Russian and German journals, also teaching at the Paris Conservatoire. He was a great admirer and advocate of Berlioz, who was grateful for many professional and personal kindnesses and referred to him as, 'a composer of great merit and a very able teacher'. He worked on revising the Fanny Pelletan edition of Gluck. His other works include oratorios (*Tobias*), instrumental music (overture *Die lustigen Weiber*), choruses, songs and piano music.

JOHN WARRACK

Damen. See DAHMEN family

Damenization. A system of solmization devised by Carl Heinrich Graun (1704-59). He gave to the rising scale of C major the fixed syllabic names *da, me, ni, po, tu, la, be, da*. Sharps were represented by the suffix *as*, flats by *es*, giving the resources shown in ex 1. Advantages claimed for the system were the separate note names made available not only for chromatic but for certain

enharmonic degrees, and the opportunity provided for exercising all the vowels as well as the more explosive consonants so important in German enunciation. A disadvantage, however, was the lack of euphony of certain of the syllables – particularly where some keys were concerned. The scale of A \flat major, for instance, ran *les, bes, da, mes, nes, po, tu, les*. The system made little impression other than on Graun's own pupils and disciples, and has long been discarded.

BERNARR RAINBOW

Damerini, Adelmo (b Carmignano, Florence, 11 Dec 1880, d Florence, 12 Oct 1976). Italian musicologist. He studied the arts and philosophy and, although self-taught in music, took a diploma in composition at the Bologna Liceo Musicale (1917). In 1922 he became lecturer in poetry and drama at Palermo Conservatory, subsequently he was head of the music section of the Palatine Library at Parma (1926-32) and then directed the library of Florence Conservatory (until 1962). He contributed to various newspapers such as *La nazione*, *Il tempo*, *Avanti*, *L'ora* and *Il corriere Emiliano*. His publications include a series of opera guides (*Boris Godunov*, *Norma*, *Salome* etc); his compositions include a mass, an oratorio, some instrumental music and songs to Japanese texts.

FERRUCCIO TAMMARO

Dameron, Tadd [Tadley Ewing] (b Cleveland, 21 Feb 1917, d New York, 8 March 1965). Black American jazz composer, arranger, band-leader and pianist. After working with lesser-known groups he joined Harlan Leonard, scoring many of that band's records including *Dameron Stomp* and *A la Bridges*; he also wrote for Jimmy Lunceford, Coleman Hawkins (*Half Step Down, Please*) and Sarah Vaughan (*If you could see me now*). In the late 1940s Dameron arranged for the big band of Dizzy Gillespie, who gave the première of his large-scale orchestral piece *Soulphony* at Carnegie Hall in 1948. Also in 1948 Dameron led his own New York

Ex 1

group, including 'Fats' Navarro, and was at the 1949 Paris Jazz Festival with Miles Davis. After forming another group of his own with Clifford Brown in 1953, he became inactive due to ill-health. From 1961 he wrote scores for recordings by Milt Jackson, Sonny Stitt and 'Blue' Mitchell.

Dameron did not achieve full expression of his gifts as a composer because of his inability to maintain his own jazz group for long. Navarro was the finest interpreter of his pieces, as their many joint recordings show. The best of these exhibit a pithy thematic invention uncommon in jazz: *Sid's Delight* and *Cashah* (both 1949) reveal Dameron's powers at their height. Like Thelonious Monk, Dameron was repeatedly linked with bop, though he rarely employed its stylistic devices. With other arrangers for Gillespie he attempted to adapt bop to big bands, failing however to transfer the crucial rhythmic procedures of this essentially small-group style. In spite of this his best pieces for Gillespie (e.g. *Good Bait* and *Our Delight*) show particular melodic and harmonic substance. Other notable compositions by Dameron include *Fontainebleau* (1956), an extended piece without improvisation, *Hot House* (1945), recorded by a Gillespie-Charlie Parker group, and *Lyonia* (1949), recorded by Ted Heath in England.

MAX HARRISON

Damett, ?Thomas (b ?1389-90, d between 15 July 1436 and 14 April 1437). English composer. His name is always spelt thus in the musical sources, though archival records show variations. Damett was evidently the illegitimate son of a gentleman (according to Papal dispensations allowing him nonetheless to take orders and hold benefices), a 15th-century coat-of-arms for 'domett' survives. He seems to have taken his father's name, since his niece (? and therefore his brother) was named Damett. He was a commoner at Winchester College from some time after 1402 until 1406-7, when he cannot have been older than 18. There is no record of the university career which probably ensued, though he was described as 'Dominus' in 1421. In 1413 he was presented to the rectory of Stockton, Wiltshire, if we can presume him to have been 23 by this date, we can estimate his date of birth fairly accurately as 1389 or 1390. Also in 1413 his name appears in the accounts of the Royal Household Chapel, and thereafter in 1415 (at Harfleure), 1421 and 1430-31. Since successors to his prebends in St Paul's (held from 1418) and St George's, Windsor (held from 1431), were appointed on or by 5 August 1436, he may have died by that date.

His will survives and is printed in translation in J. Harvey: *Gothic England* (London, 1947), pp.181ff. Damett's mother was still alive when he wrote his will on 15 July 1436 (proved on 14 April 1437). Music is not mentioned, but there are bequests of books, including a missal, and one other item is 'a silver cup chased and covered with writing and "Benedictus qui venit in nomine Domini"'. This invites the observation that his only apparent use of plainsong is in the tenor of his one isorhythmic motet, which uses 'Benedictus qui

ve-' of the Sarum Sanctus chant 3 transposed down a tone (continued untransposed by Sturgeon as the tenor of his motet). Reasons have been given for associating this motet with the London celebrations which followed the Agincourt victory. The regular text of the sequence *Salvatoris mater pia* includes some substituted lines uniquely appropriate to Henry V. The texts of both Damett's other non-Ordinary compositions, both in score, as are two Gloria settings, show slight deviations from the standard forms: *Salve porta* is the second stanza of the sequence *Salve virgo sacra parens*, but is modified at the end, and the psalm antiphon *Beata Dei genitrix* adds an alleluia which renders it appropriate to the Easter season.

Nine works survive, all in the second layer of the Old Hall Manuscript, and possibly autograph, with two fragmentary concordances in *GB-Ob* University College 192. The paired Gloria and Credo are unified by the use of the same SQUARE in the tenor of each (the only Old Hall compositions, apparently, to make free use of an existing square, found also in Ludford's mass for feria iv, rather than being the source of a square melody), despite the discrepancy in ranges. Andrew Hughes has demonstrated their close structural and motivic unity, both have extensive duets. Similar melodic and harmonic parallels are found in Old Hall nos 37 and 72, though the clinching evidence of an identified tenor is not available in this case to overcome the same disparity of ranges (the Credo of each 'pair' being a 5th higher than its Gloria). Damett had mastered the techniques of proportional writing (specifying *subsesquitercia* even for part of a descant composition in score), and he used several specialized signatures and colorations. The contratenor of no.6 is to be sung in augmentation, a feature common in the works of Power. Damett showed a fondness for low tessitura with partial signatures of up to two flats.

MARGARET BENT

Damianus a Ss Trinitate. See STACHOWICZ, DAMIAN.

D'Amico, Fedele (b Rome, 27 Dec 1912). Italian music critic, son of the theatre historian and critic Silvio D'Amico. After taking a law degree and studying the piano and composition with Casella, he took up journalism. He was music critic of the Rome daily *Il Tevere* (1931-2), the Rome weekly *L'Italia letteraria* (1932-4), the Milan weekly *Sette giorni* (1942), the Rome weekly *Voce operaia* (which he edited when it was banned in 1943-4), the Rome weekly *Vie nuove* (1948-54), the Rome weekly (later monthly) *Il contemporaneo* (1954-9), the Rome weekly *Italia domani* (1958-9), the Milan weekly *La fiera letteraria* (1967) and the Rome weekly, *L'espresso* (from 1967). He has held editorial positions on *La rassegna musicale* (1941-4), *Enciclopedia dello spettacolo*, music and dance section (1944-57), *Cultura e realtà* (1950-51) and *Nuova*

rivista musicale italiana (from 1967). He has also been associated as administrator and music consultant with Lux Film (1941-4), the Accademia Filarmonica Romana (1948-55, as vice-president from 1950), *Società italiana per la musica contemporanea* (1949-59), the publishing firm Il Saggiatore (1958-66) and the Teatro dell'Opera, Rome (1963-8). In 1963 he took up a post teaching music history at the University of Rome. In addition to his critical writing he has contributed to other foreign and Italian publications, specializing in 19th- and 20th-century music and in music and dance for the theatre. His many interests include writing texts for music (e.g. for Jan Meyerowitz's cantata *I Rabbini*) and translating librettos (for works by Mozart, Boccherini, Henze, Janáček, Weill, Hindemith, Stravinsky and Shostakovich). He has also composed incidental music for U Betti's *Il cacciatore d'anitre* (1941) and Chekhov's *The Cherry Orchard* (1942).

CAROLYN M. GIANTURCO

Dammann, Rolf (b. Celle, 6 May 1929) German musicologist. He studied musicology under Blume at Freiburg University (1948), Kiel University (1948-50) and under Zenck and Gurlitt at Freiburg again (1950-52) where he took his doctorate (1952) with a dissertation on Jean Mouton's motets. He was appointed lecturer in the history of Protestant church music and hymnology (1953-64), and (from 1958) in music history at the Staatliche Hochschule für Musik, Freiburg. He also worked on the Sachteil of Riemann's *Musik Lexikon* (1955-64). He completed his *Habilitation* in musicology at Freiburg in 1958 with a work on the German Baroque concept of music. He then became a lecturer, and (since 1967) *ausserplanmässiger Professor* in musicology at Freiburg; he held the chair of musicology at Heidelberg (1963-4), and (during the summer terms of 1967 and 1973) at Freiburg. His research is concerned with late medieval, Renaissance and Baroque music. By adopting an approach based on the history of ideas, particularly of concepts, he has aimed to show the connection between the concept of music and the concrete music of a period, and to place both in their cultural historical context.

HANS HEINRICH EGGBRECHT

Damme, José van. See VAN DAM, JOSÉ.

Da Modena, Giacomo. See FOGLIANO, GIACOMO.

Damon (fl. late 5th century BC). Greek music theorist of the Periclean age. During the last three decades of the 5th century, he was the most prominent of the harmonists (see below), who constituted one of the two main schools of music theory and were opposed to the empiricists.

Among the pre-Socratics, Damon had paramount importance for doctrines of musical ethos. Dance and song 'necessarily arise when the soul is in some way moved', he maintained (ed. Diels, no. 37, pt. B, item 6), aware that purposive action originates in the soul. He went on to voice the primary tenet of all musical ethic, claiming that 'liberal [i.e. befitting a free man] and beautiful songs and dances create a similar soul, and the reverse kind creates a reverse kind of soul' (ibid). According to Aristides Quintilianus, (ii, chap. 14; ed. Winnington-Ingram, p. 80, ll. 26-9; ed. Meibom, p. 95; ed. Diels, 37/B/7), this creative act was explained as having a twofold nature: 'Through similarity, the notes even of a continuous melody [i.e. one which follows the scale order] create character . . . and also bring [it] out . . . This was the doctrine of Damon's school also'. Similarity (*homoiotēs*) was in all likelihood a Damonian principle originally separate from the Platonic principle of mimesis which incorporated it. As Philodemus presented Damon's belief in the *De musica* (ed. Kemke, p. 55, ed. Diels, 37/B/4), the virtues of the liberal and beautiful soul included 'not only courage and moderation but also justice', and 'in singing and playing the lyre, a boy ought properly to reveal' these qualities. The Platonic Socrates (*Republic*, §400c, ll. 1-4, ed. Diels, 37/B/9) notes that Damon applied ethical valuation to metrical complexes as well as rhythms, taking these two elements separately or in combination. There is a statement by Aristides Quintilianus (ibid) about traditional modes which is more difficult to understand: 'In the *harmoniai* handed down by him [Damon] it is possible to find in the sequence of notes that sometimes the female notes, sometimes the male, predominate or diminish or are completely absent, obviously because a different *harmonia* was serviceable according to the character [*ēthos*] of each particular soul'. The element of continuity (see above, concerning stepwise melody) appears to be intimately bound up with the process of note selection (*pettēia*), which Aristides named as an important technique of the Damonian school. The phrase 'each particular soul' suggests late theory, however. No primary source, moreover, connects Damon or his followers with the male-female concept; nor does the antithesis appear to have been a part of the early history of Greek music in any case. Finally there is the statement, attributed to Damon by Socrates in the *Republic* (§424c, ll. 5-6; ed. Diels, 37/B/10), that 'musical styles are nowhere altered without [changes in] the most important laws of the state'. This thesis, found in other cultures as well (e.g. that of ancient China), usually issues from a conservative or even reactionary point of view. Yet on several occasions Aristophanes, an arch-conservative, attacked Damonian positions (*Nubes*, ll. 647-51, 961-71, *Ranae*, l. 729, ll. 1491-9) as the chief spokesman for the poet-composers in their hostility towards the new, dogmatic philosophy of the Damonian school.

The possibility that Damon may have been a radical rests further, and chiefly, on a careful interpretation of the evidence of Plato. The passages in his dialogues which seem to praise Damon (*Laches*, §180d, ll. 2-3,

§197d, II.1-5, §200a, II.2-3; *Republic*, §400b, I.1 c. 1.6, §424c, II.5-6) take on an altered significance when one recalls the writer's dislike of versatility, technical skill and professionalism. Again, praise even from Socrates had no binding force on Plato himself. Yet Damon was viewed with respect: Plato saw him as no mere teacher of the elements of music but a professor of musical theory and ethic (*mousikos*) and evidently of 'logic' and political science as well. In later times, Isocrates (xv, §235) and Plutarch (*Pericles*, §4) were to call him a Sophist; his association with Prodicus, Protagoras and Agathocles bears out the claim.

When Aristotle (*Politics*, §1340b, II.5-6) mentions statements about modal ethos 'made by persons who have devoted special study to this branch of education', he may be referring to the Damonian school. These harmonic theorists had already been attacked in the early 4th century by the author of an anonymous diatribe against doctrines of ethos, the so-called Hiebh musical papyrus. It cites various aspects of harmonicist method and theory: comparative criticism (*synkrisis*), a strongly theoretical bent, insistence upon amateur status and the belief that music can make men just. Although these points are not always Platonic, they are usually Damonian. The final one eventually reappears in the passage already cited from the treatise by Philodemus, who rightly countered elsewhere (*De musica*, iv, §24, II.9-35; ed. Kemke, pp.92-3) that Plato did not equate justice with music but claimed only that the two are analogous. The tradition that Damon spoke before the court of the Areopagus, questioned by Philodemus (*De musica*, i, §11, II.17-19, iv, §34, II.1-5, ed. Kemke, pp.7, 104-5), is insecurely based. It is equally doubtful that he 'discovered the relaxed Lydian mode', as suggested in the pseudo-Plutarchian *De musica* (chap.16, ed. Lasserre, p.118, II.17-18; ed. Ziegler, p.13, II.10-14). At the same time, tradition would hardly have associated a noted conservative with one of the *harmoniai* which Plato condemned and banned in the *Republic*.

Although mid-20th-century continental scholarship has ascribed far too much to Damon, he was unquestionably a formidable figure. He expanded and codified ethos doctrines in a notable and perhaps unparalleled degree; his view that music is connected with the soul's motion provided one of the main theoretical foundations on which Plato was to build, and his name enjoyed wide renown until the Roman period and even later (Cicero, *De oratore*, iii, chap.33, Martianus Capella, ix, §926).

WARREN ANDERSON

Damón, William. See DAMAN, WILLIAM.

Damoreau, Etienne-Grégoire [*l'aîné*] (fl. 1754-63). French composer and violinist. His only known works, the six *Sonates à deux violons ou dessus de viole sans basse* op.1 (Paris, 1754), are firmly in the tradition of the Baroque *sonata da camera*, suggesting that

Damoreau belonged to an older generation of composers. He was called *l'aîné* to distinguish him from his younger brother Jean-François Damoreau.

NEAL ZASLAW

Damoreau (des Aulnais), Jean-François [*le jeune*] (fl. Paris, 1754-c.1775). French organist, harpsichordist and composer, younger brother of Etienne-Grégoire Damoreau. His *Pièces de clavecin avec accompagnement de violon et sans accompagnement* appeared in Paris in 1754. He appeared at the Concert Spirituel on three occasions, playing organ concertos in April 1759 and April 1760 and a transcription of the overture to Mondonville's *Titon et l'Aurore* in June 1759 (the custom of performing organ transcriptions of orchestral works had originated with Balbastre in 1755-6 and remained popular for more than a decade). In 1763 he gave a series of public demonstrations on a harpsichord built by Le Gay, which had an action that both bowed and plucked, and could be heard every day at the Tuileries between 4 and 9 p.m. In 1771 Damoreau published his *1re suite en quatuor* (for piano or harpsichord, violin, flute or oboe), on melodies by Grétry, Monsigny and Philidor, the *2e suite en quatuor* (piano, harpsichord or harp, violin, horn or viola), on melodies by Martini and La Borde, appeared the following year.

Damoreau *le jeune* should not be confused with the organist and composer Nicolas-Jean Le Froid de Méreaux, listed as 'Demereaux' or 'Desmereaux' in the Parisian *Almanach musical* and *Calendrier musical universel* between 1775 and 1789.

Damper pedal. See SUSTAINING PEDAL.

Dämpfer (Ger.). MUTE.

Dampierre, Marc Antoine, Marquis de (b. 24 Dec 1676, d. Versailles, 18 June 1756). French nobleman. He was equerry to the Duke of Maine, then to Louis XV. A celebrated huntsman, he composed hunting-calls and was perhaps the first to put the music of the hunt into musical notation. His fanfares were originally handed down orally, but were later published through the efforts of a pupil as *Recueil de fanfares pour la chasse à une et à deux trompes* (Paris, c.1778).

PAULETTE LETAILLER

Damrosch. German-American family of musicians.

(1) **Leopold Damrosch** (b. Posen, 22 Oct 1832; d. New York, 15 Feb 1885). Violinist, conductor and

composer. He was educated at the Gymnasium in his native town and at Berlin University, where he took the degree in medicine in 1854. Having shown marked musical taste in early life, he then decided, against his parents' wishes, to abandon medicine and devote himself to the study of music. He became a pupil of Ries, S. W. Dehn and Böhmer, and made such progress that he appeared the next year as a solo violinist at Magdeburg. After he had given concerts in the principal German cities Liszt appointed him leading violinist in the court orchestra at Weimar in 1857. While there he married the singer Helene von Heimbürg. In 1858-60 he was conductor of the Breslau Philharmonic Society, where his programmes included works by Wagner, Liszt and Berlioz. In 1860 he made concert tours with Bulow and Tausig. In 1862 he organized the Orchesterverein of Breslau, of which he remained director until 1871.

In that year Damrosch was called to New York to become conductor of the Männergesangverein Arion. His energy, strong musical temperament and organizing ability soon brought him influence in the musical life of New York, where in 1873 he founded the Oratorio Society, a choir devoted to the performance of oratorios and other works. In 1878 a further result of Damrosch's labours was the foundation of the Symphony Society for orchestral concerts. Damrosch was elected conductor of both of these, a position he occupied until his death. In the 1876-7 season he was conductor of the Philharmonic Society's concerts.

In 1880 Columbia College conferred the MusD on Damrosch. In 1881 he conducted the first great musical festival held in New York, with an orchestra of 250 and a chorus of 1200. In 1883 he made a successful tour through the western states with his orchestra. His compositions, some of them published in Germany, some in the USA, were numerous but unimportant (see the list in *Grove 2*).

Damrosch was also instrumental in the establishment of German opera at the Metropolitan Opera, which had opened with an Italian season that was a disastrous financial failure. He presented a plan for German opera, gathered a company of German singers and opened the season on 17 November 1884, ending on 11 February 1885. Damrosch conducted all the performances but the last, which took place five days before his death.

(2) **Frank (Heino) Damrosch** (b Breslau, 22 June 1859; d New York, 22 Oct 1937). Conductor and teacher, son of Leopold Damrosch. He went to New York with his family in 1871, having studied composition and the piano as a child. He first went into business in Denver, but soon devoted himself to music, becoming conductor of the Denver Chorus Club and supervisor of music in schools. After his father's death he was chorus master at the Metropolitan Opera until 1891. In 1892 he organized the People's Singing Classes in New York for instruction in sight-reading and choral singing; from this he developed the People's Choral Union, with a mainly working-class membership of 1200. He was also instrumental in founding the Musical Art Society in New York, a small chorus of professional singers devoted to the performance of a cappella choral works and modern choral music; he was conductor until the society was discontinued in 1920. In 1897 he was made supervisor of music in the New York

schools and in 1898 succeeded his brother Walter as conductor of the Oratorio Society, which their father had founded. He held that post until 1912. At various times he conducted choral societies in towns near New York, but resigned most of these posts in 1904 to become director of the Institute of Musical Art in New York. He received the MusD of Yale University in 1904.

(3) **Walter (Johannes) Damrosch** (b Breslau, 30 Jan 1862, d New York, 22 Dec 1950). Conductor, educationist and composer, brother of Frank Damrosch. He was devoted to music from his childhood and studied composition and the piano in Germany and in New York, where he went with his family in 1871. When his father began his season of German opera at the Metropolitan Opera in 1884, Walter became assistant conductor, and after his father's death he continued in that post under Anton Seidl. He succeeded his father as conductor of the Oratorio and New York Symphony Societies. He was active in the former until he resigned in 1898, and in the latter, with a brief discontinuance, until his retirement from all musical activities. In 1894 he organized the Damrosch Opera Company with German singers, giving performances in New York and throughout the country for five years. In 1899 he was made conductor of the German operas at the Metropolitan for two years. In the 1902-3 season he was conductor of the New York Philharmonic Society. In the following year the New York Symphony Society was reorganized and continued under his direction. With this organization he made a tour in Europe in the summer of 1920.

Damrosch received the MusD from Columbia University in 1914. During World War I he organized a bandmasters' training school in France for the American Expeditionary Force; and later he was concerned in founding the music school for Americans at Fontainebleau. In his later years Damrosch came to the fore as a director of broadcast orchestral music. He was the first to conduct an orchestral concert relayed across the USA. In 1927 he was appointed musical adviser to the NBC, and among other activities he organized a regular 'music appreciation hour' for schoolchildren throughout the USA and Canada, an application to broadcasting of his lifelong work as director of children's concerts in New York. Despite his untiring efforts for musical education Damrosch never completely abandoned composition.

WORKS

Damse, Józef (b Sokółów, Malopolska, 26 Jan 1789, d Rudna, nr. Warsaw, 15 Dec 1852). Polish composer and actor. From 1809 to 1812 he was a clarinetist, trombonist and military bandmaster, and from 1813 a singer and actor, first in Vilnius and then in Warsaw. There he began to compose, writing music for the stage, including 40 comic operas and burlesques, 16 melodramas and three operas. He was a composer without any high artistic aspirations. His output is not of great value, particularly as in his stage works he pandered to the lowest tastes of the general public.

ALINA NOWAK-ROMANOWICZ

Dan, Ikuma (b Tokyo, 7 April 1924). Japanese composer. He studied composition with Sabinō Moroi and Shimofusa at the Tokyo Music School, from which he graduated in 1945. In 1950 he made a successful début as a composer with his First Symphony, written for the 25th anniversary of the Japanese radio competition. That year he finished his best-known and most representative work, the opera *Yūzuru* ('The twilight heron'), which makes abundant use of pentatonic melodies in folk style supported by a thin-textured orchestration. The simple lyricism and straightforward sentiment of the work established it as the most popular opera by a Japanese composer; within a decade it had received nearly 200 performances and been heard in Europe and the USA. It won a number of prizes, including the Kōsaku Yamada Prize for Composition, the Mainichi Music Prize and the Iba Opera Prize. In 1953 Dan joined Akutagawa and Mayuzumi in the Sannin no Kai (Group of Three); after that date he composed many vocal works and film scores, but he remains primarily a composer of opera and orchestral music. Although later compositions include more frequent dissonances, his music is always tonal, basically romantic and inclined to the exotic. He is also popular as a writer of essays on music, among them *Paipu no kemuri* ('Pipe smoke') in six volumes (Tokyo, 1965–72), *Eskargo no uta* ('Songs of escargot', Tokyo, 1964) and many others.

MASAKATA KANAZAWA

Danby, John (b c1757, d London, 16 May 1798). English organist and composer. He was a Roman Catholic and a pupil of Samuel Webbe. He was for some years organist of the chapel at the Spanish Embassy, Manchester Square, London, for the service of which he composed a number of masses and motets. He composed 92 glees, catches and other part songs (according to Baptie), many of which were published in three books published during his lifetime and in a posthumous collection issued in 1798 'for the benefit of his widow and four children'. He won eight prizes from the Catch Club for his compositions. His glees are polished and graceful, and occasionally original. *'Tis midnight*, all (1794) uses a mixture of time signatures in the different voices with good effect. He also published a few songs, *La guida alla musica vocale* op. 2 (c1785), and *La guida della musica instrumentale* op. 5 (c1790), an elementary keyboard tutor with eight 'progressive lessons' and one duet attached.

Dance.

I Introduction. II Western antiquity. III Middle Ages and early Renaissance. IV Late Renaissance and Baroque to 1700. V 18th century. VI 19th century. VII 20th century

I. Introduction. Dance, like all the arts, finds expression in an apparently infinite range of styles, forms and techniques: it may satisfy the simplest inner needs for emotional release through motor activity, as in children's singing-games, or the most complex demands of the creative artist on the professional stage; it may be profoundly subjective or philosophical, or purely decorative or virtuosic; it ranges from the ecstatically Dionysiac to the calmly Apollonian, the hypnotic to the cerebral, the totally pantomimic to the totally abstract, the completely functional – that is, serving a social or ritual purpose – to art for art's sake. Like music, dance may be performed either in solitary privacy, or by groups for their own satisfaction, or in a concert or theatrical setting. Thus its pleasures may be gained

either by direct participation or vicariously. As a theatrical art it goes hand in hand with costume and scenery, music and poetry. As such, it is frequently part of religious rites or put to the service of the state. These associations are not unusual for any art. What seems to be unique to dance, however, is that it appears never to stand alone, but always to be accompanied by musical sound, at however simple a level. For the ancient Greeks, in fact, music, dance and poetry were represented by the single term *mousikê* (art of the Muses).

Western dance music, with which this article is concerned (for folk traditions and non-Western dance, see the entries on the countries concerned), comprises two major divisions: music for dancing proper, such as a waltz or a Stravinsky ballet, and dance-inspired music, as heard in Bach suites, symphonic minuets, or Chopin mazurkas. Both categories range from musical simplicity to complexity, and within each there are masterpieces by some of the finest composers. With regard to dance music proper, it is essential that musicians understand the character, tempo, rhythmic needs and physical problems of the dances in order to perform the music. As for idealized dance music, recent research into the dances of the 15th to 18th centuries, for example, has aided musicians immeasurably in their attempts to transmute dance-like qualities into the music and to explore the problems of tempo, articulation, phrasing and character it presents. (For details of the choreography and repertory for specific dances, and for illustrations, see the entries on the dances concerned. For theatrical stage design, see OPERA, §VIII.)

The prehistories of music and dance are more heavily shrouded in mystery than those of the other arts for lack of concrete evidence. Tales of their origins, no matter how specific they appear to be, lack the corroboration that could prove them true. While known human migrations may logically be assumed to have included dance, any hypothesis in this area must be viewed with an awareness of the tendencies of conquerors to absorb artistic influences from the conquered. Even in recorded history, the problems of authenticating Western dance history are more severe than they are for Western music, because not even a rudimentary notation existed before the 15th century, and the notation systems in use since then record only a tiny fraction of all dance. Besides, most of these systems are essentially short-hands in which one symbol stands for a number of movements occurring either simultaneously or consecutively. Written descriptions of these movements in dance manuals, which also first appeared in the 15th century and are certainly the best sources on dance of the past, are often ambiguous. Furthermore, both in the notations and in the manuals exact correlations of dance with music are often elusive. Today there are still problems, for the advent of sound film, valuable as it is, and the development of accurate and complete dance notations (for example, Labanotation) have not yet resulted in a record of dance remotely comparable in extent to current musical recordings and scores. It is, therefore, still the rule rather than the exception for dances to be revived from memory, a method that is notoriously fallible. It goes without saying that non-Western dance, taught largely by rote, presents the same problems.

To flesh out the history of dance music much other evidence must be examined. Early iconographic sources tell of dance and its musical accompaniments quite clearly (Greek vases are a rich source, for example).

Written records (memoirs, letters, plays, poems, tales and travellers' accounts) document the place and functions of dance in a society, of desirable or undesirable attributes in dancing, and of instrumental and vocal accompaniments. The more direct evidence supplied by dance music and poetry intended for dancing reveals something of its metre and character. But none of these sources either provides movement sequences, or describes how music and dance were correlated, or gives clear tempo indications. Concrete modern examples may demonstrate the possibilities for movement inherent in the human body, and the many ways these may relate to music, but they must remain largely hypothetical when dealing with the past, even when there may be a basis for thinking that certain ancient traditions have been maintained through reverential rote teaching. While the utmost caution must be observed, then, in using all types of evidence, and while much primary research remains to be done, some facts of dance history are indeed certain, and there is a considerable body of information on the relationships between music and dance.

Music for dance may be supplied entirely by the dancer by clapping, stamping, snapping the fingers, slapping the body or singing. These musical means may be extended by wearing bells, shells, *Lederhosen* or boots, by striking sticks, swords or shields, or by playing castanets, finger cymbals, tambourines or drums hung on the body. Except for the voice, these devices are largely percussive in nature, providing basic metrical and rhythmic accompaniments and accents for the dancer. Dance music may also be supplied by non-dancing singers or instrumentalists, or both. Here too, there is great variety, for the accompaniment may use the resources listed above, may be assigned to one or many, to amateurs or to professionals, it may be improvised on a basic pattern or composed, and may extend from the pure 'mouth music' of nonsense syllables to the sophisticated musical resources of a symphonic ensemble or electronic tape. The manner of accompaniment varies widely in other respects as well. The 'accompanist' may, in fact, direct the dances, as in the case of the 18th-century dancing-master with his *pochette* violin, or he may compete with the dancer, as in some of the German *Zwiefacher* which change metre rapidly in a guessing-game between dancers and musicians, or he may both follow and lead, as when a musician pauses for a dancer's leap before resuming command of the beat. In short, the union between musician and dancer is achieved through multiple means.

The term 'dance music' usually implies strong pulses and rhythmic patterns that are organized into repeated metric groupings synchronizing exactly with those of the dance. Rhythmic accents and phrase lengths normally coincide with those of dance also, as does the mood of the music. It should be pointed out, however, that significant exceptions to these norms can easily be found which result in dance and music relating to each other in a contrapuntal manner (as in the hemiola minuet step, which is not always duplicated in the music, or as in some Balkan dances in which dance phrase and musical phrase do not coincide until the final cadence). Such elements as form, melody, harmony and texture can perhaps be more independent of the dance, as may be illustrated by 18th-century binary dances in which the form, the melodic material and the tonic-dominant-tonic harmonic movement are not mirrored by the footwork or dance paths, although each repetition of the

music does encompass each dance figure. Nevertheless, it is entirely possible for musical form and dance form to coincide more closely, or for a choreographer to duplicate many other aspects of a pre-existing musical work, or, on the other hand, for music to be composed to mimic and support totally the structure of a pre-existing choreography. The multiplicity suggested here is balanced, however, by one seemingly immutable constant: the association of slow tempo with either a solemn or a tragic mood and of fast tempo with gaiety or dramatic climax. The corollary to this, that excitement is engendered by a speeding up of the basic pulse, seems to be found in all Western dance.

II. Western antiquity. In ancient Greece dancing played a prominent role both in private life and in public ceremonial and ritual. Group dancing, more often than not by members of the same sex, was commonest, but solo dancing, usually of an expressive or blatantly imitative character, developed particularly in connection with the stage, though also at private entertainments. The most striking difference from modern Western society is the absence of evidence for dancing in pairs of opposite sexes. The Greeks regarded the whole body as being involved in the movements of the dance, especially arms and hands (for which the term *cheironomia* is frequently found), but even head and eyes. Literary evidence for the dance is supplemented by that of art, especially vase painting, but the latter must be used with caution because of artistic conventions in the portrayal of action.

The earliest references in Homer are to dancing of youths and maidens at country festivals and weddings, or as entertainment in royal palaces. When Odysseus (*Odyssey*, viii, 206ff) is entertained by the Phaeacians, who boast their pre-eminence in dancing, he witnesses a dance in which athletic movements and ball-throwing are part of the performance. The mention (*Iliad*, xvi, 183) of maidens dancing in the choir of Artemis shows that the cults of Olympian divinities then, as in later classical Greece, featured song and dance rituals which became stereotyped in various poetic genres (e.g. the *partheneia*, maiden songs, composed by Alcman, Pindar and others for performance in the appropriate shrine, hymeneals, epithalamia, paeans, dithyrambs, etc). The *pannuchis* ('all night' festival) was a common setting, and deities such as Dionysus, Apollo, Artemis and (in Sparta) the semi-divine Helen were invoked as patrons of the choirs. The word *thiasos* was used of the company of votaries of a particular god, and such groups were widespread in mainland Greece and islands like Delos, Lesbos and Crete.

It was commonly held by the Greeks themselves that Crete had once made an important contribution to the development, even 'invention', of dancing, and archaeological evidence confirms that dancing in groups or circles played some part in Minoan religious ceremonies and entertainments, the executants sometimes ornately dressed, or engaged in athletic tumbling and somersaulting for which Cretans were famed and which the Greeks regarded as part of the dance. The agility in battle of the Cretan Meriones, one of the minor Achaean heroes of the *Iliad*, is attributed to his dancing skill, and the description of battle as 'the dance of Ares' becomes a traditional poetic motif. Among prominent Cretan myths is the legend that the infant Zeus was protected at birth by the beating of feet and clashing of weapons by the Curetes, which drowned his cries. (Some scholars would associate this with a well-established primitive belief in the magical 'apotropaic' powers of dancing.) Armed dances continued to be popular both in Dorian Sparta, where disciplined dance forms recalling tactical manoeuvres were prominent in the education of young men and were thought to contribute to the martial excellence of classical Sparta, and in Athens, where at the panathenaic festival the so-called Pyrrhic dance, sometimes said to have been invented by Neoptolemus (Pyrrhus), son of Achilles, was performed in honour of Athena by youths naked except for helmet, shield and spear, and consisted of a traditional series of movements and gestures mimicking offensive and defensive postures of combat (see fig. 1). References in Aristophanes, Demosthenes and others show that the dancing class, attended by youths according to their local tribe, was an important feature of education and social life.

Another dance said to be of Cretan origin was the *hyporchêma*, a lively dance of a pantomimic nature with instrumental accompaniment. This was occasionally danced at emotional moments in the lyrical passages of Attic tragedy, in which artistic choreography was greatly developed. The chorus punctuated the spoken dialogue of the play with songs and dances, accompanied by music of the double aulos, which varied in mood and metre according to the unfolding of the plot. The origins of tragedy are controversial, but one tradition, held perhaps erroneously by Aristotle, saw it as an extension or development of the dithyramb, originally sung and danced spontaneously in honour of Dionysus,

1. Pyrrhic dance. Hellenistic marble bas-relief copied from a Greek original (4th century BC) (Sala delle Muse, Vatican, Rome)

god of fertility and wine. Certainly the association of Dionysus with both these poetic genres remained traditional, but in Athens the dithyramb itself continued to develop, and in the 5th century was a circular dance of 50 participants, and a prominent element in competitions between the tribes at Dionysiac and other city festivals. The tragic chorus numbered first 12, then 15, and seems to have danced formally in rectangular patterns in the so-called *stasima*, or choral odes, performed in the *orchēstra* ('dancing-place'), where it remained throughout the play, from its first entrance (*parodos*) until its exit (*exodos*) to a marching anapaestic rhythm. The dances of Phrynichus and Aeschylus, the earliest notable tragedians (who traditionally wrote their own music and arranged their own choreography), were much admired. Sophocles, said to have been an elegant dancer, is known to have written a handbook 'On the chorus', which unfortunately has not survived. In his plays and those of Euripides the actors occasionally join with the chorus in lyrical exchanges, but seem not to have been called on to engage in the dancing.

Performed along with the tragedies were 'satyr plays', with the chorus masquerading as attendants of Pan or Silenus in grotesque caricatures of the tragic dances, and there is evidence of indecent dances such as the *sikinnis* and *kordax*. (Much terminology of specific dances is found in compendious works of later antiquity, particularly the *Deipnosophists* of Athenaeus, e.g. books i and xiv, and the lexicon of Pollux, iv, 99ff.) The *kordax* was associated also with Attic comedy, and many plays of Aristophanes end with scenes of violent revelry where the chorus and actors indulge in the energetic, whirling dances appropriate to the *kōmos* (revel). Another striking feature of his plays is the dressing of the chorus as animals, birds or insects, which may hark back to popular charades in which participants dressed in animal costume and imitated animal behaviour (see fig. 2). That such dressing-up could also be used more seriously in ritual contexts is shown by another tradition of classical Athens, that of young girls at puberty dressing as bears and dancing in honour of Artemis at the neighbouring township of Brauron.

While dancing at festivals and religious rituals tended to produce stereotyped patterns, there was also the uninhibited ecstatic dancing, particularly in honour of Dionysus, but also of divinities from the East such as the Asiatic mother goddess (sometimes called CYBELE) and various fertility demons (Attis, Sabazius, etc.), whose cults infiltrated Greece. The dancing associated with these rites resembled the outbursts of dancing

mania that have periodically occurred in Europe and given concern to civic authority by the social disorder they arouse. Women were especially prone to such effects, and there is much literature (notably Euripides' *Bacchae*) about maenadism (called after the female votaries of Dionysus), while in art these dances are characterized by poses showing the tossing head, bulging throat and startled eyes of the devotee in a 'possessed' state. Much too is said of corybantism, called after the male devotees of Asiatic cults, whose excited dancing apparently induced hallucinatory states.

The contrast between such emotional and orgiastic dancing and the traditional use of the dance in education, and to some degree as a form of gymnastics, impelled Plato (in the *Republic*, and in more detail in the *Laws*) to recommend strict state control over forms of dancing permitted to free Hellenic citizens, who should concentrate on stately dances such as the *emmeleia* which imparted grace to body and soul alike, or on warlike dances in the Dorian tradition, allowing the more licentious dances to be performed, if at all, for entertainment by slaves and foreigners. (There are descriptions in Xenophon's *Symposium* of the sort of dances that might be provided by professional entertainers and enjoyed at Athenian dinner parties, where *hetærae* might also be engaged to dance for the com-

pany; see fig. 3) Elsewhere Socrates himself is quoted as saying that 'those who are best at dancing are also best at war', alluding of course to such dances as the Pyrrhic described above Plato's views on music and dancing were much influenced (via Socrates) by Pericles' friend and adviser Damon, the musician and educationist, who held firm beliefs in the effect of melody and rhythm on 'soul' and character, and much subsequent literature on dancing, by for example Plutarch, Lucian and Libanius (the latter two being authors of extant treatises 'on the dance'), and by musical writers such as Aristides Quintilianus, concentrates on the ethical influences of dance rhythms.

In the Greco-Roman world also, literary sources include much censorious condemnation of dancing (Cicero, Seneca) or devastating satire (Juvenal) against what was now mostly a professional art, but needless to say the dances of prostitutes in the taverns were popular with the masses, to say nothing of the more artistic theatrical displays of Greek dancers like the famous Bathyllus and Pylades. The real virtuosos were the *phantomimi*, who interpreted a series of different roles during the spectacular choreography of mythical scenes, and attracted public lionization, large incomes and the favour of the imperial courts. The theatrical excesses of the reign of Nero, and his patronage of dancing among the other arts, were notorious; and indeed later a dancer, the celebrated Theodora, by her marriage to Justinian, actually became Empress of Rome. Inevitably the unrelenting censure of moralists, pagan and Christian, directed against salacious women and effeminate men dancers, became a literary commonplace, and a far cry from the art idealized by the classical Greeks as the god-given gift of Apollo, Terpsichore and her sister Muses, and even, Lucian (*De saltatione*) declared, as the mortal imitation of the concord and rhythm manifested in the dance of the stars.

III. Middle Ages and early Renaissance. It would of course be absurd to talk about the dance history of the Middle Ages as if there had been no changes of style, no development of technique, no evolution of philosophical attitude and aesthetic approach towards the art of dancing during the nearly 1000 years of medieval cultural history. However, only the roughest sub-division of the whole period is possible. The reason is the absence of primary dance sources before the great instruction manuals of the 15th century. Up to about 1420, the year given on the first page of the Domenico treatise, knowledge of medieval dance must be gathered from literary references, from musical evidence and from iconographic representation. There is, happily, an abundance of these. However until the emergence of the medieval instruction book, or of eye-witness accounts such as those in the fly-leaves of Nancy (1445), Cervera (c1496) and Salisbury (1497), or of the *prattica* collections of Foligno (mid-15th century), the Il Papa manuscript (early 16th century) and the Nuremberg manuscript (1517), information is limited to the mere mentioning of names and technical terms at worst and to the delineation of shapes at best.

1 The Middle Ages 2 The early Renaissance

1 THE MIDDLE AGES The key words *saltare* (*saltatio*), *ballare* (*ballatio*, *bal*, *ballo*) and *choreare* (*choreatio*, *chorea*, *choreas ducere*), as they were used by the church Fathers in either a critical or an approving sense, allow some admittedly rough conclusions about dance in the early Middle Ages. The classical Latin definition of *saltatio* was 'pantomime', that is, representative dance in the hands of professional performers. This became 'to jump' or 'to leap' and, as the technical term entered into the movement repertoire of social dancing, merged with the corresponding Germanic 'springen' and 'hüpfen' to form the frequently mentioned *Hupfauff*, *Springdantz* and *saltarello* types of the late Middle Ages and the early Renaissance.

The most general of the medieval terms is *ballatio* (from Greek *ballem*) which is used in the widest understanding of dance (*ballator*, *ballatrix*, 'dancer') and dance festivity (*bal*, *baui*; see **BALLO**), as well as in juxtaposition to *chorea*. The latter, a classical term that eventually became identified with *choraula*-*carola*-*carole*, is used exclusively for group dances in line or circle patterns, while *ballatio* seems to imply other formations, such as the processional type of dance. Slightly overlapping in meaning with *saltare* is the Roman word 'tripudiare' (*tripudium*); originally the technical term for the Salian armed and victory dances (see **AEPPLI** for etymological details and quotations), it was subsequently applied to other forms of formal dances with or without weapons and to religious dances like the two-voice *Stella splendens* of the 14th-century Spanish *Llibre vermell* which is accompanied by the remark 'Sequitur alia cantilena ... ad tripudium rotundum' (*AnM*, x, 72f), and it finally acquired the general meaning of dance, the 'ars tripudii' of the Guglielmo treatises of the mid-15th century. The last of the general dance

terms, *danzare* (*dancier*, *danser*, *tanzen*, with their nouns), did not enter the vocabulary until the late Middle Ages. Again the meanings are varied and ambiguous: besides the most general meaning, of any kind of choreutic activity, it is most often used for a pairing of *danser* or *tanzen* with another, contrasting term 'Quaroler et dansser et mener bonne vie' (*Chevalier au cygne*; see Godefroy, I, 786), 'dacent et balent et querolent' (*Renart*; *ibid*, 787), 'tanzen unde reien' (*Stamheimer*, see Sachs, Eng. trans., p.269) and so on.

As time progressed, the first proper names for dances began to appear. *Carole* and *espringale*, *reien* and *hovetantz*, *estampie*, *stantipes* and *saltarello*, *trotto* and *tresche* are all part of the repertory from the 12th century on. German peasants danced *firlefanz* and *hop-paldei*, *ridewanz* and *gofenanz* (Böhme), their Italian counterparts the *piva*; the *cazzole* was performed at Easter in Sens Cathedral in the 13th century (Gougaud, p.232).

Of all these only the *carole* emerges from the writings of medieval poets as a definite choreographic shape: it was the line dance *par excellence*, ancestor of the farandole and the branle, with the participants holding hands; it could have figures during its course (the 'bridge' appears frequently in iconographic representations: see the Lorenzetti fresco of the Siena Palazzo Pubblico, fig.4), it could be stretched out over a great space ('Tel carole ne fu pas veue/pres d'une quart dure d'une lieue' Phelipe de Remi, *La manekine*, see Sachs, *op cit*, 271) or contracted into a closed circle, it could be quietly stepped or performed with lively hops and jumps. When *caroles* or *reyhen* were sung, all participants would join in, either in strophic songs or responding to the intonation of a leader, who could be either a jongleur or one of the festive company. Rondeaux, virelais and ballades were most frequently used for this purpose, but whether

the choreography reflected in any degree the structural complexities of these vocal forms, there is no way of knowing.

While the long or circular *carole* is documented for all levels of medieval society, the more formal *danse* (*danza*, *tantz*, *hovetantz*) for couples or groups of three was, at least initially, the particular property of the nobility. The key words for the dance-technical execution are 'to walk' (Middle High Ger. *gên*), 'to step', 'to slide', 'to glide' (Middle High Ger. *slifen*); the embellishing *schwantzen* ('to strut'; literally, 'to wag the tail') is probably the medieval ancestor of the 15th-century *campeggiare* (Cornazano) and the *pavoneggiare* of the 16th century (Caroso, Negri), just as these elegant processional dances themselves stand at the beginning of an uninterrupted development which leads on to the classical Burgundian *basse danse* and the more elaborate Italian *bassadanza* of the 15th century, and then to the pavan of the high Renaissance (see fig.5, p.182).

Medieval writers occasionally made a distinction between *danse* and *bal* (or *bau*: 'Dances, haus et caroles veissiez commencer' *Berte*; see Godefroy, I, 559). It is tempting to see in this the earliest trace of the characteristic division of the court dances of the quattrocento into *bassadanzas* and *balli*, the former either purely processional or restrainedly ornamental, the latter predominantly expressive and dramatic, but there is simply not enough evidence from the Middle Ages to prove or to disprove this hypothesis.

The writings of medieval authors are full of references to the musical instruments that provided the accompaniment for dances. *Tambourin*, drums and bells, pipe and tabor, *frestels*, lutes, *psalterion*, *gigen* (vielles), organetto, bagpipes, shawms and trumpets – in short, the entire palette of instrumental colours, either singly or in a variety of combinations, could be and was used

4 *Carole* detail from the fresco 'The Good Government' (c1337–9) by Ambrogio Lorenzetti, in the Palazzo Pubblico, Siena

to accompany dancing. *Estampie* and *danse royale*, *stantipes*, *ductia* and *nota*, saltarello and *rotta*, well documented in medieval musical practice (*GB-Ob* Douce 139, *F-Pn* fr.844, *GB-Lhm* Add.29987) and theory (Johannes de Grocheo, c1300), have been subjected to much scrutiny and musicological discussion. From all this the forms of the instrumental dances emerge clearly enough. short, repeated sections (*puncta*) with *ouvert* and *clos* endings are the rule; their number can vary from three to seven. There are some pairings of saltarello and *rotta* which are early examples of the *Tanz-Nachtanz* idea. On the basis of Johannes de Grocheo's writings the relative speed for the *estampie* has been established as fairly sedate (Wagenaar-Nolthenius) while the *ductia*, 'cum recta percussione', seems to have been quite fast, 'levis et velox'. Occasional attempts have been made (by Sachs, Aubry, Reese) to connect the known repertory of medieval choreographies with the repertory of instrumental dance music, but in the present writer's opinion all of these attempts have failed. It is simply not known what dance went with what music: a medieval dancer could *caroler*, *danser* or *haller* to a saltarello just as conveniently as to a *ductia*, a *nota*, a *rotta* or an *estampie*.

While the raucous and joyous dances of the lower

classes, like the folkdances of the present, seem to have been quite clearly defined as to their regional provenance and manner of execution (see Böhme, Sachs), the refined style of dancing of the medieval knights and their ladies amounted to a language that was spoken everywhere. One reason for this was that the teaching of dance and the playing of music apparently lay in the same hands. Choreographies, like epic tales and songs, were carried from castle to castle by professional entertainers; jongleurs, *Spielleute* and Jewish *letzim* sang and played, tumbled and mimed and, when called on to do so, led the dances which concluded the day's activities. The annual jongleur 'schools' provided welcome opportunities for exchanging ideas on the current trends of fashionable entertainment, and from these centres ideas and materials were carried back to princely residences everywhere. When the specialist in the teaching of dance began to separate himself from the general entertainer is not known, the first known name is Rabbi Hacen ben Salomo who in 1313 taught a religious dance to members of the congregation of St Bartholomew at Tauste (Spain, see Sachs). No-one else is mentioned during the 14th century, although the writings of Dante and Boccaccio, poems like *Les echecs amoureux* and *Le roman de la rose*, epic tales, chronicles and, as always,

5. Processional dance (probably a basse danse) accompanied by a sackbut and two shawms miniature (by Loyset Liédet or workshop) from 'L'histoire de Renaud de Montauban', Burgundian, 15th century (F-Pa fr.5073, f.117v). for a further illustration, see BASSE DANSE.

the critical voices raised by church and civil authorities, frescoes and marginal illustrations give ample proof of the continuous development of the art of dancing in this highly sophisticated historical period.

Periodically great waves of mass hysteria swept the lands in which the fear of death, a subject so central to medieval thought, expressed itself in the eruption of a dance-madness. From the 11th century to the 15th, according to the chronicles (see Sachs, Böhme), people were prone to this affliction which made them dance and leap, turn and twirl in an ever-increasing frenzy that could last for hours and days and was likely to end in complete exhaustion if not in death (see fig.6). Depending on the place - often a church or a churchyard (see Gougoud) - or the day of their outbreak, these ecstatic dances were called *dance macabre*, 'St John's' or 'St Vitus's dance', the area along the Rhine was particularly prone to the disease, but there are reports from other parts of central Europe as well. Italy during the same period knew a similar kind of dance-madness, the strenuous motions of the tarantella were said to be the only cure for the deep depression caused by the poisonous bite of the *Lycosa tarantula* spider, but when the dancing began it irresistibly drew hundreds of spectators into its mad revolutions and thus had the same effect as the *chorea major* of the north

6 Dance of death woodcut from H. Schedel's 'Liber chronicarum mundi' (1493)

with a young lady's proper behaviour in the Guglielmo treatises), dress and the like; in the second half the choreographies are given, many with their music, many without.

2. THE EARLY RENAISSANCE The culmination of the old tradition and the beginning of an entirely new phase of dance history came in the first half of the 15th century. The dance, which previously had not been much more than a loosely organized, companionable and entertaining, orally transmitted choreographic activity, became an art practically overnight, taught and written about by experts who not only compiled the fashionable repertory and developed methods of notation but also brought to their subject a philosophical attitude and aesthetic insights which went far beyond the merely pragmatic. While the traditional anonymity still dominated in the north (no author's or compiler's name is given with either the splendid Brussels basse danse manuscript or the Michel de Toulouse print *L'art et instruction de bien dancier*), the Italian dancing-master was a respected member of his home court, intimately involved with the private life and the public image of his prince, a man of status, well paid and much sought-after, teacher, performer, choreographer, writer and master of ceremonies all in one.

The line of illustrious names begins with DOMENICO DA PIACENZA (c1390-c1470), dancing-master of the Este family, *saltatorum princeps et re dell'arte*, founder of the first Lombard school of dancing and teacher of GUGLIELMO EBREO DA PESARO (b c1425), and ANTONIO CORNAZANO (c1430-84). Lorenzo Lavagnolo, Giuseppe Ebreo, Giovanni Martino, Magistro Filippo and Giorgio were active in the second half of the 15th century; 'Il Papa' left a collection of dances from the early 16th century, thereby providing one of a handful of choreographic documents that connect the great 15th-century treatises with those of the late 16th century.

All the instruction manuals of the 15th century, whether anonymous or not, are structured in the same manner. The first half is devoted to the theory of dancing, to a description of steps and movements and their relationship to the accompanying music, and to style, ballroom manners (e.g. the delightful passage dealing

For the Franco-Flemish sources of the north the repertory consists almost exclusively of the basse danse, the stately, quietly gliding processional dance that enjoyed the favour of court and town well into the 16th century. Only five steps are used and these, having been explained in the introduction, are written in tablature. *R* stands for *révérence*, *b* for *branze*, *ss* for two single steps, *d* for a double step, *r* for *reprise* (sometimes replaced by *c* for *congé*). These steps are combined into *mesures* of different lengths (the system is full of ambiguities: see Sachs, 1933, Brainard, 1956, Hartz, 1958-63, for three different interpretations), a deceptively simple method of organization which allows for an amazing degree of expressiveness within so limited a repertory of movements. In the two main sources, the Brussels manuscript and the Michel de Toulouse print, each basse danse is given with its own tune, notated in tenor fashion in uniform blackened breves, each of which accommodates one step of the tablature (four melodies at the end of the manuscript are mensurally notated; three of these have concordances in Michel de Toulouse). The rhythmic sub-division of the melodies lay in the hands of the musicians, who would add improvised upper voices to the tenor and create the sonorities that the occasion called for, using *les instruments haults* for outdoor dancing and particularly splendid festivities, *les instruments bas* for indoors and intimate gatherings (see *Les echecs amoureux*: Abert, 1904-5).

Contemporary with the northern basse danse but stylistically much younger was the Italian bassadanza (for details see Brainard, 1970, pp.70ff). The Italian masters delighted in the invention of new shapes; figures alternate with processional passages, linear choreographies (*alla fila*) with others for couples or groups of three; an entire, newly developed range of dance-technical possibilities came into play. The result is that many of the bassadanzas of the early Renaissance look and feel exactly like their counterparts, the balli and ballettos by Domenico, Guglielmo and others. One major distinction lies in the use of the accompanying music: while each ballo, when it has music at all, has

a tune of its own, carefully constructed to accommodate and underline the various phases of the choreographic plan, the bassadanças have fully written-out step sequences only. Only Cornazano listed three 'tenori da bassedance et saltarelli gli migliori et piu usitati di gli altri' (f.3) of different lengths, the implication being that any tune of the right dimensions could be used to accompany a bassadanza. Whether the pairing of bassadanza and saltarello (Fr. *pas de brehan*; Sp. *alta danza*), in spite of Cornazano's statement that 'detro ad ella se fa sempre lui' (f.10), was quite as automatic a process as Sachs would claim is hard to say. Although combinations of a slow, stepping dance with a lively, jumping dance are present in the literature and the music from the Middle Ages (*tantz-hoppaldei*, *baixa et alta*) to the pavane-tourdion and pavane gailarde pairs of the 16th century, the Italian dancing-masters only rarely mentioned this sequence (for three *prattica* examples see *Otto bassedanze* nos 2, 5 and 8). On the other hand there are reports of festivities from Italy (e.g. *La festa del paradiso*) as well as from England, where one basse danse was followed by several others, only at the end of such a group did the dancing become so lively that a princely performer 'perceiving him selfe to be accombred with his Clothes sodainly cast of his gowne and daunced in his Jackett' (during the wedding celebrations of Prince Arthur and Catherine of Aragon, 1501, see Orgel, pp.22f).

While the princes in private could behave much as they chose and dance whatever they liked, their code of conduct ordained that when dancing 'in presentia di molti, e in loco pieno di populo' a certain dignity had to be observed, 'temperata però con leggiadra e aersa dolcezza di movimenti' (Castiglione, *Il libro del cortegiano*, II, 11), it was not suitable that a gentleman should display too much technical brilliance, 'presterze de piedi e duplicati rebattimenti', which would make him look like a paid entertainer, nor was it advisable that he join in *moresche* and *brandi* (brangles) unless he were well disguised (Castiglione). These remarks, coming as they do after the turn of the century, contradict to some extent the gist of the teachings of Domenico, Cornazano and Guglielmo Ebreo, whose goal was the training of the *ballarino perfetto* who could compete with ease and grace with the best of professional dancers at his court, just as the entire repertory of bassadanças and intricate balli was created for 'sale signorile' and for 'dignissime madonne et non plebeie' (Cornazano).

Besides the two main types, the private repertory of court dances included *calate*, *trotto*, *striana*, *alvadança* (possibly *altadanza*, see Prudenzi, *Saporetto*) and *roegarze* (Castiglione). The *chiarentana* (*chiarenzana*) was mentioned by Prudenzi in the context of chamber dances. Guglielmo (f.66v) and Giorgio (p.54) gave a fully choreographed balletto by that name, which is closer to an English longways than any other dance from the 15th century; it was also performed, side by side with torch dances, at princely weddings and other more public gala events (see Moe, 1956, p.62).

Soon after 1500 the first traces of a new repertory began to appear. The brangle became visible both in the musical sources (Petrucchi, Attaignant, A. de Lalaing) and in the cheerful dance instruction book *Ad suos compagnones studentes* by ANTONIUS DE ARENA (?1519 and later edns.). It was the characteristic dance of the common people (see BRANLE, fig.1), gay, uncom-

plicated, frivolous at times; 'and all those who take part in the dance acquit themselves as best they can, each according to his age, disposition and agility' (Arbeau, *Orchésographie*, 1588, trans. Beaumont, p.113). *Tordiones*, *gallarda*, *l'antigailla gaya* and *pavana* were all mentioned in the university dancing-master's book, although he did not yet feel altogether secure with these novelties ('Hic tibi pavanas nolo describere dansas/Rarenter dansat iste paysus eas', p.79), and preferred to confine himself to the traditional basse danse.

The strands of popular group dancing and professional solo dancing overlap and cross constantly in the *moresca* (morris, *morisque*, *Maruschka-Tantz*). From Portugal to Hungary, from Mallorca and Corsica to northern England, it appears from the Middle Ages to the present in nearly as many shapes and forms as there are documents attesting to its popularity. However, during the early Renaissance three basic types predominate: the solo *moresca* with exotic movements, reminiscent of the sinuous, undulating dances that arrived in Europe via Spain with the invasion of the Moors (most pictorial representations of Salome dancing at King Herod's banquet are part of this tradition), the formation dance with swords or sticks (also known as 'Les mattachins' or 'Les bouffons', see Arbeau; for illustration see MATACHIN) representing the battles between Christians and heathens (see the *moresque* in the *Pas d'arbre d'or*, Bruges, 1468, as well as the sword and stick dances of the Basque country and England), and the competitive miming *moresca* in a circular pattern, in which each of the participants acts out a part and the most convincing obtains the prize from the person in the centre, usually a lady 'Mayde Maryan' of the English morris bearing a jewel, a rose or an apple (see the Israel van Meckenem engraving in MORISCA; the illuminations to the Freydl manuscript of Maximilian I, fig 7, E. Grasser's figures from the Rathaussaal in Munich). The movement is always strong, either grotesque or funny or exaggeratedly polished (Grasser); the dancers often paint their faces black (hence the *Schwartz-Knab* tunes in 16th-century German sources) or wear masks (Freydl Arena, p.73), bells are sewn to their clothes which emphasize each step and jump as the dancers gyrate to the accompanying pipe and tabor, bagpipe, tambourine, or, in more modern times, the fiddle and the harmonica. The figure of the fool who interferes with the pattern as well as with performers and spectators continues the tradition of the medieval devil, the prankster of the mystery and miracle plays; the horse evokes ancient fertility rites (see Sachs, 1933; Domokos).

Although the *moresca* in one form or another was part of the court repertory throughout the 15th century (the references in the Ambrosio treatise and festival reports attest to that, as do the mummery pictures of the Freydl manuscript of 1502), the main carriers of the tradition were the well-to-do artisans in the late medieval cities and towns. In Nuremberg, whose coopers, butchers and knifsmiths were famous for their annual guild dances, and where the *Schemhart* had been practised since the 14th century (see Sumberg), particular privileges were granted to have a *Morischkotanz* performed; an entire Fastnachtsspiel *Morischgentanz* survives from the early years of the 16th century. Similar events took place in Munich and Augsburg, and it is more than likely that the tradition remained constant until it surfaced again in Arbeau.

Although there are many literary references to

national and regional styles of dancing in the Middle Ages and the early Renaissance - 'der alte tanz' . von Dürenge(n) (Wolfram von Eschenbach, *Parzival*), 'danzare all'ungaresca', 'ballare alla romana', 'calate de maritima et campagna' (Prudenzan), 'la baixa moresqua' (Cervera manuscript), 'portugalisch tänz' (Leo von Rozmital) - it is impossible to say how these distinctions, apparently clear to contemporaries, were made in terms of the dance itself. Touches of costume were added to the fashion of each period (Salome and other biblical or exotic figures wear turbans with their 14th- or 15th-century dress); musical instruments, particularly percussion and wind, evoked specific localities (tambourines for Hungarian and Moorish numbers, bells for *morisques*, bagpipes for peasants or for the nobility in a rustic setting) On the whole, however, the language of dance, though changing through the ages, was essentially an international idiom that was spoken and understood everywhere

Even the art of theatrical dancing, once it had left the medieval tumbling stage, followed largely the elegant example set by the ballroom whose style and technique were either overemphasized and made fun of or transported directly on to the stage (see Brown, 1963) The break did not come until the late 18th century when the increasingly demanding art of the ballet dominated the stage while the ballroom cultivated a much simpler type of group dancing During the entire Renaissance and through the Baroque period, however, theatrical dancing was simply an intensified and enlarged rendering of that which every courtier and patrician practised daily and performed nightly to his own and the observers' delight

IV. Late Renaissance and Baroque to 1700

1 Before 1630 2 After 1630

1 BEFORE 1630 From 1550 to about 1630 court dance is well documented in choreographic and musical sources, spectacles, plays, memoirs, letters and, to a lesser extent, iconography. These rich resources accurately reflect the great popularity of dance as a social and a theatrical art. Particularly fortunate is the large number, nature and scope of the manuals on social dance from the second half of the 16th century, which was to be unequalled until the 18th. Lacunae exist, however, primarily in the areas of 'antick' or grotesque dances. There is also little detailed information on the professional pantomime or acrobatic techniques of such groups as the *commedia dell'arte*.

From the musical standpoint it is not only the wealth of dance music of this period that is important. The specific rhythmic patterns of the popular dance types pervaded much of the vocal music that was not necessarily intended for dance: the lighthearted villanellas, canzonettas, *scherzi musicali* and ballettos of the period are filled with the distinctive galliard, canary and corrente rhythms especially, but these rhythms also appear in the more serious madrigals and theatrical works (among the most famous of these, perhaps, is Monteverdi's *Zefiro torna*, based on the licentious *ciaccona* bass). At this time the tradition was established in which dance, often in triple metre, symbolized both joyfulness and love required – a tradition still strong in Puccini's *La bohème*. At this time, also, occurred the union of dance, song and spectacle in opera, a direct outgrowth of the pastoral, *intermedio* and *ballet de cour*. Furthermore, dance served as a vital force in the development of the new, purely instrumental idioms and forms of the 16th century, which in the 17th were to prove so significant in all musical media: *ostinato* variations, binary form, and the suite and its related genres (*ordre*, *sonata da camera* and the orchestral *ouverture*). Finally, it was primarily the dance music of this period that served as the source of certain fundamental elements of Baroque music, the most obvious of which were clear and regular metric organization with strong and often-repeated rhythmic motifs, well-defined tunes and simple, often well-known basses in a homophonic texture, with functional harmony and standardized chordal schemes.

Dancing skills were cultivated daily by the nobility and their middle-class emulators, with the assistance of ubiquitous dancing-masters, for it was assumed that joyous flirtation and the exhibition through dance of feminine charms and lusty male prowess were vital parts of social intercourse. All occasions of state, great or small, required celebration in the ballroom: thus personal aggrandisement and adornment were natural concomitants of the theatrical ambience of a state ball. The seriousness with which skill at dancing was regarded

throughout the entire courtly period was reflected in the neo-Platonism that found its way into much of the prose and poetry of the time, as so vividly expressed in Sir John Davies's *Orchestra, a Poem of Dancing* (c1594):

Dancing, bright lady, then began to be
When the first seeds whereof the world did spring,
The fire air earth and water, did agree
By Love's persuasion, nature's mighty king,
To leave their first disorder'd combating
And in a dance such measure to observe
As all the world their motion should preserve

The dances performed at social gatherings included solemn processional pavan types, circular branles, or progressive longways dances 'for as many as will'. There were individually choreographed ballettos, the direct descendants of the 15th-century ball, for solo couple, trios, or groups of two or three couples dancing simultaneously, and dances in which the partners alternated solo and accompanying passages. Miming dances, like the battle between the sexes in Negri's *La battaglia*, or vaulting *voltes* in embrace position, enhanced the flirtatious flavour of the ball, while dances that were essentially kissing-games (such as the cushion dance), or choreographed chases, as in Negri's *La caccia*, made the sport of love even more explicit. Young men dazzled their ladies with glittering galliards which involved truly virtuoso techniques, including competitive hitch-kicks to a tassel raised high above the floor (see fig.8), multiple pirouettes and rapid air turns or beats ('capers'). From simple to complex in pattern, and from easy to technically difficult, there were dances to suit everyone. The style was light but vigorous, with emphasis on leg- and footwork, the torso erect and quiet, and the arms relaxed except when involved with a partner.

On specially grand occasions, mellifluous poetry, brilliant costumes and colourful scenery combined in

8. Landing after the 'salto del fiocco' ('jump to the tassel'), a competitive feat in the galliard for which Negri listed many variations: woodcut from his *Le gratie d'amore* (1602)

the Italian *intermedio*, the French *ballet de cour* or the English masque to produce that perfect delectation of the senses attested to by all (see fig.9). The neo-Platonic conceit, that in dance the harmonious movements of the parts of the body paralleled the movements of all human bodies in a well-ordered world and mirrored on earth the dance of all celestial bodies to the music of the spheres, found its fullest and most explicit expression in these sumptuous spectacles, which were well established by the turn of the century, and continued throughout the Baroque period (the final *intermedio* of the famous Florentine group of 1589, portraying the descent of Rhythm and Harmony, is an allegory of just this conceit). Such extravaganzas involved the best professionals in all the arts, including dance. Nevertheless, theatrical dances essentially enlarged on what was practised daily by the amateur nobility, in fact, titled aristocrats and professionals danced side by side in the court spectacles, the greatest gods often personified by the princes of highest degree.

Theatrical dances could, of course, exist independently of the largest spectacles, and varied widely in scope, whether as brief excuses for laudatory poetry at state dinners, welcoming processions for visiting dig-

nitaries, mock battles (*moresche*), horse ballets (*carroussels*; see fig.10) or stage works combining all theatrical forces (*balli*). There could be solo dances by one or two male dancers (in the third *intermedio* of 1589, for instance, Apollo dances his duel with the python in different poetic metres, then performs a victory dance; see INTERMEDIO, fig.3); small group dances by males or females (as in Monteverdi's *Ballo dell'ingrate*); or shows of skilled swordsmanship by teams of young gentlemen (*matachins*). Finally, there could be those geometrically figured dances for large numbers of people that formed the main dances of the *intermedio*, *ballet de cour* and masque, and persisted throughout the 17th century as the *grands ballets*.

The printed dance manuals of the period provide several hundred specific choreographies and music for social dances, many rules for the performance of the step patterns which constitute the basic vocabulary of both social and theatrical dance, and rules of social etiquette often delightfully expressed by the dancing-masters whose function was to train their aristocratic young charges in the social graces and the warlike arts. Beginning in 1581, four large and two small dance manuals appeared which document the dance for the

9. *Ballet des polonois*: detail from a Brussels tapestry (1582-4) 'Festivities in a Garden in honour of the Polish Ambassadors', in the Galleria degli Uffizi, Florence

10 *Carrousel in Florence in 1637*, engraving, 'Figure della festa a cavallo, rappresentata nel teatro del Ser. Gran Duca di Toscana' by Stefano Della Bella, many of the geometric figures had symbolic significance

period from 1550 to 1630 *Il ballarino* by FABRITIO CAROSO (1581), *Opera bellissima . . . di gagliarda* by Prospero Luti (1589), *Orchésographie* by THOINOT ARBEAU (1588), Caroso's *Nobiltà di dame* (1600), *Mutanze di gagliarde, tordiglione, passo e mezzo, canari e passeggi* by Livio Lupi (1600, 1607), and *Le gratie d'amore* by CESARE NEGRI (1602). Known manuscripts are few and small. The chief authors, Caroso, Arbeau and Negri, were old men when their books were published; indeed, some of their dances can be traced to earlier decades, even to the 1550s. The fact that most of the manuals were reprinted well into the 17th century indicates validity until about 1630 in Italy and Spain, though later publications (see below) hint that other fashions were taking hold in France and England. That Italy dominated the realm of dance in the 16th century, as it had in the 15th, is suggested by the geographical provenance of five of the manuals, and by the numerous Italian dancing-masters that Negri listed who were then working in France, Spain, the Netherlands and German-speaking countries. It is the Italian manuals that contain the most elaborate and sophisticated steps, the most complex variations on the basic dance patterns, and choreographies of staged dances. Yet Arbeau is important, for he supplied ample evidence of the dance in France, and is the only source for some French dances that were popular elsewhere, such as branles and the *volte*. Though the English, Spaniards and Germans were avid dancers, they produced no significant manuals at that time, and information comes mainly from the many textual references in Shakespeare, Cervantes and

others.

Those few surviving staged choreographies and other accounts give clear indications that the group stage dances (*balli*) were heightened versions of the social balletos, requiring greater skill and memory but incorporating the same basic step vocabulary, style and musical types. The best technical information on spectacular dances comes, again, from Italian sources; elsewhere there are merely tantalizing literary descriptions or drawings of the geometric symbolic figures so popular all over Europe, without any specific facts on footwork or the means by which these figures were attained. Negri however described three *balli* specified as portions of grand spectacles, and Cavalieri provided his choreography (for illustration see CAVALIERI, EMILIO DE') of the largest extant staged *ballo* with his own music, in the descent of Rhythm and Harmony mentioned above (the music became the famous *Aria di Firenze*). In these *balli* running figures, circles, half-moons, chains, squares and wheels follow each other in quick succession, showy galliards alternate with stamped canaries and walking passages, and tuttis with solos; in short, they contain excellent clues to the mysteries of dance in early Italian opera, *ballet de cour* (the first important *ballet de cour* was planned and choreographed by the Italian Balthasar de Beaujoyeux) and masque.

The degree to which folkdance nourished court dances is unknown, but that it did so is clear enough, as may be seen in, for example, Arbeau's branles of different geographical origins. Certainly the dividing-

line between folk and court dance was not so well marked then as later, and cross-influences may be postulated between such dance steps as the morris 'caper' and 'gallery step', and the galliard. In some cases such influences are well documented, as with regard to the Mexican origins of the sarabande. Throughout Western dance history the cultivated 'arts' of dance and music have relied on inspiration from the folk and the exotic, whether real or imagined, for fresh ideas, renewed vigour and special 'character'. In every case that character has gradually been remade in the current courtly or theatrical image until fresh inspiration has been needed.

It is small wonder that, throughout this period, dance music found its way into instrumental collections for the educated amateur. The sheer quantity, however, and the profusion of titles are staggering, and further underscore the popularity of the art. Dance collections range from musical manuals (Le Roy) to huge eclectic volumes (Besard). They are for solo instrument (Fitzwilliam Virginal Book) or ensembles (Mainerio), and extend from very simple pieces in two or three strains, with or without varied *doubles*, to huge sets of virtuosic variations. It is unlikely that the latter were intended for dancing, but it remains debatable whether the simple *danseries* (as in Gervaise) were intended to accompany dances, one theory being that professional players would not have depended on these collections for their repertoires. Frequent concordances and reprints among the sources reduce the real repertory somewhat, but attest further to its popularity and geographical spread.

Among the instrumental publications of importance were those by Abondante, Gardane, Gorzanis and Barbeta in Italy; Gervaise, Le Roy, Morlaye, Du Tertre, d'Estrée and Francisque in France; Gerle, Wecker, Schmid, Ammerbach, Waissel and Praetorius in Germany; Susato and Phalèse in the Low Countries; Le Roy, Barley, Dowland, Morley and Holborne in England; and Cabezón and Ortiz in Spain.

With regard to instrumental usage, Arbeau listed sackbuts, recorders, pipe and tabor, violins, transverse flutes, spinets, hautboys and 'toutes sortes d'instruments' as suitable for dancing, adding that dances could also be sung. Caroso and Negri however gave the music only in lute tablature and mensural notation, and there is other evidence that in Italy, whether in social dance or in spectacle, a tradition of appropriate instrumentation sprang up for certain types of *inter-medio* scenes or personages. Drums and double-reed instruments were considered to be grotesque or peasant types and were excluded from noble or Olympian scenes. This tradition seems also to have been adhered to in English masques and French *ballets de cour*. Huge complements of these acceptable instruments accompanied dance in spectacle, and were combined with vocal forces of all types.

Much music for social dances is based on well-known migrant tunes or basses, whether originally sacred or secular, vocal or instrumental; for example, Gastoldi's balletto *L'innamorato* was choreographed by Negri as *Alta mendozza*, and it appeared in England as *Sing we and chaunt it* and in Germany as *In dir ist Freude*. Furthermore, the same dance music may appear in duple or triple metre in different sources. Phrasings are both regular and irregular, and changing metre or hemiola provide charm and interest. National differences in style

emerge in dance music as elsewhere: the English, in general, are more tuneful than the Italians, who often emphasize the basses and chordal schemes (*romanesca*, *folia*, *passo e mezzo*). Most of the music is rather commonplace; obviously the delights that dance music suggested and the social status dance enjoyed were responsible for its great vogue. Nevertheless, the famous sets of variations on dance themes by such composers as Sweelinck, Byrd and Cabezón indicate the opportunities and challenges that dance music could suggest.

Popular individual dance types which appear in both the dance manuals and the musical collections were the *allemande* (*tedesca*), *branle* (*brawl*, *brando*), *courante* (*corrente*), *galliard* (*tourdion*, *tordiglione*, *volte*), *pavan* (*pavaniglia*, *paduana*, *passo e mezzo*) and *saltarello*. Others remain essentially local: the English measure and dump, for example, do not seem to have crossed national boundaries at that time. Some popular types, such as the *bergamasca*, *ciaccona* and *sarabande*, are not found in the manuals at all, for they were apparently still too crude for courtly ladies and gentlemen. Other seeming discrepancies between frequencies in the manuals and the music are more difficult to explain, however. Despite their numbers in the musical sources, there are few choreographed pavans or *passo e mezzo*, and saltarellos appear at this time only as parts of ballettos indistinguishable from other quick after-dances called by various other names. The biggest difference of all is that the paired pavan galliard, *passo e mezzo-saltarello*, or *Tanz-Nachtanz* (*Hupfauf*, *Proporz* or *tripla*), which dominate the musical sources and continue the old duple-triple, slow-fast combinations, seem to be absent from the manuals. However, the multi-movement ballettos of the Italian manuals do, in fact, most often begin with these combinations. Of even more import musically is the fact that most of the ballettos are essentially variation suites in more than two movements, suggesting that danced suites first inspired the grouping of dances into musical suites. Thus, performing the dances in the manuals can give valuable hints about the relative dance tempos in suites of the 16th and 17th centuries.

Apart from the variation suites themselves, the variation principle obviously pervaded dances and music alike. All of the individual dances consist of a series of variations (or figures), one to each repetition of the music, which was also undoubtedly varied in performance. It is also clear that very few step patterns belong solely to one variety of dance (such as the *seguito battuto ala canario*), and that even these may be borrowed at will and inserted into another type of dance when desired. Further, the facts that there are no purely 'low' or 'high' dances, that all step patterns, including the seemingly immutable galliard, are adaptable to either duple or triple metre, that there are galliard variations of five-, six-, or seven-bar lengths, and that balletto movements can consist of many extremely brief sections in different metres, suggest that there was greater flexibility in the dances of this period than has sometimes been believed. Finally, the evidence that in the galliard, the canary or the *passo e mezzo* the dancer could invent his own variations *ad libitum*, provided only that he matched the danced cadence to the musical cadence, again makes clear that improvisation and variation went hand in hand in dance as they did in music.

2. AFTER 1630. In the 17th century the status of dance

11. Minuet. engraving 'Menuet de Strashbourg' from the *Königlichen Almanach* (1682)

remained unchanged throughout Europe, but the most pronounced developments in style and dance types were closely bound up with the steadily enlarging sphere of French influence, which included England, Denmark, Sweden and Germany. Italian influences remained strong however in Portugal, Spain and Germany until nearly the end of the century, when French tastes prevailed. Continued interest in folk and exotic colour also encouraged the contributions of English, Spanish, German, Polish and Hungarian dance elements to the mainstream of dance. The vigour and beauty of dance music by such masters as the Italians Frescobaldi and Corelli, the Frenchmen Gaultier, Chambonnières and Lully, the Englishmen William Lawes, Locke and Purcell and the Germans Froberger, Georg Muffat and Kuhnau represent the best of an enormous repertory of music designed to evoke or to accompany the pleasures of the dance.

In the ballrooms of France the great variety of dance types continued, changing in mode and manner as the century progressed. Some dropped out completely (the *passo e mezzo*, for example), and some, like the courante, reached their apogee, others, such as the sarabande and chaconne, gradually became socially acceptable. New dances emerged as well, among them the minuet, eventually to become 'queen of dances' (see fig 11). In England there is considerable evidence that the rise of the Puritans did not impede the pursuit of social graces: in 1625 John Cotton wrote: 'Dancing (yea though mixt) I would not simply condemn', in 1653 Whitelock, Cromwell's ambassador to Sweden, proved himself a gentleman to Queen Christina by his dancing, and in 1657 Cromwell himself had 'mixt dancing' at his daughter's wedding. With the Restoration, social dancing was given fresh impetus by an English court educated in France. Throughout that period dancing schools proliferated and dancing was part of the curriculum at fashionable boarding-schools. The custom developed for gentlemen to visit ladies' dancing schools to observe the dancing of the students, much as they visited the conservatories of the Ospedali in Venice to enjoy the music-making of the young female musicians. An account of a visit to England by the Grand Duke of Tuscany in 1689 as reported by Count Lorenzo Magalotte states:

Dancing is a very common and favourite amusement of the ladies in this country, every evening there are entertainments at different places in the city, at which many ladies and citizens' wives are present, they going to them alone, as they do to the rooms of the dancing masters, at which there are upwards of 40 or 50 ladies. His Highness had the opportunity of seeing several dances in the English style and gentlest manner by very young ladies, whose beauty and gracefulness were shown off to perfection in this exercise.

Dance tutors also continued to be engaged privately by those with social pretensions, and thanks to diarists like Pepys there is ample documentation of the time spent in pursuit of dancing skills as well as of the social and political ambiances of the balls.

Dancing remained a vital part of the numerous French court entertainments of the 17th century (Michel Henry, for example, listed 96 ballets performed at the French court between 1600 and 1620), but the intermingling of amateurs with professionals on stage slowly disappeared in the last quarter of the century, until finally dance in court spectacle, theatre and opera was completely professional. Until then, however, theatrical dances for noble performers remained elaborated versions of popular court dances (see fig.12). In one such performance, for example (*Ballet des plaisirs*,

1655), Louis XIV and the Duke of York performed with Lully, Molière and Beauchamps in the *grands ballets* (these were always choreographed by Lully). On the other hand, dramatic and pantomimic dance continued to develop a strong separate tradition, though remaining within the accepted style. The first sizable permanent dance companies appeared, and such famous dancer-choreographers as Lully, Beauchamps, Pécour, Isaac and Priest received full credit for their art. Star dancers, like Maria Thérèse Subligny or Jean Balon, became specialists in certain types of dance, as well as social celebrities. In addition, the cultivated critic appeared in print with increasing frequency, as did instructive encyclopedists like Menestrier. Their extensive writings are rich sources of information.

12 Costume design for Louis XIV who danced, as Apollo, in the '*Ballet de Pélée et Thétis*' (1654) (F-Pi 1005, f.1r)

With changes in title and fashion, French spectacles that included dance continued to range from intimate indoor presentations within the court to grand outdoor carousels or brilliant water-shows, all categorized into numerous dramatic genres. The significant musical developments in France led from the early *ballet de cour* and its sub-types such as the *ballet à entrées* through the mid-century *comédie-ballet* and the pastoral; they culminated in the great operas, or *tragédies lyriques*, of Lully, and the century closed with the genre of the

opéra-ballet (see fig. 13, p 195). All of these genres were interspersed with dance, either as part of an interlude-like *divertissement*, or as an equal and integral element with music or drama. In England dance wound its way through the various transformations of the Jacobean and Caroline masques, which were essentially dramatized dance, continued in the private entertainments that persisted during the Commonwealth, and triumphed again in all the theatrical works of the Restoration. The powerful partnership of dance with opera and drama in France and England may be demonstrated briefly by Lully's construction of entire scenes on a *chaconne* or *passacaille*, and by Purcell's inclusion in *Dido and Aeneas* of at least 15 dances, some courtly and some grotesque, concluding with a heart-rending dance of cupids about Dido's tomb.

Italian theatrical dance at this time seems to have continued its *commedia dell'arte* tradition, combining virtuosity and dramatic action. Dance in Italian opera however was usually relegated to final joyous scenes, but it reigned supreme between the acts in the extravagant and exotic *intermedi* in which the nobility continued to participate. In most cases the opera composers did not write the music for the *intermedi*. In Vienna native composers like Ebner or Schmelzer wrote the *intermedi* to operas by Cesti or Bertali, *intermedi* that were often veritable potpourris of French and Italian influences (for example, in Draghi's opera *L'avidità di Mida*, 1671, Schmelzer juxtaposed a *bergamasca*, a *canario*, a gavotte and a sarabande). Italian influence in France and England did not become entirely dormant after the early part of the century through Mazarin, who brought Italian companies to France, Lully (who as a young man played Scaramuccio and other grotesque or dialect roles) and Tiberio Fiorillo (the great Scaramuccio who visited London in 1673). Italy continued to act as a vital force on stage dance. Italian stage designers (machinists) like Torelli dominated Europe throughout the century.

Dance style between 1600 and 1650 changed markedly, distinguished in both social and professional dance by a definite turnout of the leg and an increasing emphasis on preparatory *pliés* or *élévés* on the foot. This evolution in style is barely documented, however, and developments that took place later in the century can only be surmised, for there is a frustrating paucity of precise information on dance, despite all the accounts in memoirs or letters and despite all the iconography. The number of new manuals published in the first third of the century did not match in number, quality or extent the reprints of Caroso, Negri and Lupi that appeared at the same time, and after the middle of the century there were no printed manuals at all. In the entire century there were, in fact, only two new manuals worthy of the name: F. de Lauze's *Apologie de la danse* (1623), and Juan de Esquivel Navarro's *Discursos sobre el arte del dançado* (1642). These were without music, and neither provided even one complete dance choreography with all of its steps, but they did describe some footwork precisely, and they revealed some major differences in style between Spain, which still remained within the orbit of the older Italian style, and France and England, which were following the new modes. A third source, Mersenne's *Harmonie universelle* (1636–7), provided some sparse though significant choreographical and technical information, and made an effort to define the dances in both musical and poetic terms, with limited success. Finally, John Playford's *The English Dancing*

Master (1651, and many subsequent editions to 1728) made a bid for the English country dances, which had shown steady social progress since the mid-16th century, and which would all but engulf ballrooms on both sides of the Atlantic by the late 18th century. As valuable as Playford is, however, his is essentially a 'call' book whose figures may be deciphered but whose steps and style are never described. There are no other printed manuals whatsoever from the latter half of the 17th century, and the manuscript sources are few and small. Hypotheses about the dances of this period, then, must be based on the numerous manuals and choreographies that began again in 1700 with Raoul-Auger Feuillet's *Chorégraphie*. These reveal a well-developed notation (for illustration see FEUILLET, RAOUL-AUGER) which was immediately adopted internationally, and a full-blown style whose aesthetic was identical with that of the music – at once exceedingly graceful and highly ornate, with physical strength concealed by delicacy of gesture, firm structure disguised by *agréments* of hands, head and feet, and with all love's passions transformed to play. A dance style so mature in its development by 1700 suggests a reasonable extrapolation to approximately 1675, the more so because a number of the extant choreographies are set to music by Lully.

The dance types referred to by Lauze include the *courante*, *galliarde* and *branze*. Included among Navarro's are the *pavana*, *gallarda*, *folia*, *dos de Villano*, *chacóna*, *canario* and *alemana*. Mersenne listed the *allemande*, *branze*, *canary*, *courante*, *galliarde*, *gavotte*, *passamezzo*, *passepied*, *pavanna*, *sarabande* and *volte*; his text made it clear, however, that not all of these were still danced in France. All three authors referred to brilliant pyrotechnics, but Navarro was the most explicit. By the end of the century the most popular dances included the *branze*, *bouree*, *canary*, *chaconne*, *country dance* (*contredanse*), *courante*, *forlana*, *gigue*, *loure*, *minuet*, *passacaglia*, *passepied*, *rigaudon* and *sarabande*. In social dance, as in the theatrical dance, these would often be grouped into *suites*.

The tremendous output of dance music during the 17th century is exemplified by the publication in Germany alone of more than 100 large collections during the first quarter of the century. The instrumental suite received a particularly strong impetus here with Schein and Puerl, was given its basic classical format by Froberger and Kindermann, and was conceptually completed by such composers as Krieger, Buxtehude and Kuhnau (see SUITE). In France, the *ordre* principle prevailed with Chambonnières, the Couperins and D'Anglebert, but the suite proper did appear late in the 17th century as the *ouverture*, which was usually made up of a group of dances extracted from theatrical productions; that most of these dances were originally intended for dance performance is still too frequently overlooked. In England the suite was also popular, rendered specially attractive by the English penchant for melody by, for example, Jenkins, Locke and Purcell. In 17th-century Italy *ordre*-like collections were less popular than the ensemble music in suite-like groupings entitled 'Sinfonia' or 'Balletto' by Buonamente, Marini and others; later, with Vitali and Corelli, the ensemble suite was known as the *sonata da camera*. The powerful influence of dance on 'abstract' Italian music is further underscored by the presence, in the early sectional *canzona* and the later *sonata da chiesa*, of dance forms and rhythms (especially the incisive patterns of the galliard,

corrente, canary and sarabande). In the Iberian peninsula the individual dance types remained ungrouped, as with Cabanilles. The structure of the individual dance types everywhere was predominantly binary by the middle of the century, but rondeau form and continuous variations on ostinato basses or chordal schemes (usually the pas-sacaglia or chaconne) provided useful variety. The variation principle, so pervasive early in the century, continued to reveal its strength here and in the *doubles* of the binary dances but variation suites were out of style by the mid-century. Extemporized embellishment continued to be a vital part of the style in both music and dance.

As the century progressed some of the dances, such as the allemande, increasingly took on characteristics of idealized dance music – polyphonic complexity, serious mood or virtuoso difficulty – but many remained actively in the danced repertory. It is thus not always possible to distinguish between those compositions intended for dancing and those that were truly abstract. Since suites of dances were common in both theatrical and social dances, and since most composers wrote and performed at the bidding of masters who held dancing in high esteem, even the suite, an important vehicle of instrumental music of the time, may actually reflect dance practice. Nevertheless, by the end of the 17th century leading composers found the fully developed dance types to be ideal vehicles for the abstract communication of dramatic and profound emotional content.

V. 18th century

1 Theatrical dance 2 Social dance and the dance in instrumental music

1 THEATRICAL DANCE. In the last quarter of the 17th century Baroque dance, as exemplified in the *tragédie lyrique* of Quinault and Lully, had reached a plateau of perfection, and French supremacy was firmly established. Though promoting a rival cause, Ragueneau declared (*Parallèle des italiens et des français*, 1702)

The Italians themselves will own that no dancers in Europe are equal to ours, the Combatants and Cyclops in *Perseus*, the Tremblers and Smiths in *Isis*, the Unlucky Dreams in *Atrys*, and our other entries are originals in their kind, as well as in respect of the *airs* composed by Lully, as of the steps which Beauchamps has adapted to these *airs*.

No theatre can represent a sight more lively than we see; it sometimes expressed in our dances, and, in a word, everything is performed with an unexceptionable exactness.

In 1738 Luigi Riccoboni (*Réflexions historiques et critiques*) stated 'All Europe knows what a Capacity and Genius the French have for dancing, and how universally it is admitted and followed.' Lully and Quinault considered dance an expressive medium and a valid dramatic agent. In their *tragédies lyriques* they used not only traditional Baroque dance types (minuet, gigue, canary, passepied, bourrée, chaconne, *pas-sacaille*) but also dramatic dances, related to the action, such as the 'Entrée des forgerons' in *Isis*, and even large-scale divertissements (such as the *fête champêtre* in *Roland*) were no longer purely decorative as in the 17th-century *ballet à entrées* but served as a vehicle for the drama. The numerous untitled dances afforded opportunity to link dance with plot – the *ballet en action* (or *ballet d'action*), which Noverre claimed to have invented nearly 80 years later, was probably an integral part of performances, although no specific choreographic evidence survives, the Abbé Dubos (*Réflexions critiques sur la poésie, la peinture et la musique*, 1719) stated:

I have heard tell of some ballets almost without dance, but rather composed of gesture and of demonstrations, in a word, a pantomime that Lully had created for the funeral ceremonies in *Psyche* and *Alceste*, in the second act of *Thésée*, where the Poet has introduced the dancing old men, in the ballet of the fourth act of *Atrys* and in the first scene of the fourth act of *Isis*.

Such large-scale pantomimes became increasingly rare in later *tragédies lyriques*, in which the spectacular element is subordinated to the dramatic, but did still occur (such as the 'Airs des Combattans' in *Amadis*). Looking back in 1754 Cahusac summed up the achievements of Quinault and Lully. Quinault's aim was 'to make use of the dance to carry on the action, to animate and embellish it, to guide it through successive developments to an ultimate perfection'; he used dance 'as a principal element . . . to depict, to preserve, in a word, that character of imitation and representation which is a necessary requirement of everything introduced on the [lyric] scene'.

The unique fusion of drama and dance exemplified in the *ballet en action* remained an ideal throughout the

18th century: weakened in France by certain trends in the *tragédie lyrique* before Rameau and the new genre of the *opéra-ballet* (see OPERA, §III, 1 (iii)), it reasserted itself in the work of Rameau and was consolidated in the second half of the century. However, the aristocratic, impersonal and stylized elements of Baroque theatrical dance were simultaneously being undermined by a series of innovations and reforms, all generally directed towards a romantic conception of dance as an independent art form with emphasis on the individual dancer. The domination, almost amounting to tyranny, of Lully's music in France in the first half of the century became increasingly intolerable. Cahusac complained that Lully was

from then on regarded as a divine composer, the singers as models, the ballets as masterpieces, the machines as the last word in mechanics, the decorations as marvels of painting. Lully died, the traditions of all that he had done in his theatre remained. It is now ten years since the dance has dared to produce different figures from those of which Lully approved, and I have seen censured as pernicious novelties the principal gestures which have been introduced.

This reaction against the more conservative elements of the *grand siècle* may be seen to come from two distinct groups, the virtuosos and the avant garde of Romanticism.

The most striking feature of both the post-Lully *tragédie lyrique* and the *opéra-ballet* is the increased proliferation of dances. According to Cahusac, in 1697 La Motte in his *L'Europe galante* conceived

a spectacle of song and dances formed of many different actions, all complete and without any liaison between them other than a vague and indeterminate rapport. The spectacle created by La Motte is composed of several different acts, each representing a single action, and including divertissements of song and dance.

13. Scene from Lalande's 'Ballet de la jeunesse', first performed 1686: engraving

14 Marie-Anne Camargo dancing 'Pas de la nuit' lithograph by E. Desmaisons (published 1844) after Guérard

Opéra-ballet during the Regency supplied a public need for a lighter form of entertainment than that provided by the *tragédie lyrique*, with greater emphasis on the divertissement. It also created opportunities for local colour, exoticism and increased orchestral effects. The divertissement of songs and dances represented the culmination of each entrée and used all the most popular dance types. Campra's four *opéra-ballets* (*L'Europe galante*, 1697, *Les muses*, 1703; *Les fêtes vénitiennes*, 1710, *Les âges*, 1718) contain 123 dances of all the usual types except the allemande. Dance fulfilled a dual role as a dramatic vehicle (*danse en action*) and also simply as a decorative *agrément* with little or no relationship to the action (*danse simple*). Cahusac considered that Lamotte (in *L'Europe galante*) 'only knew of the *danse simple* . . . It is nothing but divertissements in which one dances for dancing's sake'. Sometimes the two functions of dance were combined, as in the third entrée of *L'Europe galante*, in which the dramatic action is developed in the divertissement.

In the entrée 'La provençale' added to *Les festes de Thalie* in 1722 Mouret used the dance to underline local colour. However, in *Les âges*, Campra's last *opéra-ballet*, the reckless profusion of disconnected dances seems to bear out Cahusac's comment, and this ascendancy of the divertissement at the expense of the drama also infiltrated the *tragédie lyrique*: Campra in *Achille et Déidame* was accused of 'completely drowning the subject in the divertissement'. By 1749 Rémond de Saint-Mard (*Réflexions sur l'opéra*) was complaining that 'too much scope is given to the dances . . . everything is to be danced'; Nougaret (*De l'art du théâtre*, 1769) complained that 'the dances are frequently misplaced in the grand opera', and that many French composers had allowed themselves to be 'seduced by the example of the

Italians'. He considered that the number of acts or entrées should be limited to five, and cited *Les fêtes vénitiennes* (which has ten) as an example of a work in which the action was too frequently interrupted by divertissements. Rousseau (*La nouvelle Héloïse*, 1761) commented, 'In each act, the action is usually cut off at the most exciting moment by a fête . . . The introduction of these fêtes is simple - if the prince is happy, one shares his joy and one dances; if he is sad, one wants to cheer him up and one dances'. For the remainder of the century, composers and dancers strove to remedy the balance between dance and drama.

The concept of the *ballet en action* was not confined to France. The earliest work in which the action is unfolded entirely through the expressive movements of the dancers was *The Tavern Bilkers* (1702), a short piece in the style of the *commedia dell'arte* produced at Drury Lane Theatre by John Weaver. Weaver was a dancer, teacher and choreographer who had translated Feuillet's *Chorégraphie* in 1706 and subsequently produced several treatises of his own revealing an acquaintance with ancient Roman pantomime, which he imitated in 1717 in *The Loves of Mars and Venus* (music by Symonds and Firbank). His *Orpheus and Eurydice* (1718) was announced as a 'dramatick entertainment in dancing after the manner of the ancient pantomimes', his works were apparently interspersed with comic interludes using *commedia dell'arte* characters. Weaver's ballets anticipated later 18th-century developments in combining classical, naturalistic and pastoral elements but were without direct successors.

The early 18th century in France saw the rise of the virtuoso dancer. Professional male dancers had first infiltrated the *ballet de cour* in 1671, when Louis XIV allowed them to perform noble roles in ballets, thus sharing with the aristocracy a common technique and style, that of the *danseur noble*. The most celebrated exponent of this style was Louis Dupré ('Dieu de la danse'), who was also an influential teacher. Women professionals were admitted in such roles for the first time in Lully's *Le triomphe de l'Amour* (1681). In 1713, two years before the death of Louis XIV, a fully professional school of dance was established at the Paris Opéra, an indication of the increasing importance of dance technique. Among the famous virtuoso dancers of the early 18th century were Dumoulin, Javillier, Dangeville, Malter, Michel Blondi (1675-1737, classed as the best dancer in Europe for the *danse haute* and 'character' entrées, especially those of furies) and Françoise Prévost (1680-1741) who with Jean Balon danced in Mouret and Lamotte's *ballet en action* (based on the murder of Camille in Act 4 of Corneille's *Horace*) during the Grands Nuits de Sceaux (1715). Prévost taught two dancers whose innovations in technique, style and costumes, as well as their extraordinary popularity, entitle them to be regarded as the first ballerinas. Marie-Anne Camargo (1710-70; see CUPIS DE CAMARGO), who made her début at the Opéra in 1726 in J.-F. Rebel's choreographic divertissement *Les caractères de la danse*, developed virtuoso technique to unprecedented heights; Voltaire in *Le temple du goût* described her as 'la première qui ait dansé comme un homme'. She was a celebrated exponent of the *danse haute*, excelling in lively dances (gavottes, rigaudons, tambourins, marches and lours) and frequently appeared in the role of a sailor or a bacchante (see fig. 14). The *pas de menuet* and the *entrechat quatre* (which she

did not invent but perfected) were particularly associated with her. According to Noverre, she was 'quick and active. She danced only to lively music and such quick movements do not lend themselves to a display of grace, but instead she substituted ease, brilliance and gaiety'. Voltaire summed up the contrasting styles of Camargo and her rival MARIE SALLÉ (1707-56)

Ah Camargo, que vous êtes brillante
Mais que Sallé, grands dieux est ravissante
Que vos pas sont légers, et que les siens sont doux
Elle est inimitable, et vous êtes nouvelle
Les Nymphes sautant comme vous
Et les Grâces dansent comme elle

Sallé, a creative artist of intelligence and vision, developed a highly expressive, romantic style of dancing (see fig 15); according to Noverre 'her voluptuous dance was conceived with as much finesse as lightness, it was not by leaps and frolics that she went to your heart'. Voltaire called her 'cette excellente danseuse qui exprime les passions'. Cahusac recounted how, in a revival of *L'Europe galante* at the Opéra (1736), she created an 'ingenious episode' in the *passacaille*, in which she played the part of a 'young odalisque' abandoned by her lover, depicting in her gestures and facial expressions the whole gamut of emotions. She excelled in the *pas de deux*, in which her partners included her brother, Nivelon, Malter III and D Dumoulin.

Both Sallé and Camargo anticipated Noverre's plea for an end to cumbersome and inappropriate costumes. Camargo introduced soft ballet slippers and shortened

the skirts of her costumes to allow greater freedom of leg movement when executing virtuoso dance steps, Sallé dispensed with a mask early in her career when she appeared with Laval at the Opéra on 17 February 1724 in *Les caractères de la danse*, 'tous deux en habits de ville et sans masque'. In 1734 she dared to appear in *Pygmalion*, in London, dressed only in a simple muslin robe and with her hair loose. On 16 April 1735 she appeared in London in Handel's *Alcina* dressed as a man; this innovation however was not well received, and she was hissed. Both her reforms in dress and her expressive style of dancing were copied by Madeleine Guimard (1743-1816), who made her début at the Opéra on 9 May 1762 as Terpsichore, and to some extent in England by Giovanna Baccelli (fl 1774-1801).

Two of Sallé's greatest triumphs were as the Rose in the entrée 'Les fleurs' from *Les Indes galantes* (1735) and as Terpsichore in *Les fêtes d'Hébé* (1739), both to music by Rameau, whose revitalization of ballet music paralleled the virtuoso developments in dance. The trend before Rameau's time towards the use of dance simply as *agrément* was checked by Rameau, in both his *opéras-ballets* and his *tragédies* he sought a Lullian fusion of dance and drama which incorporated the progressive elements of the preceding years. His aims were abetted by the librettist of eight of his works, Louis de Cahusac, whose seminal publication *La danse ancienne et moderne* (1754) had considerable influence on other choreographers, notably Noverre. Cahusac argued for a

15. Marie Sallé' engraving (1733) by Nicolas IV de Larmessin after N. Lancret

more natural approach: 'In all things Nature must be the guide of Art, and Art must seek to imitate Nature', and criticized the use of dance solely as an *agrément* - in his view it should be intimately wedded to the main action. Cahusac himself systematized the use of the *danse en action* in his second libretto for Rameau, *Les fêtes de l'Hymen et de l'Amour* (1747), and he included *ballets figurés* in *Les fêtes de Polymnie*, and in *Nais, Zais and Zoroastre*.

According to Noverre, Rameau

laid down wisely the limits suitable for dancing, his melodies were simple and majestic, he avoided his predecessor's monotony of tune and movement and varied them, realizing that legs could not move as quickly as fingers and the dancers could not possibly perform as many steps as the air had notes, he phrased them tastefully.

From the *tragédie lyrique* and the *opéra-ballet* he inherited a plethora of dance types, nearly all of which he used. His traditional dances differ from those of Lully in their expansion of form - affording scope for the new techniques - and their highly effective orchestration. Lively rigaudons and tambourins occur frequently, particularly in the *ballets héroïques*. Rameau was perhaps at his best in the *danses caractérisées*, such as the 'Danse des Lacédémoniens' and 'Pour le génie de Mars' from *Les fêtes d'Hébé*, in which virtuosic elements are prominent. In a 1747 production, Carmargo took the part of Eglé, and Gaetano Vestris and Louise-Madeleine Lany, both notable virtuosos, danced in the ballets. Fashionable orientalism is exploited in *Les Indes galantes*, affording opportunity for exotic dances and orchestral effects, including a storm and an earthquake. However, Rameau's prime importance lies in his consolidation of the *ballet en action*. In *Les Indes galantes* there is a *ballet en action* for the Persians, for the flowers and for Borcús and Zephyr. Action dances in his *tragédies* occur in the divertissement at the end of *Castor et Pollux*, in which Hebe (played in a revival of 1737 by Sallé) tempts Pollux entirely in mime. Act 2 of *Dardanus* includes a divertissement created from the subject matter. The chaconne in the final divertissement represents Rameau's first attempt at a combination of through-composition with the choreographic variety required in a chaconne. In the entrée 'L'enlèvement d'Adonis' in *Les surprises de l'amour* there is an elaborate pantomime depicting the loves of Venus and Adonis.

In the second half of the 18th century three important factors influenced the development of dance. First was the consideration of ballet not only as an adjunct to opera but also as an independent art form, usually with a separate choreographer, designer and composer. Ballets were frequently interpolated between the acts of operas or performed separately at the end - for example, Noverre's first Viennese ballet, *L'apothéose d'Hercule*, was performed with Hasse's *Partenope* on 9 September 1767. The second factor was the rise of centres of innovation other than Paris; the third was the growing demand of performers and theorists (stimulated by the example of Sallé and the 'back to nature' theories of the Encyclopédistes and other Enlightenment writers, in particular Rousseau and Diderot), for a more natural, simple and expressive style of dancing. Gallini (*A Treatise on the Art of Dancing*, 1772) wrote:

The greater the simplicity of steps in a dance, the more beautiful it is and requires the more attention in the performer to exactness and delicacy, for slowness and neatness being in the character of simplicity, afford the spectator both leisure and distinctness for his examination whereas dances of intricate evolutions, in quick motions, in their confusion and hurry, allow no clearness, or time for particular observations. Those who would make any considerable progress in this art, should,

above all things, study justness of action. They cannot therefore too closely attend to the representation of nature, either upon the stage, or in life.

One of the most important contributors to this trend, and a major figure in the reform of dance, was JEAN-GEORGES NOVERRE (1727-1810), a dancer and choreographer whose early development was greatly influenced by his contact with Sallé and with Rameau's music. He worked first at Lyons (where in 1751 he produced his first serious pantomime ballet *Le jugement de Paris*), and subsequently in Strasbourg (1753-4) and Paris (1754-5, at the Opéra-Comique). In 1755 he went to England, where his elaborate staging of a revival of his first work, *Les fêtes chinoises* (1755), provoked a riot. However, he was greatly impressed by the realistic acting of David Garrick, who in return called Noverre 'the Shakespeare of the dance'. A direct result of Noverre's work with Garrick was his renowned treatise *Lettres sur la danse* (1760), in which he criticized the lack of harmony between the departments involved in theatrical performances.

The poet imagines that this art elevates him above the musician, the musician would be afraid to lose dignity by consulting the ballet-master, the latter never communicates with the designer, the scene-painter speaks only to the painters under him and the stage-setter, often despised by the painter, is in supreme command of the workings of the theatre. The designer often sacrifices the costume of an ancient people to the prevailing fashion, or to the whim of some well-known dancer or singer. Most composers follow the old formulae of the Opera, they write passepieds because Mademoiselle Sallé and Monsieur Dumoulin danced them attractively and with grace. In fact, Sir, opera is, if I may so express myself, a spectacle for monkeys.

Noverre went on to propose his own ideas for a 'dramatic', as opposed to 'mechanical', type of dance. He crystallized the vision of *ballet en action* as music, drama, choreography and staging, in which the separate parts are subordinated to the general scheme, though admitting diversity in rapidly changing tableaux and a variety of dancing styles to suit the characters, and he demanded an end to virtuosity for its own sake, stereotyped and unpractical costumes, and the dominance of outdated musical styles. When he moved to Stuttgart, he put his theories successfully into practice in a series of 20 new ballets, working with the stage designer Servandoni, the costumer Boquet, a distinguished company of dancers, and the composers Jommelli, Deller and Rudolph. The most popular of these was *Médée et Jason* (1763), a heroic *ballet en action* which provided a vehicle for several famous dancers (see fig. 16). Gaetano VESTRIS (1729-1808), a dancer of superb style and technique, especially in jumps and the pirouette, who inherited the title of 'Dieu de la danse' from Dupré and of whom Noverre said: 'he is the best, in fact the only serious dancer in the theatre'; Vestris's son Auguste (1760-1842) who became *premier danseur* at the Opéra at the age of 21, and Anne Heinel, a German ballerina who was credited with the perfection of the pirouette. *Médée* also approached spoken drama in an attempt at psychological definition through movement, attitude and gesture.

In 1767 Noverre became ballet-master to the imperial family and the two theatres in Vienna, the second most important European centre of ballet. Between 1767 and 1774 he staged at least 38 new ballets, and also choreographed several operas, including Gluck's *Alceste* and *Paride ed Elena*. An unsuccessful period at the Regio Ducal Teatro in Milan was followed by an equally dismal failure at Paris, where his appointment earned him the enmity of Maximilien GARDEL, subse-

quently ballet-master at the Opéra and the choreographer of *Nnette à la cour* (1781), Jean Dauberval and the prima ballerina La Guimard; and his insistence on independent ballets in preference to those within an operatic context was unsuited to French taste. One of his few Paris successes was the revival of *Les petits riens* to music mainly by Mozart. During the final years of his career he spent several successful seasons in London, where he produced his last important ballet, *Iphigenia in Aulis* (1793).

Noverre's appointment in Vienna in 1767 succeeded that of FRANZ HILVERDING VAN WEWEN (1710-68), ballet-master at the Kärntnertor-Theater from 1742 and at the Burgtheater from 1752. Hilverding was the first Viennese choreographer to create fully developed pantomime ballets, including some on tragic themes, in place of decorative divertissements. For the German theatre he used subjects offering opportunities for local or exotic colour, such as *Les bûcherons tirolois* (1754) and a revival in 1758 of 'Le turc généreux' from Rameau's *Les Indes galantes* (see fig 17), for the Burgtheater his subjects were almost entirely pastoral, allegorical or mythological (*Orphée et Euridice*, 1752).

From 1758 to 1765 Hilverding worked at the Russian imperial court in St Petersburg, where many of his numerous ballets were composed by the prolific and skilled Joseph Starzer, including *Pygmalion* (1763), *Acis et Galatée* (1764) and *Le triomphe du printemps* (1766). Starzer returned to Vienna in 1768, where he composed ballets for the two opposing great masters of the art, Noverre (*Roger et Bradamante*, *Adèle de Parthieu* and *Les Horaces et les Curiaces*) and GASPERO ANGIOLINI (*Il Cid* and *Teseo in Creta*). The early productions of Angiolini, who succeeded Noverre in Vienna, were along the lines of Hilverding's work, and were followed in 1761 by his masterpiece (in which he also danced the title role), the ballet-pantomime *Don Juan*, with sets by G. M. Quaglio, scenario by Calzabigi and music by Gluck, it aimed to make ballet a serious dramatic form in which gesture was used for emotional effect, as opposed to the *galant* or virtuoso divertissement. In his preface to the score, Angiolini wrote: 'If we can stir up every passion by a mute play, why should we be forbidden to attempt this? If the public does not wish to deprive itself of the greatest beauties of our art, it must accustom itself to being moved by our ballet and

brought to tears'. *Don Juan* was followed a year later by *Orfeo ed Euridice* (5 October 1762), a masterly fusion of pictorial, gestural, verbal and musical elements into an organic whole. Angiolini's collaboration with Gluck (which also produced *La Cythère assiégée*, 1762, *Semiramide* and *Iphigénie en Aulide*, both 1765) realized his ambition of achieving unity of choreography and music. He later succeeded Hilverding in St Petersburg, where between 1766 and 1772 he created at least nine ballets for the court, including a *ballet héroïque* entitled *Le départ d'Enée*, after Metastasio. In 1772 he went to Italy, where he published his *Lettere ... a Monsieur Noverre* (1773), in which he asserted Hilverding's prerogative as the inventor of the *ballet en action* and opposed Noverre's views on various aspects of choreography and dance. The *Lettere* initiated a bitter controversy between the two opposing factions of Noverre and Angiolini, causing the failure of the latter's subsequent Viennese ballets (including *L'orphelin de la Chine*). Although it is evident that both men developed the *ballet en action* simultaneously and independently, Angiolini was technically the first to put his themes into practice, since *Don Juan* preceded Noverre's Stuttgart ballets. But it was the influence of Noverre, disseminated through the work of several important pupils, that finally effected the transition to romantic ballet in the last quarter of the 18th century.

On the eve of the French Revolution Jean Dauberval (1742–1806), a ballet-master at Bordeaux who had worked with Noverre at Stuttgart, introduced a new

type of ballet based on a middle-class view of peasant life (a prototype perhaps existed in contemporary opera, notably Rousseau's *intermède*, *Le devin du village*). *La fille mal gardée*, produced at Bordeaux on 1 July 1789, consisted mainly of character and *demi-caractère* dancing (the latter an amalgam of folkdance and academic steps), with emphasis on the comic element of the plot. Despite its date *La fille mal gardée* only faintly echoed progressive politics and probably originated as an offshoot of fashionable ethnic preoccupations, it did, however, deal another blow to the concept of ballet as a principally aristocratic art. Dauberval's most important pupil, Salvatore Viganò (see §VI, 1(i)), was an influential figure in early romantic ballet.

Another of Noverre's pupils was responsible for technical innovations which opened up new possibilities of style and technique suitable to romantic subjects. On 7 July 1796 at the King's Theatre in London, Charles Louis Didelot (1767–1837) produced an anacreontic ballet-divertissement in one act, *Flore et Zéphyre*. The work featured machinery by Liparotti, who used counterweighted wires to balance, support and fly individual dancers, enabling them to pose for the first time on tiptoe, and heralding the introduction (after 1795) of blocked-toe shoes and *pointe* technique. The representation of flight (a prominent feature of 17th-century French opera) had recently been attempted at the Paris Opéra by Pierre Gardel (1758–1840), in whose ballet *Psyché* (1790) a machine bore the two lovers to the Palace of Love – but the apparatus was visible. The

introduction of wires invisible to the spectators was not only an aesthetic improvement; it made possible a vast expansion of virtuoso technique. Didelot is also credited with the introduction of flesh-coloured tights (*maillots*), and the dancers representing deities in *Flora et Zéphyr* wore abbreviated Greek tunics, both these innovations facilitated freedom of movement.

2 SOCIAL DANCE AND THE DANCE IN INSTRUMENTAL MUSIC. In the early 18th century the upper classes still modelled their culture on the courts, and in dance the style and types of the French court had been disseminated throughout Europe by French dancing-masters. The *Chorégraphie* by RAOUL-AUGER FEUILLIÉ, published in 1700, describes all the main types known at the court and introduces a choreographic notation that further aided their spread (an English translation by John Weaver was published in 1706). In the first three decades of the century the Baroque dance types reached a peak of flexibility and expressiveness, particularly in their abstract instrumental form: in those years the suites of Bach, Handel, François Couperin and Rameau appeared. With the emergence of the Rococo aesthetic, already evident in the success of Camargo and Marie Sallé in Paris in the 1720s, most of the Baroque types declined, and the restrained but complex elegance of the minuet led to its becoming the predominant social dance in aristocratic circles, which it remained for the rest of the century. The change of taste is also amply demonstrated in instrumental music, the static Baroque suite (in which the movements were nearly always in the same key) ceased to be a genre of artistic importance after Bach's *Ouverture nach französischer Art* (1734), which like so many of Bach's works is a definitive essay in a genre that was on the point of disappearance (see SUITE). In contrast, the minuet is the only courtly dance type to appear in the Rococo harpsichord sonatas of Scarlatti, its earlier dominance even in French court culture is indicated by its being the only dance fully described in Pierre Rameau's *Le maître à danser* (1725), the definitive treatise (though one of many that were published in the first half of the century) on French social dance of the day. With the development of the pre-Classical sonata, symphony and string quartet the minuet became the only important dance used in extended instrumental pieces, where its simplicity and versatility made it the ideal vehicle for Rococo elegance. Many Classical movements strongly suggest Baroque dance rhythms, though rarely throughout their length (among Mozart's piano concertos, for example, the slow movement of K488 suggests a siciliano and the finale of K503 a gavotte, furthermore the gigue or tarantella finale of the Baroque concerto was still common in Schubert's time), but the minuet was at once the courtly dance *par excellence* until the French Revolution – and for a time afterwards in Germany – and a vital force in Classical instrumental music. Introduced into the symphony, often as a finale, by Italian composers and then by Johann Stamitz in Mannheim, it became in the works of Haydn and Mozart a movement capable of great sophistication, sometimes through the introduction of contrapuntal devices and the extension of its formal patterns (see MINUET and illustrations). It remained an obligatory movement in the aristocratic divertimento and related forms, and as a symbol of the aristocracy it appears in the ballroom scene of *Don Giovanni* simultaneously with the bourgeois contredanse and the rustic German

dance.

Second in popularity to the minuet was the CONTREDANSE, the development of which was stimulated by the English country dance introduced at the French court in 1685–8, usually in 2/4 or 6/8 time, it was simpler and more 'natural' than the minuet and was thus adopted by the middle classes as well as the aristocracy. It developed in several forms (anglaise, écossaise, cotillon); in England it was danced longways but in France a more refined square set was used. Courtly contredanses were composed by Mozart, but those by Beethoven (1803) are less restrained and show a predilection for 'reel' rhythm. The contredanse survived the Revolution in various forms, notably the écossaise (examples of which were composed by Beethoven, Weber and Schubert) and the quadrille, which needed only four dancers. Though the contredanse was not adopted in Classical instrumental music in the manner of the minuet, the influence of its clear eight-bar melodies is often apparent in divertimentos and particularly in the finales of symphonies by Haydn (no.85), Mozart (nos.39 and 40) and Beethoven (no.7).

The most significant development in middle-class social dance was the introduction of various types of round-dance, in which individual couples danced in more or less close embrace, this development, which culminated in the supremacy of the waltz in the 19th century, parallels the decline of courtly *virtù* in the face of individual expression and naturalness. The sedate, relaxed rhythms of the 17th century gave way to a type of intoxicating, impetuous triple time that introduced the element of 'swing', a characteristic of social dances ever since. The origins of the waltz are obscure, but it is known to have developed from a number of similar dances of rustic origin in southern Germany, Bavaria, Austria and Bohemia, known generically as German dances (*deutscher* or *allemandes*) and including such specific types as the ländler, *dreher* and *steirer*. These unsophisticated dances were introduced into the ballroom from about 1760 (elements of the German dance had been introduced into the French contredanse earlier in the century, but the choreography had been made less intimate). The term 'walzen' appears at first to have been a description of the gliding and whirling associated with this type of dance (see WALTZ, §1, and GERMAN DANCE). Some early ländler were in 2/4 time, as described in Guillaume's *L'almanach dansant* (1771), but later triple time became universal. Vienna long remained the centre of the German dance and the waltz; Mozart and Beethoven provided many for court balls there as did Schubert for bourgeois soirées (often improvising at the piano). The rural associations of the German dance were exploited in Viennese instrumental music from the time of Haydn, many of whose mature symphonies and quartets have minuets, and especially trios, that are more rustic than courtly in character. The country dance in Beethoven's Pastoral Symphony is explicitly rustic; his Bagatelle op.119 no.3 is a simple dance 'À l'allemande'; while the fourth movement (marked 'Alla tedesca') of his String Quartet in B \flat op.130 is a highly stylized German dance of the type often found in the works of Schubert (e.g. Piano Sonata in D D850). The waltz was often denounced as immoral in its early days, but that did not prevent it spreading to become, as the minuet had been, one of the most universally popular European dances.

The German dance was not the only rustic dance to

influence the ballroom; in peripheral European states such as Poland, Hungary and Spain other national dances became popular. The POLONAISE was taken up by the Polish aristocracy in the 18th century and spread throughout Europe; it appears in suites by J. S. Bach and Telemann, and in the hands of W. F. Bach it became the vehicle for profound expression, as it did once again with Chopin. It was also cultivated by Mozart (Piano Sonata in D K284/205b), Beethoven (opp.56 and 89) and Schubert (ten for piano duet). The MAZURKA also became a fashionable social dance to a lesser extent. In Hungary the VERBUNKOS (recruiting-dance) was popular from about 1715, symbolizing opposition to German influence, and in Spain and Portugal the minuet was infiltrated by native dance styles (as seen in P. Minguet e Yrol: *Arte de danzar a la francesa*, 1758), the music of which also strongly influenced instrumental works (Scarlatti, Boccherini, Soler) and dramatic music. In such countries the emphasis on national dance rhythms is evidence both of the Rococo taste for the exotic and of a growing feeling for nationalism in music.

1 Theatrical dance (i) The transition to romantic ballet, 1800-30 (ii) The romantic ballet and its influence (iii) Ballet in opera (iv) The classical ballet in Russia to 1900 2 Social dance

1 THEATRICAL DANCE. In ballet the terms 'classical' and 'romantic' are chronologically reversed from their musical usage, the romantic style in ballet having preceded the classical

(i) *The transition to romantic ballet, 1800-30.* In composing his music for *Die Geschöpfe des Prometheus* (1801) in the form of an overture and 16 numbers, Beethoven wrote for a *ballet en action* derived from Noverre's principles, which in the 18th century had ended the ballet's subservience to opera and made it an independent theatrical art. *Prometheus* was created for the Vienna court theatre (originally as *Gli uomini di Prometeo*) by SALVATORE VIGANÒ (1769-1821), a Neapolitan who often composed the music as well as the scenarios for his ballets, in place of static mime interspersed with dancing, he developed a type of expressive mime-dance based on individual character (see fig.18), and the dramatic use of a *corps de ballet*, especially after he became ballet-master at La Scala in 1813. His achievements paved the way for Carlo Blasis (?1795-1878), whose treatises on the technique of dance (*Traité*

élémentaire, 1820; *Code of Terpsichore*, 1828) first codified the methods on which the teaching of classical ballet is still based.

Beethoven's ballet score was an exception to the usual musical practice at this time of a hurriedly assembled patchwork by a musician on the theatre staff (those at the Paris Opéra included Rodolphe Kreutzer, the dedicatee of Beethoven's *Sonata* op.47). It was normal to incorporate melodies from well-known operas or songs of which the words would relate to the stage action at a given point, and original music, mostly confined to the set dances, was written in a facile style to fit the choreographer's preconception of rhythm and structure. Similar conditions prevailed in Russia, where Charles Louis Didelot (1767-1837), a pupil of Dauberval and Noverre, spent two influential periods at St Petersburg in 1801-11 and from 1816 until his death. However, he is credited with having paid more attention to music than most choreographers of his time, and demanded a corresponding musicality from his dancers; he frequently worked with the composer Catterino Cavo, and recent Soviet research (by Gozenpud and Rabinovich, see Roslavleva, 1966) suggests that Cavo was musically more successful with his ballets than his operas precisely because they were composed to a pre-conceived structure supplied to him.

The prevailing situation was engagingly described in memoirs published by V. A. Duvernoy in 1903:

Once the plan of the piece and the dances were arranged, the musician was called in. The ballet-master indicated the rhythms he had laid down, the steps he had arranged, the number of bars which each variation must contain. In short, the music was arranged to fit the dances. And the musician docilely improvised, so to speak, and often in the ballet-master's room, all that was asked of him. You can guess how alert his pen had to be, and how quick his imagination. No sooner was a scene written or a *pas* arranged than they were rehearsed with a violin, a single violin, as the only accompaniment. Even after having done all the ballet-master required, the composer had to pay heed to the advice of his principal interpreters. So he had to have much talent, or at least great facility, to satisfy so many exigencies, and I would add, a certain amount of philosophy.

Nevertheless, attempts were made from about 1820 to compose more homogeneous scores for ballet, especially in the work of Jean Schneitzhoffer, the second chorus master at the Paris Opéra, and his superior Hérold, whose score for a new version of *La fille mal gardée* (1828) remains the musical basis for present-day productions. Hérold's successor was Halévy, and his score for a *Manon Lescaut* ballet by Aumer in 1830 is thought to have been the first to use melody to identify character, it earned the grudging admiration of Meyerbeer for its skilled use of musical allusions to suggest period. The function of the scenario writer began to be separated from that of choreographer from about 1827, when Scribe anonymously provided a scenario for Aumer's *La somnambule*, with music by Hérold, while from her début at Vienna in 1822, Marie Taghioni was preparing to bring about the revolution in theatrical dance that became the romantic ballet.

(ii) *The romantic ballet and its influence.* The ideal embodiment of the romantic image was Marie Taghioni (1804-84), who reflected in her dancing the spirit that infused the literature of Scott and Hugo and the music of Berlioz and Chopin. Her frail physique was schooled relentlessly by her father, the ballet-master Filippo Taghioni (1777-1871), to develop a style distinguished by lightness, grace and modesty, by the use of point-shoes for artistic effect, and by unusual elevation and delicacy on landing. Her freer, more graceful

movement, enhanced by a new style of costume with a diaphanous, bell-shaped skirt and fitted bodice, gave a fresh purpose to the art of dance in the theatre (see fig.19). It enabled it to become more poetic and imaginative, an art of illusion rather than illustration. The style was inaugurated by *La sylphide*, staged by Filippo Taglioni for his daughter at the Paris Opéra in 1832. This had a scenario credited to the tenor Adolphe Nourrit, with whom Marie had appeared the year before in Meyerbeer's *Robert le diable*, when she led the ballet of spectral nuns which constituted one of the opera's most novel expressive scenes.

La sylphide reflected the romantic ideal in its theme of a tragically unattainable love, and its combination of the exotic and the supernatural, a Scottish setting and an ethereal being who appears and vanishes with the illusion of flight, which Taglioni was perfectly trained to suggest. Her style of dancing was a creative triumph which has haunted the art of ballet ever since, it not only displaced the male as the dominant figure and established the supremacy of the ballerina for almost a century, but it also required that composers should emphasize the lightness and grace of the ballerina more than the ballet's drama and situation, which is partly why much of the century's ballet music is essentially feminine in character. Taglioni's production of *La sylphide*, with music by Schneitzhoffer, carried the seeds of romantic ballet to Russia when Taglioni first danced there in 1837, but a version choreographed by Auguste Bournonville at Copenhagen in 1836 – the version that has survived – had a new score by H. S. Løvenskjöld.

The obverse of the romantic image in dance was personified by Fanny Elssler (1810–84), a Viennese of strong dramatic character and virtuoso technique. If Taglioni was a spirit of the air, Elssler was the child of the earth, excelling in colourful character dances in which a theatrical presentation was given to such folk-dances as the Spanish *cachucha* and the Polish *krakowiak*. Elssler first triumphed in Paris in Coralli's ballet *Le diable boiteux* (1836) with music by Casimir Gide, and while Taglioni continued to suggest ethereal illusion in other ballets by her father, such as *La fille du Danube* (1836) and *L'ombre* (1839), Elssler dazzled with her virtuosity in *La gypsy* and *Le tarentule* (both 1839). From 1840 she toured the USA for two years and achieved an artistic and financial success then unparalleled in American theatrical history, although there European ballet remained a sterile import which failed to stimulate any native dance activity in the theatre until the 20th century.

While Elssler was in the USA and Taglioni was in Russia, the Paris Opéra was conquered by a new ballerina who arrived from Naples by way of Milan: Carlotta Grisi (1819–99), a cousin of the celebrated singers Giuditta and Giulia Grisi. Carlotta was the discovery of Jules Perrot (1810–92), who had partnered Taglioni and turned to choreography when the male dancer became virtually eclipsed. A combination of talents which came together at an opportune moment comprised Perrot and Coralli as choreographers, Gautier who brought poetry to the writing of a scenario, and Adam who extended the expressive character of ballet music: the result was *Giselle*, which had its première at the Opéra in 1841 (see fig.20). In its contrast between the realistic peasants of the first act and the disembodied spirits of the second, the need for the ballerina to unite the essential characteristics of each, and the skill of

20 Carlotta Grisi and Jules Perrot in the first scene of Adam's *Giselle* engraving (c1842)

Adam in an incipient use of leitmotifs and musical reminiscence for dramatic effect, *Giselle* represents the romantic ballet at its peak.

Perrot first made London an important centre for ballet during the 1840s, when he worked for six years at Her Majesty's Theatre under Benjamin Lumley's management. Perrot staged *Giselle* for Grisi (whom he had married) and went on to create some of the finest romantic ballets in *Ondine* (1843), *La Esmeralda* (1844), *Catarina* and *Lalla Rookh* (both 1846). These united the dramatic, the supernatural and the exotic in true *ballets d'action* where the choreography created sympathetic characters and carried the narrative forward without superfluous virtuosity, even if the music composed for each of them by Cesare Pugni did little more than embroider the rhythm and reinforce the expressive mood. Perrot also staged *divertissements* to display the finest dancers of the time, culminating in *Pas de quatre* (1845), in which Lumley succeeded in presenting four divas simultaneously: Taglioni, Grisi, the Italian Fanny Cerrito (1817–1909) and the Danish Lucile Grahn (1819–1907).

Grahn represented another important centre of romantic ballet in Copenhagen, where Auguste Bournonville returned in 1830 from his studies with Vestris in Paris to direct the Danish Court Ballet (later the Royal Danish Ballet) for the next 47 years. As well as his own version of *La sylphide*, which he staged in 1836 for Grahn on the model of Taglioni's Paris version, Bournonville created more than 50 ballets of different types for his Danish company, which continued independently of theatrical fashion elsewhere; by maintaining the prestige of the male dancer on a par with the ballerina he distinguished the Danish school of ballet from all others in Europe. Bournonville's musical interests (which included the operas of Mozart and Wagner) encouraged native composers to provide original and homogeneous scores for his ballets. Two days before his death in 1879 he witnessed the début of Hans Beck, a dancer who carried the Bournonville ballet style into the

mid-20th century with a continuity of tradition unparalleled elsewhere in Europe.

In Russia the foundations laid by Didelot up to 1829 were receptive to the French Romantic influences brought first by Taglioni in *La sylphide* to St Petersburg in 1837. She continued to appear there each year to 1842, and Elssler, Grisi, Cerrito and Grahn went there in her wake, dancing the ballets most closely associated with them. These included *Giselle*, which established Elena Andreyanova (1819–57) as the first Russian romantic ballerina at St Petersburg; her Moscow counterpart was Ekaterina Sankovskaya (1816–78), who danced *La sylphide* and followed Andreyanova in *Giselle*, Elssler in *La Esmeralda* and Taglioni in *La fille du Danube*. Sankovskaya also choreographed her own production of *Le diable à quatre* in Moscow four years before Perrot staged it in St Petersburg. Perrot went there when London's interest in ballet declined after Jenny Lind's operatic successes, and remained as ballet-master until 1859, when he was succeeded by Arthur Saint-Léon, a virile dancer and Cerrito's husband until they separated in 1853. Saint-Léon had only modest success in Russia except for *Koniok gorbunok* ('The little hump-backed horse'), one of the first ballets on a specifically Russian folk story which, in spite of the limited musical interest of Pugni's score, supplemented by themes borrowed from Rossini (*Tancredi* in particular), remained in the repertoire for many years after its 1864 première (20th-century productions by other choreographers continued to use the Pugni music until a new score was composed by Shchedrin in 1960). The native Russian element in ballet was consolidated by *The Fern* (1867), with choreography by Sergey Sokolov, a student of Saint-Léon, and music by Yuri Gelber, first violin and conductor of the Bol'shoi Theatre orchestra, and led directly to later balletic triumphs in association with Tchaikovsky.

(iii) *Ballet in opera*. Throughout the 19th century ballet retained a connection with opera, chiefly when composers incorporated dance scenes to diversify weightier emotional matters. Weber anticipated some elements of *La sylphide* by more than 20 years in his early opera *Silvana* (1810), in which his mostly mute heroine embodies the romantic woodland spirit and expresses herself in dance. Weber evoked a strong flavour of Spanish dance in his music for *Preciosa*; he added a newly composed pas de cinq to *Euryanthe* in 1825 for its Berlin production, to please Friedrich Wilhelm III of Prussia; and *Oberon* has enchanting dances woven into the musical fabric. In Russia, Glinka was an admirer of ballet who took lessons in his youth, and whose knowledge of ballet and folkdance is reflected in dance scenes which grow out of the dramatic action, notably in *Ivan Susanin* (1836) and *Ruslan and Lyudmila* (1842). By the 1820s ballet had become a necessary element of all productions at the Paris Opéra, where Rossini, after interpolating dance movements from other sources in his earlier operas, provided two extensive dance sequences in *Guillaume Tell* (1829), in which Marie Taglioni first danced the well-known Tyrolean Dance.

Meyerbeer incorporated ballet to more than decorative purpose in *Robert le diable* (1831), his ballet of the spectral nuns serving to tempt the hero from the path of honour (for illustration, see OPERA, fig.11), but in his later operas such as *Les Huguenots*, *L'étoile du nord* and *L'africane* his ballet sequences were more in the nature

of divertissements, as were those Donizetti added to *Les martyrs* (the French version of *Poluto*) or to *La favorite* and *Dom Sébastien*. Verdi's adaptations for the Paris Opéra are particularly interesting in this respect; he added a ballet to *I lombardi* when it was staged there as *Jérusalem*; he composed a ballet of the Four Seasons as an original element in *Les vêpres siciliennes*; he added Spanish-gypsy dances when *Il trovatore* became *Le trouvère* (including one based on the theme of the Anvil Chorus); he summoned Hecate and the witches to dance in *Macbeth*; and he equipped the Paris production of *Don Carlos* with 'La Pérégrina - ballet de la reine'. He resisted blandishments to add a ballet to *Rigoletto*, but in 1894 provided a divertissement for *Otello*, his last music for the theatre.

With the decline of romantic ballet as an artistic entity after about 1850, ballets became more and more an excuse for vulgar display by individual performers or for varying degrees of elaborate spectacle. The entrenched position in Paris within ten years is illustrated by the episode of the ballet Wagner was required to add to *Tannhäuser*: he placed it at the start of Act I whereupon part of the audience, having arrived too late to witness it, created a disturbance that wrecked the opera's prospects. French composers such as Berlioz, Gounod and Massenet took care to safeguard themselves by making due provision for ballet in their operas, others alternated between operas and ballets as complementary entertainments. When Grétry's *Zémire et Azor* became a ballet in 1824, Schneitzhöffler retained much of the original music in his transcription, but when Auber turned his *Marco Spada* opera of 1852 into a ballet on the same subject five years later, he constructed a quite different score using themes from *Fra Diavolo* and his other operas.

Adam successfully worked in both genres, as did his pupil Delibes, who was responsible for two scores that raised the standard of ballet music at a time when the art itself was in decline in western Europe. The first of these was *Coppélia* (1870), originally choreographed in Paris by Saint-Léon, in which Delibes extended Adam's device of associating themes with characters. The lack of difference in musical manner between the male and female dances in *Coppélia* is explained by the fact that the male had been so far relegated that his leading role was then, and for many years subsequently, danced by a female *en travestie*. Delibes further developed the leit-motif device in *Sylvia* (1876), and Tchaikovsky came to know and admire the music to fruitful purpose, but none of Méréante's original choreography has survived.

(iv) *The classical ballet in Russia to 1900*. Tchaikovsky once described his music for *Swan Lake* as 'poor stuff compared with *Sylvia*', but it was his score which, by treating ballet as a subject worthy of musical imagination, set new standards for the role of music in classical ballet and achieved one of its enduring masterworks. *Swan Lake* had its origins in a domestic entertainment by the children and friends of Tchaikovsky's sister, performed at their home probably in about 1871. It was extended to a four-act ballet on a commission in 1875–6 from the directorate of the imperial theatres, and was first performed at the Bol'shoi Theatre, Moscow, in 1877, with Pelagia Karpakova in the dual leading role of Odette–Odile. Nobody was credited with a scenario for *Swan Lake* in the original programme, but the folk story seems to have been given theatrical form by the

21 *Snowflakes from the first performance of Tchaikovsky's 'The Nutcracker' (St Petersburg, 1892)*

Bol'shoy Theatre director Vladimir Begichev and the dancer Vasily Geltzer, in collaboration with Tchaikovsky and the ballet-master Julius Reisinger (who was responsible for the first choreography) The ballet achieved a modest success in spite of difficulties presented by the stronger and more organic musical element, and choreography that hardly matched the level of musical invention. A Russian dance at the first performance, and a full-scale pas de deux at the fifth, were added by Tchaikovsky at the request of the ballerinas concerned.

Nikolay Kashkin, who made the first piano transcription of *Swan Lake*, later recalled that the ballet 'held its place on the stage until the scenery was worn out'. Not only the décor became ragged, but the musical score suffered more and more until nearly a third was exchanged with music from other ballets, and not necessarily good ones'. In progressively more mutilated form the ballet continued in the Bol'shoy Theatre repertory through the new choreographic version made by Joseph Hansen in 1880 until it was eventually dropped in 1883. It then remained unperformed until after Tchaikovsky's death when an entirely new version was mounted at St Petersburg in the wake of the greater successes of *The Sleeping Beauty* (1890) and *The Nutcracker* (1892; fig. 21).

Meanwhile in 1869 the Russian imperial ballet had come under the despotic control of Marius Petipa (1818-1910), a French ballet-master and choreographer whose brother, Lucien, was *premier danseur* at the Paris Opéra, and whose father, Jean, had taught at the Russian Imperial Academy of Dancing. Building on the existing foundations, Petipa created 46 original ballets in Russia which raised the style to a peak of spectacular

grandeur, the best of them continued to influence the course of classical ballet and its teaching throughout the 20th century. Petipa had already toured in France, Spain and the USA, he first went to St Petersburg in 1847 and was *premier danseur* until 1858 when he became second ballet-master under Saint-Léon. In this capacity he staged his first important ballet in 1862, the three-act *Pharaoh's Daughter*, with music by the ubiquitous Pugni, who at that time had the official post of staff ballet composer to the imperial theatres. Petipa's mixture of *pas d'action* stemming from Perrot's dramatic principles, with exotic divertissements, fantastic processions and multiple apotheoses, not necessarily logical to the narrative, constituted the first *ballet à grand spectacle*, a type that dominated Russian ballet for the rest of the century. *The Sleeping Beauty* remains the most celebrated example, more of Petipa's choreography having survived from this than from any other, but scenes and pas de deux by him have been handed down from the 1895 revision of *Swan Lake*, and from three ballets with music by Minkus: *Don Quixote* (1869), *La bayadère* (1877) and *Le corsaire* (1899).

The composition of *The Sleeping Beauty*, described by Stravinsky as 'the convincing example of Tchaikovsky's great creative power', was brought about by Ivan Vsevolozhsky, director of the imperial theatres, who abolished the post of staff ballet composer and engaged composers of more distinction. Vsevolozhsky prepared the scenario and designs, while Petipa mapped out in detail a sequence of dances which, far from being a hindrance to musical composition (as some commentators have suggested), proved a practical help to Tchaikovsky, whose enthusiastic collaboration resulted

in the supreme example of 19th-century classical ballet. It was first performed at the Mariinsky Theatre, St Petersburg, in 1890, and remains a cornerstone of the classical ballet repertory.

Two years later Vsevolozhsky brought Tchaikovsky and Petipa together again for *The Nutcracker*, which was to form part of a double bill with Tchaikovsky's one-act opera *Iolanta*, but Petipa had not progressed very far before illness compelled him to yield the choreography to his assistant, Lev Ivanov (1834–1901), who alone was named on the posters for the first production at St Petersburg in 1892. Ivanov was further responsible for a new version of Act 2 of *Swan Lake*, mounted as a memorial to Tchaikovsky after the composer's death in 1893, which led to the full new production in 1895 by Petipa and Ivanov together, from which most later versions of the ballet have stemmed. The scenario for this was modified by Tchaikovsky's brother, Modest, and the alterations made in the musical sequence to meet Petipa's requirements have continued to bedevil most productions of the ballet.

Ivanov worked so much in the shadow of Petipa, mostly revising older ballets, that the transitory nature of unrecorded choreography has denied him much posthumous fame, but he was a talented (though untrained) musician, and the known share of his contribution to *Swan Lake*, still preserved in the familiar Act 2, shows him to have been a much more musical choreographer than Petipa. Besides *The Nutcracker*, Soviet historians also single out Ivanov's original choreography of the Polovtsian Dances in the first production (1890) of Borodin's *Prince Igor*, but at the end of his life Ivanov had to petition the imperial theatres for financial assistance, on the strength of 50 years' service, and he died in poverty. Petipa, however, recovered from his illness to collaborate fruitfully in *Raymonda* (1898) and *The Seasons* (1900) with Glazunov, whose symphonic aspirations sadly curtailed his evident talent for ballet. A change in the administration of the imperial theatres and the failure in 1903 of *The Magic Mirror* brought about Petipa's retirement. His legacy was a repertory and a style on which others could build, and an ensemble of dancers and a school of training which represented an investment for the future; Sergey Dyagilev was one of the first to profit from it.

2. SOCIAL DANCE During the 19th and 20th centuries, a period of extensive industrialization and development of leisure interests, dancing became a recognized pastime of the public at large; regular dance orchestras were no longer the prerogative of royal courts or the aristocracy but were able to maintain an independent existence, and directing dance bands and composing and arranging for them became a full-time activity very much in the public eye, its leading exponents enjoying international fame. In addition dance music increasingly came to be listened to as well as danced to.

The centre of 19th-century dance music was Vienna, and the upsurge of interest in dancing was prompted by the popularity of the waltz. During the 18th century the waltz had developed from various country dances in triple time (such as the German dance and the *ländler*) to make its way during the early years of the 19th century from the taverns in the suburbs of Vienna to the large dance halls that were being built in the city (see fig.22). The significance of the waltz was to rival that of its predecessor, the minuet, and its period of survival as

a ballroom dance was to exceed that of any other. It was the waltz that, in spreading through Europe, persuaded a wider public to take an interest not only in the dance itself but in the music.

In the early 19th century the waltz's chief rivals for ballroom popularity were the quadrille and the galop. The quadrille, a formal square-dance, had developed from the country dance or contredanse as a 'quadrille de contredanses', and survived for most of the century as a more relaxed dance beside the other livelier dances. The quadrille had a complicated set of steps, by contrast with the galop which was one of the simplest dances ever invented. A lively dance, and a suitable way to bring an evening to an end, the galop's popularity finally faded during the second half of the century. Perhaps second only to the waltz in popularity was the polka, a hopping dance which came from Bohemia in the 1830s, it was the rage in Vienna and Paris by 1840 and in Britain and the USA during the following years, remaining popular until around the turn of the century.

There were, of course, many other dances that achieved lesser significance: the polonaise, a processional dance, served as a suitable way to start an evening; the cotillon reappeared in various forms as a novelty dance; and the mazurka achieved popularity either independently or in compound form as the polka-mazurka. There were indeed many variants of the main dances. The *valse à deux temps* was a quicker form of waltz with elements of the galop, while the *redová* was another dance related to the waltz. The *schottische* achieved popularity around the mid-century and was closely related to the polka, while the polka itself was danced in German countries during the second half of the century either as the slower 'polka française' or as the quicker 'polka schnell'. The 'quadrille des lanciers', a variant of the quadrille which appeared in Britain about 1817 and reappeared throughout Europe in the 1850s, finally achieved popularity in Britain as 'the lanciers'.

Of the chief dances the quadrille in particular was restricted in its format and in the scope its regular eight-bar phrases gave for musical development. Other dance formats allowed greater development and more scope for musical creativity, and the waltz in particular, by including an extended introduction anticipating the main themes, by allowing the melodies to expand, and by rounding off the whole with a recapitulatory coda, was able to achieve the status of a miniature tone poem. Indeed the importance of the 19th-century dance was by no means confined to the ballroom; quite apart from the extensive influence the waltz in particular had on serious music, as the minuet had before it, the main dance bands supplemented their playing at balls by giving concerts in parks and entertainment centres. The dance repertory was supplemented by operatic selections, instrumental showpieces and songs, but such dances as the waltz and polka became as much the main attractions of these concerts as of balls. Entertainment centres such as the Tivoli Gardens in Copenhagen were opened towards the middle of the century with such concerts as prime attractions, and many of the dance-band leaders of the time were at least as celebrated for their concerts as for their performances at balls.

Among the most celebrated dance-band leaders of the century were Lanner, the Strausses and Ziehrer in Vienna, Labitzky in Carlsbad, Gungl in Berlin, Musard, Isaac Strauss and Waldteufel in Paris and H. C. Lumbye in Copenhagen. The composition of the main bands

22. Title-page of 'Odeon-Tänze' (1845) by Johann Strauss (I)

developed from the orchestra for which Mozart composed his dances for the Vienna Redoutensaal double woodwind, a small body of strings without violas, and percussion; yet the maintenance of a regular orchestra and the requirements of novelty items for popular concerts encouraged elements of showmanship and displays of instrumental technique that make these bands recognizable forerunners of the show bands of the 20th century. Certainly the spread of the waltzes of Johann Strauss (I) abroad during the 1830s in no way prepared audiences for the impression made by his orchestra on its international tours. In the *Journal des débats* in 1837 Berlioz enthused over the rhythmic precision of the band, the remarkable effect of the short, staccato themes being passed from one wind instrument to another and the thrilling effect of their *fortissimo*, and the enthusiasm was repeated wherever the orchestra went in Britain in 1838. Perhaps the greatest of the showmen was Jullien, whose orchestra produced all manner of eccentric sounds. By the 1860s, however, when the waltz had become somewhat institutionalized and when the most famous examples (such as *The Blue Danube* and *Tales from the Vienna Woods*) were written, the main dance-orientated orchestras had become similar to small symphony orchestras, the style more lyrical and the instrumentation more conventional.

VII. 20th century

1 Classical theatrical dance. (i) Diaghilev and the Russian exiles to 1930 (ii) Britain, the USA and elsewhere (iii) The USSR a continuing tradition (iv) Main trends since 1945 2 Modern theatrical dance 3 Social dance

1 CLASSICAL THEATRICAL DANCE. In balletic usage the term 'classical' continues to define old and new works performed in a style derived from the Franco-Russian *danse de l'école*, in contrast with 'modern dance' which commonly refers to the freer style derived in the USA from Isadora Duncan, Ruth St Denis and particularly Martha Graham, and in Europe from Rudolf von Laban, Mary Wigman and Kurt Jooss

(i) *Diaghilev and the Russian exiles to 1930*. Sergey Diaghilev (1872–1929), whose touch of genius changed the face and fortune of classical dance within five years and determined its 20th-century course in the West, could neither choreograph nor compose, but was originally concerned with disseminating Russian art in all its manifestations. He first organized exhibitions of visual art in Paris and then planned a production there of Borodin's *Prince Igor* with a Russian company (1909), financial reasons caused this to be restricted to a presentation of Act 2 only, and consequently the Russian dancers in the scene of the Polovtsian Dances captured as much as if not more attention than the singers. Diaghilev realized that Russian ballet could be even more successful in the West than Russian opera.

His second Paris season (1909) accordingly presented for the first time the 'Ballets Russes de Serge Diaghilev' in a repertory almost entirely choreographed by Mikhail Fokin (1880–1942), including the Polovtsian Dances as a separate item. Prompted by what he had seen of the American modern dancer Isadora Duncan, Fokin's other works in this and following years initiated a new trend in the use of pre-existing music, not necessarily composed with dancing in mind.

At first he used such music in three different ways, as an anthology of works by one composer, of which the most famous example is the orchestrated Chopin anthology first made in 1909 for *Les sylphides* (originally *Chopiniana*, a title still retained in the USSR), which was followed by similar Schumann anthologies for *Le carnaval* (1910) and *Papillons* (1914); a miscellany of works by different composers for the same ballet, as in *Cleopatra* (1909), which used music by Arensky, Glazunov, Glinka, Musorgsky, Rimsky-Korsakov, Taneyev and Tcherépnin, or the association of a new balletic narrative or theme with a single work, as in *Sheherazade* (1910), where Rimsky-Korsakov's music was matched to a story different from that which prompted his composition. Diaghilev soon realized that musical integrity was no less important to dance than choreography and visual character, and the second of these categories was quickly discarded, the others have continued to furnish a wide variety of musical means for dance.

Diaghilev also continued the 19th-century practice of specially written music for dance and engaged composers of true promise or distinction, most notably Stravinsky, whose three pre-1914 Diaghilev commissions, *The Firebird* (1910), *Petrushka* (1911) and *The Rite of Spring* (1913), first brought him international fame. In that period Diaghilev also engaged Debussy (*L'après-midi d'un faune* and *Jeux*), Ravel (*Daphnis et Chloé*), Florent Schmitt (*La tragédie de Salomé*) and Richard Strauss (*Josephslegende*). From 1917 until Diaghilev's death these were supplemented by Satie (*Parade*), Falla (*The Three-cornered Hat*), Poulenc (*Les biches*), Auric (*Les fâcheux*), Milhaud (*Le train bleu*), Sauguet (*La chatte*), Prokofiev (*The Steel Step* and *The Prodigal Son*) and Constant Lambert (*Romeo and Juliet*), while the production of *Apollon musagète* (1928) initiated the partnership between Balanchin and

23 Vaclav Nizhinsky (right, also the choreographer) and the nymphs in Debussy's 'L'après-midi d'un faune': photograph from the 'Illustrated London News' (22 February 1913)

24. Scene from the first production of Vaughan Williams's 'Job' (London, 1931), choreographed by Ninette de Valois, with Anton Dolin (centre) as Satan

Stravinsky which had far-reaching consequences for classical dance in the following decades. Dyagilev's policy towards composers confirmed his belief that music could and should have an organic and not merely decorative part in the theatrical conception.

The choreographic interest of Dyagilev's company centred successively on Fokin, Leonid Massin (1896–1979) and George Balanchin (*b* 1904), and to a lesser extent on the dancer Vaclav Nizhinsky (1888–1950), who was responsible for the first choreography of *L'après-midi d'un faune* (see fig.23), *Jeux* and *The Rite of Spring* in versions which have since been forgotten, and his sister Bronislava Nizhinska (1890–1972) who created, among other works, *The Wedding* and *Les biches*, which continue to be performed in her original choreography. A member of Dyagilev's company at the outset was Anna Pavlova (1881–1931), who broke with him after his first Paris season, formed her own company (mostly English in origin) in 1914 and began the world tours that continued until her death. She spread the interest in classical ballet in many countries where it was a complete novelty, but her inferior taste in music (using Czibulka, Drigo, Paul Lincke and the slighter works of more distinguished names) was also responsible for a widespread and persistent belief that 'ballet music' was confined to works of a trivial nature.

With the sudden death of Dyagilev in 1929 and the disbandment of his company, the conditions became ripe for the establishment of a tradition of classical dance on a more permanent basis in Britain, the USA and elsewhere. Companies calling themselves 'Ballets Russes', or versions of that title, continued to be active and their confused identities are described in detail elsewhere (Lynham, 1947); the first of them, the Ballet Russe de Monte Carlo, produced the so-called 'symphonic ballets' by Massin, of which *Choreartium* (1933), to Brahms's Symphony no.4, occasioned something of a musical scandal. (It was not, however, the first ballet to make use of a pre-composed symphony; Alexander

Gorsky had choreographed Glazunov's Fifth Symphony at the Bol'shoi Theatre in 1915.)

(ii) *Britain, the USA and elsewhere.* A direct outcome of the Dyagilev company's activities, and of its first production in the West of Petipa's St Petersburg classic *The Sleeping Beauty* (Alhambra Theatre, London, 1921), was the establishment of classical dance on a regular basis through resident companies in Britain and the USA. Dyagilev had recruited and trained the three women who laid the foundations of classical ballet in Britain: Marie Rambert (*b* 1888), Ninette de Valois (*b* 1898) and Alicia Markova (*b* 1910). Marie Rambert began teaching in London in 1920, and in 1926 founded a company which still continues as Ballet Rambert. Ninette de Valois became associated with Lilian Baylis at the Old Vic from 1926, and from 1931 at Sadler's Wells Theatre, where the Vic-Wells Ballet formed by de Valois was the basis of the Royal Ballet. Alicia Markova was the first British prima ballerina and set the high professional standards that both the Rambert and the Vic-Wells companies aimed at from the outset, she later (1935–8) toured Britain with the Markova-Dolin Ballet.

Operating on Dyagilev's principles as far as she could, Valois staged classics from the notebooks of the Russian régisseur Nikolay Sergeyev (*Giselle*, *The Nutcracker* and *Swan Lake* in 1934 and *The Sleeping Beauty* in 1939), and supplemented these with works of her own and others by Frederick Ashton (*b* 1904), who became a resident choreographer in 1935. Where possible, a collaboration was sought with British composers, including Vaughan Williams (*Job*, 1931; see fig.24), Walton (*Façade*, 1931), Toyé (*The Haunted Ballroom*, 1934), Gordon (*The Rake's Progress*, 1935), and Bliss (*Checkmate*, 1937), while Constant Lambert as musical director made arrangements of music by such composers as Auber, Liszt and Meyerbeer (for Ashton's *Les rendezvous*, *Apparitions* and *Les patineurs*

respectively), and of Boyce for Valois' *The Prospect Before us*. The company became known as the Sadler's Wells Ballet in the late 1930s, after Markova left in 1935 to form her own company with Anton Dolin, Margot Fonteyn (*b* 1919) succeeded Markova in the ballerina roles, having begun dancing with the company in 1934. During World War II it was based at the New Theatre, London; it reopened Covent Garden in 1946 with *The Sleeping Beauty* and became the resident company there, and received the royal charter in 1956. A second company, the Sadler's Wells Theatre Ballet (at first the Sadler's Wells Opera Ballet), was formed at Sadler's Wells Theatre in 1946, and subsequently became the touring echelon of the Royal Ballet. In 1976 it returned to its former base and was officially renamed Sadler's Wells Royal Ballet.

Rambert's sphere of operation has been more circumscribed, her company never having acquired a regular base for performance, but it has complemented that of Valois by consistently acting as a forcing-house for choreographic talent. Having brought to light Frederick Ashton, whose first ballet, *A Tragedy of Fashion*, to music by Eugene Goossens, inaugurated the Rambert dancers' first appearance (Lync Theatre, Hammersmith, 1926), Rambert subsequently developed the talents of Antony Tudor (who became a significant influence on classical dance in the USA), Walter Gore, Andrée Howard and Frank Staff, followed in the postwar period by several more, notably Norman Morrice and Christopher Bruce. Rambert encouraged a broad-minded and relatively adventurous approach to music which enabled Tudor to create *The Planets* (to part of Holst's suite, 1934) and *Dark Elegies* (to Mahler's *Kindertotenlieder*, 1937), and which also ranged from Schubert (Howard's *Death and the Maiden*, 1937) to Poulenc, Honegger and Prokofiev before World War II.

Meanwhile Balanchin, who worked in Copenhagen, Paris and London for short periods after the Dyagilev company disbanded, was approached in 1933 with a plan to establish a base for classical dance in New York, to parallel developments in modern dance, and he opened the School of American Ballet there the next year. From it there appeared, as opportunity and funds allowed, a succession of companies including the American Ballet, Ballet Caravan and Ballet Society, and a growing team of dancers trained in Balanchin's style (which he extended to numerous Broadway and film assignments in the 1930s and 1940s). These activities brought about American subjects for dance and the participation of American composers; an example is Eugene Loring's *Billy the Kid* with music by Copland, first staged by Ballet Caravan in 1938. Ballet Society, formed in 1946, was in due course invited to make its home at New York City Center where it became the foundation of the New York City Ballet in 1948, and where it continued to flourish until it was installed at the New York State Theater in Lincoln Center in 1964.

Other major companies to establish the classical tradition in the USA include the San Francisco Ballet (from 1937) and the American Ballet Theater, originally formed at New York City Center in 1940, with which Tudor became closely associated from the outset, and whose later notable choreographers include Jerome Robbins. From the 1950s classical companies of varying standards proliferated in large cities and regional areas. In Canada a modest ballet school opened at Winnipeg in 1938, became a professional company

from 1949 and received a royal charter in 1953 as the Royal Winnipeg Ballet. It was followed by the National Ballet of Canada based in Toronto (1951) and Les Grands Ballets Canadiens, based in Montreal (1952).

In Europe the once-supreme Paris Opéra Ballet declined into the doldrums, from which it was partly lifted by a former Dyagilev principal Sergey Lifar (*b* 1905), but never regained its old prestige. However, the Paris-based Les Ballets Suédois was influential in experimental work (1920–25), as was Les Ballets des Champs-Élysées in maintaining the Paris Opéra tradition in the period from 1945 to 1950. In Copenhagen the Royal Danish Ballet continued on its course undisturbed by the rest of the balletic world and unaffected by Dyagilev (except for brief visits from Fokin in 1925 and Balanchin in 1930), and was rediscovered internationally after 1945 as the repository of the Bournonville style and method, virtually unchanged for a century. More recently, under Flemming Flindt (*b* 1936) the Danish company has sought to maintain a balance between the Bournonville tradition and new developments in classical dance.

(iii) *The USSR a continuing tradition.* Between the retirement of Petipa from St Petersburg in 1903 and the revolution of 1917, the focus of classical ballet moved to Moscow, where Alexander Gorsky (1871–1924) was appointed ballet-master at the Bol'shoi Theatre in 1900. He staged new versions of several Petipa ballets, including five progressive versions of *Swan Lake*, making them more dramatic and less formal; he was the first choreographer to make use of a pre-existing symphony for dance (Glazunov's Symphony no 5, 1915); and he introduced *The Nutcracker* to Moscow in 1919. His style of dance-drama was found to accord with the new Soviet aims for classical dance after 1917 when, instead of being swept away as a symbol of imperial decadence (as many activists wanted), it was defended by the first Soviet Commissar of Enlightenment, Anatol Lunasharsky, as a national asset that deserved to be made worthy of the proletariat.

With the classical tradition preserved and nurtured by outstanding teachers such as Agrippina Vaganova in Leningrad and Vasily Tikhomirov in Moscow, the new Soviet ballet passed swiftly through a phase of post-Revolutionary experiment to cultivate a new harvest in the classical tradition. Tikhomirov was the joint choreographer with Lev Lashchilin of the first successful 'socialist ballet', Glier's *The Red Poppy* (1927; see fig.25), which established socialist realism as a balletic theme and which is still in the repertory. *The Age of Gold* (1930) was a fiercer but more controversial satire on capitalist principles, with music that helped to make Shostakovich more widely known; one of its choreographers, Vasily Vainonen (1898–1964), went on to create in *The Flames of Paris* (to Asaf'yev's pastiche of 18th-century French music, 1932) the emotional human drama against a revolutionary political background which has continued to be a prominent theme in Soviet ballet.

Gorsky's naturalistic style of dance-drama reached its peak in the work of Leonid Lavrovsky (1905–57), who began choreography in the 1930s at Leningrad where the former imperial company now took its name from the Kirov Theatre (formerly the Mariinsky Theatre). Lavrovsky's *Romeo and Juliet* in 1940 to Prokofiev's score (the first version was by Vanya Psota

25. Scene from the first production of Glier's *'The Red Poppy'* (Moscow, 1927), choreographed by Tikhomurov and Lashchulin

at Brno in 1938) was his major achievement, he also choreographed *The Stone Flower* in 1954 to Prokofiev's last ballet score, after the composer's death. Lavrovsky's counterpart and predecessor at Moscow was Rostislav Zakharov (b 1907), whose *Fountains of Bakhchisarav* (1934, music by Asaf'yev) was the first of several ballets on Pushkin subjects. He also choreographed the first version of *Cinderella* (1945) to Prokofiev's other major ballet score, when the title role was taken by the most

celebrated of Vaganova's pupils and the outstanding Soviet ballerina of the mid-20th century, Galina Ulanova (b 1910).

A later version of *Cinderella* in 1964 had choreography by Konstantin Sergeyev (b 1910), another Leningrad dancer who had earlier made the first ballet on race relations in *The Path of Thunder* (1957), with music by Karayev and based on a novel by the South African writer Peter Abrahams. The classic tragedy of

26. Scene from the Royal Ballet's production of *'La fille mal gardée'* (Herold, arranged Lanchbery), choreographed by Frederick Ashton (1960), with Alexander Grant as the horse

Spartacus, with music by Khachaturian, has furnished successive ballets by Leonid Jacobsen (1956), Igor Moiseyev (1958) and in 1968 by Yuri Grigorovich, who became director of the Bol'shoi Ballet in 1966. His productions have modified naturalistic dance-drama by reasserting the supremacy of the classical style, but used with more freedom of imagination, as in his versions of *Swan Lake* and *The Nutcracker*.

The Lavrovsky production of *Romeo and Juliet*, led by Ulanova and Yuri Zhdanov, opened the Bol'shoi Ballet's first season at Covent Garden in 1956 and initiated an influence on classical dance in the West which was continued in later tours by the Bol'shoi and Kirov companies (the latter first appeared at Covent Garden in 1961). Ulanova's embodiment of a total commitment to a dramatic role, with musical phrasing to heighten emotional expression, and a technique that was broader in outline and more impassioned in character than that attempted by Western dancers, brought about a new focus of style in classical dance, as did Soviet dancers who left the USSR to settle and work in the West, notably Rudolf Nureyev, Natalia Makarova and Mikhail Barishnikov. The underlying conservatism of music in Soviet dance, however, has been less fruitful elsewhere.

(iv) *Main trends since 1945* From being concentrated in a few centres and touring companies, classical dance in the third quarter of the 20th century has become an element of national or civic cultural prestige throughout the world. Whether funded from government, commercial or private sources, full-time companies devoted wholly or mainly to classical dance are active in almost all European countries, the USSR, the Middle East, North and South America, Cuba, China, Japan, Australasia and South Africa. In many countries two or more companies perform in direct or complementary competition, and it has become a regular practice for tours to be made from one country to another on a continuing basis of cultural exchange, a practice virtually initiated by the successful visit of the Sadler's Wells Ballet from Covent Garden to New York in 1949 and repeated almost every year since.

Classical companies involve larger numbers of dancers than their modern-dance counterparts, and their success depends fundamentally on at least one resident choreographer or director whose works give the company a corporate personality, and on schools of ballet where teachers of distinction can provide, year by year, a flow of intensively trained young talent to the professional companies. Basic repertoires generally include at least one of the five main 'classics': the three Tchaikovsky ballets, *Giselle* and *Coppélia*, to which a *Romeo and Juliet* (Prokofiev) is often added. These are supplemented by the works of the resident choreographers and others, who may be invited to produce their more successful ballets in other countries. Some choreographers work in peripatetic fashion for any company wishing to engage them, and works from the Diaghilev repertory continue to be revived after more than 50 years. Forms of notation have enabled older works to be re-produced, and new systems of notation ('choreology') can provide a more lasting record of new works, although it is frequently felt that productions staged from notation alone lack the personality their creators would have given them.

The 'dance explosion' is a world phenomenon, but in

Britain alone there were 59 premières of professional ballets in 1973, plus 98 staged for the first time in Britain by visiting or domestic companies, totalling 157, of which more than half were in the classical category. Almost all were of single-act length, varying from 15 to 60 minutes, as most new ballets outside the USSR tend to be, mainly for financial reasons. A large national company may stage four to eight such works a year, unless some special occasion enables the number to be increased, the most memorable example of which was New York City Ballet's tribute to Stravinsky (1972), when 31 ballets to his music were staged within a week by Balanchin and six other choreographers, of which 20 were entirely new works.

In postwar economic conditions the full-evening ballet with music specially composed, the most usual kind of work a century earlier, is very rare. The first full-length score by a British composer was Britten's *The Prince of the Pagodas* (1957), created by John Cranko (1927-73) for the Royal Ballet at Covent Garden; others of musical distinction have been Henze's *Ondine* (1958) for Ashton and the Royal Ballet, and three ballets by Peter Darrell (b 1929). *Sun into Darkness* (1966; music by Malcolm Williamson) for Western Theatre Ballet; and *Beauty and the Beast* (1969; music by Thea Musgrave) and *Mary, Queen of Scots* (1976; music by John McCabe), both for Scottish Ballet.

Other full-length ballets have been staged to pre-existing music. Some have tried to remodel 19th-century prototypes with new arrangements of the music as well as new choreography, such as *Don Quixote* (Minkus, arranged by Lanchbery), *La fille mal gardée* (Hérold, arranged by Lanchbery), and *Beatrice* (Adam, arranged by Horovitz). Various musical compromises have enabled operas and operettas to furnish balletic subjects. Cranko's *Onegni* (1965) for the Stuttgart Ballet and Kenneth MacMillan's *Manon* (1974) for the Royal Ballet use anthologies of smaller works by Tchaikovsky and Massenet respectively, unconnected with the operas of each of them, but Darrell's *The Tales of Hoffmann* (1972) for Scottish Ballet, and Ronald Hynd's *The Merry Widow* (1975) for the Australian Ballet, are both based on transcriptions of the opera scores by Offenbach and Lehár. Music may occasionally be derived from more than one composer within the same ballet, as in MacMillan's *Anastasia* (1971), where Martinů is preceded by Tchaikovsky to point up the difference in time between pre- and post-Revolutionary Russia.

Thus music for classical dance is a flexible matter. Most new ballets use pre-existing music, ranging from a single work to an anthology. Massin's 'symphonic' ballets of the 1930s have had little direct influence, and Roland Petit's matching of a dramatic narrative to Bach's Passacaglia in C minor (three times repeated) in *Le jeune homme et la mort* (1946) was controversial, but it can reasonably be claimed that Ashton's *Symphonic Variations* (1946, to César Franck) constitutes one of his choreographic masterworks, no less an achievement than his *Enigma Variations* (1968) or MacMillan's *The Song of the Earth* (1965). Narrative associations have tended to become tenuous or have been discarded, not least in the later works of the long and fruitful association of Balanchin and Stravinsky from *Apollon musagète* (1928) to *Duo concertante* (1972); their collaboration includes in *Agon* (1957) and *Movements* (1963) what many regard as the deepest interpenetration of

27. Martha Graham and her company in 'Primitive Mysteries' (New York, 1931)

28. London Contemporary Dance Theatre in 'Continuum' (London, 1977), choreographed by Micha Bergese (also dancing), with Linda Gibbs, Patrick Harding-Irmer and Sallie Estep

music and dance ever achieved. With or without new music, Stravinsky's dictum holds good: 'Choreography must realize its own form, one independent of the musical form though measured to the musical unit. Its construction will be based on whatever correspondences the choreographer may invent, but it must not seek merely to duplicate the line and beat of the music' (*Memories and Commentaries*).

Where pre-existing music is used, the effect of the resulting ballet is governed by a single crucial principle - that the level of choreographic imagination should never be less than that of the music. A ballet (or a modern dance) can be better than its music, but it can never afford to be worse. Sometimes a ballet can legitimately and successfully change a musical conception, as Fokin did with Rimsky-Korsakov in *Sheherazade* (1910), or Darrell in setting a digest of *Othello* (1973) to the first movement alone of Liszt's *Faust Symphony*. Occasionally a musical work engages the attentions of several different choreographers independently, as happened in the 1960s with Berio's *Sinfonia* and in the early 1970s with George Crumb's *Ancient Voices of Children*.

Three factors militate against the more frequent use of specially composed music for dance: the cost of commission fee, copying, extra rehearsal and performing rights, the time taken to compose a score, generally longer than it takes to compose choreography and often longer than production schedules can allow, and the contrasting approaches of the two forms of creative work: the choreographer creates in fragments, discarding and building, while the ballet composer, unlike his 19th-century counterpart, usually begins with a total concept and fills in the detail. Nevertheless, the responsive collaboration of choreographer and composer remains the best means to dance creation, as the ideal 'perfect analogous concord between what we see and what we hear' recommended by Blasis in the early 19th century.

2 MODERN THEATRICAL DANCE. The term 'modern', or 'contemporary', dance is applied to any of the styles and techniques of theatrical dancing, intended for independent presentation, which have grown up during the 20th century as an alternative to the strict disciplines of classical ballet. In America its pioneers were Isadora Duncan (1878-1927), who took ancient Greek art as her inspiration, and Ruth St Denis (1877-1968), who modelled her work primarily on oriental sources.

Duncan's influence was worldwide as a result of her many tours, and the impression she made on Fokin during a visit to Russia particularly influenced the course of classical ballet. Her revealing costumes, flimsy draperies and bare feet were regarded as daring, but introduced a valuable reform of dance costumes in general (for illustration see DUNCAN, ISADORA). Musically her great innovation was the use of any score that inspired her, she danced to symphonies by Beethoven, Schubert and Tchaikovsky, and appeared at the Bayreuth Festival in 1904 in some of her interpretations of Wagner's music. Previously dancing had been largely confined to inferior music, and the greater freedom of choice she introduced gave the opportunity for many subsequent developments. Her personal qualities as a performer inspired in many others an interest in dance, but although she devoted much time to founding dance schools for children, the direct influence of her technique remains curiously limited.

In 1915 St Denis and her dance partner Ted Shawn (1891-1972) - a successful propagandist against the misconception that dancing was an effeminate career for men - formed a school, known from 1917 as Denishawn, which produced most of the next generation of American modern dancers. Prominent among them were Doris Humphrey, who devised means of teaching the art of choreography, Charles Weidman, who pioneered specifically American themes, and Martha Graham (b 1900). It was Graham more than anyone else who successfully devised a technique of modern dance that could be taught as the basis for the dancer's own personal use in different styles. The aim of modern dance has always been expression rather than display, with a consequent emphasis on innovation and a personal style, but the success of the Graham School in New York (founded 1941) prevented the ill-informed charge (analogous to attacks made on modern painters) that modern dancers' style stemmed merely from lack of technique. Graham's own ballets, often based on mythological or psychological subjects, have a theatrical power that has established her internationally as the leading modern dancer of her generation and helped to popularize modern dance where it had formerly been resisted.

Graham's pupils and partners often went on to form their own companies and soon demonstrated that the technical training they had in common was no bar to strikingly individual development. Among them Merce Cunningham (b 1915), in collaboration with his musical director John Cage and artistic directors Robert Rauschenberg and Jasper Johns, had the greatest influence, pioneering a dissociation of music and dance in which, though presented concurrently, each aimed at self-sufficiency instead of the dance taking its rhythms and structure from the music. Cage and some of his fellow musicians greatly affected the course of American modern dance, not only by their collaboration with Cunningham but also by their participation in the many and often completely anarchic dance experiments that took place in Judson Church, New York. In return, the musicians benefited through their scores' having earlier and more frequent performances than if they had waited for concert presentation, and they were heard by an audience in sympathy with radical experiment.

In pre-war Europe modern dance was most successful in Germany, where RUDOLF VON LABAN (1897-1958) and Mary Wigman (1886-1973) were the leading exponents. Laban's pupil Kurt Jooss (1901-79, active in the 1920s in Münster and Essen) created the most successful single work of the German school, *The Green Table* (Paris, 1932), with a specially written score for two pianos by F. A. Cohen; because of its perennially relevant theme of anger at political machinations leading to war, this has entered the repertoires of several companies, including some based on classical ballet technique. Jooss fled from the Nazis and spent many years in England; he re-founded his school in Essen in 1949, but after the war the slightly heavy style with which he was associated became less popular in central Europe. In Britain it was the success of visiting companies from the USA that revived interest in modern dance and led to the foundation of new companies, of which the London Contemporary Dance Theatre is the most flourishing, under the direction of another of Graham's former partners, Robert Cohan.

29. Alwin Nikolais Dance Theatre in 'Sanctum' (New York, 1964)

In spite of increased interest among European dancers and audiences, most innovations in modern dance have continued to come from its American practitioners. Paul Taylor developed fresh qualities of humour and lyricism in a form previously tending to be a little dry, and Alwin Nikolais's imaginative use of lighting won much admiration. Nikolais also composes his own music, with the aid of a synthesizer, and some other modern-dance choreographers have made their own accompaniments, generally using either percussion or magnetic tape; modern dance has been associated with the full spectrum of contemporary music of all qualities.

The many experimental approaches to both modern and classical dance among the youngest generation of choreographers calls into question the future of both forms. A considerable overlap has developed between the two styles, which at one time regarded each other with hostile caution. The Nederlands Dans Theater pioneered a style combining elements of both forms, and in Britain the established Ballet Rambert was reorganized on similar lines. Some of the best young choreographers, led by Glen Tetley from the USA, who trained and performed in both styles, now work in a way that could lead to classical and modern dance's becoming historical, joint precursors of a new kind of dance combining the brilliance of one, the expressiveness of the other and fresh elements inspired by the most recent developments in theatre and music.

3. SOCIAL DANCE. Whereas during the 19th century the popularity of the leading dances spread from Europe to America, during the 20th century the traffic was reversed. Examples of American influence had been felt during the 19th century, for example the barn dance (or military schottische) which began a long popularity in British ballrooms during the 1880s. Of wider significance was the boston or 'valse boston'; though known in Europe during the 1870s, it was in the years immediately before World War I that it enjoyed considerable popularity in European ballrooms as danced to the waltzes of Archibald Joyce, Sydney Baynes and others. Though the boston itself in time fell out of favour, it was probably primarily responsible for breaking the hold that the fast, rotary Viennese waltz had on the public in

favour of the more sedate 20th-century style of waltz. Even more of a sensation in the years preceding World War I was the tango, which was rhythmically related to the habanera and exported from Argentina to Paris where it was adapted to the ballroom. At a time when the afternoon *thé dansant* session was popular at fashionable hotels, 'tango teas' were very much the fashion at the height of the tango's popularity in 1912-14. A companion dance, the maxixe, which arrived at much the same time from Brazil, was less successful.

It was, however, the ragtime dances, of which the two-step and cakewalk had been direct precursors, that brought about a radical change in dance styles. Around 1910 the one-step, a dance based on a simple walking step, became popular in the USA, providing an entrée to the dance floor for commercial ragtime numbers such as *Alexander's Ragtime Band*. Variants of the one-step included the bunny-hug and turkey-trot, and there were other ragtime dances such as the horse-trot and fish-walk. But it was the foxtrot, developed in the USA around 1912 and promoted by the dancing team of Vernon and Irene Castle, that really established a new era in dancing, it reached Britain in 1914 and in due course spread through Europe.

After World War I interest in the new dance styles rapidly increased. New dances enjoyed periods of success, such as the shimmy, which reached Europe from the USA in 1921 and was characterized by a turning in of the knees and toes followed by a shake of the bottom. Another was the charleston, which featured vigorous side-kicks and which, like so many earlier dances, met with a good deal of opposition on moral and medical grounds before its brief period of acceptance in the mid-1920s. The waltz survived to lend rhythmic variety in the midst of the prevalence of common time, but its tempo was by then considerably slower than that of the 19th-century waltz. Like so many dances, it was subject to continual changes in steps and tempo; and the foxtrot came to be danced either as the 'slow foxtrot' or the 'quick foxtrot' which in due course came to be known simply as the 'quickstep'.

The rise of new styles coincided with mounting public interest in ragtime and jazz, and the syncopation and instrumental characteristics of such ensembles were taken over by the dance bands of the time. However, in

seeking to satisfy the public the typical dance band eschewed the more revolutionary or suspect aspects of jazz, such as improvisation. Yet there was no firm dividing-line between jazz and dance bands, and the dance bands were probably as near as the general public came to jazz. Paul Whiteman, perhaps the most widely known band-leader of the 1920s, was popularly dubbed 'King of Jazz', yet his publicity proclaimed that he 'confined his repertory to pieces that were scored and forbade his players to depart from the script'. He was a violinist by training and in the early 1920s led his band on the violin as in the 19th-century dance band; soon, however, the violin was generally dropped as lead instrument and the standard dance-band instrumentation became two or more brass instruments, two or more saxophones (usually doubling other reed instruments) and a rhythm section consisting of piano, banjo and drums, sometimes with a brass bass or tuba. Later still the guitar replaced the banjo.

Whereas the fame of 19th-century band-leaders and their music had owed a good deal to sheet music and the bandstand, those of the 1920s and 1930s owed much to the gramophone and radio. It was especially through the growth of radio during the 1920s that the new dance-band sounds gained wide popularity, and radio stations soon came to realize their commercial value. Notably in Britain, where dancing had during the 19th century been accepted as a pastime less than elsewhere in Europe, people learnt the new dance styles, and dance halls were introduced in many large towns. Hotels too realized the value of providing a large ballroom with its own band, which supplemented and eventually replaced the older 'Palm Court' ensemble.

A new feature of the 1930s was an interest in Latin American dancing to the accompaniment of a band whose rhythm section included maracas, claves and Cuban drums. The interest was sparked off by the arrival of the rumba in New York in 1931 and continued with the samba, a newer version of the maxixe. A later feature of the 1930s, and a more direct development from the earlier dance and show bands, was the advent of the swing bands of Benny Goodman, Glenn Miller and others. The associated dances, such as boogie-woogie and jitterbug, were free and improvised, and marked a notable move away from traditional formal dancing in close embrace.

After World War II the formal dance steps and the dance bands of the inter-war years began to lose their appeal. The staple diet of popular gatherings has been the jive (a simplified version of the jitterbug) and a simple 'smooch' to quiet music. Of the new dance types the most significant have been rock and roll (popularized by Bill Haley and the Comets, notably in the film *Rock around the Clock*, 1955), the twist (popularized by Chubby Checker in the early 1960s) and, soon afterwards, the shake. All these could be danced in groups, without a need for individual partners. The traditional dance-band instruments have widely been replaced by groups of electric guitars, electric organ and rhythm instruments, but with the advent of the microgroove record and discothèques instrumentalists have tended to give way to the juke-box or the disc-jockey to provide music for dancing. Perhaps only in a few Latin American dances that have enjoyed spells of popularity, such as the cha cha cha in the late 1950s and the bossa-nova in the early 1960s, has there been a renewed link with earlier dances. But dance styles of former periods

have always retained their appeal for important, formal social occasions.

Dance, William (b London, 1755; d London, 5 June 1840). English pianist and violinist. He was the grandson of George Dance (1700-68), the famous architect, and other family connections of his were painters and playwrights. He was a violinist at Drury Lane Theatre in 1771-4, at the King's Theatre from 1775 to 1793 and led the orchestra at the Handel Commemoration of 1790 in the absence of Cramer. W. T. Parke, reporting his performance of a piano concerto at the Hanover Square Rooms in 1789, said that he 'displayed great taste and power of execution'.

The circular proposing the meeting which led to the formation of the Philharmonic Society was issued by 'Messrs Cramer, Corni and Dance' from Dance's house on 17 January 1813, and Dance was a director and the treasurer of the society until his death. Mendelssohn was a friend of the family and inscribed the MS of his fourth Song without Words (14 September 1829) to Dance's daughter Sophia Louisa.

Nellie Curzon Smith, a great-granddaughter of William Dance, who married Henry J. Watt and died young, was a brilliant pianist. She was a pupil of John Farmer and later a protégée of Joachim at the Berlin Hochschule für Musik.

II G. FARMER

Dance of death (Fr. *danse macabre*, Ger. *Totentanz*). A medieval and Renaissance symbolic representation of death as a skeleton (or a procession of skeletons) leading the living to the grave, in more recent times a dance supposedly performed by skeletons, usually in a graveyard. The 14th-century epidemics of bubonic plague in Europe are generally thought to have influenced the creation of the dance of death, but its literary origins can be traced at least as far back as the *Dieu des trois morts et des trois vifs* (before 1280) of Baudouin de Condé. The illustrations in the *Danse macabre* (1485), published by Guyot Marchant, and in Heinrich Knobloch's so-called *Heidelberger Totentanz* (1490), as well as the famous woodcuts of Holbein in *Les simulachres et historiées fices de la mort* (1538; later known as *Totentanz*) depict skeletons playing musical instruments (see illustration), but musical activity is by no means always present in 15th- and 16th-century pictures of the dance of death, and in most of them dancing is not shown either. A possible derivation of the French 'macabre' from the Hebrew and Yiddish word for a gravedigger suggests that the dance's origins may lie in the customs of medieval gravediggers' guilds.

A song of Spanish provenance which perhaps accompanied a 14th-century dance of death is quoted by Ursprung (p.155), but the earliest music that can definitely be linked with the dance is a *Mattasin oder Toden Tantz* in August Nörmiger's *Tabulaturbuch auff dem Instrumente* (1598). The 19th-century tradition of the dance of death as a midnight revel by resurrected skeletons drew its impetus largely from Goethe's poem *Der Totentanz*. It was this, together, with Orcagna's

fresco *The Triumph of Death* in the Campo Santo, Pisa, that inspired Liszt's *Totentanz* for piano and orchestra (1849), and Goethe's version of the dance is echoed in Adolphe Adam's ballet *Giselle* (1841). Saint-Saëns's symphonic poem *Danse macabre* (1874) was originally projected as a setting of a well-known poem by Henry Cazalis, similar to Goethe's, in which Death is represented as a gruesome fiddler of dance-tunes. Both Liszt and Saint-Saëns used the plainchant *DI-S IRAE*, which in other music has assumed a macabre character of more general significance; it reappears in Mahler's *Das klagende Lied* (1878-98), the subject of which is loosely connected with the oldest traditions of the dance of death.

MALCOLM BOYD

Danckert, Werner (b Erfurt, 22 June 1900; d Krefeld, 5 March 1970) German musicologist and ethnomusicologist. He studied natural sciences and mathematics at the University of Jena, and musicology under Riemann and Abert at the University of Leipzig, under Becking at the University of Erlangen and under Schering at Leipzig Conservatory, where he also studied the piano and composition (1919-21). In 1924 he took his doctorate at Erlangen with a dissertation on the history of the gigue and then worked as Becking's assistant at Erlangen (1924-5). In 1926 he completed his *Habilitation* in musicology at Jena University with a dissertation on styles of melodic writing, having previously given seminars for music teachers and taught the piano at the Weimar Academy of Music (1929-32). His project of assembling the Jena collection of early musical instruments (1933) was co-sponsored by the State Museum in connection with its new series of museum concerts. Subsequently he served as music critic for the *Thüringer allgemeine Zeitung* in Erfurt (1932-7), as lecturer (1937) and professor (1939) at the musicological institute of Berlin University, and as head of the musicology department of the University of Graz (1943-5). Having emigrated to East Germany to become professor at the University of Rostock (1950) he was forced to flee in the same year to Krefeld, West Germany. Thereafter he was unable to obtain an academic post and had to eke out a living as a music teacher and through his publications.

As an ethnomusicologist Danckert contributed greatly to the study of melody, particularly pentatonism. Using the theoretical concepts of the German anthropologists of the so-called 'Kulturkreis' school, he undertook a study of European folk music, *Das europäische Volkslied* (1939), which remains an outstanding survey of the subject. One of the two substantial works dealing with symbolism in music that were left unpublished at his death was published posthumously. Towards the end of his life he published several arrangements of early French and English songs and dances for wind and string duets and trios.

 ISRAEL J. KATZ

Danckerts, Ghiselin (b Tholen, Zeeland, c1510; d after August 1565). Flemish composer, singer and writer on music. Although he mentioned in an unpublished treatise on music that he was at one time in the service of Pierluigi Caraffa, member of a well-known Neapolitan family, his principal post was as a papal singer. He remained a member of the Sistine Chapel from 1538 until August 1565, when he was compelled to retire as part of a reorganization of the chapel on the grounds that 'he has no voice, is exceedingly rich, given to women, useless' ('vocem non habet, excellens dives, mulieribus deditus, inutilis'). He served at various times as the chapel's *punctator* and *camerlengo*. De Bruyn deduced from the partly published diaries of the Sistine Chapel that Danckerts was rarely absent from his post.

As a composer he was evidently little known and sparsely published; no single collection of his works remains. In 1551 Danckerts was one of the judges in the debate between Don NICOLA VICENTINO and VICENTE LUSITANO on the role of the chromatic and enharmonic genera in contemporary musical practice. The debate was won by Lusitano but its most lasting consequences were the writing of Vicentino's well-known treatise, *L'antica musica ridotta alla moderna prattica* (Rome, 1555) and Danckerts's own unpublished treatise, written in the wake of the debate. De Bruyn dated the first redaction of the treatise at about 1551, followed by two later versions written c1555-56 and 1559-60. Its importance lies mainly in its presentation of Danckerts's views on the musical developments of his time; it is in part drawn from his experience as a papal singer. In one interesting chapter in what is taken to be the second version, Danckerts described a controversy about the application of accidentals between two Roman singers of the church of S Lorenzo in Damaso, which must have taken place between 1538 and 1544. This revealing passage is one of the few in contemporary writings

which give some idea of the practical difficulties faced by 16th-century singers in coping with the problem of applying unspecified accidentals to polyphony (see Lockwood). In another important passage Danckerts attacked what he called the 'nuova maniera' in music of his own time, by which he meant the tendency of composers of about 1550 to introduce degree-inflecting accidentals into their works, to use the terms 'cromatico' and 'misura di breve' in titles of publications, to confound the traditional meaning of certain mensuration signs and most of all to undermine the traditional eight-mode system. Even though it remained in MS, the treatise became known beyond Roman musical circles as a contribution to the conservative side of musical thought in the second half of the 16th century. The Bolognese theorist Artusi later issued a defence of Danckerts's and Escobedo's sentence against Vicentino, which he eventually incorporated into his *Imperfezioni della musica moderna*, i (Venice, 1600).

WORKS

- Lactamini in domino, 8vv, in 1545?
 Tu es vas electionis, 5vv, Suscipe verbum, 6vv, formerly in *I-TVca* destroyed during World War II
 2 madrigals, on texts by Ariosto, 4vv, in 1555²⁷
 4 other Ariosto settings attrib 'Ghiseli' in *B-Bc* 27731 (cantus only), by Danckerts according to Van den Borren
 Several puzzle canons, including 2 in P. Cerone. El Mellopeo y maestro (Naples, 1613)

WRITINGS

LEWIS LOCKWOOD

Danccla. French family of musicians

(1) (Jean Baptiste) **Charles Danccla** (b Bagnères de Bigorre, 19 Dec 1817; d Tunis, 10 Nov 1907). Violinist, composer and teacher, the most celebrated member of the family. He studied the violin locally with Dussert and at the age of nine played for Rode, then living in retirement in Bordeaux. He played and sight-read so well that Rode gave him letters of introduction to Baillot, Cherubini and Kreutzer. From 1828 to 1840 he attended the Paris Conservatoire; he studied the violin with Paul Guérin and Baillot and won a *premier prix* in 1833; he then studied counterpoint and fugue with Halévy and composition with Berton, his fellow pupils including Gounod, Bouquet and Franck. While a composition student, he played the violin in Paris theatre orchestras (he succeeded Javault as leader at the Opéra-Comique) and thus supported his family and enabled them to study at the Conservatoire. He was associated with Habeneck's Société des Concerts du Conservatoire as early as 1834 and was its leading violinist from 1841 to 1863.

Danccla's interest in chamber music was stimulated by Baillot's performances of quartets by Boccherini, Haydn, Mozart and Beethoven. About 1839 the Dancclas formed their own chamber music group, and

from the 1840s their concerts at Hesselbein's home were a regular feature of the Paris season. Owing to internal politics at the Conservatoire, his ambition to succeed Baillot in 1842 as principal professor of violin was not fulfilled, despite Habeneck's support. Six years later he refused the post of assistant conductor at the Opéra-Comique and left Paris because of unsettled conditions. For two years he was the postmaster of Cholet, he continued to play the violin in the Cholet area and, occasionally, with his family in Paris. Reviewing a Paris concert in 1849 at which Dancla's Fourth Quartet in B \flat was performed, Henri Blanchard wrote 'He is still a good composer even though circumstances have forced him to become a man of letters'. He returned to Paris to work as an official in the postal administration, and was finally offered a position at the Conservatoire in 1855. Five years later he was made professor of violin, a post he held until his unwilling retirement in 1892, at the age of 75 he still played his own works in public.

Although impressed by Beriot's style and elegance and overwhelmed by Paganini's virtuosity, Dancla's ideal was Vieuxtemps. He did not tour, so his reputation outside France was based on his compositions. Blanchard had some reservations about his playing, which he attributed to Dancla's nervousness and irritability, but praised his trill, his lightness of bowing and his brilliance. He was highly respected at the Conservatoire as a person, musician and teacher, but had fewer eminent pupils than did his colleague Massart. He was a prolific composer and won prizes for four of his 14 string quartets and three of his works for male chorus, but it is only through his didactic works that his music survives, the most important being the *20 études brillantes et caractéristiques* op 73 and the *Ecole du mécanisme* op 74. He may be regarded as the last exponent of the classical French school of violin playing.

(2) **Arnaud Philippe Dancla** (b Bagnères de Bigorre, 1 Jan 1819, d Bagnères de Bigorre, 1 Feb 1862). Cellist and composer, brother of (1) Charles Dancla. He studied the cello locally with Peres, a Bagnères amateur, and with Norblin at the Conservatoire, where he won a *premier prix* in 1841. He was a regular member of the Société des Concerts from 1847 to 1861 and also a member of the orchestra of the Opéra-Comique. Illness forced his early retirement to his native town. He wrote studies and concert pieces for the cello and a number of religious pieces for cello with organ or harmonium accompaniment.

(3) **(Jean Pierre) Leopold Dancla** (b Bagnères de Bigorre, 1 June 1822, d Paris, 29 April 1895). Violinist, cornettist and composer, brother of (1) Charles Dancla. Like his brother he studied the violin with Dussert. At the Conservatoire he studied the cornett with Meifred, winning a *premier prix* in 1838, and the violin with Baillot, winning a *premier prix* in 1842. He played in the orchestra of the Société des Concerts from 1846, and was a cornettist in the national guard. In 1853 he joined the orchestra of the Opéra, and five years later the orchestra of the Théâtre Italien. He was a prolific composer of chamber music, character pieces and transcriptions for the violin, and sacred choral and vocal music.

(4) **(Alphonsine Geneviève) Laure Dancla** [Déliphard] (b Bagnères de Bigorre, 1 June 1824; d Tarbes, 22 March 1880). Pianist and teacher, sister of (1) Charles Dancla. She studied at the Conservatoire

and won a *premier prix* in solfège in 1837. She performed chamber music with her brothers and for many years taught music in Tarbes, in the Pyrenees. Some of her piano pieces and songs were published in Paris.

ALBERT MELL

Danco, Suzanne (b Brussels, 22 Jan 1911). Belgian soprano. She received her entire musical education at the Brussels Conservatory, where she carried off many prizes and diplomas, for piano and the history of music as well as for singing. The unusual breadth of her musical culture was shown by her command of many different styles. In opera she was best known for her Mozartian interpretations, notably of Fiordiligi and Donna Elvira, which were applauded throughout Italy as well as at the festivals of Edinburgh, Glyndebourne and Aix-en-Provence. In England she sang parts as different as those of Mimi (Covent Garden, 1951) and of Marie in a BBC concert performance of Berg's *Wozzeck*, she also excelled in broadcast performances of *Pelléas et Mélisande*, and made a touching and exquisite heroine in Ansermet's first recording of Debussy's opera. As a concert singer she was in demand for unusual music of all periods and schools, but was most at home in the songs of Debussy, Ravel and Berlioz. Her versatility was the more remarkable in that her clear, cool soprano offered no great richness or variety of colour, but it had been admirably trained, and could manage the roulades of Mozart as easily as the most difficult intervals of Berg.

DESMOND SHAW-TAYLOR

Dando, Joseph (Bourne Haydon) (b London 11 May 1806, d Godalming, 9 May 1894). English violinist. He first studied the violin with his uncle Gaetano Brandi and for about seven years from 1819 he was a pupil of Nicolas Mori the elder. He joined the Philharmonic Orchestra in 1831 and for many years was well known in London and the provinces as an orchestral leader. He played in that capacity with the orchestras of the 'Classical Harmonists' and 'Choral Harmonists' Societies. In middle age he was a popular conductor of amateur orchestras. He was page to Mori at the coronation of George IV and played at those of William IV and Queen Victoria.

Apart from his activities as a violinist and teacher for 60 years or more, Dando was notable for being the first man to organize and lead a public concert of string quartets. In the early days of the Philharmonic Society the programme occasionally included a quartet but no concerts exclusively of quartets had been given in London. Dando, already well known in London amateur circles as a fine quartet player, was asked by admirers to arrange a benefit concert in aid of a distressed friend; this took place at the Horn Tavern, Doctors' Commons, on 23 September 1835 with Dando as leader; two more followed on 12 and 26 October. The success of this series led to the formation of a team consisting of Henry Blagrove, Henry Gattie and Charles Lucas with Dando as viola player, and between 1836 and 1842 they gave regular seasons of quartets. On the departure of

Blagrove in 1842 Dando took over the leadership with John Loder playing viola. The concerts, until then in the Hanover Square Rooms, were moved to the newly-restored Throne Room of Crosby Hall in Bishopsgate Street, where they continued until the deaths of Gattie and Loder in 1853. Over a period of 18 years Dando was first the innovator and later a vital force in chamber music performance in London. He and his colleagues gave first English performances of Haydn (*The Seven Last Words*), Mendelssohn (E♭ Quartet) and Schumann (A minor Quartet). He was a friend of Mendelssohn, who played at one of his concerts, and of Spohr. He was a member of the orchestra at the first performance in England of Beethoven's *Fidelio* in the Haymarket Theatre in 1832.

In the early 1870s Dando was forced to give up the violin because of a stiffening of the third finger of his left hand; in 1875 he was appointed music master at Charterhouse School, Godalming, a post he held until shortly before his death. His playing was described by a contemporary as being remarkable for elegance of expression and neatness of execution but not without vigour and passion when required.

MANOUG PARIKIAN

Dandrieu [d'Andrieu], **Jean-François** (b c1682, d Paris, 17 Jan 1738). French composer. After Couperin and Rameau, he was the most celebrated French harpsichord composer of the 18th century. He was the son of Jean d'Andrieu, seed merchant, and Françoise Rondcau. His uncle was the priest-organist Pierre Dandrieu (the name appears in one form as often as the other), and he had a brother, Nicolas, and two sisters: Jeanne-Françoise, an excellent musician who succeeded her brother at St Barthélemy, and Marie-Louise-Charlotte (incorrectly split into two persons by Brunold). Before he was five Jean-François played for Mme Victoire de Bavière; with his musician sister he was a pupil of Jean-Baptiste Moreau. On 28 January 1704 he took over the duties, though not the title, of organist of St Merry from Henri Mayeux, who had become ill; he was formally installed as *titulaire* on 19 July 1705, having apparently been aided in obtaining this post by Guillaume Robert, Seigneur de Septeuil, the dedicatee of the first of three early books of harpsichord music. On 1 November 1707 he was one of the judges in the competition for the post of organist at Ste Madeleine-en-la-Cité, won by Rameau, and on 17 December 1721 he replaced Buterne as one of the organists of the royal chapel. Some time before 1710, Jean-François may have taken over the duties of his uncle Pierre at St Barthélemy, since he is mentioned on the title-page of his op.2 as organist of that church. Pierre, however, retained the formal title until his death, and no other work of Jean-François mentions St Barthélemy until the posthumous organ collection of 1739. In 1728, Jean-François helped direct the rebuilding of the organ at St André des Arts. Apparently he never married. He was buried in St Barthélemy.

Titon du Tillet said his music 'has rather the character of that of the famous François Couperin'; it is 'beautiful, flowing, and free of that affected harmony and those risky and brilliant passages which astonish the mind more than they touch and charm the heart' (the 'risky and brilliant' passages are possibly Rameau's). Daquin (*Siècle littéraire de Louis XV*, Amsterdam, 1753, i, p.112) was more reserved: 'He was known

above all for his ingenious way of playing noëls. Many of his harpsichord pieces are still in vogue, and although he was not the prince of his art, he did a few things that made him much esteemed. He was the composer of a very nice minuet known under the name of Handel'.

The music of the Dandrieus presents certain problems of dating and attribution, not all of which have been solved. None of the *airs* can be assigned with certainty to uncle or nephew, though the probabilities are reflected in the lists below. Jean-François rewrote and republished much of his own and his uncle's music without mentioning the source. His fourth book of harpsichord music is called 'premier livre' as though he wanted to repudiate the earlier ones, at least nine of the 36 pieces in his last harpsichord collection of 1734 are reworkings of early pieces. Jean-François' book of noëls is freely based on that of his uncle, in the 37 pieces common to both, mostly sets of variations, 91 individual variations were taken over bodily by the nephew without acknowledgment. *Les caractères de la guerre*, which started life as a *divertissement* for orchestra, meant to be danced and intended for an opera that cannot now be identified, was transcribed for harpsichord as the final piece of the first suite of 1724, then extensively rewritten in 1733. The subsequent *véritables éditions* are doubtless the third version brought out posthumously by Jeanne-Françoise.

For the historian, the special interest of Dandrieu lies in his revisions of his and his uncle's early works, since they are clearly intended to bring the music into line with what Jean-François conceived to be current demand. The older style is similar to that of Marchand, Clérambault and Elisabeth-Claude Jacquet de la Guerre; the transformations are nearly all in the direction of simplicity – it was of the later style that Titon du Tillet was speaking in the citation above. Dandrieu reveals his attitude towards titles in a statement in the 1724 harpsichord collection 'For the names I have chosen, I have tried to draw them from the very character of the pieces they designate, so that they can determine the style and movement by awakening simple ideas acquired by the commonest experience or ordinary and natural sentiments of the human heart'.

WORKS

DAVID FULLER

Dandrieu, Pierre (*d* Paris, 1733) French composer and organist, uncle of Jean-François Dandrieu. He was a priest and organist of St Barthélemy in Paris (now destroyed). Pierre Dandrieu is known almost exclusively as the composer of a book of noëls for organ and for a scandalous attempt on the part of LOUIS MARCHANT to have him dismissed from his position at St Barthélemy. The attribution of three airs to Pierre is based on the fact that Jean-François would have been only about 15 when the first of them was published though he was playing before the nobility at the age of five. The mention of St Barthélemy on a title-page of Jean-François' about 1710 suggests that Pierre had conferred the reversion upon his nephew and perhaps that he had retired from his functions, he retained the title, however, until his death. Relations between uncle and nephew may have been strained, as Pierre's will mentions the brother and both sisters of Jean-François, but not Jean-François himself. Bonfils has speculated that the fact that Jean-François republished many of Pierre's noëls under his own name may have been a factor.

WORKS

(all published in Paris)

3 airs in Ballard's *Airs sérieux et à boire* (1697; 1699?). Mes yeux pour leur langueur extrême. Petits oisillons sous ces feuillages, l'amour est fait pour la jeunesse (all possibly by J-F. Dandrieu)

Noëls, O filin, chansons de Saint-Jacques, Stabat mater, et carillons, org/hpd (c.1710), basis for a collection by J-F. Dandrieu

Danek, Adalbert. See DANKOWSKI, ADALBERT

Dan Fog. See FOG, DAN.

D'Anglebert, Jean-Baptiste-Henri. French musician, son of JEAN-HENRI D'ANGLEBERT

D'Anglebert, Jean-Henri (*b* Paris, 1635; *d* Paris, 23 April 1691). French composer, harpsichordist and organist. He was initially organist to the Duke of Orleans and to the Jacobins in the rue St Honoré, Paris. Later, in 1662, he entered the service of Louis XIV as *ordinaire de la chambre du Roy pour le clavecin*. He inherited this position from Chambonnières and officially held it until his death; however, his son Jean-Baptiste-Henri was appointed his successor in 1674 and in turn held the post until his death in 1735.

The principal source of D'Anglebert's keyboard music

is his *Pièces de clavecin ... diverses chaconnes, ouvertures, et autres airs de Monsieur de Lully ... quelques Juges pour l'orgue et les principes de l'accompagnement* (Paris, 1689, 2/1703). Miscellaneous harpsichord pieces are to be found in four MSS: two in F-Pn Baugn MS and Cons.Rés.89ter (autograph), another in private hands (Louis Couperin MS) and the fourth in US-BE (Parville MS, containing three anonymous *préludes non mesurés* which Curtis attributed to D'Anglebert on stylistic grounds); there are editions by M. Roesgen-Champion (Paris, 1934) and in *Le pupitre*, liv (1975).

D'Anglebert's harpsichord music is undoubtedly the finest we have of the French school between the appearance of Chambonnières' two *livres de clavecin* in the early 1670s and the publications of the first decade of the 18th century. D'Anglebert made up four suites out of the pieces in his publication, promising in the preface to add others in different keys in a subsequent second book which, however, never appeared. The first three suites begin with an unmeasured prelude, followed by the standard sequence of allemande, courante, sarabande and gigue. Some of these dances appear in more than one version in the same suite. After the gigue the number and order of the remaining pieces, which include minuits, gavottes, chaconnes, galliards and transcriptions of pieces from stage works by Lully, are fairly random. The presence of Lully in the collection – perhaps in order to assure its success – reflects not only a vogue for this sort of arrangement but also D'Anglebert's involvement in the production at court of Lully's operas and ballets. He included keyboard arrangements of the overtures to *Cadmus*, *La mascarade* and *Proserpine*, as well as of *airs* and dances from *Phaëton*, *Roland*, *Armide*, *Le triomphe de l'amour* and *Acis et Galatée*. In addition the second suite is complemented by transcriptions of four popular tunes (referred to in the preface as vaudevilles). D'Anglebert explained that the six organ fugues that follow were intended 'to furnish an example of what I once used to do for the organ'. These fugues provide the key to his style, showing it to be firmly grounded in contrapuntal techniques; it is certainly these techniques that animate the more severely classical dances of his harpsichord music, the allemandes, courantes and giges in particular. At times this imparts to them an austere flavour but it is matched by a breadth and grandeur in design far surpassing what is found in the keyboard works of his exact contemporaries and even in similar dances by Chambonnières and Louis Couperin.

D'Anglebert concluded his publication with a short treatise on keyboard harmony. He must also be given credit for his considerable contribution to the evolution of French keyboard ornamentation. His table of ornaments, which is the most complete in the French classical repertory, contains many new signs that subsequently became common in French music and in Baroque music in general.

For illustration of D'Anglebert's autograph see NOTATION, fig 71

Daniel [d'Aniels], **Arnaut** (b Riberac, ?1150-60, d c1200). French troubadour poet and composer, and primary exponent of the *trobair clous*, or difficult and obscure style. His reputation rests largely on the complexity of his literary style and on the frequent references to him in the works of Dante: 'whether in verses of love or prose, he surpassed all' (*La commedia Purgatorio*, canto xxvi). In spite of this posthumous fame, contemporary sources give no definite information about his life. His *vida* (*I-Rvat* 5232, f 39) explains that he was born a gentleman, received a good education, and abandoned everything for the life of a *joglar*. The only certain biographical fact that may be gleaned from his works is his presence at the coronation of Philippe Auguste of France in 1180. It is apparent from his works that he received an extensive education, and references to him by other poets seem to confirm that he lived the life of a poor scholar and poet. According to another anecdote in his *vida*, Arnaut was a *joglar* in England (1189-99) at the court of Richard, Cœur-de-Lion, but this is not confirmed in contemporary documents.

Arnaut's primary interest, both for his near contemporaries and for the modern reader, lies in the complexity and learnedness of his verse. 18 poems are ascribed to him, only two of which have survived with their melodies (both ed in Gennrich and Toja): *Chanson do ill mot son plan e prim* (PC 29.6) and *Lo ferm voler qu'el cor m'intra* (PC 29.14). Of these, *Lo ferm voler* is a sestina – a form invented by Arnaut.

ROBERT FALCK

Daniel, Francisco (Alberto Clemente) Salvador (b Bourges, 17 Feb 1831; d Paris, 24 May 1871). French musicologist and composer of Spanish descent. He was a pupil at the Ecole Normale in Bourges and learnt the violin, the piano and theory from his father, Salvador Daniel. He entered the Paris Conservatoire in 1843 and later joined the orchestra of the Théâtre-Lyrique, where he became friendly with Delibes, and played the viola with Gouffé in chamber music concerts. His friendship with Félicien David influenced him to go in 1853 to Algeria, where he became interested in Arab music and collected folk tunes from village and countryside; he also made journeys to Tunisia, Morocco, Egypt, Spain and Portugal for this purpose. In Algiers he was the director of a choral society and professor of music at the Ecole

Arabe. In 1857 he went to live in Madrid, where he gave violin concerts and, accompanied by Max Marchal, played in the salons of high society. The following year he was a music critic for *La independencia española* under the pen name of Sidi-Mahabul; in 1859 he went to Lisbon.

When Daniel returned to France in 1865 he set about introducing the Arab music he had collected to the European public. In 1867, at the suggestion of Prince Napoleon, he presented a programme of Arab airs which he had arranged for orchestra as one of a series of concerts given in the famous Pompeian house built by the prince on the Champs-Élysées. He also gave lectures on Arab music to the Société des Compositeurs de Musique, of which he was a member, and published several Arab fantasias for piano, a *Messe africaine* (Paris, n.d.) and an *Album de [12] chansons arabes, mauresques et kabyles* (Paris, c1865-70).

His political leanings were revealed in his friendship with Vallès and Courbet, his concerts for the people in the Rue St Denis and his contributions to Rochefort's *La marseillaise* and other revolutionary journals. Because of these activities he lost favour with society and the musical establishment and his deteriorating financial situation forced him to resume work as an orchestral violinist. During the Siege of Paris he took part in the rising of 31 October 1870 and was wounded. In January 1871 he bore arms against the regular troops and in May replaced Auber as director of the Conservatoire, for which activities he was shot.

Talented, intelligent and cultured, Salvador, as he was known to his friends, was also passionate and arrogant, considering himself rejected by a society which refused to recognize his talent. He was known above all as a specialist in the history of Arab music, his death prevented the publication of a collection of 400 Arab songs translated into French with piano accompaniment. He also wrote an opera using Arab themes, which, despite the support of Berlioz, was not performed. This and several compositions for violin and piano are lost.

GUY BOURLIGUEUX

Daniel, Jean [Mithou; Miltou] (b Poitou, between c1480 and c1501; d Angers, c1550). French composer, organist and poet. He was organist at Notre Dame, Nantes, in 1518. From about 1524 to 1544 he was organist and chaplain first at St Pierre, Angers, and later at the cathedral there, where he would have known Janquin. Daniel wrote music and text for such dramatic monologues as *Grace et amour*, and texts for some compositions by Pierre Certon. His chansons were printed between 1556 and 1583 in collections by Le Roy & Ballard and Fézandat. Around 1525–30 he wrote both music and text for numerous noels, but only the texts were published, several of which are in Poitou dialect.

JOHN STEVENS

Daniel, Salvador [Salvador-Daniel, Don] (b Hostalrich, Girona, 1 April 1787; d Paris, c1850) Spanish pianist, organist, teacher, writer on music and composer. A captain in the forces of the liberal party (not the Carlist, as has been thought), he fled Spain and took refuge in France after the absolutist reaction of 1823. He settled in Bourges and, making use of the musical knowledge he had acquired while training for the priesthood, became a piano teacher, organist of St Stephen's Cathedral and a teacher of solfège and harmony at the town's Collège Royal and École Normale. He was still in Bourges in 1847, but apparently settled later in Paris. An excellent violinist and pianist, he also made a serious study of music theory. He supported the Galin-Paris-Chevé system, a simplified method of teaching music which gained popularity and created controversy in Paris in the mid-19th century (see CHEVÉ SYSTEM), and put forward a new application of it in his writings. He composed a mass for three voices, which was published in the second volume of *Grammaire philharmonique*.

WRITINGS

Grammaire philharmonique, ou Cours complet de musique contenant la théorie et la pratique de la mélodie, les règles de la transposition ainsi que de l'écriture à la dictée ou d'après l'inspiration, la théorie et pratique du plain-chant et la théorie et pratique de l'harmonie (Bourges, 1836–7)

GUY BOURLIGUEUX

Danielis, Daniel (b Visé, nr. Liège, baptized 1 May 1635; d Vannes, 17 Sept 1696). South Netherlands

composer, organist and singer. At least seven other musicians with this surname worked at or near Liège between the late 15th and the early 18th centuries. Daniels became organist of Liège Cathedral on 11 December 1657 but resigned on 8 September 1658 to follow Duke Gustav Adolf of Mecklenburg-Güstrow, who had met him while taking the waters at Spa (near Liège) and had engaged him as a bass singer on 20 June 1658. From 1661 to 1681 he was Kapellmeister at the Güstrow court; during this period he made several journeys to other parts of Germany. In Paris in 1683 he was one of 35 candidates who applied for posts as *sous-maitres* in Louis XIV's chapel in succession to Du Mont and Robert, but he was not selected. From 1684 until his death he was director of music at Vannes Cathedral. The style of his music is Italianate and no doubt became so through his early training at Liège, musical tastes at Güstrow and probably his personal inclination. His melodic lines are supple and freely ornamented, and his polyphonic writing is competent and effective. His motets were among the earliest works to introduce the Italianate aesthetic into France, and they influenced French composers active at the end of the 17th century.

WORKS

4 motets, 2vv, bc, in *Mélanges de musique latine, française et italienne* (Paris, 1725–7)

50 motets, in C. A. Le Maignan de Kerangat *Livre de musique, F-Pn*

13 motets, 2 4vv, vn, in *Petit motets et élévations, Pn*

7 motets, 1 4vv, 2 3 va, bc, *Pr*

5 motets, 1 4vv, 3 va, 2 vn, bc *S-Uu*

Many lost works incl. masses, vespers, psalms, Te Deum, stage music, pastorale

JOSÉ QUITTIN

Daniel-Lesur [Lesur, Daniel Jean Yves] (b Paris, 19 Nov 1908). French composer and teacher. His mother, Alice Thiboust, was a composer and pupil of Tournemire, with whom Daniel-Lesur had early organ and composition lessons. He studied at the Paris Conservatoire (1919–29) with Jean Gallon for harmony and Caussade for counterpoint and fugue, also taking piano lessons from Armand Ferté. In 1935 he was appointed professor of counterpoint at the Schola Cantorum, where he remained until 1964, serving also as director for the last seven years of his tenure. His pupils there included Ohana. In 1936 Daniel-Lesur was, with Messiaen, Jolivet and Baudrier, a founder-member of the group La Jeune France, dedicated to a 'return to the human' and opposed to the neo-classicism then prevailing in Paris. He was organist of the Benedictine Abbey of Paris (1937–44), and in 1939 he began a long and varied association with French radio. The administrative posts he has held in later years have included those of Inspecteur Principal de la Musique (1969–73),

Administrateur de la Réunion des Théâtres Lyriques Nationaux (1971-3) and Inspecteur Général de la Musique (from 1973)

Daniel-Lesur's music stands apart from that of his more famed contemporaries in La Jeune France, being more conventional in texture, rhythmically more regular, and more directly diatonic. Its modal shading probably comes less from his colleagues' influence than from his respect for Tournemire and his interest in folk music. Of this he has made numerous arrangements, besides using folk tunes occasionally in original compositions in a manner that suggests a closeness to d'Indy. However, in its strength and warm dignity, his music has more in common with that of Dukas. A list of forebears would also have to include Berlioz, whose influence is evident in the opera *Andrea del Sarto*, and not just in the choice of a story taken from the romanticized life of an artist of the Italian high Renaissance. The project was particularly important to Daniel-Lesur he wrote incidental music for Musset's drama in 1947, drawing on this for the symphonic poem of 1949, the opera followed in the 1960s. It shows a Berliozian desire to establish sudden psychological insights by means of orchestral coups, but its more permanent qualities of richly veiled mystery suggest a successor to Dukas' *Ariane*.

PAUL GRIFFITHS

Daniélou, Alain (b Neuilly-sur-Seine, 4 Oct 1907) French musicologist and orientalist. After gaining his baccalauréat in Paris (1925) he spent a year at St John's College, Annapolis, Maryland (1926-7), and on his return to Paris studied the piano, classical dancing (N. Legat and Nizhinska), singing (C. Panzera) and composition (M. d'Ollone). After involving himself in Parisian artistic life with recitals and exhibitions of his paintings, he left in 1932 for the east: he travelled in North Africa, the Middle East, India, Indonesia, China and Japan, and finally settled in Benares in India, where he studied Sanskrit, philosophy and music (theory and *vijnā* with Shrivendranath Basu) in the traditional schools (1935-50). In 1949 he was appointed research profes-

sor at the Hindu University of Benares, and associate director of the School of Indian Music. He left Benares to become director of the library of manuscripts and Sanskrit publications of Adyar in Madras (1954), and in 1956 became a member of the Institut Français d'Indologie in Pondicherry. He was appointed a member of the Ecole Française d'Extrême Orient in Paris (1959), adviser to the International Music Council of UNESCO (1960) and director of the International Institute for Comparative Music Studies (1963) which he established in Berlin and Venice.

Daniélou's experience with the musical languages of both east and west has given him a unique approach to musicology, in which he attempts to relate philosophical and emotional concepts with precise mathematical calculations of scalar intervals (e.g. *The Rāga-s of Northern Indian Music*). In his *Traité de musicologie comparée* he took this approach even further by trying to prove the ancient Chinese theory that universal order depends on the precise tuning of intervals. His work has provoked criticism (e.g. by A. Bake, in *EM*, ii, 1961, 231), in particular for misquoting the ancient texts on which he bases much of his information. Daniélou has also published on various aspects of Indian civilization, such as Hindu philosophy and sculpture. As music adviser he has edited collections of discs of Asian and African music for the series UNESCO Anthology of the Orient.

CHRISTIANE SPIETH-WEISSENBACHER

Daniels, Mabel Wheeler (b Swampscott, Mass., 27 Nov 1878; d Boston, 10 March 1971). American composer. She studied at Radcliffe College (BA 1900) and with Chadwick in Boston. In 1904-5 she was a pupil of Thuille in Munich and upon returning published a valuable autobiography, *An American Girl in Munich Impressions of a Music Student* (Boston, 1905). She directed the Radcliffe Glee Club (1911-13) and was head of music at Simmons College, Boston (1913-18). Her largest work, the *Song of Jael* to a text by Robinson for the Worcester Festival (5 October 1940), was also her sole lengthy vocal work with text by a modern male author. She published a documented study, 'Robinson's Interest in Music', in the *Mark Twain Quarterly*, ii/3 (1938). Although never daring or very individual, she was a competent composer who scored well for both voices and orchestra.

ROBERT STEVENSON

Danilevich, Lev Vasil'yevich (b Shuya, Vladimir govt, 25 June 1912). Soviet musicologist and teacher. After graduating from the Moscow Conservatory in 1936, he continued his studies as a postgraduate and took his *kandidat* degree in 1939 with a dissertation on Tchaikovsky's symphonies. While teaching music history at the Moscow Institute for Military Conductors (1944–57) he was also a senior lecturer at the Moscow Conservatory (1949–57). From 1945 to 1953 he was deputy director of the music department of All Union Radio, and since 1954 he has been chairman of the committee of music critics at the Union of Composers of the USSR. Danilevich's principal research interests are in 19th- and 20th-century Russian music. He has written books and articles on Tchaikovsky and Rimsky-Korsakov and has published numerous studies of Soviet composers, notably Kabalevsky and Shostakovich.

IGOR BELZA

Danilewicz-Czczot, Witold. See CZECZOTT, WITOLD

Danilin, Nikolay Mikhailovich (b Moscow, 3 Dec 1878, d Moscow, 6 Feb 1945). Soviet choral conductor and teacher. He attended the Moscow Synodal School under Stepan Smolensky, Alexander Kastal'skiy and Vasily Orlov, and later studied the piano under Koreschenko at the Philharmonic Academy, Moscow. While teaching solfège and sight-reading at the Synodal School (1897–1918), he became assistant conductor of its choir in 1904 and was principal conductor from 1910 to 1918. By improving its standard, and widening its repertory beyond the conventional limits of church

music, he played an outstanding part in the development of Russian choral singing. He toured with the choir in Austria, France, Germany and Italy from 1911 to 1913. Under his direction it was renowned for an emotional and colourful vocal tone, and a strong but restrained vigour that incorporated the best national choral traditions. After the establishment of the USSR, Danilin was successively conductor of the Bol'shoy Theatre Choir, Moscow (1919–23), the Leningrad Academic Choir (1936–7) and the USSR State Choir (1937–9). He taught at the People's Choral Academy, Moscow, from 1918 to 1923 and was professor of choral conducting at the Moscow Conservatory from 1923 to 1945. He trained many leading choral conductors in the USSR.

I. M. YAMPOL'SKIY

Danilov, Kirsha (fl. c1760–90). Russian folksong collector. All that is known of him is that his name, perhaps a pseudonym, is associated with one of the most valuable 18th-century folklore collections. There is evidence that he began fieldwork in one of the south-western regions of Siberia during the 1760s, for in 1768 P. A. Demidov, a wealthy writer who possibly commissioned the collection, sent one of the song texts, 'obtained from the Siberian people', to the historian G. F. Miller; however, the manuscript of 70 songs (now in *USSR-Lsc*) was probably not completed until the 1780s. For many years Demidov owned the collection, but in 1802 or 1803 it was passed to F. P. Klucharyov, director of the Moscow postal service, who in 1804 arranged for the publication of 26 of the song texts without music, a second edition (1818), containing 61 songs with music, was prepared on the instructions of N. P. Rumyantsev, who had acquired the manuscript in 1816.

Danilov's was the earliest important collection of Russian *blum* (epic songs) and historical songs, and provides a wealth of source material on folk tales. Many Russian writers, including Pushkin and Tolstoy, possessed copies, and Rimsky-Korsakov used one of the songs, *Visota li, visota podnebesnaya*, in the finale to the fourth scene of his opera *Sadko*. All the folk tunes, some of which accompany more than one text, are unharmonized and written above the comfortable range of the human voice; this suggests that the collection was intended not for amateur performance, like those of Trutovsky and Pratsch, but for more scholarly study. In 1894 the manuscript was discovered in the library of Prince Mikhail Rostislavovich Dolgorukov, and an authoritative edition by P. N. Sheffer appeared in 1901; a transcription and exhaustive study was published in 1958.

GEOFFREY NORRIS

Danish Musicological Society. See DANSK SELSKAB FOR MUSIKFORSKNING.

Dankowski [Danck], **Adalbert** (Wojciech) (b ?Wielkopolska district, c1760; d after 1800). Polish composer and violinist. He was at first attached to the Cistercian monastery at Obra, where he is thought to have studied; about 1779 he was a monastery musician. From 1787 to 1790 he was conductor and composer at Gniezno Cathedral. Elsner stated that around 1792 he was a viola player at the German theatre in Lwów. His compositions were known in almost all the major Polish musical centres at that time, in the Wielkopolska district, Wilno, Krzemieniec and the Kraków region.

Dankowski's instrumental pieces are in the early Classical style; his vocal works (exclusively to religious texts) show a marked influence of the Neapolitan School. His music, mostly homophonic, is characterized by Polish dance elements, and he sometimes made use of folk instruments (such as the *tuba pastoralis*). His extant works include two symphonies, in D (ed. J. Krenz, Kraków, 1951), and E♭ (ed. D. Idaszak, *Muzyka staropolska*, Kraków, 1966); 39 masses, 3 requiems, 27 vespers, 7 litanies, 37 motets and other sacred compositions in numerous libraries (notably CS-KRE, D-Mbs, PL-CZp, Gnd, GR, OB, Pilzno, Pa, SA, Staniątki, SZ, Wtm and WL).

DANUTA IDASZAK

Dankworth, John [Johnny] (Philip William) (b London, 20 Sept 1927). English composer, jazz musician and band-leader. He began his jazz career playing the clarinet in a semi-professional traditional-style band, Freddy Mirfield's Garbage Men. He studied at the Royal Academy of Music (1944-6), then played on transatlantic liners to hear modern jazz at first hand in the USA. By this time Dankworth was playing the alto saxophone

(at first he was strongly influenced by Charlie Parker) and he quickly became a leading figure of postwar British modern jazz. He formed the Johnny Dankworth Seven in 1950, and three years later organized his first large jazz orchestra (it departed from the conventional big band instrumentation by not containing a regular saxophone section). Dankworth's many compositions for his jazz orchestras (some in collaboration with his staff arranger David Lindup) include several large-scale suites; he has also composed an opera-ballet, works for combined jazz and symphonic musicians and a number of film scores. He has toured widely with Cleo Laine, who began singing with his band in 1953 and became his wife in 1960. In 1974 he was made a CBE.

WORKS

(selective list)

- Stage *Lysistrata* (opera-ballet), 1964
- Film scores (dates are those of film release) *The Criminal*, 1960, *Saturday Night and Sunday Morning*, 1960, *The Servant*, 1964, *Darling*, 1965, *Modesty Blaise*, 1966, *Return from the Ashes*, 1967, *The Last Grenade*, 1969, 10 Rillington Place, 1970
- Jazz orch. *What the Dickens*, 1963, *Zodiac Variations*, 1964, *Million Dollar Collection*, 1967
- Other works *Improvisations, jazz and sym. insts.*, 1959, collab. M Seiber, *Escapade*, 1967, *Tom Sawyer's Saturday*, 1967, *Str. Qt.*, 1971, *PF Conc.*, 1972

CHARLES FOX

Danmark (Dan). DENMARK

Dannemann (Rothstein), Manuel (b Santiago, Chile, 16 May 1932). Chilean ethnomusicologist and folklorist. At the University of Chile he studied philosophy, specializing in Romance languages and Spanish education (1958-65), he also studied ethnomusicology and folklore privately with Carlos Lavín. He has held positions as professor of folklore at the Catholic University (1957-74), professor of ethnology and folklore at the University of Chile (appointed 1971), professor of ethnomusicology at the latter institution (appointed 1963), chairman of the art department of the Catholic University (1972-4) and president of the Research Committee of the University of Chile, northern campus (appointed 1974). In 1973 he visited the University of California at Los Angeles and Berkeley as a fellow of the University of Chile. He has lectured widely in Latin America and the USA, and participated in numerous international conventions and congresses. In his research he has concentrated on the study of Chilean folklore and folk music, devoting many years to field work; his extensive publications reveal a systematic and comprehensive approach to the subject.

GERARD BÉHAGUE

Danner, Christian (Franz) (baptized Schwetzingen, 12 July 1757; *d* Rastatt, 29 April 1813). German violinist and composer, son of Johann Georg Danner. A pupil of his godfather Christian Cannabich, he was a supernumerary violinist in the Mannheim court orchestra as early as 1770, and by 1776 was receiving a salary of 400 florins. His great ability on the violin is confirmed by Mozart, who taught him composition in Mannheim (as recorded in a letter from Mozart's mother, 14 December 1777). He accompanied the court when it moved to Munich in 1778, and there gave violin instruction to his most famous pupil, J. F. Eck. In 1785 he became Konzertmeister in Zweibrücken, and three years later he took over the same position at Karlsruhe. From 1803 he held the title of musical director to the Grand Duchy of Baden. His only known work is a violin concerto composed in Munich in 1785 and published about two years later by Sieber in Paris and Amon in Heilbronn.

ROLAND WÜRTZ

Danner, Johann Georg (baptized Mainz, 11 Nov 1722; *d* Karlsruhe, 28 March 1803). German violinist and oboist, possibly of Alsatian descent, father of Christian Danner (a Danner is recorded as organist in Strasbourg in 1733). From 1743 he held the position of *Kammermusicus* at Zweibrücken, but at the 'reform' of the court music, on 9 February 1755, he was dismissed. He found employment in 1756 (according to Walter, 1757) at Mannheim as a violinist, later also as 'musical instructor' to the children of the court. Account lists show that he was still at Mannheim in 1776 and 1778, but he went to Munich when the seat of the court moved there in the latter year. After 1802 he lived in retirement in Karlsruhe with his son, the violinist Christian Danner.

For bibliography see DANNER, CHRISTIAN

ROLAND WÜRTZ

Dannreuther, Edward (George) (*b* Strasbourg, 4 Nov 1844; *d* Hastings, 12 Feb 1905). English pianist, writer and teacher of German origin. After some lessons during childhood in Cincinnati from F. L. Ritter, he studied at Leipzig with Moscheles, Hauptmann and Richter (1859–63). He made a successful Crystal Palace début as a pianist, introducing the first complete English performance of Chopin's F minor Piano Concerto (11 April 1863), then establishing himself as a prominent figure in London musical life. His many services to Wagner began with the founding of the Wagner Society (1872), two of whose series of concerts he conducted (1873–4); he also acted as English agent in the supplying of the dragon and other of what were described as the 'stage fauna' of the *Ring* for the first Bayreuth Festival in 1876, helped to promote the London Wagner Festival in 1877 (when Wagner and Cosima stayed in his house at 12 Orme Square and Wagner read for the first time the complete poem of *Parsifal*), and, not least, translated some of Wagner's writings and wrote and lectured on Wagner.

An enthusiast for new music, Dannreuther introduced to England the concertos by Grieg, Liszt (A major) and Tchaikovsky (B♭ minor); but he was equally a defender of the classics, which featured strongly in his chamber concerts at his house (1874–93), in his public performances and in his lectures. He taught the piano at the RAM, and greatly helped and encouraged the young Hubert Parry by both his teaching and his performance. He was a valued contributor to the earlier editions of *Grove*, his article on Wagner is now outdated, but contains some interesting details and first-hand observation. His published compositions include two sets of songs and one of duets.

Though he was a brilliantly equipped practical musician, Dannreuther's writings tend to concentrate on Wagner's theories of opera rather than their actual embodiment in music. But for a critic writing originally before the completion of the *Ring* his perspicacity is astonishing, and subsequent revisions to his book on Wagner's operatic reform extend and support but do not substantially contradict his original perception. A good English stylist, he produced vivid versions of Wagner's often difficult prose, and intelligently added to his translation of *Beethoven* two relevant extracts from Schopenhauer (from *Versuch über das Geistersehen* and *Die Welt als Wille und Vorstellung*).

His volume in the *Oxford History of Music* takes a strongly German viewpoint, excluding from serious consideration much nationalist music, even Russian, of crucial Romantic importance, nevertheless, he befriended Tchaikovsky, and even persuaded him, where Nikolay Rubinstein had failed, to accept emendations to the solo part of his First Piano Concerto. His treatise on ornamentation, which covers the 16th to 19th centuries, was for long a standard work.

His brother Gustav (*b* Cincinnati, 21 July 1853; *d* New York, 19 Dec 1923) was a violinist who studied in Berlin with Joachim and De Ahna, and lived in London before returning to the USA. He played in the Boston SO, directed the Buffalo Philharmonic Society (1882–4) and founded a string quartet in 1884 in New York, where he settled. He led the New York Symphony and Oratorio Societies and taught at Vassar College from 1907.

JOHN WARRACK

Dannström, (Johan) Isidor (b Stockholm, 15 Dec 1812; d Stockholm, 17 Oct 1897). Swedish singer, teacher and composer. While still in his teens he studied music at the Academy of Music in Stockholm (1826-9), where J. E. Nordblom (singing), T. Byström (piano) and E. Drake (harmony) were his teachers. His father having decided that he should try a career in commercial life, he worked as a clerk between 1829 and 1836. However, by giving guitar and flute lessons he earned enough money to resume his musical studies. In 1835 he returned to Drake for lessons in harmony and counterpoint, and at the same time Isak Berg became his singing teacher. From 1836 he devoted himself wholly to music. In 1837, shortly after the publication of his first song, he began a journey through Europe which lasted four and a half years. He studied music theory with S. W. Dehn in Berlin and singing with Forini in Bergamo, in Paris the Italian opera was his main interest and for a short time Rubini became his teacher. Later he gave concerts in Warsaw and Kraków and also visited Vienna before he returned to Sweden. He was engaged as a baritone at the Kungliga Teatern in Stockholm in 1841, and together with Jenny Lind, Giovanni Belletti and J. Günther he created an outstanding period in the history of the Stockholm Opera. He made his début in Mercadante's *Il bravo*. One of his best roles was Don Giovanni; he accompanied himself in the serenade.

In 1844 Jenny Lind left Sweden, which seems to have caused Dannström to do the same. He went to Paris, where he studied with Jenny Lind's teacher Garcia for a year. After his return to Stockholm he established himself as one of the most sought-after singing teachers and as a successful composer. In 1849 he published his *Sång-method* which for many years remained the best tutor in Swedish (2/1876). He conducted the Harmoniska Sällskapet (1847-8) though he had no real interest in choral music. For some years around 1850 he wrote music criticism in different Stockholm papers, *Dagligt allehanda* and *Aftonposten* (1848-9), and *Aftonbladet* (1854-5), and from 1851 he was a very active member of the Academy of Music. During his journey to America in 1853-4 he stayed mostly in Washington, D.C., where he gave concerts and took pupils. In 1856 he founded a successful music shop in Stockholm.

All Dannström's compositions are vocal music. His operetta *Doktor Tartaglia* had its first performance at the Kungliga Teatern in 1851 (a revised version was given in Göteborg as *Crispinos giftmål*, 1878). He was also successful with his music for the comedies *Skomakaren och hans fru* (1847), *Herr och fru Tapperman* (1848) and *Lordens rock* (1861). Some of his popular songs, the 'polskas', are of folkdance character but embellished with rich coloratura. Others, such as *Hur ljuvt det är att komma*, are sacred songs. In 1876 one of his song collections was awarded a prize by the

Musikaliska Konstföreningen. Among his duets the comic *Duellanterna* is the best-known. As an old man he published his memoirs, *Några blad ur Isidors Dannströms minnesanteckningar* (Stockholm, 1896), in which he gives interesting portraits of Jenny Lind and many others of his contemporaries.

D'Annunzio, Gabriele (b Pescara, 12 March 1863; d Gardone Riviera, 1 March 1938). Italian writer. A strong influence on Italian music in the early 20th century, he gave evidence of a deep musicality in his writings, such as the odes to Bellini and Verdi in the second book of *Laudi* (Milan, 1904) and the passages on Monteverdi and Wagner in the novel *Il fuoco* (1896-8). To have recognized Monteverdi's stature before 1900 itself reveals a searching mind; and D'Annunzio was also ahead of his time in admiring Wagner as an artist while refusing to accept his philosophy and theories. Moreover, throughout his life - from his passionate concert-going in Rome around 1880 to his retirement in the Vittoriale, where he even had his own string quartet, the Quartetto del Vittoriale - he sought the company of musicians and won their respect for his knowledge and penetrating insight many fell completely under the spell of his personality.

D'Annunzio collaborated directly with composers on several occasions. *Parisina* was created as a libretto for Mascagni, and *Fedra*, although initially conceived as a play, was written with the idea of adapting it as a libretto for Pizzetti, with whom D'Annunzio was for a time on very close terms (he even invented for him the quintessentially D'Annunzian pseudonym 'Ildebrando da Parma'). Pizzetti's elaborate incidental scores for *La nave* and *La pisanella* were both commissioned as integral parts of the dramas' conceptions, while the texts were being written, this was also the case with Debussy's music for *Le martyre de St Sébastien*. Other composers who used adaptations of D'Annunzio plays as opera librettos included Franchetti, Zandonai, Montemezzi and G. F. Malipiero; the list of those who set his poetry in songs or choral pieces is long, ranging from Tosti to Casella and Dallapiccola. Furthermore, many Italian composers were influenced in a more general way, for better or worse, by the hedonistic aesthetic of 'dannunzianesimo', that cult of the elaborately picturesque, the exotic, the selfconsciously archaic, the gratuitously barbaric and the sensual which underlies much of D'Annunzio's art. Respighi in particular, although quite unlike D'Annunzio personally, often came remarkably close to the D'Annunzian spirit in his works.

On a more practical plane, D'Annunzio played a significant part in encouraging both the resurgence of Italian instrumental music and the revival of music from the remoter Italian past - he was even director, at least nominally, of *I Classici della Musica Italiana*, a series of editions of early music for which he wrote an introduction in 1917. That he was also enthusiastically involved in the foundation of Casella's *Corporazione delle Nuove Musiche* (1923) is a further proof of the vast range of his interests.

WORKS SET TO MUSIC

DRAMATIC

La città morta (play, 1898) opera *La ville morte* by R. Pugno and N. Boulanger, 1911, unpubd, unperf

- Sogno d'un tramonto d'autunno* (play, 1899) music by G. Napoli, 1911, opera by G. F. Malipiero, 1913-14, unpubd, unstaged, concert perf. RAI, 1963

JOHN C. G. WATERHOUSE

Danon, Oskar (b Sarajevo, 7 Feb 1913) Yugoslav conductor and composer. He studied at the Prague Conservatory and took his doctorate in musicology at Prague University. From 1938 he established himself as an orchestral and theatrical conductor in Sarajevo. During the war he took part in the Resistance movement against German occupation. In 1945 he was appointed director and conductor of the Belgrade Opera, but in 1960 he gave up administrative responsibilities in favour of full-time conducting.

Although Danon had earlier conducted performances of *The Bartered Bride* in Prague, his international fame began in 1958 with the Belgrade Opera performances of Borodin's *Prince Igor* and Massenet's *Don Quichotte* at the Lausanne Festival and at the Théâtre des Nations Festival in Paris. He conducted the company in Prokofiev's *Love for Three Oranges* with great success at the 1959 Wiesbaden Festival and the Paris Opéra's *Boris Godunov* (in the Rimsky-Korsakov edition) in 1960. The Belgrade company's proficiency in the Russian repertoire was particularly valued at a time when the West had virtually no contact with Soviet operatic enterprise. Although the company performed at home in Serbo-Croat, it was engaged to record in Russian. Danon's conducting of *Prince Igor* was accordingly the first complete recording of that work ever to reach the West (1955), followed in 1956 by Glinka's *A Life for the Tsar* (*Ivan Susanin*). In a later recording of *A Life for the Tsar*, conducted by Igor Markevich (1959), Danon did not disdain the role of chorus master. At the Edinburgh Festival of 1962 he was much commended for his vigorous and varied conducting of the Belgrade company in *Don Quichotte*, *Prince Igor* and the first performances in Britain of Prokofiev's *The Gambler* and *Love for Three Oranges*. Later the same year he conducted *Prince Igor* in the Chicago Lyric Opera season. Outside the Slavonic repertoire he also conducted *Tristan und Isolde* (Barcelona, 1969), Richard Strauss's *Arabella* (Amsterdam, 1970) and other works. Danon's career has been mainly but not exclusively devoted to opera: he has written a Symphonic Scherzo, chamber works, and music to several plays including Shakespeare's *Much Ado about Nothing* and Jonson's *Volpone*; he is a professor at the Musical Academy in Belgrade.

D'Anossa, Giuseppe. See AVOSSA, GIUSEPPE.

Danoville (fl Paris, 1687). French viol player and writer on music. He held the title 'Escuyer' and lived in the Rue St Jacques, Paris; his first name is unknown. He published *L'art de toucher le dessus et basse de viole* (Paris, 1687/R1972), which appeared in the same year as Jean Rousseau's *Traité de la viole*. Both authors attributed recent advances in the technique of the viol to SAINTE-COLOMBE, and in his preface Danoville described Sainte-Colombe's excellent manner of playing. In the body of the work he discussed the position of the left hand and the holding of the bow and provided an explanation of tablature and staff notation and of seven ornaments (*tremblement, pincé, port de voix, coulé du doigt, tenue, couché du doigt* and *balancement*)

MARY CYR

Danse macabre (Fr.) DANCE OF DEATH.

Dansk Selskab for Musikforskning (Danish Musicological Society). A society founded in 1954 by J. P. Larsen, Nils Schjørring, Henrik Glahn and Sven Lunn to promote musicology in Denmark, through publications and lectures, and to be a link with similar organizations abroad. It arranged congresses of Scandinavian musicologists at Copenhagen (1958) and Århus (1966) and the 11th IMS congress in Copenhagen in 1972. It has published the *Dansk århøg for musikforskning* from 1961 and has produced volumes for the series *Dania Sonans*

Dansse real. Medieval French term which appears at the head of one monophonic, textless and possibly instrumental piece in *F-Pn* fr.844 (a manuscript of troubadour and trouvère chansons – see SOURCES, MS), and may be extensible to other pieces. It bears some resemblance to the forms of the ESTAMPIE and DUCTIA

The piece concerned follows (f.104v) immediately after eight other monophonic textless pieces, each labelled 'estampie real', and was probably entered by the same hand (very different from the main body of the manuscript), all nine pieces being in a mensural notation (unlike the chansons) which, however, is not without its ambiguities. They were probably copied into the manuscript before 1325 (see Aubry). The *Dansse real* strongly resembles the estampies except for the fact that it comprises only three melodic sentences, and that these are not repeated.

On f.5 of the same manuscript there are two pieces, probably in the same hand, which strongly resemble the above. Both pieces consist of repeated sentences with *ouvert* and *clos* endings. These endings are written out only on their first occurrence, with the words *ouvert* and *clos* actually written under them, and with fairly clear indications that the same endings were to be repeated after all sentences. The first of the two pieces has four such repeated sentences, the second has three. Thus the latter seems to correspond completely to the description given by Johannes de Grocheo for the ductia. It is, however, labelled 'Danse', while the former is without label.

HENDRIK VANDERWERF

Dante Alighieri (b Florence, May or June 1265; d Ravenna, 14 Sept 1321). Italian poet and theorist. Italy's greatest poet became prominent in the 1280s as a leading member of a group of young poets who were transforming the style and content of the fashionable, elevated love-lyric; later he characterized the achievement of those years as the 'dolce stil novo'. He included the best of his early poems in his short prose work *La vita nuova* (c1292–3), the record of his love for Beatrice and his grief at her early death in June 1290. In the mid-1290s he fell in love with Philosophy, personified in his poems as a noble lady, and devoted himself wholeheartedly to the study of logic, ethics, physics, metaphysics and theology – indeed, to almost every branch of medieval science. Simultaneously he began to be active in the political life of the turbulent Florentine republic. He rose to be one of the six Priors in 1300, before suffering exile after a *coup d'état* by his political opponents in November 1301. He never returned to Florence. In exile he continued to write lyric poetry (88 poems survive) and pursued his philosophical studies, writing several learned prose works. Two of these demand attention: *Convivio* (c1304–8), a 'banquet' of learning written in the vernacular to reach a lay audience, and *De vulgari eloquentia* (c1305), a Latin work defining the language, style and metrical form proper to the highest reaches of vernacular poetry.

The great work of Dante's maturity, a narrative poem he called simply *Commedia*, presents in fictional form a radical reassessment of his involvement in politics and philosophical study. It falls into three more or less equal parts: *Inferno*, *Purgatorio* and *Paradiso*. It is divided into 100 cantos, each of about 140 lines. Perhaps its greatest debt to the medieval art of music lies in the many intricate numerical symmetries that govern its structure, and in what these symbolize; the metre itself, *terza rima*, rhyming *aba, bcb, cdc* etc, and linking the hendecasyllabic lines to make a pattern of threes in an unbroken chain, mirrors the greater art of the Three-person Creator. The poem is at once extremely simple and linear, and extremely complex. Over a cantus firmus, represented by the realistic narrative of the journey, Dante wove the equivalent of many polyphonic strands by giving the story an allegorical dimension, by introducing prophecies, flashbacks, digressions and learned discourses, and by spinning a complex web of correspondences and patterns of meaning through a virtually unbroken flow of simile, metaphor and allusions to history, myth and legend. Music is significantly absent in Dante's *Inferno*: Hell reverberates with 'sighs, screams and lamentations', and 'different tongues make not sweet harmony but an eternal tumult in the dark air' (*Inferno* iii.22–30, set by Luzzaschi). In *Purgatorio* music plays an important part: on every terrace the souls sing an appropriate hymn or antiphon from the liturgy. But the emphasis falls on the 'therapeutic' power of such music, sung as an act of corporate worship and as part of a rite of expiation. It is in Heaven (or rather in the heavens) that music assumes its proper role: in association with images of the dance, music conveys the order, beauty and bliss (*dolcezza* is the key term) of eternal beatitude and perfect love, the state men may enjoy when they have been not only

redeemed and restored but 'transhumanized' (*Paradiso* 1.70, xxx.57) and made divine. No-one who has read *Paradiso* will lightly misjudge the purely sensuous sweetness of music in Dante's day. And Dante is still unsurpassed in his power to suggest in poetry the impact of great music on the listener, the experience of ecstasy or transport in which everything else is forgotten (e.g. *Purgatorio* ii.106-20; *Paradiso* xiv.118-26, xxiii.96-111, 127-9). He declared himself unable to express 'la dolce sinfonia di Paradiso' (*Paradiso* xxi.59), but the reader is left feeling that he too has heard.

Conversely, Dante's poetry has been poorly served by musicians. No contemporary settings of any of his verse have survived, and the earliest that have date only from the first half of the 16th century (see Einstein). The madrigalists rarely used texts by him. Romantic composers (Liszt, Tchaikovsky: see below) responded with characteristic abandon to the horror of certain scenes and the pathos of tragic encounters in the *Inferno*, but these are really uncharacteristic of the *Commedia* as a whole.

Dante's scattered remarks about the relationship of poetry and music are often quoted, and often misrepresented. 'Poesis nichil aliud est quam fictio rhetorica musicaque poita', he wrote in *De vulgari eloquentia*, II, iv.2. This was wrongly rendered (with an earlier reading of 'posita' or 'composita' for 'poita') as 'poetry is a rhetorical fiction set to music', making the musical setting a condition of poetry. A better translation might be 'poetry is simply a work of imagination [fictio] composed or made [poita, from Gk *poein*] according to the rules of rhetoric and music'. Good prose is *rhetorica poita*, so the musical organization of words is certainly that which distinguishes poetry from prose. But 'musica' is here used both in a precise and limited technical sense (as governing the rules of rhythm) and in a general sense which allowed Dante to speak of his craft as 'harmonizing words' (*Convivio*, II, xiii.23; *De vulgari eloquentia*, II, viii.5). To bring words into harmony is to organize the sequence of syllables rhythmically and numerically so that they form lines of verse with a fixed number of syllables and certain cadences (*musica poita* in the technical sense). It is also to temper the harsher and smoother sounds of words (scrupulously defined in *De vulgari eloquentia*, II, vii.4-6) so that they will combine to form a structure that is pleasing and appropriate to the meaning (*De vulgari eloquentia*, II, i; *Rime* ciii.1-2; *Inferno* xxxii.1-3). Further, it is to bind the lines of verse into groups of three, four or more by rhyme, thus creating the larger metrical units that make up the constituent parts of the stanza in a canzone or ballata, or the quatrains and tercets of a sonnet. Poems can be called *rime* ('rhymes') when *rima* is used in the broad sense to denote 'all speech which is governed by numbers and time and ends in rhymed consonances' (*Convivio*, IV, ii.12). The sweetness of poetry depends on its *armonia* so understood. Like music itself, poetry is 'tutta relativa' (*Convivio*, II, xiii.23), and 'the more beautiful the relationship [proportion], the sweeter is the resultant harmony'; this is why the sweetness of poetry cannot survive translation, since the aural relationship of the parts must inevitably be broken (*Convivio*, I, vii.14).

There is another sense in which a canzone stanza is *musica poita*: it has to be constructed so that it can be set to music ('omnis stantia ad quandam odam recipiendam armonizata est', *De vulgari eloquentia*, II, x.2) according to the musical conventions of the day. These

were similar to the rules of *Meistergesang* as explained by Hans Sachs in Act 2 of *Die Meistersinger*, and they required that the stanza be set to two contrasted melodies, of which the first must be repeated (*AAB*). Hence the stanza had to have two metrically identical *pedes* with shared rhymes (Ger. *Stollen*) followed by a metrically distinct *sirma* with contrasted rhymes (Ger. *Abgesang*: see BAR FORM). But it is perfectly clear that, for Dante, the poem already had its own 'harmony' and was complete when the poet's work was done: it did not need a musical setting to exist as a 'song'.

Madrigal settings of Dante survive by Luzzaschi, Marenzio, Claudio Merulo, Domenico Micheli, G. B. Mosto, Soriano and Pietro Vinci. Composers' interest in him seems to have been slight, and only with the onset of the Romantic period did it revive, chiefly with reference to the Francesca da Rimini episode. 'Nessun maggior dolore' (*Inferno* v) is sung under Desdemona's window by gondoliers in Rossini's *Otello* (1816) Mercadante (1828) and Morlacchi (1839) wrote operas called *Francesca da Rimini*. Donizetti composed a setting of the hymn to Mary (*Paradiso* xxxiii) for bass and piano, and an opera called *Pia de' Tolomei* (1837). Boito and Verdi set Dante texts (Zandonai's *Francesca da Rimini*, 1914, is a setting of a libretto by D'Annunzio based on Boccaccio's commentary to Dante), and Liszt and Pacini wrote symphonies inspired by his work.

PATRICK BOYDE

Danyel [Daniel], John (b Wellow, nr. Bath, baptized 6 Nov 1564; d c1626). English lutenist and composer. His elder brother was Samuel Daniel (b 1562), the court poet. He was a student at Christ Church, Oxford, and supplicated for the degree of BMus on 16 December 1602; he was awarded the degree on 14 July 1603. The Stationers' Register for 9 April 1606 records the entry of Thomas Adams to publish 'A booke of songs in folio for the Lute violl and voices by Master John Daniell bachelour in Musicke'. Danyel dedicated the collection to 'Mrs Anne Grene the worthy Daughter to Sr William Grene of Milton Knight'; from the dedicatory poem and the title of the lute solo which ends the book we can infer that Danyel was Anne Grene's lute teacher, and from the Grene's address that he worked in the Oxford area. He received livery as a musician of the royal household for the mourning for Prince Henry in 1612. On 10 July 1615 his brother Samuel was granted a warrant to build up 'a company of youths to perform Comedies and Tragedies' at Bristol. One week after the grant of this warrant the direction of the players at

Bristol was given over officially to John, and in 1618 John again replaced his brother, now as 'allower of the plays' at Philip Rosseter's Blackfriars playhouse. He collaborated with Simon Waterson the printer to produce a complete edition of Samuel's poetry in 1623. In 1625 Danyel is last mentioned as one of the royal musicians (at the funeral of King James I), and he can be presumed to have died shortly afterwards. Though contemporary references to his activities as a composer and player are few, Danyel seems to have been held in high regard. Tomkins dedicated the two parts of a madrigal in his *Songs of 3. 4. 5. and 6. parts* (London, 1622) to Dowland and to Danyel this linking of Danyel's name with that of the best-known lutenist of his day is surely a significant tribute to his skill.

Notable among Danyel's songs is *Like as the lute delights*, in which he indulged his talent for word-painting: at 'a wailing descant on the sweetest ground' he wrote a ground in the lute part of a scale from *e*^b up to *c'* and down again, above which the descant in the voice wails with suspensions and a false relation (see ex.1). Perhaps his best-known song, however, is *Can*

Ex 1 *Like as the lute delights*

The musical score for 'Like as the lute delights' is presented in two systems. The first system shows the voice part (soprano) and the lute part (treble clef). The voice part has the lyrics 'A wail - ing descant, a wail - ing' and the lute part has a descending scale from *e*^b to *c'*. The second system shows the voice part and the lute part. The voice part has the lyrics 'des - cant on the sweet est ground' and the lute part has a descending scale from *c'* to *e*^b.

dolefull notes (in three sections), which seems to be his contribution to the arguments of the time about the best kind of music to accompany poetry. The accompaniment here is relentlessly contrapuntal, and a chromatic motto phrase in the second section, 'No, let chromatique tunes', anticipates part of Dowland's setting of *From silent night* (*A Pilgrimes Solace*, London, 1612). Danyel's lute music shows him to have been a skilful player, with a distinctive variation technique. *Mrs Anne Grene her leaves bee greene* is the first English solo to use the French *cordes avallées* tuning, in this case *A''-D'-G-A-e-a-c'-f#'-f#'*.

 DAVID SCOTT

Danzi. German family of musicians of Italian origin.

(1) **Innozenz** [Innocent] **Danzi** (b. Italy, c.1730; d. Munich, 17 April 1798). Cellist. In F. W. Marburg's list of members of the Mannheim orchestra (1756) he is noted as being 'from Italy'. He joined Johann Stamitz's Mannheim court orchestra on 29 May 1754 and married Barbara Toeschi, the sister of Carl Joseph Toeschi. With 1000 florins a year he was one of the highest-paid musicians in Mannheim. In 1778 he moved with the court to Munich, and in 1783 retired on a pension. Mozart met him at the rehearsals for *Idomeneo* in Munich (letter of 24 November 1780).

(2) **Johann Baptist Danzi** (b. Mannheim, baptized 17 Jan 1758). Violinist, son of (1) Innozenz Danzi. He was a supernumerary violinist of the Mannheim court orchestra from 1773 to 1776 and held a permanent post from 1777 to 1785.

(3) **Franziska** (Dorothea) **Danzi** (b. Mannheim, 24 March 1756; d. Berlin, 14 May 1791). Soprano and composer, daughter of (1) Innozenz Danzi. See *LEBRUN* family, §(2).

(4) **Franz** (Ignaz) **Danzi** (b. Schwetzingen, 15 June 1763; d. Karlsruhe, 13 April 1826). Composer, son of (1) Innozenz Danzi. He had his first instruction in the cello, the piano and singing from his father, and at the age of 15 was able to work as a cellist in the famous Mannheim orchestra. The rich musical and cultural life of the town during its last ten years as the seat of the Palatine court made such an impression on the young musician that when the court moved to Munich in 1778 he preferred to stay in Mannheim and join the orchestra of the newly founded National Theatre, where his colleagues included the Kapellmeisters Ignaz Fränzl and Peter Ritter (the aging Holzbauer was no longer active). The elector's endeavours to establish a native German opera were continued at the new National Theatre, giving the young Danzi his first chance as a composer, after the completion of his studies at Abbé Vogler's Mannheim School of Music. As a composer and conductor of incidental music (e.g. for Schiller's *Die Räuber*, 1782) he gained experience and his first successes.

In 1783 he succeeded his father as a cellist in Munich. He first appeared before the Munich public as a composer for the stage with the comic opera *Die Mitternachtsstunde*, one of his most successful works, which was performed in many theatres and published by Simrock in Bonn. In 1790 he married the singer Margarethe Marchand, and in the following years they led a successful life of travel together, performing in Hamburg, Leipzig, Mannheim, Prague, Florence and Venice, lastly as Kapellmeister and prima donna respectively with the Guardasoni company. In 1796 an engagement of Margarethe took the couple back to Munich, where on 18 May 1798 Danzi was made deputy Kapellmeister (under Peter Winter), with responsibility for the German comic opera and the church music at court. His wife's early death in 1800, however, moved him to retire from all duties. After a short stay in

his native Mannheim and some concert tours he was appointed Kapellmeister in Stuttgart in 1807, a position formerly held by Zumsteeg. There his professional dissatisfaction was eclipsed by his friendship with Carl Maria von Weber, 23 years his junior. Weber's novel *Tonkünstlers Leben* and many epigrams bear witness to his affection and respect for his older friend and patron. As well as performing Weber's *Abu Hassan* Danzi also helped the composition of *Silvana* with suggestions and encouragement. Although Danzi's responsibilities were increased in 1812 when he was entrusted with the teaching of composition at the newly founded Institute of Art, he chose to accept the offer in the same year of the post of Kapellmeister at Karlsruhe. As Kapellmeister to the Baden court it was due to him that the Karlsruhe orchestra was enlarged and, through his training, improved to meet modern demands. The repertory at Karlsruhe reflected his partiality for the Classicism of Mozart, but also for the beginnings of Romanticism found in Weber. The premières of Weber's operas *Preziosa*, *Der Freischütz* and *Euryanthe* were quickly followed by performances in Karlsruhe.

In view of Danzi's work as a theatre Kapellmeister it is natural that music for the stage should form the focus of his career as a composer, and he cultivated it in all its forms. incidental music, ballet, entr'actes, melodrama, Singspiel and, in *Iphigénie en Aulis*, even continuous serious opera without spoken dialogue. The rhythmic flexibility, bold harmonies and cantabile instrumental style that Danzi had learnt from Vogler were supplemented in his works by the impressions of his years in the Mannheim orchestra (in such works as Schweitzer's *Alceste* and Holzbauer's *Günther von Schwarzbürg*) and by the modern elements of chromatic inner parts, use of unusual registers of orchestral instruments and liking for the clarinet that derived from his young friend Weber. He was also a prolific composer of vocal, orchestral and above all chamber music (which has been particularly favoured in the modern revival of his music), and his broad general education in Mannheim found expression in his writings on musical topics, which included essays in *Aurora* and the *Allgemeine musikalische Zeitung*, as well as a necrology of Carl Cannabich.

WORKS

DRAMATIC

(Singspiels unless otherwise stated)

- Cleopatra (drama, 1), Mannheim, 30 Jan 1780, *D-Bds*
 Azakia (comedy, 1), Mannheim, 6 June 1780
 Die Mitternachtsstunde (3), Munich, Hof, April 1788 (Bonn, c1795)
 Der Sylphe (2), [perf.] Munich, Hof, Apr 1788
 Der Triumph der Treue (melodrama, 2, M G Lambrecht), Munich, Hof, Feb 1789, lost
 Der Quasi-Mann (comedy, 2, Lambrecht), Munich, Hof, Aug 1789, lost
 Deucalion et Pirrhia (opera, 1), c1795, *GB-Lhm*
 Der Kuss (comedy, 1), Munich, 27 June 1799, arias, duets (Munich, 1799), *D-Mbs*, *GB-Lhm*
 El Bondocani, Munich, 1802, lost
 Iphigénie en Aulis (grand opera, 3, A. Zeno), Munich, Hof, 27 Jan 1807, lost
 Dido (melodrama), Stuttgart, 1811, lost
 Camilla und Eugen oder Der Gartenschlüssel (comedy, 2), Stuttgart, 15 March 1812, *D-Bds* [perf. Munich, 1807, cited in Manfredi (1954-5), doubtful]
 Rubezahl [Der Berggeist oder Schicksal und Treue] (2, C. Mazzola), Karlsruhe, Hof, 19 April 1813, *Mth*
 Malvina, Karlsruhe, 20 Dec 1814
 Turandot (2, after Gozzi), Karlsruhe, Hof, 9 Feb 1817, *Mth*
 Die Probe (opera, 1), Karlsruhe, Oct 1817
 L'Abbé de l'Attaignant oder Die Theaterprobe (opera, 1), Karlsruhe, 14 Sept 1820
 Viola (entr'acte), *Mth*

Incidental music, written for Mannheim. Der Wiederkauf, composed c1780, Der Schiffbruch, 4 March 1781; Albert von Turneisen (Iffland), 27 May 1781, Laura Rosetti (d'Aren), 15 Aug 1781, Die Rauber (Schiller), 13 Jan 1782, Lanassa (K. Plümcke), 29 Dec 1782, Der Liebhaber ohne Namen (Götter), 30 Jan 1783, Franz von Sickingen, 27 Feb 1783, Liebe um Liebe (Iffland), 20 Nov 1785
 Incidental music to Wilhelm Tell (Schiller), Munich, 11 Sept 1806

CHORAL

- Masses no 1, 4vv, org (Offenbach, c1814), no 2, 4vv, insts, org (Offenbach, c1814); 1 for S, A, T, B, insts, org (Munich), others, *A-Wn*, *D-Mbs*
 Other sacred Abraham auf Moria, oratorio, 1808, *Bds*, Preiss Gottes, cantata (Leipzig, 1803), 9 lateinische Vesper-Psalmen, S, A, T, B, 6 insts, org (Munich, n d); Der 6 Psalm, 4vv, org, op 60 (Offenbach, 1823), Psalmus 128, 4vv, insts, op 65 (Leipzig, 1823), Te Deum, 4vv, insts, 14 Jan 1806, *Bds*, *F-Pc*, Tantum ergo, Salve regina, Ave regina, Alma Redemptoris, litany, 4-5vv, insts, org (Munich, n d), others, *D-Bds*, *Mbs*
 Secular Das Freudenfest, cantata, 4vv, insts (Leipzig, 1804), Cantate am Jahrestage von Mozarts Tod, vv, kbd (Mainz, c1805), An die Freude (Schiller), ode, 1v, 4vv, pf (Berlin, n d)

SONGS

- 1v, pf 6 canzonette, op 13 (Munich, n d), 6 deutsche Lieder, op 14 (Augsburg und Munich, n d), 6 deutsche Lieder, op 15 (Leipzig, c1795), 6 deutsche Gesänge, op 19 (Munich, n d), 8 Volkslieder (Schubert) (Leipzig, 1809), 6 deutsche Gesänge (Leipzig, 1813), 6 romances françaises (Bonn, c1813), 12 canzonette, op 40 (Munich, n d), Balladen und Romanzen, op 46 (Leipzig, 1814), 6 petits duos (Offenbach, c1818), 6 Gesänge, op 63 (Offenbach, n d), 3 canzonette con variazioni, op 65 (Offenbach, 1829), 6 Lieder, op 69 (Leipzig, 1823), 6 Lieder, op 70 (Leipzig, 1823), arias, S/T, some with insts, publ Munich or MS, other single lieder
 4 4vv, pf 6 Gesänge, S, T, B, op 16, 2 vols (Leipzig, c1800), 8 Gesänge, S, S, T, B, op 17 (Leipzig, c1800); 3 Soldatenlieder, 4vv, op 58 (Offenbach), Gesänge der Hellenen, 4vv, op 72 (Leipzig, n d), 6 qts, S, S, T, B (Bonn, 1821), 6 Gesänge, S, S, T, B, op 74 (Leipzig, c1825), other single lieder, canons etc
 Singing exercises, incl opp 24, 32, 50 (Berlin und Leipzig, 1800-20)

ORCHESTRAL

(5) **(Maria) Margarethe Danzi** [née Marchand] (b. Frankfurt am Main, 1768; d. Munich, 11 June 1800). Soprano and composer, wife of (4) Franz Danzi. The daughter of Theobald Marchand, a theatrical director at Mainz, Frankfurt am Main, Mannheim and Munich, she was acquainted with the stage early in life, and appeared on the Mannheim stage as early as 1777. Together with her younger brother Heinrich she received tuition from Leopold Mozart at his home in Salzburg from 1781 to about 1785. She made her début at Munich in Carnival 1787 in Vogler's *Castore e Polluce*; in 1790 she married Franz Danzi and began a successful career with her husband. From 1796 she was a member of the German Theatre in Munich, and her three violin sonatas op.1 were published there by Falter (no.1 ed. in *Varie musiche di Baviera*, i, Giebing, 1967).

Danzi, Franziska. German singer; see LEBRUN family

Danzig (Ger.). GDAŃSK.

Danzi Wind Quintet. Dutch ensemble. It was formed in 1957 for the first performance in the Netherlands of Schoenberg's Wind Quintet op.26, and consisted of Frans Vester (flute), Leo Driehuys (oboe), Pem Godri (clarinet), Brian Pollard (bassoon) and Adriaan van Woudenberg (horn). In 1958 they presented themselves as the Danzi Wind Quintet (after one of the first composers for wind quintet, Franz Danzi, 1763-1826). Driehuys was succeeded by Koen van Slogteren, Maarten Karres, and, in 1973, Han de Vries; Pem Godri's place was taken by Piet Honingh in 1962. At first the quintet performed mostly 20th-century music, including works composed for them by Van Baaren, Escher, Ton de Leeuw, Schat and Van Vlijmen. They gave the first Dutch performance of Stockhausen's *Zeitmasse* in 1960 and the première of Kreněk's 'Alpbach' Quintet in 1962, and they introduced Schoenberg's Wind Quintet to England, Poland and Yugoslavia. Gradually they expanded their repertory to include classical works, which gained from their technique developed for the modern repertory. Vester has

brought much unknown 18th- and 19th-century music to light through his research, and the players gradually began to use authentic early instruments. They appeared at the 1966 Edinburgh Festival, and have since played at festivals in Salzburg, Warsaw and Darmstadt, and have made extensive tours.

TRUUS DE LEUR

Danzón. A formal ballroom couple-dance in rondo form derived from the *contradanza* and habanera traditions of the 19th century. The Cuban *danzón* has developed within the urban popular tradition with increasingly obvious African influences. Among these are extensive use of the symmetrical *cinquillo* and *tresillo* patterns, staggered rhythmically to create complex instrumental cross-rhythms. Structurally the *danzón* consists of a series of alternations between verses, *estribillos* (refrains) and instrumental solos.

WILLIAM GRADANTE

Da-Oz [Daus], **Ram** [Avraham] (b. Berlin, 17 Oct 1929). Israeli composer of German birth. He moved to Palestine with his parents in 1934 and began studies of the piano in 1945 and the oboe in 1947. Blinded in the Palestine War of 1948, he studied theory and composition privately with Hajos for three years, and he graduated from the Tel-Aviv Academy of Music in 1953. Two years later he had a string quartet, a piano sonata and some songs publicly performed. Parts of these works showed a personal expressive quality, which became more apparent in the sombre orchestral *Metamorphoses of Grief and Consolation*. Earlier tendencies toward fast chromatic modulations developed into atonal writing in the piano *Capriccio*, the String Trio and the *Lea Goldberg Songs* (1962); the influences of Prokofiev and Bartók gave place to those of Schoenberg. The dodecaphony ruling the *Movimenti quasi sonata* for piano, the Second Quartet and the Piano Trio was then replaced by shorter motivic sets. *Changing Phantoms* for chamber orchestra and *Improvisation on a Song* are perhaps his most imaginative and well-shaped works.

WORKS

(selective list)

NATHAN MISHORI

Da Palermo, Mauro. See CHIAULA, MAURO.

Da Ponte, Lorenzo [Conegliano, Emmanuele] (b. Ceneda [now Vittorio Veneto], 10 March 1749; d. New York, 17 Aug 1838). Italian librettist and poet. On 29 August 1763 his father Geronimo, a Jewish tanner and leather dealer, became a Christian in order to marry Orsola Pasqua Paietta; his three sons by a previous marriage also converted. According to custom the Coneglianos took the name of the Bishop of Ceneda, Lorenzo Da Ponte. The father was baptized Gasparo, the eldest of the three sons Lorenzo.

Da Ponte had no regular schooling until he was 14 or

15, when he and his brother Girolamo entered the seminary at Ceneda. The death of the Bishop of Ceneda (1768) left Lorenzo without financial support and he decided to take holy orders. In 1769 he moved to the seminary at Portogruaro, where he became professor of literature (1770) and assistant director (14 April 1772). At that time he was writing Italian and Latin poems, among them *Dirambo sopra gli odori*, in which he glorified wine. On 27 March 1773 he administered the sacraments for the first time, having been ordained priest; in autumn 1773 he left the seminary and went to Venice, where he fell in love with a patrician, Angiola Tiepolo. He was professor of humanities in the seminary at Treviso until the end of 1776, when he was dismissed for his views on natural laws and forbidden by the republic of Venice to teach in any capacity within its domains. Banned from the city on 17 December 1779 for 15 years because of adultery, Da Ponte went to Gorizia, where he made a living by writing occasional pieces.

The date of Da Ponte's first visit to Vienna is not definitely known. A forged letter from the librettist C. Mazzola was instrumental in bringing him to Dresden, and on the way he stayed for three days in Vienna, probably in late November or early December 1780. During his six months as Mazzola's guest in Dresden he gained insight into the work of an operatic poet and made some attempts at libretto writing. The publication of his favola *Filemone e Bauci* shows that he was in Vienna by 1781, through the Hofkapellmeister Salieri, to whom Mazzola had recommended him; he gained an audience with Joseph II, who had him appointed librettist to the newly founded Italian theatre. Out of gratitude he dedicated his first libretto, *Il ricco d'un giorno*, to Salieri, but when the opera failed Salieri rebuffed him and joined the opposite camp of the Abbate Casti, who had come to Vienna in 1783. Da Ponte now placed his hopes on Martin y Soler, for whom he wrote his next libretto *Il burbero di buon cuore* (1786). His first

success was his adaptation of Beaumarchais' comedy *Le mariage de Figaro* which, according to him, had been suggested by Mozart. His next was the libretto for Martin y Soler's *Una cosa rara*; a contemporary reviewer wrote that the opera had almost driven the Viennese to a frenzy. In autumn 1787 Salieri, Mozart and Martin y Soler all asked Da Ponte for librettos. For Salieri he reworked Beaumarchais' *Tarare* as *Axur, Re d'Ormus*, for Mozart he wrote *Don Giovanni* and for Martin y Soler *L'arbore di Diana*. His last work for Mozart was *Così fan tutte*.

Da Ponte's autocratic bearing and cliquishness had antagonized the Viennese theatrical world by 1790 and he was left without support by the death of his patron Joseph II in 1792. He had already been dismissed from the imperial service by spring 1791 and in that year and the next he was in Trieste with the singer Ferrarese. The Da Ponte documents in the Vienna Haus-, Hof- und Staatsarchiv show that he held four men particularly responsible for his dismissal – the Hofkapellmeister Salieri, the auditor of the Burgtheater Johann Thorwart, the bass-baritone Francesco Bussani and the secret agent at the imperial court, Giuseppe Latenzi.

In the autumn of 1792 Da Ponte travelled with Nancy Grahl to London by way of Prague (where he visited Casanova) and Dresden. His hopes of becoming librettist to the Italian Opera in London were at first disappointed, and he failed to establish an Italian theatre company in Holland and Belgium in summer 1793, but at the end of that year he became librettist at the King's Theatre, London. The succeeding years were marked by business worries, and his intrigues and business methods gained him many enemies (including Martin y Soler). In autumn 1798 he went to Italy to engage singers for the London theatre, but having lost his post as librettist he founded an Italian bookshop in London and became partner in a printing works. Gradually he sank into financial difficulties which eventually became so pressing that by June 1805 he had emigrated to the USA with Nancy Grahl and the children of their union (they lived together until 1832). In New York he started up as a grocer but, not being equal to the business practices of the New World, became a teacher of Italian language and literature in New Jersey, Pennsylvania and New York (from 1825 at Columbia College). In 1823 he published his memoirs, the climax of his life in the USA was the production of *Don Giovanni* in New York in 1825.

Many of Da Ponte's librettos were commissioned. He did not have the originality of his rival Casti, and the quality of his texts lies not so much in their inventiveness as in their brilliant adaptation of works by other writers. He assimilated all the literary influences of his time: he wrote light, flowing verse in the manner of Goldoni, partaking of both the Arcadian grace of Metastasio and the simplicity of Calzabigi. The comic scenes in his *opere buffe* often depend on antithesis, particularly that between reality and caricature. The portrayal of grand passions was not his strength; in this Casti was far superior.

Da Ponte showed considerable aptitude in suiting each libretto to its intended composer, as his group of texts written in the 1787–8 season for Martin y Soler, Mozart and Salieri demonstrates. His librettos for Mozart are brilliantly designed to exploit the composer's particular gifts, and it may be supposed that the two men worked together in planning the dramatic

Lorenzo Da Ponte; engraving by Michele Pekenno after N. Rogers

structures of these works. Da Ponte added typical *buffo* detail to Beaumarchais' original of *Le nozze di Figaro*, especially to the secondary characters Bartolo, Marcellina and Basilio, while at the same time muting its overt political content and concentrating its action. In *Don Giovanni* he made use of familiar devices from contemporary *opera buffa* – disguises, beatings, games of hide-and-seek – to extend the subject matter of Bertati and Gazzaniga; while he was obviously dependent on his model, his numbers are wittier, more striking and more polished, and his figures and types more sharply and flexibly drawn. Da Ponte's libretto for *Così fan tutte*, much criticized in the 19th century as frivolous and immoral, is arguably his finest, with its elegant diction, its cleverly devised symmetrical structure, and its opportunities for raising serious human issues in what is essentially a stylized, artificial framework.

WRITINGS

(dates are of first performance)

LIBRETTOS AND OTHER MUSICAL TEXTS

- Il ricco d'un giorno* (dramma giocoso, 3), Salieri, 1784, *Il burbero di buon cuore* (dramma giocoso, 3, after Goldoni *Le bourgeois bienfaisant*), Martin y Soler, 1786, *Il finto cieco* (after *L'aveugle clairvoyant*), Gazzaniga, 1786, *Le nozze di Figaro* (commedia per musica, after Beaumarchais), Mozart, 1786, *Il Demogorgone ovvero Il filosofo confuso* (dramma giocoso), Righini, 1786, *Una cosa rara o sia Bellezza ed onestà* (dramma giocoso per musica, 2, after Velez de Guevara *La luna della sierra*), Martin y Soler, 1786
Gli equivoci (dramma buffo, 2, after Shakespeare *Comedy of Errors*), Storace, 1786, *Il Bertoldo* (dramma giocoso, 2, after Brunati), Piccchio, 1787, *L'arbore di Diana* (dramma giocoso, 2), Martin y Soler, 1787, *Il dissoluto punito o sia Il Don Giovanni* (dramma giocoso, 2, after G. Bertati: *Il convitato di pietra*), Mozart, 1787, *Axur, Re d'Ormus* (dramma tragico-comico, 5, after Beaumarchais *Tarare*), Salieri, 1788, *Il talismano* (commedia per musica, 3, after Goldoni), Salieri, 1788
Il pastore fido (dramma tragicomico, after Guarini), Salieri, 1789, *L'ape musicale* (commedia per musica, 2), Salieri, Martin y Soler, Gazzaniga, Gassmann, Anfossi, Cimarosa, Mozart, Giordani, Monibelli, Piccinni, Tarchi, Paisiello, 1789, *La cifra* (dramma giocoso, 2, after G. Petrosellini *Dama pastorella*), Salieri, 1789, *Così fan tutte o sia La scuola degli amanti* (dramma giocoso, 2), Mozart, 1790, *Nina o sia La pazza per amore* (dramma giocoso, 2, B. Lorenza, after Marschner), Paisiello, 8 numbers by J. Weigl, 1790
La quacchera spiritosa (commedia per musica, after G. Palomba), Guglielmi, 1790, *La caffettiera bizzarra* (dramma giocoso, 3), Weigl, 1790, *I voti della nazione napoletana* (cantata), Piccchio, 1791, *Flora e Minerva* (cantata), Weigl, 1791, *Il Davide* (oratorio sacro, 4), 1791, *L'ape musicale rinnovata*, 1791 [see version of 1789]; *Per la ricuperata salute da Ophelia*, Salieri, Mozart, Cornet, text and music lost, *Il sacrificio di Jefe* (cantata), lost
Il ritorno felice, lost, *Il sogno* (cantata), lost, *Mezenzio* (tragedia nuovissima, 5), 1791, later adapted into the lib. Massenzio for the soprano Mara, *I contadini bizzarri* (comic opera, after T. Grandi *Le gelose villane*), Sarti, 1794, *Il capriccio drammatico* (comic opera, 1, after G. M. Diodate), Cimarosa, 1794, *La bella pescatrice* (comic opera, 1, after S. Zini), Guglielmi, 1794, *La Semiramide* (musical drama, after F. Moretti), Bianchi, 1794, Sonnet for benefit of the soprano Banti, London, King's Theatre, 29 May 1794
La Frascata (comic opera, 2, after earlier lib), Paisiello, 1794, *La vittoria* (cantata), Paisiello, 1794, *La capricciosa corretta o La scuola de' maritati* (dramma giocoso per musica, after Shakespeare *The Taming of the Shrew*), Martin y Soler, 1795, also known as *Gli sposi in contrasto* and *La moglie corretta*; *Alceste o sia Il trionfo dell'amore coniugale* (tragedy, after R. de Calzabigi), Glück, 1795, *L'isola del piacere o The Island of Pleasure* (comic opera, 2), Martin y Soler, 1795
La bella Arsene (heroic opera, 3, after Favart), Mazzinghi, 3 numbers by P. A. Monsigny, 1795, *Antigona* (serious opera, 2), Bianchi, 1796, *Il tesoro* (opera buffa, 2), Mazzinghi, 1796, *Il consiglio imprudente* (comic opera, 1, after Goldoni *Un curioso accidente*), Bianchi, 1796, *Le nozze di Tamigi e Bellona* (cantata for naval victory of 14 Feb 1797, originally for wedding of Prince of Wales), Bianchi, 1797, *Merope* (serious opera, 2, after Voltaire), Bianchi, 1797
Cinna (serious opera, 2, ? after A. Anelli), Bianchi, 1798, *Angelina* (comic opera, 2, after C. P. DeFranceschi), Salieri, 1801, *Muridate* (opera, after A. S. Sografi), Nasolini, 1802, *Armida* (serious opera, 2), Bianchi, 1802, *La grotta di Calipso* (dramma, 2), Winter, 1803, *Castor e Polluce o Il trionfo dell'amor fraterno o The Triumph of Fraternal Love* (serious opera, 3), Winter, 1804, *Il ratto di Proserpina o The Rape of Proserpine* (serious opera, 2), Winter, 1804, *Eco ei Narciso*, lost, *Il disinganno de' morti*, lost

OPERA TRANSLATIONS

- Zemira e Azor* (after J. F. Marmontel *Zémire et Azore*, Grétry), 1796, *Evelina or The Triumph of the English over the Romans* (after N. F. Guillard *Arvine* or *Eveline*, Sacchini, completed by J.-B. Rey), 1797, *Atys e Cibele* (after P. Quinault *Atys*, Piccinni), collab. C. Mazzola, 1780, *L'Ifigenia in Tauride* (after Guillard and Roulet *Iphigénie en Tauride*, Glück), 1783

RUDOLPH ANGERMÜLLER

Daquin, Louis-Claude (b Paris, 4 July 1694; d Paris, 15 June 1772). French organist, harpsichordist and composer. He was generally considered the outstanding organist of his generation. Coming from a part-Jewish family of intellectual distinction, he was something of an infant prodigy – he played before the king at the age of six, and only two years later directed a performance of his *Beatus vir à grand chœur avec symphonie* in the Sainte-Chapelle – and appears to have required little formal musical education. Nicolas Bernier, his composition teacher and *maître de musique* at the Sainte-Chapelle, found that the boy divined far more than he ever learnt. In 1706, Daquin turned down the offer of the post of organist at the Sainte-Chapelle (succeeding

Marin de la Guerre, whose wife the composer Elisabeth-Claude Jacquet de la Guerre was his godmother) in favour of an appointment to Petit St Antoine; he was then only 12. In 1727 he successfully competed against Rameau for the post at St Paul, and in 1732 succeeded Louis Marchand, his former teacher, as organist to the Cordeliers. His appointment in 1739 as *organiste du roi*, in succession to Dandrieu, marked the summit of his career. Later, the chapter of Notre Dame (in direct imitation of the court) nominated Daquin as one of four organists to follow Calvière (d. 1755). Daquin's son, who styled himself Pierre-Louis D'Aquin de Château-Lyon (1720-97), documented some of his father's more notable successes, his *Lettres* give an account of Daquin's career, to which filial loyalty doubtless added colour, and are the main source for the laudatory biographical notices found in de Fontenay and La Borde, which emphasize Daquin's admirable qualities not only as a musician, but also as a man.

Daquin's extant compositions - four suites for harpsichord in his *I^{er} Livre de pièces de clavecin* and 12 settings of Christmas carols in his *Nouveau livre de noëls pour l'orgue et le clavecin* - fail to explain his reputation. His book of harpsichord pieces, coming as it does in the wake of those of Couperin and Rameau, shows a distinct falling-off in invention and technique, saved, however, by a certain spontaneous naivety in approach which, in such pieces as the famous 'Le coucou', accords well with the 'naturalness' expected of French music by this time.

Daquin's noëls, 'of which the majority may be played on violins, flutes, oboes etc' (alternative scorings which the composer also licensed for some of his harpsichord pieces), reveal the attraction this composer must have held for Parisian church-goers. Settings such as 'A la venue de noël' (the first in the book) brilliantly match passage-work with bold declamation, while others (such as nos. 2 and 3) conjure up, to great effect, the more relaxed atmosphere of shepherds piping on the hillside. Such noëls, which cannot lay claim to any particular musical distinction - the same may be said of those by Gigault (1682), Lebègue (1685) and Raison (1714) - must, in their context, have greatly charmed Daquin's admirers. He is said to have left behind a certain amount of vocal music, mostly in MS (see de Fontenay), but only a single *air à boire* seems to have survived.

EDWARD HIGGINBOTTOM

Darabukka [darbukka]. A single-headed goblet drum found in the Islamic Middle East and north Africa. It is made from pottery, wood or metal, and is played under

Iranian dombak

the arm or resting on the player's leg. The bottom is open and the skin head is directly attached by nails or glue. The origin of the term *darabukka* is very confused (see Picken, p.116), but probably lies in the Arabic word *darba* ('to strike'). There are many variations of the name (see Picken, p.118, for local variations in Turkey alone), the most important being *dombak*, *dombek* or *zarb* (Iran), *derbocka* (Morocco and Algeria) and *deblek* (Turkey).

The Turkish *deblek* (usually of metal or pottery) is used principally in folk ensembles. The large Iranian *dombak* is carved from a solid block of wood, usually decorated with an inlay design, often ornate, it is the principal percussion instrument in a classical Persian music ensemble and is played by many classical musicians as a second instrument. Andalusian ensembles from Algeria and Morocco play a pottery *derbocka* in their folk and traditional ensembles, and in Lower and Upper Egypt the goblet drum of Nile boatmen and other folk musicians is called the *hoqa*. The *darabukka* is also found in Albania and Bulgaria. Other primitive forms are found in Malaya and Indonesia; these have a snakeskin head laced with split cane to a wooden body. On Celebes one large form serves as a temple instrument, set on the ground when played: this is a survival of the original use of goblet drums in Babylonia and Sumeria from as early as 1100 BC. The *darabukka* has found its way into western European orchestral music through the works of Berlioz, Delibes and Milhaud.

WILLIAM J. CONNER, MILFIE HOWELL

D'Arányi, Adila. See FACHIRI, ADILA.

Darasse, Xavier (b Toulouse, 3 Sept 1934). French organist and composer. He studied at the Paris Conservatoire with Duruflé for harmony (*premier prix*), Plé Caussade for counterpoint and fugue, Falcinelli for organ and improvisation, Rivier for composition and, most important, Messiaen for analysis. In 1962 he joined France Musique as a producer and in 1965 he was appointed professor of the organ and composition at the Toulouse Conservatory. He is also a member of the Commission Supérieure des Orgues Historiques. As a performer he has specialized in the modern repertory, from Messiaen's cycles to works by de Pablo, Chaynes and others (his own compositions incline to the latter pole), and in French Baroque music. He has also recorded Romantic works (Liszt and Widor) and has contributed articles on 19th- and 20th-century French organist-composers to this dictionary.

PAUL GRIFFITHS

D'Arcais, Francesco, Marquis of Valverde (b Cagliari, 15 Dec 1830; d Castel Gandolfo, 14 Aug 1890) Italian music critic and composer. In 1853 he became music critic for the *Rivista contemporanea* of Turin and later that year of *L'opinione* in Rome, with which he was associated for 36 years, achieving a position of great influence. He also wrote for the *Gazzetta musicale di Milano*, the *Illustrazione italiana*, *Il trovatore* and the *Nuova antologia*. He strongly supported the movement for the revival of instrumental music in Italy. Originally hostile to Wagner and Boito, he was later converted to admiration for both. He joined with some musicians and artists in a 'league of orthography' which was directed against the claque then extremely powerful in the Rome theatres and which upheld an ideal of the theatre as 'art'. He was a member of the selection committee of the Sonzogno Competition which in 1890 awarded first prize to *Cavalleria rusticana*. He composed two operas and dramatic and vocal music.

SERGIO MARTINOTTI

Darcis [d'Arcis, d'Arcy], **François-Joseph** (b Vienna, 1759-60; d ?Moscow, c1783). French composer. He was so precocious that his parents, a French actor-singer in the Opéra-Comique troupe at Vienna and his German wife, were encouraged to try 'to write the second volume of the young Mozart' (Grimm). He was brought to Paris about 1769, exhibited at court to Mme Adélaïde and the Duke of Chartres (whose protection was acknowledged in the dedications of his first two publications), and entrusted to the tutelage of Grétry, who was persuaded of Darcis' talent by the sight of the nine-year-old boy, pulled away from the piano by his younger brother and sobbing on the floor, clutching his

pen and still committing precious music to paper. In April 1771 he had a prodigy's triumph at the Concert Spirituel, playing a concerto by J. C. Bach and pieces by Schobert and Wagenseil. His first stage work, *Le bal masqué*, a one-act *opéra comique*, was given in 1772 before the royal family at Versailles; Grimm (or Diderot), who heard it at the Comédie-Italienne, said that 'the music . . . by a 12-year-old scamp named Darcis . . . is pitiable from start to finish . . . Not the shadow of talent . . . He could spend 20 years with Grétry and would come out as inept as he went in'. The public liked it well enough to support a run of six performances and a revival. A second one-act *opéra comique*, *La fausse peur*, which opened in 1774, had more success: the *Mercur de France* (October 1774) called the *airs* 'agreeable and effective; the piece has action and humour that give it appeal in the provinces'.

By the time it was revived, in 1778, his parents had sent him to Russia on the advice of the police (Fétis). 'His passions were a continual storm', according to Grétry, 'he loved women, and they liked him, for besides his talents he had a charming face'. In 1778 *L'intendant*, on a Russian libretto by N. Nikolev, was given at the Grand Theatre in Moscow: it was a brilliant success, and there are records of performances for 21 years, rare for a Russian comic opera of the period. But not even Russian winters could cool Darcis' passions: apparently in the wake of some scandal he either was killed in a duel with a Russian officer (Grétry) or committed suicide (Mooser).

The style of Darcis' *ariettes* is hardly different from that of his sonatas, and both are very like those of the young Mozart. The writing is mostly in two parts, the accompaniments to formula, the phrases clear and symmetrical with little contrast. His sonata op.2 no.3 contains a 'Polonoise' rondeau sicilienne.

DAVID FULLER

Darclée, Hariclea (b Bucharest, 1860; d Bucharest, 12 Jan 1939). Romanian soprano. She studied in Paris with J. B. Faure, and in 1888 made her début at the Opéra in *Faust*. In 1890 she scored a great success at La Scala in Massenet's *Le Cid*, and was immediately engaged by all the leading Italian theatres. Between 1893 and 1910 she appeared frequently in Moscow, St Petersburg, Lisbon, Barcelona, Madrid and Buenos Aires; she returned several times to La Scala. Her repertory ranged from

Hariclea Darclee in the title role of Puccini's *Tosca*

the coloratura soprano roles (Gilda, Ophelia in *Hamlet*) to the dramatic *falcon* or heavier Verdi roles (Valentine, Aida), including many in other categories of the Franco-Italian lyric soprano repertory. Violetta, Desdemona, Massenet's and Puccini's Manon, Mimi, Santuzza, Wally, Iris and Tosca (she created the last three)

Her versatility depended upon exceptional vocal gifts (she had one of the most beautiful voices of the period); to power, and sweetness of tone were added range, evenness, agility and an excellent technique. She was extremely handsome, with a stage presence as elegant as her vocal line. As an interpreter, however, she rarely managed to overcome a certain coldness of temperament, so that in the *verismo* repertory she sometimes sounded less convincing than other, not so gifted sopranos such as Bellincioni, Carelli or Storchio. She sang until 1918 (as late as 1916 she appeared at La Scala as Santuzza) but by then her voice was declining. Reduced to poverty, she spent some of her old age in the Verdi Home in Milan

RODOLFO CELLETTI

Darewski, Herman(n E.) (b Minsk, 17 April 1883; d London, 2 June 1947). British composer and band-leader. His father, Eduard Darewski, was a Polish singing professor. Herman Darewski was educated in London and studied music in Vienna (1897–1900). After his first successful songs he joined the publishers Francis, Day & Hunter (1906), for whom he wrote music hall, pantomime and musical comedy songs, including *Sister Susie's sewing shirts for soldiers* (1914). He composed a series of successful revues,

including *Business as Usual* (1914), *Push and Go* (1915), *Joyland* (1915), *Razzle Dazzle* (1916), *The Better 'Ole* (1917), *Carminetta* (1917), *Buzz-Buzz* (1918), *As you Were* (1918), *The Eclipse* (with Melville Gideon, 1919) and *Just Fancy!* (1920). In 1919 he formed a publishing company, which was short-lived, and a successful band in the style of the American jazz-dance bands then in vogue. He became musical director at the resorts of Bridlington (1924–6, 1933–9) and Blackpool (1927–30) and at a London cinema (1930–32). His memoirs were published in 1937. His brother Max Darewski (1894–1929) was a child prodigy composer and conductor and a pianist and composer for revues in London.

ANDREW LAMB

Dargason [Sedany]. An eight-bar 'circular' tune (having no conclusion on the key-note) which has lent itself to combination with others, as in the three-men song 'Oft have I ridden' in Ravenscroft's *Pammelia* (1609) and the ostinato movement of Holst's *St Paul's Suite* (1913). As an instrumental piece it occurs in Dowland's lute manuscripts (*GB-Cu* D d 2.11, D.d.3.18, D d 4.23, D.d.9.33, D d 14.24), in Playford's *New Lessons for Gittern* (1652), in his *Dancing Master* (1651, 8/1690, ed C. Sharp, *Country Dance*, ii, 1911) where it is allied to the dance 'Sedany', in Edward Jones's *Musical Relicks of the Welsh Bards* (1784) as 'Melody of Cynwyd', in the *Journal of the Welsh Folk-song Society*, i/3 (1911), p. 115, as 'Sidanen', and in Holst's Second Military Band Suite op. 28 (1911). Dargason was known as a ballad tune in the early 16th century: 'The merry ballet of the Hawthorne Tree' (*GB-Lhm* Cotton, *Vespasian A25*; pubd in Ritson's *Ancient Songs*, 1790) is to be 'songe after "Donkin Dargason"', and similarly 'Shropshire Wakes' (in *Oh Douce*, Ballads, f.207, and *Cmc Pepys*).

According to Chappell, it appears that the word 'dargason', perhaps derived from Anglo-Saxon *duergar* ('dwarf', 'fairy'), is a personal name occurring in an unidentified romance (hence 'Donkin Dargason'), and is used to signify fairyland in John Day's *Isle of Gulls* (1606) and Ben Jonson's *Tale of a Tub* (1633). *Sidanen* (Welsh 'silken') is a Tudor epithet for a fine woman; the dance 'Sedany', as described by Playford, like its tune, proceeds ad infinitum.

MARGARET DEAN-SMITH

D'Argentille, Charles. See CHARLES D'ARGENTILLE.

Dargies, Gautier de. See GAUTIER DE DARGIES.

Dargillières. French family of 16th- and early 17th-century organ builders and organists. They were based in Paris and played an important part in the development of French Renaissance organ building. Antoine (c.1518–1572), organist and 'faiseur d'orgues de la chapelle du roi', built instruments at St Gervais, St Geneviève-des-Ardents and Ste Marie-l'Egyptienne. Gabriel was active in a number of French cities. In 1559 he built the organ at Sarcelles near Paris, and in Paris he built organs in Ste Madeleine-de-la-Cité, the Hôtel-Dieu and St Pierre-des-Arcis. Nothing is known of him after 1581. Roch (baptized Paris, 27 Jan 1559), the son of Antoine, built the organs at Chartres Cathedral and

St Michel, Rouen, as well as organs in a number of other provincial cities. Jehan, probably also a son of Antoine, built harpsichords as well as organs and was referred to as 'maître faiseur d'orgues et de tous autres instruments'. He worked on the instruments in the Sainte Chapelle and St Etienne-du-Mont and on many privately owned organs. Other members of the family, active about 1600, were Guillaume, Paul and Raoul.

GUY OLDHAM

Dargomizhsky, Alexander Sergeyevich (b Troitskoye, Tula district, 14 Feb 1813; d St Petersburg, 17 Jan 1869). Russian composer. With Glinka, he established a tradition of national opera based upon folksong and a concern for dramatic truth, within which such diverse composers as Musorgsky and Tchaikovsky could produce their operatic masterpieces. His songs and orchestral works are also of historical importance in the development of Russian music.

Dargomizhsky's father, the illegitimate son of a nobleman, and a wealthy landowner in the Smolensk district, possessed a caustic wit his son was to inherit. He had eloped with Princess Kozlovskaya, a minor poetess whose sentimental verses and pallid dramatic scenes were published during the 1820s and 1830s. Her interest in French culture was communicated to their six children. Though it is recorded that she disliked music, her eldest son Viktor was an accomplished violinist, a daughter played the harp, and Alexander showed remarkable early promise as pianist and composer. He was born on his father's country property where his parents had taken refuge from the Napoleonic army. A sickly child, he began to speak only at the age of five. Thanks to lessons with the fashionable master Zcibig, he was to become a noted singing teacher, but his voice was always high-pitched and squeaky. In 1817 the family settled in St Petersburg. The children received the customary home-based education in which the arts played an important role. Dargomizhsky's first piano teacher was his German governess, Louise Wohlgeboren, but he soon made sufficient progress to take lessons with Danilevsky, whom he later described as 'a fine musician'. Danilevsky did not consider composition a fitting occupation for a young aristocrat and tried to discourage his pupil's creative tendencies. (Apparently he met with little success since a number of songs and piano pieces, chiefly dances, survive from the 1820s.) Dargomizhsky completed his practical studies with Franz Schoberlechner, a pupil of Hummel, and was much in demand as a pianist at society gatherings and charity concerts. From 1822 he studied the violin with Vorontsov. Although he was often asked to make up a quartet, he never fully mastered the problems of intonation (a shortcoming celebrated by his brother Viktor in satirical verse) and soon lost interest in the instrument.

Following in his father's footsteps, he entered government service in autumn 1827; a reputation for efficiency won him regular promotion. Like most young men of his class, he regarded music as a leisure activity rather than a serious pursuit. Though several of his compositions were published – some in journals, others perhaps at his own expense – he received no training in the theory of music. However, in the winter of 1833–4, he was introduced to Glinka, who lent him the notebooks

in which he had worked exercises in thoroughbass and counterpoint for Siegfried Dehn. With Glinka he played piano duets, organized concerts, and analysed Beethoven's symphonies and Mendelssohn's overtures. He also attended the orchestral rehearsals of *Ivan Susanin* and determined to follow Glinka's example by writing a full-length opera. His love of French literature led him to base his first libretto on Hugo's *Lucrèce Borgia*, but he had made little progress by 1837 when, on the advice of Zhukovsky, he gave his attention to the libretto which Hugo had prepared for Louise Bertin from *Notre-Dame de Paris* (the novel was in great vogue in Russia during the late 1830s). By 1841 Dargomizhsky had completed the music and a Russian translation of the text of his first opera, *Esmeralda*, and had given the score to the director of the Imperial Theatres. However, the opera is rooted in the by then outmoded tradition of French grand opera, and at this time the repertory of the Russian opera houses was dominated by Italian works, so the young composer had to wait until 1847 for its première. In spite of the generally acknowledged power of the dramatic passages and the assured handling of the choral scenes – surprising in so inexperienced a composer – it had little success and was not revived until many years after the St Petersburg premiere in 1851.

Dargomizhsky was understandably depressed by the delay in obtaining a performance of his first large-scale work, and his feelings were exacerbated by Glinka's continuing popularity. However, he obtained some comfort from the flattering attentions of his numerous female singing pupils (V. T. Sokolov recalled that he gave lessons 'only to ladies and girls' and took no monetary payment.) Indeed, about this time he remarked, 'If

Alexander Sergeyevich Dargomizhsky portrait by A. Makovsky

there had been no women in the world, I should never have been a composer. They have inspired me throughout my life'. For these uncritical admirers he wrote a series of songs (the larger part of his vocal music is for women's voices), many of which were published and became popular. While most are typical examples of the abstract romance, chiefly interesting for their melody, several, including *Vlyublyon ya* ('I am in love'), *Lileta* and *V krov' gorit* ('The fire of desire'), suggest an early interest in melodic declamation.

In 1843 Dargomizhsky resigned suddenly from the civil service with the rank of titular councillor, and in September 1844 went abroad. In Brussels he became acquainted with Fétis, and he was introduced to Auber, Meyerbeer and Halévy in Paris, where he stayed for six months. The grand operas which he had previously admired now struck him as unnatural, but he was full of praise for the satirical vaudevilles and fascinated by the steady procession of rogues through the French law courts. Like Glinka a decade earlier, not until he was absent from his native land did he realize the merits of its culture, he wrote to a friend on his return in May 1845, 'There is no nation in the world better than the Russian, and, if the elements of poetry exist in Europe, they exist in Russia'. He began to experiment in his songs with the imitation of characteristic melodic patterns of folk music and the intonation of the Russian speech (*Dushechka-devitsa* 'Darling girl', *Likhordushka* and *Me'nik* 'The miller') and undertook a serious study of Russian folksong, the fruits of which were seen in the opera *Rusalka*, completed in 1855.

The mid-19th century was a period of great social upheaval in Russia. Denied the usual outlets by strict censorship, social critics were obliged to turn to the arts for purposes of propaganda. The 'realist' philosopher Chernishevsky, who considered that it was the moral duty of every artist to enlighten and educate his fellow men by portraying 'reality and truth', concluded that, since vocal music is not art but 'the direct expression of the emotions', composers could best play a part in the reform of society by responding simply and naturally to texts dealing with subjects drawn from everyday life. Dargomizhsky was certainly in sympathy with at least part of this philosophy. In the majority of his songs composed after about 1847 his chief concern was with the 'direct expression' of the emotional content of the text through 'simple and natural' musical means – usually a basically declamatory vocal line and straightforward harmonic accompaniment. Though some writers have seen *Rusalka* as an outspoken attack on social inequality, it is probable that Dargomizhsky's role as a social reformer has been much overplayed. His interest in humanity was not that of a philanthropist, when in the late 1850s, stimulated by his involvement with a group of progressive writers and artists, he wrote a handful of songs (*Stariy kapral* 'The old corporal', *Chervyak* 'The worm', *Titulyarniy sovetnik* 'Titular councillor') which deal with 'subjects drawn from everyday life', his choice of texts was determined as much by their humorous and dramatic content as by their social relevance.

Nevertheless, there is little doubt that he was encouraged to sustain an interest in the expressive potential of music by the prevailing aesthetic philosophy of his day. In 1857 he wrote an oft-quoted letter to a friend and pupil, in which he attacked those who loved Italian opera with its 'melodies flattering to the ear'. He

continued, 'I want the note to express the word directly. I want truth'. This manifesto marks the beginning of a new and final phase in Dargomizhsky's career. He forsook society drawing-rooms to move in higher artistic circles. In 1859 he was elected to the committee of the newly founded Russian Musical Society, and formed a slightly uneasy relationship with the group of young composers which had grown up around Balakirev, the Moguchaya Kuchka ('The Five'). But, as he cast around for a suitable subject for another opera – rejecting Pushkin's *Poltava*, abandoning a fairy opera, *Rogdana*, and (as he later recorded) 'recoiling' (for the time being at least) from the 'huge undertaking' of setting *Kamennyi gost* ('The stone guest; the third of Pushkin's *Malenkiye tragedii*, 'Little tragedies') *Rusalka* was withdrawn from the repertory of the Imperial Theatres and once again he grew dissatisfied with his position in Russian musical life. The Moguchaya Kuchka, weary of his self-centred grumbings and apparent hypochondria, dubbed his group of friends 'the Invalids', and no longer frequented his soirées. As in the dark days of the early 1840s, he turned his thoughts to Europe and, no doubt reckoning that orchestral pieces were more likely to gain a performance there than an opera, completed two fantasias based on folksongs, *Baba-Yaga* and *Kazachok*. From late 1864 to early 1865 he was abroad, visiting Warsaw, Leipzig, Paris, London (with which he was favourably impressed) and Brussels, where he achieved public success with *Kazachok* and excerpts from *Rusalka*. Moreover, the management of the opera house expressed a wish to produce *Esmeralda*; however, Dargomizhsky pressed the claims of his opera-ballet, *Torzhество Vukha* ('The triumph of Bacchus'), completed in 1848 but still unperformed, and eventually negotiations floundered. On this journey also he was cordially received by Liszt.

In the spring following his return to Russia, heartened by his success in Brussels, he embarked upon an ambitious project, the culmination of his quest for truthful and accurate musical expression of emotions. Reconsidering the play he had previously put aside, Pushkin's *The Stone Guest*, he decided to set it 'just as it stands, without altering a single word' (in fact, he made a few minor alterations) so that the underlying meaning, the inner 'truth' of the text should in no way be distorted. To this end also, he employed the most 'simple and natural' compositional techniques – 'continuous melodic recitative' supported by a mainly chordal accompaniment. This 'strange work', as he himself described it, attracted the attention of the Moguchaya Kuchka, in particular Cui, who was at that time formulating his own theories of operatic reform. Spurred on by the encouragement of these young composers, he shook off his depression at the disastrous failure of the first performance of *The Triumph of Bacchus* and worked at his operatic experiment 'in a kind of fever', but the demands made upon his time by the presidency of the Russian Musical Society, to which he was elected in 1867, weakened his already failing health. As he prophesied, *The Stone Guest* was to be his 'swansong'. He died in January 1869, leaving the opera in piano score and still incomplete. At his request, Cui wrote the Prelude and the end of the first scene, and Rimsky-Korsakov finished the orchestration by the end of 1870. However, as a matter of principle, Dargomizhsky had insisted upon a higher performing fee than the Imperial Theatres were empowered by law to pay. Eventually the balance was

raised by public subscription, and *The Stone Guest* was staged in February 1872. It met with a cool reception, and, unlike *Rusalka*, which soon recovered from an unsatisfactory first performance and now commands a more or less regular place in the repertory, it has never been popular, even in Russia.

And yet, in western Europe, where it is still more rarely performed, *The Stone Guest* and not the more obviously attractive *Rusalka*, with its colourful folk scenes and splendid comic role of the miller, is the work by which Dargomizhsky's name is known. First described by Cui as 'the "Bible" which Russian composers will consult on matters of declamation and of faithful setting . . . of the text', *The Stone Guest* has been seen by European writers as 'the most influential failure' in the history of opera – the work from which the Moguchaya Kuchka and perhaps other Russian composers also distilled their philosophy of operatic art. This view, though containing the seeds of truth, is misleading. Musorgsky certainly learnt much from Dargomizhsky's experiments. At his, admittedly half-humorous, suggestion, backed up more seriously by Cui, Musorgsky began work on his own essay in continuous melodic recitative, *Zhenitba* ('The marriage') and drew on this experience when he wrote *Boris Godunov*. But Cui (whose slender talents lay rather in the direction of lyrical melody) and Rimsky-Korsakov, after their early operas, strayed far from such a narrow and uphill path (though Cui continued throughout his life to pay lip-service to Dargomizhsky's ideals, and Rimsky-Korsakov, during the 1890s, a period of spiritual crisis, returned briefly to melodic declamation in *Vera Sheloga* and *Mozart* and *Salieri*). Borodin, who admired *Chukhon'skaya fantaziya* ('Finnish fantasy'), was apathetic toward *The Stone Guest* and Balakirev was quite untouched by it. While Stravinsky felt he may have learnt something about the nature of recitative from *The Stone Guest*, Tchaikovsky was quite out of sympathy with Dargomizhsky's aims: 'But if anything is more dislikeable and false than this unsuccessful attempt to introduce truth in a branch of art where everything is based on pseudo and where truth, in the usual sense of the word, is not required at all – I do not know it'. However, he recognized the merits of *Rusalka*. So, apart from encouraging Musorgsky to seek dramatic 'truth' through declamation, a direction in which his own inclinations were already leading, it is difficult to see wherein the influence of *The Stone Guest* lies. Perhaps the view that *The Stone Guest* was a showpiece and its composer a figurehead for a group wishing to establish an identity is nearest the truth.

It is sometimes suggested that *The Stone Guest* is based on a garbled interpretation of Wagner's theories of opera. Though Wagner's theories, if not his music, were well known in Russia by the 1860s, there is much evidence to suggest that this is unlikely. Dargomizhsky's rooted antipathy to Wagner and his ideas, recorded by Rimsky-Korsakov, is further evinced by the 120-bar sketch in the form of a strict fugal exposition on the motto theme 'A.D.', marked 'a poor imitation of "Zukunft Musik"', and the sketches and cartoons in the journal *Iskra* ('The spark') with which Dargomizhsky was associated. The inspiration behind *The Stone Guest* is not Wagner but the theories of the 'realist' philosophers, Dargomizhsky's own artistic beliefs, and perhaps the operas of Gluck, whom Dargomizhsky admired. Musically, it owes little or nothing to Wagner. The

melodic line contains more than the occasional echo of the stock-in-trade phrases of French or even Italian recitative, and the harmonic oddities of the accompaniment were surely found while improvising at the piano. On the page, the deficiencies of *The Stone Guest* loom large – the very limited characterization and an unvaried musico-dramatic pace – yet some critics, both of 19th-century and more recent performances, have been strangely impressed. Perhaps on the stage *The Stone Guest* has a dramatic power more or less unsuspected by those who have been obliged to study it from the score alone.

In Russia Dargomizhsky's songs are acknowledged as an important contribution to the repertory. They range from the attractive and expressive lyrical romances and the engagingly simple 'composed folk-songs' of the late 1840s and early 1850s (pieces which point the way to Tchaikovsky's vocal music) to the vivid and powerful dramatic ballads and the low-key but telling comic sketches of his later years, in which he proves himself a worthy forerunner of Musorgsky. His orchestral pieces, full of high spirits, are effective 'curtain-raisers', though neither the use of a programme nor of a series of variations on a folksong can prevent *Baba-Yaga* and *Kazachok* from showing up Dargomizhsky's limited powers of musical architecture. There is little doubt that his predilection for vocal music was a result, at least in part, of the need to use a text as a formal prop. *The Finnish Fantasy*, Dargomizhsky's only essay in sonata form, is more successful. Historically, these pieces are important for continuing the series of orchestral works initiated by Glinka which was to form the basis of the Russian symphonic tradition developed by subsequent generations.

In the century since his death Dargomizhsky has been remembered, in western Europe at least, for the supposed influence of *The Stone Guest* rather than for his achievements. In his own country, his reputation as a composer in his own right rests assured. Though he cannot be ascribed to the first rank of Russian composers, the merits of his songs alone suggest that a reassessment of his music by Western writers and performers is now overdue.

WORKS

(printed works first published in St Petersburg unless otherwise stated)

Editions *A. Dargomizhsky. Polnoye sobraniye romansov i pesen* [Complete collection of romances and songs], ed. M. S. Pekelis (Moscow and Leningrad, 1947) [S]

 Ti skoro menya pozabudesh [You will soon forget me] (Zhadovskaya), 1846 (1847)
 I skuchno i grustno [It is both tedious and sad] (Lermontov), 1847 (1847)
 Ne nazivay eyo nebesnoy [Do not call her heavenly] (Pavlov), 1848 (1848)
 Mne grustno [I am sad] (Lermontov), 1848 (1849)
 Ya skazala, zachem [I have said why] (Rostopchina), 1847-8 (1849)
 Ne sudite, lyudi dobriye [Do not judge, good people] (Timofeyev), 1843 (1844)
 Dieu, qui sourit (Bog vsyom darit) [God bestows all] (Hugo), 1846, facs (1913)
 Ballade (from A. Dumas Catherine Howard, trans. Solovtsova), early 1840s (1848)
 Slislu li golos tvoy [Do I hear your voice] (Lermontov), c1848-9 (1849)
 Ne skazhu nikomu [Tell no-one] (Koltssov), 1849-50 (1851)
 Dushcheka-devitsa [Darling girl] (trad.), 1849-50 (1851), arr. 1v, female chorus, 1850 (1851)
 Dayte krilya mne [Give me wings] (Rostopchina), 1849-50 (1851)
 Likhoradushka (trad.), 1849-50 (1851)
 Mel'nik [The miller] (Pushkin), 1850-51 (1851)
 Bog pomoch vam [God help you] (Pushkin), 1850-51 (1851)
 Mechti, mechti [Dreams, dreams] (Pushkin), 1850-51 (1851)
 K druzyam [To my friends] (Pushkin), 1850-51 (1851), arr. 2vv, pf (1858)
 Potseluy [A kiss] (Baratinsky), 1850-51 (1851)
 Ya vsyo eshcho evo lyublyu [I still love him] (Zhadovsky), 1851 (1851)
 Bushuy i volnuysya glubokoye more [Rage and be turbulent, deep O deep sea] (Rostopchina), 1850-51 (1851)
 K slave [To fame] (Obieukhov), 1850-51 (1851)
 Kudri [Curls] (Delvig), 1852 (1852)
 Zastol'naya pesnya [Drinking-song] (Delvig), early 1850s (1852)
 Vostochniy romans [Eastern romance] (Pushkin), 1852 (1852)
 Okh, tikh, tikh, tikh, ti (Koltssov), 1850-52 (1852)
 Epitafiya [Epitaph] (Delvig) (1852), arr. as Nad mogiloy [Above the grave], 4vv, pf, early 1860s
 Ya zateplyu svechu [I will light the candle] (Koltssov), early 1850s (early 1850s)
 Kamen tyazholiy [Heavy stone], early 1830s (mid-1850s); arr. 2vv, pf, early 1860s
 Starina [Olden times] (Timofeyev), ?early 1840s (mid-1850s)
 O, milaya deva [O dearest maiden] (Mitskevich), early 1850s (1856)
 Lyubila, lyubilyu ya, vek budu lyubit [I have loved, I love, for ever I will love], early 1850s (1856)
 Elegiya [Elegy] (Ya pomnyu, gluboko) [Deep down I remember] (Davidov), ?c1855-6 (1856)

Moya milaya, moya dushechka [My dear, my sweetheart] (Davidov), early 1850s (1856)

Bez uma, bez razuma [At one's wit's end] (Koltsov), early 1850s (1856)
Kak u nas na ulitse [As in our streets] (Dargomizhsky), early 1850s (1856)

Jamais (Nikogda), early 1850s (1856)
Au bal (Na balu) (Virs), 1840s (1856)
Ispanitskiy romans [Spanish romance] (Pushkin, from The Stone Guest), mid-1850s (1856)

Kak chasto slushaya [How often I listen] (Zhadovsky), c1857 (1857)
U nevo li rusi kudri [He has light brown curls], gypsy song, early 1850s (1857)

Rusaya golovka [Light brown hair] (Polonsky), 1855–7 (1857)
Chto mne do pesney [What good are songs to me], mid-1850s (1858)
O, schastlivitsa ti, roza [O you lucky rose], ?1840s (1850s)
Stariy kapral [The old corporal] (Béranger, trans. Kurochkin), 1857–8 (1858)

Chervyak [The worm] (Béranger, trans. Kurochkin), after 1856 (1858)
Vostochnaya anya [Eastern aria] (O deva-roza, ya v okovakh) [O maiden rose, I am in chains] (Pushkin), 1858 (1858)

Rasstalis gordo mi [We parted proudly] (Kurochkin), c1859 (1859)
Chto v imeni tebe moyom? [What is my name to you?] (Pushkin), 1859 (1859)

Mne vsyo ravno [It's all the same to me] (Miller), 1859 (1859)
Paladin (Zhukovskiy), ballad, c1859 (1859)
Titulyarniy sovetnik [Titular councillor] (Wienberg), 1859 (1859)
Mchit menya v tvoi obyayta [I rush into your arms] (Kurochkin), 1859 (1860)

Kolibelnaya pesnya [Lullaby], c1861 (1861)
Pesn ribki [Song of the fish] (Lermontov), 1860 (1861)
Tivsa polna ocharovanya [You are quite fascinating] (Yazikov), recit., c1860 (1861)

Charuy menya, charuy [Bewitch me] (Zhadovsky), 1861 (1861)
Escho molitva [Still a prayer] (Zhadovsky), 1861 (1861)
Ti ne ver, molodets [Fine fellow, do not believe it], ed M S Pekelis (Leningrad, 1947)

Na razdolye nebes [In the expanse of the heavens] (Shcherbina), 1865–6 (1866)
Nozhki [Legs] (Pushkin), c1866 (1866)

Vi ne sbilis [You did not appear] (Yazikov), c1866 (1866)
Two songs (Calderón: Eres v Angli trans Grekov), c1866, ed M S Pekelis (Leningrad, 1947): 1 V adu nam suzhenno [In hell we are judged], 2 Tsveti poley [The flowers in the field]

Chto delat s ney [What can you do with her], late 1850–early 1860s (1872)
Kak prishol muzh izpod gorok [A man came from the hills], late 1850s–early 1860s (1872)

Ya zdes', Inezilya [I am here, Inezilya] (Pushkin, from The Stone Guest), late 1860s, *Lsc*

Rabotnik Kholmogorskiy [Kholmogorsk worker] (from Rogdana), early 1860s (1875)

Jalous du bel objet (Revnuyesh ti) (Hubert), late 1850s–early 1860s (n.d.)

Bezumno zhazhdai tvoy vstrechi [They madly long to meet you] (Hubert), c1858–62 (1862), on theme by Johann Strauss (ii)

Lyubit sebya ya pozvolayyu [I allow self-love] (Martinov) (1872), on theme by Johann Strauss (ii)

PIANO (all ed. in P)

5 early pieces, 1820s: Marche, Française (Kontradans), Valse mélancolique, Valse, Cosaque (Kazachok)

JENNIFER SPENCER

Dark [Darke], John (b ? between 1495 and 1500; d ? 1569). English composer. He may have been the John Dark who was a vicar-choral at Exeter Cathedral from about 1519 to about 1569. The only surviving composition known to be by him is a five-part *Magnificat*, now lacking the tenor (in *GB-Cu* Peterhouse 471-4); it is one of the few contemporary English settings not based on a faburden melody, using instead an unidentified cantus firmus which bears some resemblance to a *De profundis* chant (*LU*, 291). It is also unusual among English *Magnificat* settings in being entirely in *tempus imperfectum*.

NICHOLAS SANDON

Darke, Harold (Edwin) (b London, 29 Oct 1888, d Cambridge, 28 Nov 1976). English organist. He studied the organ with Parratt and composition with Stanford at the Royal College of Music. As organist of St Michael's, Cornhill, for 50 years (1916-66), he gave a midday recital each Monday that made him a city institution. Bach (played in the legato style of Schweitzer) was his speciality, and although he made every organ he played sound like that of St Michael's, he won a world-wide reputation as a performer. He founded the St Michael's Singers in 1919, and remained its conductor until 1966. Vaughan Williams and Howells, among others, composed works for his choral festivals. During the absence on war service of Boris Ord, Darke was acting organist of King's College, Cambridge (1941-5), and then a Fellow (1945-9). In later years his powers did not diminish: he recorded Elgar's *Organ Sonata* in his early 70s and gave recitals at the Festival Hall to mark his 75th, 80th and 85th birthdays. He composed extensively for organ and choir, but will probably be best remembered for his *Meditation on Brother James's Air* and for his tuneful setting of the carol *In the bleak mid-winter*. An Oxford DMus and an honorary Cambridge MA, he was president of the Royal College of Organists (1940-41) and a member of the RCM teaching staff (1919-69). He was appointed CBE in 1966.

STANLEY WEBB

Darlow, Denys. English musician, founder and conductor of the THURFORD BACH SOCIETY.

Darmstadt. City in the Federal German Republic. From 1567 to 1918 it was the residence of the Landgraves of Hesse, and also, from 1806, that of the Grand Dukes of Hessen-Darmstadt; from 1918 to 1945 it was the regional capital, and has since been a centre of local government. Its musical and theatrical traditions date from the 17th century, when Singballette, tournaments and masquerades were performed. The Pädagogium, founded in 1629, had a boys' choir to provide sacred music. In 1670 a comedy theatre was established; among works performed there were *Das triumphierende Siegespiel der wahren Liebe* (1673) by Wolfgang Carl

Briegel, Hofkapellmeister from 1671 to 1709 and Lully's *Arctis et Galatée* (1687). Under Count Ernst Ludwig, himself a composer, court music flourished, particularly opera. In 1709 the count appointed as Hofkapellmeister Christoph Graupner, who composed at least three operas and other works for Darmstadt.

Under Grand Duke Ludwig I (1790-1830) the court opera reached its peak. The Hofkapelle, often conducted by Ludwig himself, comprised 89 musicians, in addition to a chorus of 54, and included many fine singers. Georg Joseph Vogler was Hofkapellmeister and director of a music school, and Weber and Meyerbeer were among his pupils. J C H. Rinck was organist between 1805 and 1846. In 1819 the grand duke's rebuilt theatre was opened with a performance of Spontini's *Ferdinand Cortez*. The theatre was burnt down in 1871, replaced in 1879 and finally destroyed, together with many of Darmstadt's other musical institutions, in 1944. Important Wagner productions, produced by Kapellmeister Louis Schindlmeisser in collaboration with the scenic designer Carl Barndt (who had worked in Bayreuth) were mounted after 1850. Subsequent conductors have included Willem De Haan, Weingartner, Michael Balling, Böhm, Kleiber and Szell. The last grand duke, Ernst Ludwig (1892-1918), was sympathetic towards modern art, and a tradition of contemporary opera production grew up, with such directors as Carl Ebert and Arthur Maria Rabenalt working in Darmstadt.

Musical societies flourished in the 19th century, including the Musikverein (founded in 1831, conducted by C L A Mangold, 1839-89), the Mozartverein (1843), the Stadtkirchenchor (1874; conducted by Arnold Mendelssohn, 1891-1912) and the Instrumentalverein (1883). The Stadtische Akademie für Tonkunst, founded in 1851, encouraged chamber music and orchestral playing. The chair in musicology at the Technische Hochschule has been held by Wilibald Nagel (1898-1913), Friedrich Noack (1920-58) and Lothar Hoffmann-Erbrecht (1961-).

After World War II a temporary theatre was established, enabling the operatic tradition to be maintained, and in 1972 a new theatre with two stages was opened. Darmstadt's operatic tradition has also been enriched by the city's associations with contemporary music, particularly that of the avant garde. The Internationale Ferienkurse für Neue Musik (International summer courses for new music) were initiated in 1946 by Wolfgang Steinecke, who continued to be closely associated with them until his death in 1961. The courses, held annually until 1970 and subsequently every two years, have encompassed both composition and interpretation and include premières of new works. Among the many distinguished lecturers to have appeared are Adorno, Fortner, Alois Hába, Heiss, Krenek, Leibowitz, Messiaen, Varèse, Scherchen, Kolisch, Rehfuss, Steuermann, Wildgans and, more recently, Babbitt, Béro, Boulez, Cage, Christoph Caskel, Gazzelloni, Henze, Lejaren Hiller, Aloys Kontarsky, Ligeti, Maderna, Nono, Palm, Pousseur, Stockhausen, David Tudor and Xenakis.

The Städtisches Fachinstitut für Neue Musik was founded by Steinecke in 1946 to provide an institutional basis for the courses. It was known as the Kranichsteiner Musikinstitut from 1949 to 1962, and in 1963 became the Internationales Musikinstitut Darmstadt, an international information centre for contemporary

music, housing a library and sound archives. Since 1958 it has published the *Darmstädter Beiträge zur Neuen Musik* and *Neue Musik in der Bundesrepublik Deutschland*, the yearbook of the German section of the International Society for Contemporary Music. The Institut für Neue Musik und Musikerziehung, founded in 1947 by Herbert Barth, has held its annual conferences in Darmstadt since 1951.

ERNST THOMAS

Darnton, (Philip) Christian (b Leeds, 30 Oct 1905). English composer. He studied with Charles Wood at Caius College, Cambridge (1924-5), and privately with Butting in Berlin (1928). Appointments followed as music master at Stowe School (1929) and assistant editor of the *Music Lover* (1930-32). During the next two decades Darnton's music enjoyed success in Britain and abroad: notable premières include those of the *Suite concertante* (with Appia as soloist and Scherchen as conductor, Lausanne, 1938), the *Five Pieces for Orchestra* (ISCM Festival, Warsaw, 1939) and the cantata *Jet Pilot* (London, 1950). The last of these was followed by a silence of 20 years, broken by the *Concerto for Orchestra*. Darnton published *You and Music* (Harmondsworth, 1939, 2/1946).

COLIN MASON/PAUL GRIFFITHS

Darondeau, Benoni (b Munich, 1740; d Paris). Composer and singing teacher. He lived from 1782 in Paris, where his works were published. They include several volumes of 'petit airs' with harp accompaniment and one opera, *Le soldat par amour* (Opéra-Comique, 1789).

BRIAN PRIMMER

Darondeau, Henry (b Strasbourg, 28 Feb 1779; d Paris, 30 July 1865). French composer and theatrical musician, son of Benoni Darondeau. In 1802 he entered the Paris Conservatoire, where he studied the piano with Ladurner and composition with Berton. Although he achieved no formal academic distinction there, he was a

sound student and became an able and respected teacher. He lived in Bourges from 1836 to 1860, when he returned to Paris. As composer and musical arranger to the Théâtre des Variétés he moved in the same circles as Adolphe Adam and Habeneck, with both of whom he became friendly.

Darondeau was a prolific composer of popular romances, piano-variations, fantasies and theatrical pots-pourris. He also wrote two operas and many ballets, which were staged in various Paris theatres including the Opéra. A volume of his church music appeared in 1857. His music possesses little interest today since his inventive power was small and his imagination commonplace. Occasionally, however, his songs have a harmonic piquancy or rhythmic interest which is attractive and typical of the salon taste of the period at its best.

BRIAN PRIMMER

D'Arras, Adam. See ADAM DE LA HALLE.

Darrell, Peter (b 1929). British choreographer; see DANCE, §VII, 1(iv).

Dart, (Robert) Thurston (b Kingston, Surrey, 3 Sept 1921; d London, 6 March 1971). English musicologist, performer and teacher. Dart was educated at Hampton Grammar School, where he was a chorister of the Chapel Royal, Hampton Court. From 1938 to 1939 he studied at the RCM, and subsequently read mathematics at University College, Exeter, receiving the London degree of BSc in 1942. He served in the Royal Air Force from 1942 to 1945. At the end of the war he studied in Belgium with Charles van den Borren. Returning to England in 1946, he began a career as a harpsichordist. In 1947 he was appointed an assistant lecturer in the Faculty of Music at Cambridge University.

This appointment was the first of several in which he was to influence English musical life. He was editor of the *Galpin Society Journal* from its inception in 1947 to 1954. From 1950 to 1965 he was secretary of the series *Musica Britannica*, and remained the driving force behind the series to the end of his life. He became a member of the Royal Musical Association council in 1952, and later a member of the editorial committee of the *Purcell Society*. He was elected a member of the library committee of the English Folk Dance and Song Society in 1965.

During this period he gave frequent recitals on the harpsichord, clavichord and organ, and gave many broadcast talks. In about 1950 there began his long association with the firm of Oiseau-Lyre, Monaco, for which he made many recordings both as solo keyboard player and continuo player. The patronage of its proprietor, Mrs Louise Hanson Dyer, did much to accelerate his growing international reputation as a recitalist.

He became in 1952 a full lecturer at Cambridge, and in 1953 was granted a fellowship at Jesus College, Cambridge. He was a visiting lecturer at Harvard in 1954. In 1955 he became the artistic director of the Philomusica of London (having played with its forerunner, the Boyd Neel Orchestra, since 1948). From then until 1959, when ill-health compelled him to relinquish his orchestral commitments, he lived an immensely energetic triple life of teaching, writing and editing, and concert-giving. In 1962 he was appointed professor of music at Cambridge. His two-year tenure of the Chair

was strife-ridden, and ended when he was offered the newly created King Edward Professorship of Music in the University of London, in 1964. In that year he established a teaching Faculty of Music at King's College, London, and proceeded to create radically revised syllabuses for the London music degrees.

Dart's main fields of scholarship and performance lay in the music of J. S. Bach, in keyboard and consort music of the 16th, 17th and 18th centuries, and in particular the life and music of John Bull (on whom he left a book unfinished at his death). He wrote a great many articles on a wide variety of subjects. The essence of his work was his preoccupation with musical sources themselves. Most of his hypotheses – and many of them were audacious – arose directly from the study of a source, its preparation, ownership and use. He trained a generation of scholars not only in clear, critical thinking about musical topics but also in palaeographic, diplomatic and bibliographic skills, and emphasized the study of the history and techniques of printing. He was an impulsive, generous man, and a dynamic teacher. Towards the end of his life he advanced controversial theories concerning Bach's orchestral suites and Brandenburg Concertos, and embodied them in recordings with the Academy of St Martin-in-the-Fields. Among his 90 recordings are 'Masters of Early English Keyboard Music', keyboard works by Bach, Froberger, Handel and Purcell, and Couperin's *Les nations*. He was joint editor of many editions. Apart from his own numerous editions he also supervised revised editions of E. H. Fellowes's series the English Madrigal School (as the English Madrigalists) and the Collected Vocal Works of William Byrd (as the Collected Works of William Byrd) as well as M. Cauchie's edition of François Couperin. He was a frequent judge for international keyboard competitions and panellist at colloquia. He was a widely cultured man, possessing not only a fine collection of musical instruments and a vast personal library including manuscripts and early printed editions, but also a large collection of 20th-century drawings, paintings and sculpture.

IAN D BENT

Dartington String Quartet. English string quartet. Formed in 1958, its members are Colin Sauer (*b* New Southgate, Middlesex, 13 July 1924) and Malcolm Latchem (*b* Salisbury, 28 Jan 1931), who replaced Peter Carter in 1969, violins; Keith Lovell (*b* London, 24 Dec 1932), viola; and Michael Evans (*b* Monmouth, 15 Jan 1932), who replaced Alexander Kok in 1960, cello. They are the resident quartet at Dartington Hall, Devon, where they were originally formed for the annual Summer School of Music held there. They are also attached to the music departments of Exeter University (from 1966) and Bristol University (from 1971). Sauer studied at the RAM, Latchem and Lovell at the RCM, and Evans at the GSM and the Hamburg Academy of Music. As a quartet they received intensive coaching at Dartington Hall from Hans Keller. They made their

début for the BBC in 1959 and their public début in London in 1961. They have appeared at the Aldeburgh, Cheltenham and Athens festivals as well as touring widely in Great Britain and abroad, including a first tour of Germany in 1963. They have given many broadcast performances including several complete Schoenberg series for the BBC; they repeated this series, with the addition of the complete quartets of Gerhard, at the Queen Elizabeth Hall in 1973. They gave the first performances of quartets by Hugh Wood (nos. 1 and 2, which are dedicated to them), Skalkottas (no. 3), Frankel (no. 5) and Duncan Druce. Although they are one of the leading British ensembles specializing in contemporary music, they also play a large number of works of the standard quartet literature.

RONALD KINLOCH ANDERSON

Dartington Summer School. A combination of advanced coaching, musical holiday and concert festival organized for four weeks each August at Dartington Hall, an arts and education centre in the country near Totnes, Devon. The Summer School of Music began in 1948 at Bryanston School, Dorset, was registered the following year as a non-profit-distributing company and moved to Dartington from 1953. It originated in a suggestion by the pianist Schnabel, at the inaugural Edinburgh Festival, that students, teachers and artists might work together as a festival community. William Glock (a Schnabel pupil) was the first director of music, succeeded in 1979 by Peter Maxwell Davies, the secretary is John Amis, the registrar Beatrice Musson.

From the first year, when tutors included Nadia Boulanger, Hindemith and Schnabel, the summer school has continued to attract distinguished international and leading British composers and other musicians to coach, lecture and perform. The mixture of instruction, musical participation and professional performance attracts people with a variety of abilities and interests. Most enrol on a fee-paying basis, but a limited number of bursaries are provided for bona fide music students who could not otherwise afford to attend. The general aim of the summer school is to supplement the normal academic training for students, and to broaden and refresh musical enthusiasm among amateurs, in the surroundings of a summer holiday.

NOËL GOODWIN

Darvas [Steinberger], Gábor (b Szatmárnémeti, 18 Jan 1911). Hungarian composer and musicologist. He studied composition under Kodály at the Budapest Academy of Music (1929–32). From 1939 to 1948 he lived in Chile where he worked as assistant conductor to Kleiber (1939–41) and later as a musicologist. After returning to Hungary he continued this work, being particularly concerned with music of the 15th and 16th centuries. He began to compose only in the 1960s, combining ideas drawn from Bartók's music with aleatoricism and serialism in the orchestral pieces *Improvisations symphoniques* and *Sectio aurea*; this synthesis was developed in the works that followed. Darvas was one of the first Hungarian composers to work with tape – his *Medália* ('Medal') was given at the 1966 ISCM Festival and at Darmstadt in 1968 – and he has been interested in the association of electronic music with film.

F. ANDRÁS WILHEIM

Darwish, Sayed [Sayyid] (b Alexandria, 17 March 1892, d Alexandria, 15 Sept 1923). Egyptian composer and singer. He is the most popular figure in Egyptian music. He had a hard childhood, during which he learnt the cantillation of the Koran and religious chants, as well as picking up the current secular songs at school. For two years he studied at the religious school, a branch of Al Azhar, but he then decided to make his career as a singer-composer. He had to sing at modest local cafés, and when he began to compose vocal music he attributed it to a famous composer. Under family pressure he was sometimes forced to take manual jobs, and his early marriage, the first of four, complicated matters. Once, while working as a builder and singing to entertain his fellow workers, he was heard by the Syrian brothers Attalah, who engaged him to sing with their drama troupe on a trip to Syria. There he learnt a great deal about classical Arab forms from the master Osman El Mawsily. His important compositions in the *dawr* and *muwashshah* forms are proof of his deep understanding of the modal subtleties and rhythmic complexities of traditional art music.

Returning to Egypt he achieved some fame as a singer-composer. An important turning-point came when he went to Cairo, probably in 1917, and Salama Higazy introduced him to his theatre public, the beginning of a brilliant career as a composer for the theatre. Although his first 'operetta', *Faysouzshah*, was a failure, he soon achieved success, becoming the favourite composer in this genre and even forming his own (short-lived) troupe. His 26 operettas opened up new vistas for Egyptian music: the slow, repetitive, over-ornamented vocal style was replaced by a light, truly expressive manner making apt use of the choir. Besides this, Darwish's operettas owed their immense popularity to their social and patriotic subjects, and their workers' songs. The telling musical characterization is essentially Egyptian and strongly reminiscent of folk music. Darwish may have been influenced by the Italian opera performed in Cairo: he admired Verdi and had planned, just before his early death, to study in Italy. A prolific composer, he was a master of the old forms as well as the new theatre music, his ten *dawrs* and 21 *muwashshahs* (another 17 are of doubtful attribution) are classics of the repertory. Many of his tunes have been orchestrated by younger composers, such as Khairat, and a concert hall in Cairo was named after him. Examples of his work are published in *Sayed Darwish hayat wa naghām* ('Darwish: life and music'), edited by M. A. Hammad (Cairo, 1970).

SAMHA EL KHOLY

Dārziņš, Emīls (b Jaunpiebalga, 3 Nov 1875; d Riga, 31 Aug 1910). Latvian composer and critic. He studied the

organ with L. Homilius and composition with Rimsky-Korsakov at the St Petersburg Conservatory (1898–1901). From 1901 he lived in Riga; his early death occurred when he was run over by a train. He was one of the first notable Latvian composers of solo and choral songs. In his lifetime he was also known as a symphonist, but most of his orchestral works have been lost, apart from the *Melanholiskais valsis* ('Melancholy waltz'); only a fragment of the piano score of his opera *Rožainās dienas* ('Rosy days') has survived. All his extant works have won a firm place in the Latvian repertory; his songs, in particular, are captivating for their rich melodies and powerful emotional appeal. Specially remarkable are his large choral songs in symphonic style, such as the epic-dramatic *Lauztās priedes* ('Broken pines') and *Senatne* ('Ancient times'), and the lyrical-dramatic *Sapņu tālumā* ('In the distance of dreams'). Dārziņš was also one of the founders of professional Latvian music criticism and, through his writings, a leader of Latvian musical thought in the early 20th century.

JĒKABS VĪTOLIŅŠ

Daseian [dasian] **notation**. A system of notation used for organum in the 9th-century treatise *MUSICA ENCHIRIADIS*, and also in the slightly later Paris and Bamberg treatises. It uses the Greek *prosōdia daseia* sign transformed to designate the four notes of the tetrachord, and then further transformed to represent higher pitch tetrachords. The transformed signs are placed vertically at the left, and syllables of text to be sung are placed in horizontal alignment with them. See *NOTATION*, §§II, 6, III, I(vi), and fig.19; *ORGANUM*, §2.

Daser, Ludwig (b Munich, c1525; d Stuttgart, 27 March 1589). German composer. From an early age he was a member of the Bavarian Hofkapelle at Munich; he received his musical training there and in 1550 was a tenor. In 1552 he was promoted to be Kapellmeister. He was a success in this post, but he was relieved of it in 1563 because of strained relations with Duke Albrecht, which probably arose because he was a Protestant serving at a Catholic court. He was replaced by Lassus. In 1572 he was appointed Kapellmeister at the Württemberg court at Stuttgart, which had broken with the Roman Church in 1538; he appears to have carried out his duties effectively. After his death he was succeeded by Balduin Hoyoul, who was his son-in-law. The Munich court granted him a pension, which was paid until his death. He was admired in his day for his music, which shows that he was a well-trained and very able composer with a pronounced lyrical gift. It is conservative in style, as can be seen by the high proportion

of his works for four (rather than five) voices and by his use of cantus firmus technique in ten of his 22 masses. That he was well aware of current styles, however, is shown by his five parody masses and by some of his motets and German psalms and hymns, which date from his years at Stuttgart.

DANIEL T. POLITOSKE

Dash. (1) If vertical and standing above or below a note or chord, it indicates a more or less reduced duration of sound followed by a sufficient silence to complete the value, for purposes of articulation, and resulting in a greater or lesser degree of STACCATO, but usually greater than that indicated by a dot in similar positions; (2) if horizontal in similar positions, it indicates the fullest practicable duration of the sound intensified by a certain weightiness, with an effect between legato and staccato sometimes called portato; (3) if horizontal and following a number or sign in FIGURED BASS it indicates the continuation of the same harmony upon as many bass notes as the dash covers.

It is immaterial whether the vertical dash as in (1) is

in the form of a line, as in ex.1a, or in the form (common in the 18th century) of a wide wedge, as in ex.1b, or in the form (subsequently common) of a slim wedge, as in ex.1c. The usage apparently dates, as a feature of

notation, from the later Baroque period, though it was no novelty then as a feature of expression. In Baroque notation, the vertical dash and dot were usually (although not invariably) regarded as interchangeable; one deliberate or incidental implication might be to contra-indicate inequality (see NOTES INÉGALES).

The horizontal dash as in (2) was also a late Baroque innovation as a feature of notation. As (3), the horizontal dash occurs in 18th-century treatises rather than in ordinary compositions (with some – mainly German – exceptions), and never became as prevalent in actual scores as its theoretical prominence and obvious utility would seem to have warranted. As a feature of interpretation, however, it was and remains an important responsibility of continuo players to decide the continuation of the same harmony over what are thus treated as passing notes in the bass, whether or not the notation includes such horizontal dashes.

ROBERT DONINGTON

Dasian notation. See DASEIAN NOTATION.

Dassoucy [D'Assoucy; Coypeau, Coipeau, Couppeau], **Charles** [Assoucy, Charles d'] (b Paris, 16 Oct 1605, d Paris, 29 Oct 1677). French satirical poet, lutenist and composer. In 1637, through the Duke of St Simon (father of the author of the *Mémoires*), Dassoucy came to the attention of Louis XIII. Until 1653 he stayed in Paris and made friends with the *libertins* Tristan, Scarron, La Mothe le Vayer, Cyrano and Chapelie, and with musicians such as Nyert and Luigi Rossi, whom he met at court, where he worked as a lutenist and composer. The king admired his musical verve and his astonishing powers as a lutenist, and he made him music master to the future Louis XIV. Dassoucy's major works, the music of which is nearly all lost, were probably all composed towards the close of this period in his life.

After 1653 he left Paris and toured the provinces; at Lyons he met Molière, with whom he travelled to Avignon and Montpellier, where he was imprisoned. He later went to Turin, where he worked for Christine, Duchess of Savoy (Louis XIII's sister), and travelled to Mantua, Modena, Florence and Rome, where in the early 1660s the French ambassador, the Duke of Chaulnes, protected him. Accused of atheism, he was imprisoned again, as he recorded in his *Les aventures d'Italie* (Paris, 1677). He returned to Paris about 1670, when Molière was at the height of his career and Lully well launched on his. Unable to rival the latter, Dassoucy hoped to renew his friendship with Molière, but the playwright preferred to work with Charpentier. Furthermore, the art of lute playing was going out of fashion. Nevertheless, in 1673, undeterred, Dassoucy announced a series of novel works, 'concerts chromatiques'; they have not survived and were never performed, for he was again imprisoned, perhaps as a result of Lully's jealousy. He spent his last years adding to his output of literary works, of which he published eight, between 1651 and 1677.

The music for Corneille's *Andromède* and the words and music of *Les amours d'Apollon et de Daphné*, a musical comedy dedicated to the king, were important stages in the development of French theatre music towards opera; both works combine numerous songs, dialogues and instrumental pieces, designed to enhance the effects of spectacle and to arouse emotion. The

patchwork effect of songs and dialogues, of intrigues and rivalries, stitched together, is both a comment on the continuing significance attached to the words in these works and an anticipation of styles that were to be developed in the comic operas of the 18th century.

MARGARET M. MCGOWAN

Dattari [Dattaro], **Ghinolfo** (b Bologna, c1535, d Bologna, 1617). Italian composer and singer. He sang in the choir of S Petronio, Bologna, from 1555 to 1617. He was appointed acting *maestro di cappella* there in 1597 after the death of Andrea Rota, but returned to his position as singer two years later when Pompilio Pisanelli received the permanent appointment. His delightful villanellas of 1568 are all chordal, strophic, dance-like and popular in tone. The 5–3 harmonies are strongly tonal in their frequent dominant-tonic relationships, and there are occasional parallel triads in stepwise motion. Not only is the entire collection dedicated to a Bolognese nobleman, Count Giulio Pepoli, but each piece is individually dedicated to different Bolognese noblemen and ladies.

FRANK TIRRO

D'Attili, Dario (b Rome, 26 March 1922). American violin maker, restorer and expert. He is among the most highly respected authorities on fine old violins and bows. His family emigrated from Rome to the USA in 1935, and in 1938 he went to work at the bench of Fernando Sacconi at the shop of Emil Herrmann in New York. Apart from a period in the armed forces in World War II, he worked continuously with Sacconi (to 1973). In 1951, when Herrmann moved from New York, they both joined Rembert Wurlitzer, establishing a workshop there that became second to none. Following the untimely death of Wurlitzer himself, D'Attili was appointed general manager in 1964. In spite of the demands of restoration work and, later, appraisals and other business, there has seldom been a time when a new violin was not under construction at home. These fine-sounding and much appreciated instruments show a keen understanding of the work of the great old Italians, and a special admiration for that of Pietro Guarneri of Mantua. D'Attili has devoted much time to the study of violin varnish, with excellent results.

When Wurlitzer closed in 1974 D'Attili continued to work at home and became associated with William Moenig & Son in Philadelphia.

CHARLES BEARE

Daube, Johann Friedrich (b ?Hesse, c1730; d Vienna, 19 Sept 1797). German theorist and composer. At the age of 11 he was a theorbist at the Berlin court of Frederick the Great. In 1744 he went to Stuttgart, where on 29 July he was appointed *Cammer-Theorbist* to the Prince of Württemberg. In 1750 he was listed in court records as chamber flautist, a position he retained until 1755. At this time, for unknown reasons, he was dismissed, and when he was re-employed in 1756 he received the much lower rank of flautist in the court orchestra. In 1770 he appeared in Vienna with the title of 'Council and First Secretary' to the royal Franciscan Academy of Free Arts and Sciences, an organization centred in Augsburg where Daube may have spent some time after 1765.

Although Daube remains an obscure figure, his several treatises on performing practice and composition prove him to be a scholar of great knowledge, and are almost untouched resources for insight into the compositional practices and music aesthetics of the Classical period. His first work, the *General-Bass in drey Accorden* (1756), reflected the impact of Rameau's theories on the harmonic thought of Classical composers and theorists. Daube seems to have been the first to import into Germany the French theorist's concept of the three fundamental chords (I, IV⁺, V⁷), which he used to generate all other harmonies in realizing a thoroughbass. In addition the work throws much light on thoroughbass realization in the mid-18th century. His *Der musikalische Dilettant* (1770-73), as Benary has emphasized, is a remarkably original contribution to a doctrine of composing expressly orientated to the Classical style. Still reflecting the Baroque tradition of the thoroughbass as the primary foundation of compositional rules, Daube nevertheless put forth a number of original views, calling for a reduction of the number and complexity of contrapuntal passages, melodic and formal symmetry, and appropriate orchestration in symphonic writing. In his final treatise, *Anleitung zur Erfindung der Melodie und ihrer Fortsetzung* (1797), he wrote with enthusiasm about the contemporary Viennese musical scene, with Haydn, Mozart, Beethoven, Salieri, Vanhal, Weigl and others as his inspiration. This treatise provides a detailed guide to melodic composition in the Classical style, with emphasis on periodicity among many other characteristics. Daube deserves to be included together with such major 18th-century theorists as Mattheson, Quantz, Kirnberger and Koch. A history of Classical style has much to gain from a greater awareness of his contributions to music theory.

GEORGE J BUELOW

Daubenrock, Georg (fl early 17th century). German music teacher. He referred to himself as 'Vinariâ Tyngeta'; it may be assumed, therefore, that he originated from (or near) Weimar in Thuringia. Apparently he studied in Regensburg, since in his theoretical work he mentioned his teacher, Andreas Raselius, who was working there. In the first years of the 17th century he was in Eferding, near Linz, the territory of the Count of Starhemberg in what was at that time Protestant Upper Austria. In 1609 he became school Kantor in Steyr which was also a predominantly Protestant city; it is known that he was still employed there in 1617-18. Daubenrock was one of a number of Kantors who went to Austria from the heart of the Lutheran areas after the Reformation and before the Counter-Reformation. His only known work is *Eptome musices pro tyronibus scholarum trivialis utriusque tam latinae quam teutonice linguae collecta* (Nuremberg, 1613); it is a bilingual music primer set out in what was the normal practice of listing by subject (definition of music, clefs, sol-fa etc). Three-part examples based on the hexachord and cantus firmus tricinia show that Daubenrock was a skilful composer.

Dauberval, Jean (1742-1806). French ballet-master; see DANCE, §V, 1.

Daublaine & Callinet. French firm of organ builders. Established in Paris in 1838 as Daublaine & Cie, it purchased in 1839 the business of Louis Callinet (b Rouffach, Alsace, 1797) and became known as Daublaine & Callinet. (Callinet was from an Alsatian family of organ builders, and was successor to the builder Somer.) From 1842, the English organ builder Charles Spackman Barker ran the business as *contre-maitre*. In 1844 Callinet, excited by some dispute, destroyed all the work which he and his partners had just added to the organ at St Sulpice. Following this, he left the firm and became a workman for Cavaillé-Coll. The firm was then reorganized as Girard & Cie and in 1845 as Ducroquet & Cie. Under Barker's direction, it recon-

structed the organs at St Germain-des-Prés (1844) and St Eustache (after 1845) and restored that at St Sulpice (1844–6). The St Eustache organ was taken to the Great Exhibition in 1851, where its maker was the only French firm to exhibit; it won a Council medal, and as a result was awarded the Croix de la Légion d'honneur (22 November 1851). The specification of this organ is given in Sumner (no.33).

Ducroquet (*d* Varennes, 19 July 1877) was succeeded by a limited liability company (1855), which in turn was succeeded by Merklin, Schütze & Cie from Brussels, who had managed their predecessors' branches in Paris and Lyons. Merklin continued the business alone until his death at Nancy on 10 July 1905, with the principal factory at Lyons and a branch in Paris. The firm afterwards became the Société Gutschenritter & Decoq (1899), the mark of which was sold to Fortin. It no longer exists as a factory.

 GUY OLDHAM

Dauer, Johann Ernst (*b* Hildburghausen, 1746, *d* Vienna, 12 Sept 1812). German tenor. He began his career in 1768, and in 1771 was engaged in Hamburg, where he sang in Singspiels and danced. Like many singers of the time he was also known as an actor, and played lovers (particularly ridiculous ones) and dandies, but he was principally required for Singspiel as he combined taste and correct singing with good acting. In 1775 he went to Gotha and in 1777 to Frankfurt am Main and Mannheim. In 1779 he was engaged for Vienna where he made his début as Alexis in Monsigny's *Le déserteur* (28 November).

Dauer sang the role of Pedrillo in the première of Mozart's *Die Entführung aus dem Serail* (16 July 1782; the previous evening he had appeared as Karl Denholm in the play *Die Lästerschule*, i.e. Charles Surface in Sheridan's *The School for Scandal*). He excelled in character roles; when he assumed straight parts, particularly those requiring dignified bearing, he received a poor public response and appalling notices. In his last years he suffered from losses of memory, but nevertheless remained with the Imperial Theatre until his death.

CHRISTOPHER RAE BURN

Dauner, Wolfgang (*b* Stuttgart, 30 Dec 1935). German jazz pianist and composer. After working as a mechanic he studied the trumpet and composition at the Stuttgart Musikhochschule, and in the early 1960s played in various jazz bands and festivals in Germany. His LP *Dream Talk* (1964), with a trio of piano, bass and percussion, was one of the earliest European essays in the newly developed idiom of 'free jazz'. He has made further jazz recordings, led his own group Et Cetera and directed the jazz ensemble of Radio Stuttgart. He is particularly interested in the electronic synthesizer, with which he has formed a novel, uniquely European extension of the language of jazz. Elements of music-theatre are shown in his works combining music, dance and light; he has composed church music, avant-garde pieces for the Donaueschingen Musiktage, a children's opera and music for films, radio plays and television productions.

JOACHIM E. BERENDT

Dauney, William (*b* Aberdeen, 27 Oct 1800; *d* Georgetown, British Guiana [now Guyana], 28 July 1843). Scottish musical scholar. The son of William Dauney of Falmouth, Jamaica, he was educated at Dulwich College, London, and at Edinburgh University. He was called to the Scottish Bar in 1823. About 1839 he left Scotland for British Guiana, where he became solicitor-general.

Dauney's importance as a scholar rests on his book *Ancient Scottish Melodies from a Manuscript of the Reign of James VI* (Edinburgh, 1838), which consists of a transcript of the Skene Manuscript as well as a lengthy 'Dissertation Illustrative of the History of the Music of Scotland' and some historical documents, also transcribed. The manuscript, in lute tablature, was compiled about 1625 by John Skene of Hallyards, Midlothian. In Dauney's time it belonged to the Advocates' Library in Edinburgh; it is now in the National Library of Scotland, Edinburgh (Adv.5.2.15). Dauney's transcription was valuable in drawing attention to early, simple versions of such Scottish tunes as *The Flowers of the Forest* and *John Anderson my Jo*. During the 18th century such tunes had become – at least in polite circles – encrusted with rococo melodic ornaments; the generation of arrangers after Dauney, however, were able to go back to these unadorned versions and interpret the Scottish national song tradition anew. Dauney's transcription is incomplete and slightly inaccurate, though highly commendable by the editorial standards of his time. The 'Dissertation', largely concerned with 17th-century music, contains much valuable information and is free of the anecdotal quality of earlier treatises on the subject. Dauney was imaginative in searching for facts, but level-headed in evaluating them.

W. H. HUSK, DAVID JOHNSON

Dauphin. German family of organ builders. By 1713 Johann Eberhard Dauphin (*b* c1670, buried Hoheneiche, 20 April 1731) was a citizen of Mühlhausen, where he worked as an organ builder. In 1715 he moved to Iba, near Rotenburg, where he built many instruments for churches in east Hesse. His masterpiece, the organ at Hessisch Lichtenau, was destroyed by fire in 1886; an inscription on this instrument mentioned his pupils Johann Christoph Papst (*b*1682 in Wolfenbüttel) and Johann Heinrich Braum. Johann Eberhard's organs, mostly small instruments in village churches, have one manual and pedals (in Hesse, organs based on 8' pitch, such as his instruments at Iba and Reichenbach, were already a rarity). There is little remarkable in their specifications, apart from the frequent appearance of a 16' Quintatön and a Gemshorn. The specification of the organ at Hessisch Lichtenau, one of the very few north Hessian organs with a *Rückpositiv*, is no longer known. Remaining details in various organs demonstrate Dauphin's great craftsmanship; the robust cases have three towers (the standard type in central Germany).

Johann Eberhard's brother Johann Christian Dauphin (*i*) (*b* ?Gummersbach, Neustadt, 22 Feb 1682, *d* Kleinheubach, 14 May 1730) studied for eight years with Johann Friedrich Wender in Mühlhausen and was recommended by him for the job of renovating the Seligenstadt organ. In 1707 Dauphin moved to Kleinheubach, where he worked on his most famous instrument, the organ at Waldürn. In 1714 he was given the supervision of all the organs of the earldom of Erbach. Compared with the registration of Wender's

contemporary organ for the church of St Severi at Erfurt, the registration of Dauphin's organ at Waldürn is limited in nature: the Pedal organ is weak in tone, and the harmonic distribution of the Zymbel and Mixtur stops is deficient. Against this can be weighed a greater number of Quintatön and Quint stops (two of each on the *Hauptwerk*). The deeper registers are strengthened, although the *Hauptwerk* is still based on 8' pitch, the Pedal, however, is based on 16' pitch. In an organ case at Kleinheubach, Dauphin followed the normal central German model. The arrangement at Waldürn is highly idiosyncratic: like the Pedal, the *Positiv* is divided and placed on either side of the *Oberwerk*/*Brustpositiv* group, it is strikingly rich in decorative detail.

John Christian Dauphin (ii) (1713–72), son of Johann Christian (i), applied in 1745 for his father's position as supervisor of the organs of the Löwenstein-Wertheim estate. His sons Johann Christian Dauphin (iii) and Johann Georg Dauphin, carried on the family tradition until 1810.

 DIFTER GROSSMANN

Dauprat, Louis François (b Paris, 24 May 1781, d Paris, 17 July 1868) French horn player, teacher and composer. As a boy he was a chorister at Notre Dame in Paris, and in 1794 studied the horn with Kenn at the Institut National de Musique (later the Conservatoire, where he continued his studies with Kenn, who had been appointed principal *cor basse* professor). In 1798 he was awarded a *premier prix* – the first ever given for the horn. The silver-mounted horn by L. J. Raoux which he received on this occasion is in the museum of the Paris Conservatoire. From 1799 he travelled with various military bands including the National Guard and the Consular Guard, but he soon returned to Paris where he played at the Théâtre Montansier and re-entered the Conservatoire to study harmony with Catel and composition with Gossec. Later he studied with Reicha, whose wind quintets he edited during his years of retirement. From 1806 to 1808 he played solo horn at the Grand Théâtre of Bordeaux; he then returned to Paris to succeed Kenn at the Opéra, and became solo horn in 1817 on the retirement of Frédéric Duvernoy. He held this position until Véron became director of the Opéra in 1831, but then refused to accept the new contract.

After 14 years as an honorary assistant professor at the Conservatoire, he was appointed professor in 1816, a position which he held until 1842. In 1811 he became an honorary member of the imperial chapel for Napoleon; he also played in the private bands of Louis XVIII and Charles X, and of Louis-Philippe from 1832 to 1842. He was one of the founders of the Société des Concerts du Conservatoire in 1828, remaining in the orchestra as principal horn until 1838. In 1842 he withdrew completely from public musical activities and went to live in Egypt, where he remained (except for occasional visits to Paris) until shortly before his death.

Despite his considerable success as a soloist, Dauprat

preferred to concentrate on teaching, orchestral playing and composition for the horn. He was a supreme teacher, and the educational value of his *Méthode pour cor alto et cor basse* has not been surpassed. In addition to his *Méthode*, Dauprat published a number of excellent studies with detailed instructions regarding their performance and often with a figured bass accompaniment. He also published five horn concertos, many horn solos and chamber works involving horns; his unpublished compositions include symphonies and stage works. He left in manuscript a *Cours d'harmonie et d'accompagnement de la basse chiffrée et non chiffrée de la mélodie sur la basse* and an analytical theory of music for use in schools.

Dauriac [d'Auriac], **Lionel-(Alexandre)** (b Brest, Finistère, 19 Nov 1847, d Paris, 26 May 1923). French musicologist and philosopher. He was educated at the Lycée Louis-le-Grand and, from 1867, at the Ecole Normale, where he gained the agrégé de philosophie (1872), in 1878 he took a doctorate with the dissertation *Des notions de matières et de force dans les sciences de la nature* and in the same year published his first philosophical work. He held a lectureship in the arts faculty of the University of Lyons (1879–81) and then the chair of philosophy of the University of Montpellier. In the early 1890s he became interested in music and the value of musicology as a university discipline, and travelled to Germany (1894) to study methods of teaching music in universities there. In 1895, when he became professor of philosophy at the Sorbonne, he tried to have a chair of music psychology founded there; this attempt failed and instead Dauriac was given the newly created professorship of musical aesthetics (1896–1903). In 1904 he founded, with Ecorcheville and Prod'homme, the Paris section of the IMS, of which he became president in 1907.

JOHN TREVITT

Daus, Avraham (b Berlin, 6 June 1902; d Tel-Aviv, 1974). Israeli composer and conductor. He studied composition with Behm and the piano with Schmidt at the Berlin Hochschule für Musik (1919–21); at the Munich Academy (1921–2) he was a pupil of Courvoisier (composition) and Röhr (conducting). Between 1922 and 1933 he held conducting posts at opera houses in Breslau, Dortmund and other German cities. After his arrival in Palestine in 1936 he was

active as a composer, accompanist and vocal coach. In 1940 he received the Israel PO Prize for *Petach el hayam* ('An outlet to the sea') and in 1953 the Engel Prize for *Gvat*. From 1940 to 1963 he lived in agricultural settlements, working as a choral conductor and composer, and many works of the period reflect his pastoral environment. With the String Quartet (1954) he abandoned his former moderately dissonant tonal style for 12-note writing, developing a freer, more individual manner in the 1960s under the influence of the most recent developments.

WORKS

ZVI KEREN

Daus, Ram. See DA-OZ, RAM

Daussoigne-Méhul, Louis Joseph (b Givet, Ardennes, 10 June 1790; d Liège, 10 March 1875). Franco-Belgian composer. He was the nephew and later became the adopted son of Méhul. Admitted to the Paris Conservatoire in 1799, he studied piano with Adam, harmony with Catel and composition with his uncle and Cherubini. He finished his studies in Italy, but returned to Paris and in 1816, the year before his uncle's death, was appointed professor of harmony at the Conservatoire. His first operas, *Robert Guiscard*, *Le Faux Inquisiteur* and *Le Testament*, were not accepted by the theatres, but at last *Aspasie et Périclès* was produced at the Opéra on 17 July 1820. He wrote recitatives for Méhul's *Stratonice*, performed in this version on 20 March 1821, and completed his unfinished *Valentine de Milan*, produced at the Théâtre Feydeau on 28 November 1822. His own last opera, *Les deux Sœurs*, was produced at the Opéra on 12 July 1824. He then left Paris and became director of the Conservatory of Liège, where he spent the rest of his life, resigning his post in 1862. Among his pupils was César Franck. Daussoigne's other works include a choral symphony *Une journée de la révolution*, a cantata for the reception of Grétry's heart in 1823, and several operatic transcriptions for piano. He also contributed various articles, mainly of a pedagogic nature, to the *Bulletins de l'Académie*.

'Daussoigne', ES

E. VAN DER STRAETEN/R

Dauvergne [D'Auvergne], **Antoine** (b Moulins, 3 Oct 1713; d Lyons, 11 Feb 1797). French composer, violinist and administrator. His father, Jacques Dauvergne, was a musician and probably his first teacher. Antoine began his career as a violinist in Moulins and Clermont-Ferrand before moving to Paris in the late 1730s. According to Pierre de Bernis, he studied composition with Rameau (not with Leclair, as stated by La Laurencie and Pincherle). In 1739 he became a violinist in the

chambre du roi and obtained a privilege to publish his op.1, *Sonates en trio*. He joined the Opéra orchestra in 1744 and by 1752 had assumed some of the conducting responsibilities. His first stage work, *Les amours de Tempé*, a ballet in four acts, was presented at the Opéra in 1752, the reviewer of the *Mercure de France* commented favourably on Dauvergne's solid instrumental pieces, knowledge of harmony and taste. His greatest success and most important opera, *Les troqueurs*, followed in the next year, and established a theatrical career which was to last over 20 years.

In 1755 Dauvergne was appointed composer to the *chambre du roi* and successor to François Rebel as master of the *chambre du roi*. In 1762 he and Joliveau joined Caperan as directors of the Concert Spirituel, replacing Mondonville. The new directors modified the repertory (principally by replacing Mondonville's works with their own), added new artists to the orchestra and chorus, and appointed Pierre Gaviniès leader-conductor. Dauvergne's sacred works were all written for this organization, mostly in the earlier part of his 11-year term there. His tenure passed without notable incident until administrative and artistic misfortunes beset his final two years.

In 1769 Dauvergne became, with Joliveau, P.-M. Berton and J.-C. Trial, a director of the Opéra, and in the mid-1770s he was appointed *Surintendant de la musique du roi*. Perhaps the most significant aspect of his first term as director of the Opéra was his involvement in 1772-4 in the negotiations with Gluck. Dauvergne was unimpressed by Roullet's proposal to bring Gluck and his operas to Paris, so Gluck himself wrote to Dauvergne, enclosing the first act of *Iphigénie en Aulide* as a sample. Although Dauvergne admitted the novelty and potential influence of Gluck's work, he continued to discourage the composer by demanding five other operas. Marie-Antoinette intervened, however, and the première of *Iphigénie* at the Opéra in 1774 was a triumph.

Dauvergne's 1773 arrangement of Destouches' *Callirhoé* stimulated much adverse criticism of his knowledge of contemporary taste, and was his last dramatic setting. Nevertheless, he was named composer to the Opéra in March 1776, and the following month resigned as director. In 1780 he again became a director of the Opéra, but shortly thereafter numerous musicians complained in writing of his perpetual nagging and inept management. He was unable to rally support and resigned in 1782, pleading for an adequate pension. In 1783 and 1784 he was urged to assume the directorship of the newly established Ecole Royale de Chant; he declined the offers because of the low salary. He became director of the Opéra for the third time in 1785. Although his merit, honesty and wisdom were cited in the appointment, another series of letters, critical of his age, taste and management, made this term as unpleasant as the last. The death of his second wife in 1787, the increasing political instability (which inevitably caused financial and artistic difficulties) and his diminished abilities forced him to retire in 1790. He died, nearly forgotten, seven years later.

Dauvergne's earliest works are purely instrumental and, though clearly French, show some of the Italian traits which were being accepted in Paris during the 1730s and 1740s. The influence of the Italians, particularly Locatelli, on Dauvergne's melodic style has been well documented by La Laurencie. Among the

three-movement *Sonates en trio*, four begin with a slow movement and two with a quick French overture, all end with a minuet. Ten of the 12 *Sonates à violon seul* op 2 are four-movement works beginning with a slow movement. The motifs and thematic material in these sonatas fall into two types: brilliant, triadic, angular melodies, or fluid, ornamented, cantabile melodies. The sonatas require advanced technique, including agility in the higher positions and the ability to play double stops in these positions, thus indicating that Dauvergne's own technique must have been prodigious. Each of the *Concerts de symphonies* opp. 3-4 consists of two suites for two violins, viola and bass. In their fast movements the violins play in unison or in 3rds or 6ths, while in slow movements the second violin provides accompaniment to the melodic first. Throughout, the viola and bass supply harmonic background and movement somewhat independently of each other. The suites are entirely typical of the mid-18th century. La Laurencie recognized traces of Gluck in them, particularly in the dispositions of the melodies and the impressions of grandeur and serenity.

Although Dauvergne's sacred works have apparently not survived, reviews in the *Mercur* were generally approving, and six of the motets were performed 12 or more times in the years 1763-70. Burney, however, who heard the *Diligam te* and the *Te Deum* at the Concert Spirituel on 8 December 1770, reported that 'M. Dauvergne is a very dull and heavy composer even in the oldest and worst French style'.

Among Dauvergne's stage works, only *Les troqueurs* is important historically and musically. Based on a La Fontaine tale, it was the first thoroughly French comic opera constructed on Italian models, all of the music was original and recitative replaced the usual spoken dialogue. Italian influence is revealed by the opening *sinfonia* and by such devices as tremolos, widely varied dynamics and large melodic leaps. *Les troqueurs* was an instantaneous success, enjoyed numerous revivals, was presented in several European capitals and was parodied at least twice. According to Maret, Rameau admired the work. 'Forecasting to what degree of perfection this form might be carried in the future, he [Rameau] would think with emotion of the progress that taste for this opera would bring about in good music'. La Borde regarded Dauvergne's other operas highly: 'The arias are pleasing and often of great beauty. He combines great talent with modesty'.

WORKS

(all printed works published in Paris)

STAGE

(first performed in Paris unless otherwise indicated)

- Les amours de Tempé* (ballet héroïque, 4, L. de Cahusac), Opéra, 7 Nov 1752 (n.d.)
Les troqueurs (intermède, 1, J.-J. Vade, after La Fontaine), Foire St Laurent, 30 July 1753 (n.d.), excerpts also pubd
La coquette trompée (comédie-lyrique, 1, C.-S. Favart), Fontainebleau, 13 Nov 1753
La sibylle (ballet, 1, F.-A. P. de Moncrif), Fontainebleau, 13 Nov 1753
Enée et Lavinie (tragédie lyrique, 5, B. L. de Fontenelle), Opéra, 14 Feb 1758 (n.d.)
Les fêtes d'Euterpe (ballet, 3, Favart, A. Danchet, Moncrif), Opéra, 8 Aug 1758 (n.d.), incl. *La coquette trompée*, *La sibylle*
Le rival favorable (entrée added to *Les fêtes d'Euterpe*, P. N. Brunet), Théâtre Italien, 14 April 1760
Canente (tragédie, 5, A. H. de La Motte), Opéra, 11 Nov 1760 (n.d.)
Hercule mourant (tragédie lyrique, 5, J.-F. Marmontel), Opéra, 3 April 1761, F-Pp
Alphée et Aréthuse (ballet, 1, Danchet), Choisy-le-roi, 15 Dec 1762
Polyxène (tragédie lyrique, 5, N.-R. Joliveau), Opéra, 11 Jan 1763 (1763)

- Le triomphe de Flore, ou Le retour de printemps* (ballet héroïque, 1, Vallier [L. Tolmer]), Fontainebleau, 29 Oct 1765
La vénitienne (comédie-ballet, 3, La Motte), Opéra, 3 May 1768, selected airs (n.d.)
La tour enchantée (ballet figuré, 1, Joliveau), Versailles, 20 June 1770
Le prix de la valeur (ballet héroïque, 1, Joliveau), Opéra, 4 Oct 1771
Le sicilien, ou L'amour peintre (comédie-ballet, 1, F. Levasseur, after Molière), Versailles, 10 March 1780
La mort d'Orphée (tragédie, Marmontel), unperf
Semiramis (tragédie, P.-C. Roy), unperf

Other stage music: new airs for Lully-Persee, 1758, collab. F. Rebel, F. Francoeur, B. de Bury, airs for Linus (opera), 1758 inc., Pn, collab. J.-C. Trial, P.-M. Berton, arr. of F. Collin de Blamont. Fêtes grecques et romaines, 1770, arr. of A. Destouches. Callirhoe, 1773

OTHER WORKS

- L'heureux retour*, cantatille, 2vv (n.d.)
Motets with orch (all first perf. Paris, Concert Spirituel, music lost). *Te Deum*, choir, 1763, *Benedic anima mea*, choir, 1763, *Exultate justi*, 2 solo vv, 1764, *Miserere mei*, choir, 1764, *De profundis*, choir, 1764, *Regina coeli*, choir, 1764, *Omnes gentes*, choir, 1764, *Diligam te*, 1v, 1764, *Cantate Domino*, 1v, 1764, *Domine audivi*, choir, 1764, *Jubilate Deo*, 2 solo vv, 1765, *Regina coeli*, 2 solo vv, choir, 1766, *Quare fremuerunt*, 1v, 1766, *Exultate Deo*, 1v, 1771
Inst. 6 sonates, 2 vn, bc, op 1 (1739), [12] Sonates, vn, bc, op 2 (1739), [2] Concerts de symphonies, 2 vn, va, b, op 3 (1751), [2] Concerts de symphonies, 2 vn, va, b, op 4 (1751)
 Numerous vocal and inst. works in contemporary anthologies

MICHAEL A. KELLER

D'Auxerre [Du Camp Guilbert], **Pierre** (fl. 1534-55). French singer and composer. Chappuy referred to him in his *Discours de la cour* (Paris, 1543) as a well-educated singer of the king. D'Auxerre also belonged to a royal band of oboists and violinists made up mainly of Italian musicians. He sang in the chapel of the Duke of Orleans until 1545, and in 1552 he was given the title of singer and *valet de chambre* to the king. Apparently D'Auxerre was still at court in 1572. One chanson of his, *Oeil peu constant*, survives in Attaignant's 15th book of chansons (*RISM* 1544?), and was reprinted by Du Chemin in 1549. It is a short, melancholy love song in the style of Sermisy.

CAROLINE M. CUNNINGHAM

Davantes [Antesignanus], **Pierre** (b. Rabestenne, Hautes-Pyrénées, 1525; d. Geneva, 31 Aug 1561). French doctor, philologist and printer. He was known as a humanist. In 1554 he collaborated with Matthieu Bonhomme at Lyons, editing texts by Clenardo, Hippocrates and Terence. He settled at Geneva early in 1559 and on 25 May 1560 was granted a privilege to print 'une nouvelle invention de musique sur les Pseaumes'. This invention was a new and simple mnemonic aid for memorizing the music; it is explained and illustrated in a collection of 83 psalms printed by Michel du Bois in

1560. The system, based on numbers rather than solmization syllables, was later adopted by Jean-Jacques Rousseau (See NOTATION, fig.126.)

FRANK DOBBINS

Davashe, Mackay (b East London, 17 Nov 1920; d Johannesburg, 29 Jan 1972) South African (Xhosa) composer and saxophonist. Entirely self-taught, he soon established himself as his country's leading jazz saxophonist, showing a natural and original talent for improvisation and helping to form an individual South African jazz idiom. By 1945 he was leading the first of several groups he formed, the best of which was the Jazz Dazzlers, still active at the time of his death. In 1958 he met Stanley Glasser and together they worked on the musical *King Kong*. His other works include popular songs, notably *Izikalo zegoduka* (also known as *Kilimanjaro*), part songs, pieces for jazz band (orchestrated in a manner akin to that of Ellington, e.g. *Kwela kong*) and the musical *Bobo* (1967), his last large-scale composition.

STANLEY GLASSER

Davaux [Davau, D'Avaux], **Jean-Baptiste** (b La Côte-St André, 19 July 1742; d Paris, 2 Feb 1822). French composer and violinist. He received a sound general and musical education from his parents and about 1767 went to Paris, where he soon established a reputation as a gifted composer and violinist. He held a number of non-musical posts during his career: he served in the household of the Prince of Rohan from 1775, and later as Secrétaire des Commandements to the Prince of Guénéme, after the Revolution he was an official in the Ministry of War and in the Grand Chancellery of the Légion d'honneur. On 28 September 1814 he was elected to the Légion d'honneur in recognition of his 30 years of government service. Davaux was a member of the Société des Enfants d'Apollon, withdrawing after his retirement in 1816 to become a corresponding member.

Davaux's first published compositions were the ariettes *Les charmes de la liberté* and *Le portrait de Climène* (1768). Except for a few similar vocal pieces and his two comic operas, his output consisted of instrumental music. Although he always referred to himself as an amateur, he enjoyed great public and critical acclaim: with the possible exception of Gossec, he was the French symphonist most esteemed by his countrymen. His fame was also extensive abroad, his works appeared in numerous (usually pirated) editions in the Netherlands, England and Germany, and his quartets were heard in the USA as early as 27 April 1782 (*New York Royal Gazette*). His music was popular, being uncomplicated, rich in short, pleasing themes and having a relative lack of technical problems.

A composer of appealing chamber music for strings, Davaux published six duos, six trios, at least 25 quartets and four quintets; the quartets represent a significant contribution to the history of the genre. His published orchestral output includes three symphonies, four violin

concertos and 13 *symphonies concertantes*. He was most famous for the last, which offered a novel alternative to the symphony and the solo concerto, and permitted capable instrumentalists to achieve status and financial independence by displaying their artistry while avoiding both the musical excess and technical demands of solo virtuosity. All except the two that appeared after the Revolution have two movements (an Allegro and a Minuet or Rondo). Most are scored for two principal violins and strings, with optional paired oboes and horns, and, in a few cases, with a third solo instrument – viola, cello or flute. Davaux's first *symphonies concertantes* were published about 1772 and his last in 1800. A *sinfonie concertante* of 1794 includes patriotic airs. His music was prominently featured in the programmes of the Concert Spirituel after 1773, as the new directors, Gossec, Simon Le Duc and Gaviniès, provided a fresh stimulus for the increased performance of instrumental music rather than the traditional vocal music with Latin texts. There, Davaux's music was interpreted by such famous Parisian instrumentalists as Capron, Devienne, Pierre Le Duc and Giornovich. In 1783, an opera-ballet choreographed by Gardel *l'ainé* entitled *La rosière*, which ended with a *pas de six* to one of Davaux's *symphonies concertantes*, received great praise (*Mercure de France*, August 1783).

Davaux's theatrical ventures were less successful. His two comic operas, *Théodore, ou Le bonheur inattendu* (1785), based on Hugh Kelly's comedy *False Delicacy*, and *Cécilia, ou Les trois tuteurs* (1786), based on Fanny (Burney) d'Arblay's well-known novel, were praised for their music, but severely criticized for their dramatic ineffectiveness.

Davaux introduced his *chronomètre* device with the publication of his *Trois symphonies à grand orchestre*, op.11 (1784), well before Maelzel. Numerical indications in the first violin parts give the precise tempo setting for each movement. The purpose and operation of this mechanism were explained in the *Journal de Paris* (8 May 1784) and in the *Mercure de France* (12 June 1784). France had been in the forefront of similar activity since the inventions of Loulié (1696), Sauveur (1701), Onzembray (1732) and Choquel (1762). Inspired by the discussion of such devices in Rousseau's *Dictionnaire de musique*, Davaux had his plans executed by Breguet, a manufacturer of scientific instruments. The Davaux-Breguet *chronomètre* appeared concurrently with the *plexichronomètre* invented by the harpist Renaudin, touching off extended polemics in the press.

WORKS

(printed works published in Paris unless otherwise stated)

INSTRUMENTAL

- Symphonies concertantes*, 2, no 1, F, for 2 vn, vc, orch, no 2, D, for 2 vn, orch, op 5 (c1772), as op 3 (The Hague, c1780), 2, no 1, C, for 2 vn, va, orch, no 2, A, for 2 vn, 2 ob, orch, op 7 (1773), as op 4 (The Hague, c1780), 2, no 1, Bp, for 2 vn, orch, no 2, D, for 2 vn, fl, orch, op 8 (1776), as op 5 (The Hague, c1781), 2, no 1, G, for 2 vn, orch, no 2, D, for 2 vn, fl, orch, op 12 (1785), as op 9 (The Hague, n.d.).
Ouverture et entractes de Théodore formant une symphonie concertante, fl, ob/vn, bn/vc, orch (1785), lost; 2, D, A, 2 vn, orch, op 13 (1787), *Sinfonie concertante mêlée d'airs patriotiques*, G, 2 vn, orch (1794); *Symphonie concertante*, D, 2 vn, orch, op.16 (1800).
 Other orch. [4] *Concerto*, vn, orch (1769-71), as op.2 (The Hague, 1775-9), 3 *symphonies*, str, no.1 with 2 ob, 2 hn, op.11 (1784), 1 sym, unpubd, mentioned by Eitner, *I-Mc*.
 Chamber 6 quartetto, 2 vn, va, b, op 6 (1773), as op 1 (The Hague, n.d.), numerous other edns; 6 *quatuors concertants*, str qt, op.9 (1779), as op 6 (The Hague, n.d.); 6 *quatuors d'airs connus*, str qt, op 10 (1780), 6 duos, 2 vn (1788), as op.7 (The Hague, n.d.), as op 9 (London, n.d.), 4 quartetti, str qt, op.14 (London, 1790); 6 trios, 2 vn, va, op 15 (c1792), 3 *quatuors concertants*, 2 vn, vc, b, op 17

(?1800), 4 Quintettos, 2 vn, 2 va, vc (London, n.d.), as op 10, bks 1 and 2

VOCAL

Théodore, ou Le bonheur inattendu (comedy with ariettes, 3, B J Marsollier des Vivetières, after H Kelly False Delicacy), Fontainebleau, 4 March 1785, lost, numerous publ. airs, arrs extant
 Cécilia, ou Les trois tuteurs (comedy with ariettes, 3, Descombes, after F (Burney) d'Arblay), Comédie-Italienne, 14 Dec. 1786, F-P
 Ariettes. Les charmes de la liberté (1768), lost, Le portrait de Clémène, 'à grande symphonie' (1768), lost, other works

Daveluy, Raymond (b Victoriaville, 23 Dec 1926) Canadian organist. He studied the organ with Conrad Letendre in Montreal and Hugh Giles in New York, composition with Gabriel Cusson in Montreal and the horn at the Quebec Conservatory in Montreal. In 1948 he won the Prix d'Europe. He has held the post of organist of several Montreal churches, St John the Baptist (1946-50), the Church of the Immaculate Conception (1951-9) and St Joseph's Oratory (1960-64). He became organ professor at McGill University, Montreal (1965), and professor at the Quebec Conservatory at Trois Rivières (1966). In 1967 he was appointed co-director of the Quebec Conservatory at Montreal and in 1970 he returned to Trois Rivières as director. Daveluy's compositions include three sonatas and three chorale-preludes for organ, as well as works for choir, piano and strings. He has made records of music by Bach, Marchand and Gaspard Corrette

JACQUES THÉRIAULT

Davenant, Sir William (b Oxford, baptized 3 March 1606, d London, 7 April 1668) English dramatist, theatre manager and poet. After his arrival in London in 1622, Davenant found employment in the households of various members of the nobility until in 1634 he entered the service of Charles I's queen. He then provided the texts of the last five court masques performed before the Civil War: *The Temple of Love* (1635), *Britannia triumphans* (1638), *Luminalia* (1638) and *Salmacida spolia* (1640), all staged at Whitehall, and *The Triumphs of the Prince d'Amour* (1636), given in the Middle Temple (edns. of the second and fifth in *Trois masques à la cour de Charles I^{er} d'Angleterre*, ed. M. Lefkowitz, Paris, 1970). The last was unusual in being entirely set to music (by Henry and William Lawes). In December 1638 the king granted Davenant an annual pension of £100, which in effect created him Poet Laureate, although he was never officially so entitled until after his death. Three months later he obtained a royal patent to

build a new theatre 'wherein plays, musical entertainments, scenes or the like presentments may be presented', but this attempt to bring music and spectacle to a wider public came to nothing. He was appointed governor of the Cockpit Theatre in June 1640, but by then he was becoming involved in the approaching Civil War. Five years later he went into exile in France. He was captured by Commonwealth forces while on a voyage to Maryland in 1650 and imprisoned in the Tower. In August 1654 he was released, deeply in debt, he sought to raise money by providing entertainment, even though the staging of plays was banned. In May 1656, at his home, Rutland House, he produced a series of dialogues interspersed with music entitled *The First Dayes Entertainment*. By 3 September 1656 he had prepared an opera, *The Siege of Rhodes*; political events probably prevented its performance then, but it may well have been staged in the spring of 1659 (see Buttrey). It was apparently set mainly in recitative, though each of its five 'entries' ends with a chorus. Although influenced by masques it differs from both the masques and the operas of the period in having a unified, dramatic plot based on a modern, heroic subject. The vocal music was written by Henry Lawes. Henry Cooke and Matthew Locke, the instrumental music by Charles Coleman and George Hudson, unfortunately none of it survives. Davenant staged two further entertainments, *The Cruelty of the Spaniards in Peru* and *The History of Sir Francis Drake*, in a proper theatre, the Cockpit, in 1658-9. Both contained dialogue, spectacle and music but were propaganda pieces with little dramatic action.

After the Restoration, Davenant obtained a patent to set up the Duke's Theatre. He made no attempt, however, to stage another opera, indeed he soon produced *The Siege of Rhodes*, in expanded form, as a spoken play. Nevertheless he had a profound influence on the subsequent development of English opera through his encouragement of the use of incidental music in the plays produced at the Duke's Theatre and particularly through his adaptations of Shakespeare's *Macbeth* (1663) and *The Tempest* (with Dryden, 1667), into which he introduced spectacular musical scenes performed by subsidiary supernatural characters.

 MARGARET LAURIE

Davenport, Francis William (b Wilderslowe, nr. Derby, 9 April 1847; d Scarborough, 1 April 1925). English composer and writer on music. He read law at University College, Oxford, then studied music with Sir George Macfarren, whose only daughter he married. He was a professor of harmony and counterpoint from 1879, and subsequently undertook local examining for the RAM. In 1882 he became a professor at the GSM, and was from 1883 to 1889 honorary secretary of the Musical Association. His Symphony no. 1 in D minor won first prize at the Alexandra Palace competition of 1876, together with Stanford's Symphony in B♭. His *Elements of Music* and *Elements of Harmony* and

Counterpoint have been widely used as basic handbooks. He also wrote another symphony and other orchestral works, a piano trio and pieces for cello and piano and for piano solo.

STEPHEN BANFIELD

Davenport, (Jack) LaNoue (b Dallas, Texas, 26 Jan 1922). American recorder player, editor, teacher and conductor. His early musical experience included playing the trumpet in small jazz bands, in Broadway pit bands, and arranging music for shows in New York. While studying with Erich Katz at the New York College of Music he developed an interest in early music. Since 1949 he has played the recorder, crumhorn, sackbut and viola da gamba and has arranged and directed much medieval and Renaissance music. He has edited for the American Recorder Society, which has published several of his compositions, and later became general editor of *Music for Recorders* (New York). He took part in the début of the New York Pro Musica under Noah Greenberg in 1953 and rejoined them from 1960 until 1970, during this time he became director of the instrumental consort and assistant director of the Renaissance band. He toured internationally with them and took part in many recordings. In 1970 he joined the quartet *Music for a While*. Davenport held an appointment as artist-in-residence at Sarah Lawrence College, New York, and has taught early music at several American universities.

J. M. THOMSON

Davesne [d'Avesne, Davesnes], **Pierre Just** (fl Paris, c1745–66; d after 1783). Cellist and composer, probably of French extraction. A Davesne was given Parisian publishing rights for sonatas, a trio and other instrumental works in 1743, and Brenet (1900) stated that Pierre Davesne had a motet *Venite exultemus* performed at the Concert Spirituel in 1747. Davesne was a member of the Opéra orchestra by 1750, and his motets, symphonies and an oratorio were performed at the Concert Spirituel between 1749 and 1760. He is mentioned in the *Spectacles de Paris* (1754) as a composer of motets which were heard 'with pleasure' and several 'bonnes ouvertures d'opéras comiques'. The anonymous writer added that Davesne was then composing an opera but the object of this reference is unclear; the *Mercure de France* (August 1760) announced the presentation of *Le petit philosophe*, a comedy with couplets by Davesne, and a Huberty catalogue of about 1768 advertised three *opéras comiques* by him. He retired from the Opéra orchestra in 1766 and was still alive in 1784.

Davesne's orchestral and chamber works were well received; in May 1757 the *Mercure de France* announced his collection of 'ariettes Italiennes mises en symphonies' as a new genre whose effect was 'très agréable & fort pittoresque'. His overtures are in three or four movements after the manner of a French suite. Although La Laurencie and Saint-Foix claimed that Davesne was among the first composers to indicate gradual dynamic changes in the score, such changes are

found in earlier works of Italian and French composers, including Rameau's *Hippolyte et Aricie* (1733). He should not be confused with Jean Pierre Davesne (1714–42), the librettist of many comic works.

WORKS

Motets *Venite exultemus*, 1747, *Laudate pueri, Deus misereatur*, c1751, all mentioned by Eitner, *Deus noster*, 1749, lost, *Cantate Domino*, 1749, lost, *Laudate Dominum*, 1749, lost
Other vocal *La conquête de Jéricho*, oratorio, 1760, lost, *Parmi nous la simple nature*, vaudeville in *Mercure de France* (Aug 1755), *Le faux derviche*, *Justine et Mathurin*, *Le triomphe des arts*, opéras comiques, c1768, publ, lost

MARY CYR

Davey, Henry (b Brighton, 29 Nov 1853; d Hove, 28 Aug 1929). English musicologist and pianist. He studied at the Leipzig Conservatory (1874–7), principally with Jadassohn, Reinecke, Richter and Wiedenbach, subsequently returning to Brighton, where he worked as a journalist and taught until 1903. His extensive research was primarily concerned with English music of the 16th and 17th centuries, to which his *History of English Music* (London, 1895, enlarged 2/1921/R1969) is mainly devoted. In 1901 he catalogued the library of the Royal Academy of Music, London, where (with J. S. Shedlock) he unearthed Purcell's manuscript of *The Fairy Queen*. His other writings include the *Student's Musical History* (London, 1891), articles in the *Dictionary of National Biography* and two books on Handel for the general reader. Davey's *History of English Music* is particularly valuable for its excellent accounts, based on his own research, of nearly all the early manuscripts and prints known at the time, and of the Puritan attitude to music. He was also keenly interested in the state of English music, particularly composition; his proposals for its improvement included establishing an opera company in every large town and teaching folksongs to children.

RUTH SMITH

Davico, Vincenzo (b Monaco, 14 Jan 1889; d Rome, 8 Dec 1969). Italian composer, conductor and critic. He studied at Turin and under Reger at the Leipzig Conservatory, gaining a diploma there in 1911. In his early 20s he made his début as a conductor in Rome. From 1918 until 1940 he was resident mainly in Paris; Debussian tendencies, already present in his previous works, were reinforced, though he did much to promote modern Italian music. He subsequently returned to Rome, where he worked for Italian radio. Davico's very uneven output includes several large-scale compositions, some of which achieved success. Yet even in the colourful *La tentation de St Antoine* and the *Requiem per la morte di un povero*, which are notable for many refinements and personal touches in detail, there is a certain self-consciousness in overall conception. For Davico was by nature a miniaturist, at his best in his songs. Often conceived on a tiny scale, these have aptly been

compared to Japanese *tanke* and to the poetry of the imagists and the *crepuscolari*. Taken in quantity they suffer from a certain uniformity: a delicate, shadowy, evanescent atmosphere prevails for much of the time, enhanced in orchestral songs like *Offrande* by evocative instrumentation. Yet from time to time this mood is offset by more forceful accents – for example, in the 'Baccanale' from the *Impressioni liriche* (1908) with its almost Schoenbergian final dissonances, or in the second of the *Trois stipes* with its clanging major 7ths, minor 9ths and tritones. In the postwar *Cinque canzoni d'Isotta* there are even incidental suggestions of serialism in some of the melodic and harmonic contours.

JOHN C. G. WATERHOUSE

David (fl. 1000–975 BC). Founder, king and charismatic ruler of the united kingdom of Israel. He occupies a central position in Jewish and Christian musical tradition.

1 History 2 Tradition

1. HISTORY. The story of David is told in the generally reliable books of *Samuel* which date from nearly contemporary sources and the 5th-century *1 Chronicles*, which contains material of lesser but not totally negligible authenticity. He was obviously a man of special talent. Born the youngest son of Jesse (Isai), a sheep herder from Bethlehem, he acquired by a combination of prowess at arms, vision, opportunism and force of personality the kingship of Judah upon the death of Saul, united it to the northern provinces of Israel, established his court at Jerusalem and subjugated the neighbouring rivals of Israel within an area stretching from the frontier of Mesopotamia to Egypt. His political achievement, which actually showed signs of disintegration in his later life, was never again equalled in ancient Israel. Thus he became the ideal of Jewish kingship and also was closely related to the Messianic ideal. These ideals carried over into Christianity so that a medieval ruler like Charlemagne was referred to as the 'novus David', and Jesus Christ, of course, whom the Christians accepted as the Messiah, was the 'son of David' of the 'tree of Jesse', according to the Gospels.

It is not uncommon to find military leadership and musical ability together in heroes from what might loosely be called the Homeric age of a civilization. Yet the musical achievements associated with David are quite beyond the ordinary. According to *1 Samuel* xvi, 14–23, he first came to the royal court and earned Saul's favour as the skilful player whose music dispelled Saul's evil spirit – an anecdote, incidentally, in conflict with *1 Samuel* xvii.1–18, which has David first coming to Saul's attention as the shepherd boy who slew the Philistine giant Goliath with his sling. Varying traditions attribute at least 73 of the book of *Psalms* 150 to David. These no doubt are exaggerations, but it is certainly possible that David wrote some of them, since he seems definitely to have composed the magnificent dirge over Saul and Jonathan (*2 Samuel* i, 19–27). There is also his association with the musical aspects of the translation of the Ark to Jerusalem and the subsequent establishment of the musical offices of the Temple. The earlier version of these events (*2 Samuel* vi vii), which has David girded only in a linen ephod 'dancing with all his might before the Lord' and 'David with all Israel playing before the Lord on all manner of musical instruments', is entirely credible. On the other hand, the version in *1 Chronicles* xvi–xvi, which adds that David established the Levite orders of Temple musicians, including the leaders Heman, Asaph, Ethan and Idithun, appears for the most part to be a reading of later events into the original history.

To sort out the reality of David's musical involvement from the legendary elements is the concern of two specialized areas of music history. The first, of course, is the history of ancient Jewish music, while the second is the history of musical instruments, since the Old Testament furnishes a remarkably rich and consistent set of references to ancient Middle Eastern musical instruments. However, whatever the precise reality, it is the tradition which is of more general interest in the history of Western music.

2. TRADITION. The decisive factor in the development of this tradition was the continuation of Jewish psalmody in the early Christian church. Indeed the first several centuries of Christianity saw a growth of enthusiasm for the book of *Psalms* which is remarkable. Attesting to this are the lyric effusions of the Church Fathers. Athanasius stated that 'the words of this book include the whole life of man', while Ambrose called a psalm 'the blessing of the people ... the language of the assembly, the voice of the church, the sweet sounding confession of the faith' and Chrysostom exclaimed that wherever and whenever the faithful and clergy assemble to pray 'David is first, middle and last'. This final reference in particular reflects the actual liturgical situation. The book of *Psalms* became so central to Christian worship that the singing of it in its entirety each week became the primary function, the *opus Dei* of monks during the early Middle Ages, the period when monastic culture was totally dominant. During this time the Psalter was used as a reading primer for young clerics, a common test of one's worthiness to accept a bishopric was the recitation of the 150 psalms from memory.

As a result, copies of the Psalter are most common among the medieval manuscripts, and commentaries on the Psalter are the most common type of medieval interpretative texts. This accounts for the most dramatic stage of the David tradition: the emergence of David the musician as one of the primary subjects of medieval art. He appears regularly in the frontispiece of Psalter

manuscripts holding a string instrument of one sort or another, surrounded by his four companion musicians Heman, Asaph, Ethan and Idithun. David's appearance here is a typical instance of the medieval author portrait, but the special musical character of the illustration is determined by the short patristic preface normally placed at the beginning of a psalter. These prefaces, following Eusebius of Caesarea's pattern, paraphrase *1 Chronicles* xiii-xvi and speak of David with his psalter and his four principal musicians from the tribe of Levi with various instruments like the cithara, cynara and shofar. In many psalters he also appears in the elaborately illuminated letter B, which appears at the beginning of the text, the first word of Psalm 1 being 'Beatus'. Occasionally he appears in the illustration of Psalm cl, which contains the exhortation to praise the Lord 'in sono tubae ... in psalterio et cithara ... et organo', etc. This psalm is illustrated with a large group of Hebrew instrumentalists, including in some instances David. It is here that we have our illustrations of him as organist.

These many illustrations, incidentally, while by and large irrelevant to questions of medieval performing practice since they illustrate Old Testament texts, can be of substantial value to the historian of musical instruments if studied with proper caution.

After the 13th century, with the waning of the biblical patristic culture, David moves into the background of musical iconography, to be replaced by the angel musicians of pious medieval legends such as those of the *Legenda aurea* or by subjects inspired by the revival of classical antiquity. However, the David tradition experienced something of a revival with the return to Christian origins in the Protestant Reformation. The revival manifested itself less in art than in literature and music. Luther, for example, emphasized the curing of Saul by David as a precedent for his own strongly felt belief in music's power to dispel melancholy and intensify religious fervour. Theoretical treatises such as Praetorius's *Syntagma musicum*, i, engaged in discussion of Old Testament music in a manner which owes much to patristic psalm commentaries. At the same time, collections of concerted church music, such as Schütz's *Psalmen Davids*, were published along with the more numerous collections of chorales and psalm settings for congregational usage which invoke the name of David in prefaces and titles.

However, as the Enlightenment outlook spread through Europe in the 18th century, the David tradition ceased to exist as a living force in the thinking of most important musical figures. Instead it was from time to time invoked in more sophisticated and historically conscious ways, as, for example, metaphor in Schumann's *Davidshändler* or homage to a remote but intriguing ancient saint in Honegger's *Le roi David*.

JAMES W. MC KINNON

David playing the harp, illuminated capital from a 12th-century psalter (NL-DHk 76.Fr.13, f.29r)

David, Félicien(-César) (b Cadenet, Vaucluse, 13 April 1810; d St Germain-en-Laye, 29 Aug 1876). French composer. His predilection for oriental subjects, reflected particularly well in *Le désert* and *Lalla-Roukh*, influenced generations of later French composers

1 1810-44 2 1844-76

1 1810-44 David's mother died soon after he was born and at the age of five he also lost his father, a capable amateur violinist. Garnier, first oboist at the Paris Opéra, recommended the development of his musical talents, and in 1818 he was sent as a chorister to the *maîtrise* of St Sauveur in Aix-en-Provence. There his teachers for solfège, harmony and singing were the Abbé Michel and, later, Marius Roux; David was soon composing motets, hymns and a string quartet. In 1825 he went to the Jesuit college of St Louis at Aix, and began to discover the music of *opéras comiques* (in the guise of church music) as well as the sacred works of Haydn, Mozart and Cherubini. On the closure of the college in 1828 he worked briefly as assistant conductor in the Aix theatre, then as a lawyer's clerk and then as *maître de chapelle* at his old school, the *maîtrise* of St Sauveur. His inclination at this period was more towards church music than the theatre, although he wrote a number of nocturnes and *romances* in conformity with the fashion of the day.

The young David was clearly restless in temperament. After a year at St Sauveur, he decided to move to Paris. He was interviewed by Cherubini, director of the Paris Conservatoire, who reduced David to tears of inferiority before admitting him to Millault's class for counterpoint. He also attended the classes of Fétis (counterpoint and fugue) and Benoist (organ), studied privately with Reber, and made a meagre living from giving lessons. Hampered by poverty, and having won no prizes at the Conservatoire, he left in 1831 to give his life yet another new direction by joining the SAINT-SIMONIANS.

Whether from a lack of direction in his musical studies or from genuine sympathy with Saint-Simon's doctrines, David became the most prominent musician in a sect whose programme of equality and social realignment received considerable encouragement from the July Revolution of 1830. David was introduced by the painter Paul Justus, and when the Saint-Simoniens split within themselves late in 1831, David followed 'Père' Enfantin to Menilmontant, outside Paris, where the Saint-Simonian community worked out its social and economic programme, while David was charged with composing music for the cult's ceremonies. Choruses for four-part male choir were written for the daily liturgy, and many were later published in *La ruche harmonieuse*. Some occasional pieces mark the arrival or departure of Enfantin, the death of an apostle or the inauguration of a temple.

Indirectly David's association with Saint-Simonism had the most far-reaching effects, for the community was disbanded by government order in 1832 and dispersed in groups. David left with a small band of friends to preach the Saint-Simonian gospel to the orient with the hope of restoring Egypt to its ancient prosperity. They passed through Lyons and Marseilles, then sailed on 22 March 1833 to Constantinople, Smyrna, Jaffa, Jerusalem and finally Egypt, where the ardour of their apostolic mission was gradually superseded by the

Félicien David engraving (1845) by Prunzhofer

fascination of the East, at least in David's mind, for he clearly recognized a powerful source of musical inspiration in the customs, religions and landscape of the countries he visited. The journey was one of adventure and discovery. David took with him a small travelling piano given him by a follower in Lyons, and devoted much time during the voyage to composing songs and piano pieces, mainly of an oriental mould. He stayed nearly two years in Cairo, giving music lessons and exploring the desert. Eventually a recurrence of plague drove him from Egypt, he travelled overland to Beirut and there set sail for Genoa and Marseilles, arriving in June 1835.

In Paris the following year David published at his own expense a collection of *Mélodies orientales* (for the piano) which had little success, partly because a fire destroyed the plates and some of the stock, but also because a public that enjoyed Hugo's *Orientales* had not yet developed more than a passing taste for orientalism in musical form. David's preface explains that the melodies are genuinely oriental, made acceptable to European ears by the addition of harmony. Once again David changed direction; unwilling to embroil himself in Paris, and feeling his muse to be 'too severe and too religious' for the public, he settled in Igny, making the 30-km journey to Paris once a week, on foot. He now turned his attention to instrumental music, composing a series of 24 miniature quintets for strings in four books under the title *Les quatre saisons*, two nonets for brass and his first two symphonies. The First Symphony was played in Paris in 1838 at the Concerts Valentino, and a nonet was given by Musard in 1839, and by Valentino in 1840. Many songs also date from this period, including a number recalling the eastern journey: *Le pirate*, *L'égyptienne* and *Le hédouin*. In 1841 David moved to Paris and completed his third symphony, in E♭.

2. 1844-76. 1844 was the turning-point in David's career. In July he completed *Le désert*, which received

its first performance on 8 December that year in a concert consisting entirely of his own music. Its success was instantaneous, and it initiated a series of descriptive works in many genres that explore the French passion for oriental subjects, a predilection that can be seen in Reyer, Gounod, Bizet, Delibes, Saint-Saëns, Roussel, Messiaen and many others. The genre itself of *Le désert*, an *ode-symphonie*, was novel; each of its three movements, for soloists and male-voice chorus, includes a recitation for speaker at the beginning. Within each movement are a number of separate scenes, describing a desert storm, a prayer to Allah, the caravan, the 'rêverie du soir' and the muezzin's call. The opening is particularly striking with a long-repeated pedal C representing the vast wastes of the desert; the picturesque orchestration won Berlioz's admiration. The last movement, largely a reprise of the first, is the weakest, although one may discern there David's modern concern for formal unity, expressed in a much earlier letter:

Unity is one of the most difficult and yet the most important qualities in a composition. Making a work into a totality with a single, dominant idea appearing in different forms, yet without tiring with too much repetition, this is the composer's art, this is how the imagination must flower without being chained down

The music is rarely strictly oriental in inflection – even the muezzin is diatonic – and the straightforward tunefulness of the hymn to Allah accounts for some of its popularity. Yet the character and colour of the East had left its mark. Berlioz's notice was extravagantly favourable, although his view of David's music was tempered by time.

Riding on the success of *Le désert*, David toured Germany and Austria in 1845, meeting Mendelssohn in Frankfurt am Main and Meyerbeer in Berlin, and attending the Beethoven celebrations in Bonn. He returned with an oratorio, *Moïse au Sinai* (1846), unsuccessful at first despite its desert setting, and then *Christophe Colomb*, a second *ode-symphonie*, which again described the storm and calm, as in *Le désert*, with vigorous sailors' choruses and some fine expressive orchestral writing. *L'Eden* (1848), a *mystère* (oratorio) in two parts, was a further venture in descriptive writing, again in an oriental setting.

From this series of concert works, David ventured finally to write for the stage, and his *La perle du Brésil* appeared at the Opéra-National (later the Théâtre-Lyrique) in 1851; making further play with the descriptive elements of the sea (another storm) and Brazilian local colour, it has but little dramatic vitality. *Herculanum*, his next opera (1859), though more stagily Meyerbeerian, is not among his best works. It was first conceived as a melodrama entitled *La fin du monde*, with a finale depicting the Last Judgment, and was later reworked by Méry into a grand opera, whose first title was *Le dernier amour*. *Herculanum* contrasts the Christian and pagan worlds and concludes with the cataclysmic eruption of Vesuvius. The more modest *Lalla-Roukh* (1862) was much more appropriate to David's gifts; its delicate evocation of Thomas Moore's Kashmir, its dreamy atmosphere and aromatic orchestration mark it as his masterpiece. It quickly became popular and established David's success. *La captive*, similarly set in the East, was withdrawn from rehearsal in 1864 at the request of the librettist and never performed. *Le saphir* (1865), based on Shakespeare's *All's Well that Ends Well*, responded with only moderate

success to Auber's *mot* 'I wish he'd get off his camel' by eschewing any kind of exotic or descriptive element. Discouraged, David never again wrote for the stage.

Public recognition came to David as Officier de la Légion d'honneur in 1862. In 1867 he was awarded a prize of 20,000 francs by the Académie des Beaux Arts for *Herculanum* and *Lalla-Roukh*, and in 1869 he succeeded Berlioz as member of the Institute and also as librarian of the Conservatoire, an office which he discharged with even less devotion and interest than his predecessor.

David retained his Saint-Simonian faith to the end of his days; his loyalty to Enfantin never wavered. Yet apart from the music specially written for the Saint-Simonians in 1832, there is no trace of social dogma or idealism in his work, and he seems content to have exploited his talent for the picturesque and the evocative. In some respects his music echoes Berlioz, especially *Harold en Italie*, but his Romanticism did not extend to the dynamic imagination of the *Symphonie fantastique* or *La damnation de Faust*, and he showed no awareness of the richer harmonic language of Chopin and Liszt. Rather his music falls into the French tradition of being agreeable diversion, strongly coloured but emotionally naive, in this he preceded and greatly influenced a whole school, including Gounod, Thomas, Lalo, Saint-Saëns, Massenet and, probably most strongly, Delibes. René Dumesnil regarded David as second only to Berlioz among French composers of his time, and even if this implies much about the state of French music in this period, it is a judgment with which few would wish to quarrel.

WORKS

(printed works published in Paris)

STAGE

- Le jugement dernier*, ou *La fin du monde* (incidental music, J. Gabriel, E. de Mirecourt), c1849, unperf., F-P.
La perle du Brésil (opéra comique, Gabriel, S. Saint-Etienne), Paris, Opéra-National, 22 Nov 1851 (1852), rev 1859/61 (1873).
Le fermier de Franconville (opéra comique, L. 'A. de Leuven), ?c1857, unperf., P.
Herculanum (opera, J. Méry, T. Hadot), Opéra, 4 March 1859 (1859).
Lalla-Roukh (opéra comique, H. Lucas, M. Carré, after T. Moore), Opéra-Comique, 12 May 1862 (c1863).
La captive (opéra comique, Carré), c1860–64, unperf., vocal score (1883), full score, P.
Le saphir (opéra comique, Carré, Hadot, de Leuven, after Shakespeare *All's Well that Ends Well*), Opéra-Comique, 8 March 1865, vocal score (1865), full score lost.

ODE-SYMPHONIES AND ORATORIOS

- Le désert* (A. Colin), ode-symphonie, T solo, male vv, female vv ad lib. speaker, orch, perf 1844 (1845).
Moïse au Sinai (Saint-Etienne, after a prose sketch by B.-P. Enfantin), oratorio, perf 1846, vocal score (c1853), full score (c1861).
Christophe Colomb (Méry, C. Chabuet, Saint-Etienne), ode-symphonie, perl 1847 (1847).
L'Eden (Méry), *mystère* (oratorio), perf 1848, vocal score (c1853), full score lost.

SAINT-SIMONIAN CHORUSES

(most for men's vv, all acc. pf)

- MM announced for publication under common title *Ménilmontant*, chant religieux (1832–3), some unpubd.
 RH – arr. and pubd with different text in *La ruche harmonieuse* (c1854) [see below].

- Hymne à Saint-Simon [Gloire à celui] (R. Bonheur), MM; Appel (Bergier), MM, Avant et après le repas (E. Barrault), MM, 2 settings, no 1 lost, RH no 2, no 2 unpubd, lost; Le retour du père [Salut] (A. Rousseau), MM, RH no 27, Le nouveau temple (?Barrault), MM, lost; Au travail, lost; Prise d'habit (Enfantin), MM, lost; Prière du matin (Barrault), MM, RH no 7; Prière du soir (G. d'Eichthal), MM, RH no 4, Tout est mort [La mort et l'espérance] (C. Duveyrier), MM; Chant de vie (?Duveyrier), lost; Au peuple (Duveyrier), MM, RH no 1, Ronde [Soldats, ouvriers, bourgeois] (E. Pouyat), MM, RH no 5.
 Danse des astres (Duveyrier, Rousseau), MM, Peuple fier! peuple fort!

(Rousseau), MM, Prière du père (Enfantin), MM, RH no 21, Je ne veux plus être exploité [La voix du peuple] (Rousseau), MM, lost, Frères, levez-vous, MM, unpubd, lost, Paris est là, MM, unpubd, lost, La prison du père (Barraut), MM, RH no 3; Le Compagnonage de la Femme (Barraut), lost, La nuit à la Mère, orientale [Les étoiles] (P Granal), P; Prière ('Les temps sont accomplis'), P, RH no 6, Sérénade, P, Belle, oh belle comme l'ange, P, RH no 10

OTHER CHORAL

- 6 motets religieux, most acc org, 1828 30 (c1853)
La ruche harmonieuse, 30 choruses, men's vv, unacc, incl choruses from Moïse, L'Eden, La perle du Brésil, arrs of Saint-Simonian choruses with new texts, other works from 1828 30 (c1854)
Others Promenade sur le Nil (T de Seynes) (1837), lost; Choeur des conjurés (Saint-Etienne), men's vv, orch/brass, 1842, Pn, pubd in La ruche harmonieuse, no 12, Le sommeil de Paris, 1844, lost; Chant du soir (Saint-Etienne), men's vv, orch, 1844 (c1867), rev of Danse des astres, Hymne à la fraternité (Colin), 1848, same music as Peuple fier!, Hymne à la paix universelle, 1855, lost, Chant du travail (P Delombre), men's vv, unacc (1861), Te Deum [Invocation] (E de Lonlay), men's vv, unacc (1861), Hymne à Dieu, chorus, orch, lost, Les martyrs aux arenes, chorus, orch, lost, Hymne à la paix universelle, choruses, solo vv, orch, perf 1885, lost

OTHER VOCAL

Sacred O Salutaris, Iv, pf, Musée-Bibliothèque Paul Arnaud, Aix
Songs (1836 43) J'ai peur de l'aimer (J Resseguiers), Le bédouin (J Cognat), La pluie [La royée] (F Tournoux), Le jour des morts (A de Lamartine), also orchd, La chanson du pêcheur [Lamento] (T Gautier), Le pirate (Saint-Etienne), Le Rhin allemand (A de Musset), Adieu à Charence (Mme E [Journée de Voves]), L'absence, L'égyptienne (Cognat), also orchd, Saltarelle (A Deschamps), also orchd

Songs (1844 5) Le fou de Bicêtre (M Constantin) [melodrama with sung sections], Les hirondelles (Volny l'Hôtelet), also pubd as duet, also orchd, (La) Réverie (Mme Tournoux de Voves), Oubli (Constantin), also orchd, lost, Le pêcheur à sa nacelle (C Poncy), Le Chybouk [Le Tchibouk] (L Jourdan), also orchd, Le sommeil d'enfant (G Monavon), Les perles d'orient (Gautier, Constantin, E Brazier), collection of 6 songs, Crainte d'amour, lost, F-veillez-vous (G de Larenaudière)

Songs (1846 7) Le captif (Saint-Etienne), Le mourant (Saint-Etienne), Un amour dans les nuages (Constantin), La Bayadère [Joie et tristesse] (L Escudier), Sultan Mahmoud (Gautier), Dormez, Marie (L Barateau), Qui t'aime plus que moi? (Barateau), L'étoile du pêcheur (Chaubet), La fleur et l'oiseau mouche (V Séjour), En chemin (Barateau), Le nuage (E Plouvier), Fleur de bonheur (Barateau), Gardez-vous, mon cœur, de l'aimer [J'ai peur de l'aimer] (Barateau), Magdeleine (Barateau), Partons (E Deschamps), 2vv, L'amour créateur (T Tastet), Formosa (Tastet), l'oublier jamais (Barateau)

Songs (1851-66) Folie (Plouvier), Le ver luisant (Constantin), Le ramier (Constantin), L'ange rebelle (E Hanapier), L'écrit du Bosphore (Chaubet), Cri de charité (Chaubet), also orchd, Gronde, océan [l'océan] (C de Marecourt), also orchd, La Providence à l'homme (Lamartine), La vengeance des fleurs [l'Fl. Fontelle], also orchd, Les roses et le printemps [Le vieillard et les roses] (Fontelle), Plainte amoureuse (Fontelle), Au couvent (F Bouscatel), l'amitié (Chaubet), Amour perdu [Les perles de l'orient, no 6] (Tastet), Dors, petit, Une plainte ('Belle inhumaine')

Songs (? posth) La savoisienne (F l'Heritier)

ORCHESTRAL AND CHAMBER

Orch Sym, F, 1837, F-Pc, Sym, F, 1838, P, Sym, F, 1846), Sym, c, 1849, P, Andante, Scherzo, arr pf (c1853), Solo, F, cornet, orch, ? 1840, P

Chamber Pieces on Arab themes, brass, 1835, lost, Nonet no 1, I, 2 cornets, 4 hn, 2 trbn, ophicleide, 1839, lost, Nonet no 2, c, 2 cornets, 4 hn, 2 trbn, ophicleide, 1839, P, Les quatre saisons, 24 qnts, str qt, vc/db (1845 6); Str Qt, f (1868); 3 str qts, A, d, e (inc), after 1869, P, 3 pf trnos, Ep, d, c (1857), Fantaisie concertant sur Les amours de F Masini, cornet, pf (1843), collab J Forestier, 12 mélodies in 6 bks, vn/vc, pf (1854)

PIANO

Accompagnement de piano dans le choléra, 1832, P, Ménilmontant, mes amours, 2 ser. of waltzes, 1832, 1st ser (1833), 2nd ser lost, Pensées à Ménilmontant, 1832, one piece P, others lost, Mélodies orientales, 22 pieces in 7 bks (1836), bks 1-6 also pubd as Brises d'Orient, some with altered titles (1845), bk 7 also pubd as Les minarets, one with altered title (1845); Mélodie (c1841); Pensée (1845), 5-Smf, L'absence (1845), Andante [Mazurka], by 1845, P, Andante (1845); 3 valse expressives (1846)

Réverie (1848); 2 bluettes (1850); 2 méditations (1850), 3 mélodies valse (1851); La bergeronnette (1853); Les deux amies (1854), Doux souvenir, quatrième mélodie-valse [Mélodie] (1856), 6 esquisses symphoniques (1856); Romance sans paroles [Andantino] (1863), Le soir, rêverie (1864); Allegretto agitato (1864), Tristesse (1869), Henriette, waltz (1873)

Pfaccs to 4 folksongs in collections by P Lamazou, and to 2 chansons

HUGH MACDONALD (text), RALPH P LOCKE (work-list)

David, Ferdinand (b Hamburg, 19 June 1810; d Klosters, Switzerland, 18 July 1873) German violinist, composer and teacher. His birthdate is given in many sources as 19 January but 19 June is more probably correct. He studied the violin with Spohr and theory with Moritz Hauptmann in Kassel from 1823 to 1825. During the next two years he and his sister Louise (1811-50) played in Copenhagen, Leipzig, Dresden and Berlin. In correspondence with Mendelssohn in the summer of 1826, he discussed possible openings in Berlin at either the Royal or Königsstadt theatres. While a violinist at the Königsstadt (1826 9), he became friendly with Mendelssohn, often playing chamber music with him and Julius and Edward Rietz. After a six-year period (1829-35) as a quartet leader under the patronage of Karl von Liphart in Dorpat (Tartu, Estonia), he went to Leipzig in 1836 to assume the leadership of the Gewandhaus orchestra under Mendelssohn, a post he held for the rest of his life. He also became orchestral leader at the Stadttheater and took charge of church music in Leipzig. The same year he married Sophie von Liphart, the daughter of his former patron. He quickly established himself as an important musical figure in Leipzig, playing frequently in sonata and chamber concerts with Mendelssohn and giving regular quartet matinées.

In the spring of 1839 David visited England, where he gave recitals with Moscheles and appeared with the Philharmonic Society in one of his own violin concertos on 18 and 22 March. Moscheles wrote of him: 'This worthy pupil of Spohr played his master's music in a grand and noble style, his own bravuras with faultless power of execution, and his quartet playing at the soirées of Mori and Blagrove delighted everyone with any genuine artistic taste'. After concerts in Manchester and Birmingham and again in London, David played at the Lübeck Festival (26-8 June) before returning to Leipzig. A second visit to England two years later was less successful.

When the Leipzig Conservatory opened on 27 March 1843, David headed a violin department that included

Moritz Klengel and Rudolf Sachse; among his first pupils was Joachim who went to him at Mendelssohn's suggestion. On 13 March 1845 he gave the first performance of Mendelssohn's Violin Concerto, which was subsequently dedicated to him; the success of the work is partly due to David's invaluable advice and suggestions during the period of its composition. Mendelssohn's death in 1847 was a terrible blow to David, who served as a pall-bearer at the funeral. Paul Mendelssohn later asked him to join Moscheles, Hauptmann and Julius Rietz in editing his brother's manuscripts.

In 1851 David considered an appointment at Cologne. By early 1852, however, he had renewed his contract at the Gewandhaus, his official duties were lightened and his salary was increased. During the last 15 years of his life he was increasingly active as a conductor. In 1861 the 25th anniversary of his appointment as leader was celebrated by his pupils and friends, and he received an ovation at the Gewandhaus.

David's health began to fail in his last years, and a nervous affliction often made it painful for him to play. When his physician urged him not to play, he answered: 'I should not wish to live any more if I cannot play the violin'. Despite chest ailments that caused severe breathing difficulties, he continued to perform; his final public appearance was 16 March 1873, when he performed in Mozart's Clarinet Quintet, Mendelssohn's Andante and Scherzo from op.81 and Schubert's D minor Quartet. He died of a heart attack while on the Siloretta glacier near Klosters, where he was on holiday with his children.

Not a virtuoso in the fullest sense of the word, David played with intelligence, musicianship and thorough technical command. Jahn, writing in 1855, criticized his performance for its 'forced mannerisms', the introduction of 'cheap minauderies' to works of Haydn and Mozart, and for undue prominence. But Wasielewski, who was a pupil of David and knew his playing well, found Jahn's judgment unduly harsh. David's most significant achievements were as orchestral leader, teacher and editor. He possessed all the attributes of the ideal leader: an energetic attack, full tone and solid technique, together with responsibility, quickness of perception and musical intelligence, qualities which also made him an excellent conductor.

An imaginative and stimulating teacher, he made the Leipzig Conservatory a centre of violin study. His most famous pupils were Joachim, Wilhelmj and Wasielewski. He prepared excellent editions of studies by Kreutzer, Rode, Fiorillo, Gaviniés and Paganini, and of concertos by Kreutzer and Rode. He brought out the first practical edition of Bach's unaccompanied violin works, which he often played in public. His *Violinschule* (1863) and supplementary études opp.44 and 45 were widely used until the end of the 19th century. Although Moser criticized David's *Hohe Schule des Violinspiels*, which contains works of famous 17th- and 18th-century composers, for its stylistic inaccuracies and interpolations, he nevertheless acknowledged David's important contribution in making these and other works available. His editions of chamber music are particularly valuable and are completely free of editorial eccentricities.

David was a prolific composer. His output includes five concertos and other solo works for violin and orchestra, concert pieces for various wind instruments, a String Sextet and a String Quartet. He also wrote a number of songs and a few choral works. He withdrew

his only opera, *Hans Wacht*, after its second performance (Leipzig, 1852). Only two of his compositions are currently in print: a Suite in G minor for unaccompanied violin op.43 and a Concertino for trombone op.4. He owned several fine violins, including a Guarneri del Gesù, at present owned by Jascha Heifetz, and a Stradivarius of 1698, the 'Lark'.

 ALBERT MELL

Dávid, Gyula (b. Budapest, 6 May 1913) Hungarian composer. He studied composition with Kodály at the Budapest Academy of Music from 1938 and gained practical experience as a violist with the Municipal Orchestra (1940-43) and as conductor at the National Theatre (1945-9). From 1950 to 1960 he was professor of wind chamber music at the academy, appointed professor of chamber music at the Budapest Conservatory in 1964, and in 1967 he took a similar post at the teachers' training college of the Budapest Academy. He has received two Erkel Prizes (1952, 1955) and a Kossuth Prize (1957).

Dávid belongs to the generation of composers whose careers began under the direction of Kodály. While an academy student he engaged in folksong collecting, and it was he who discovered a particular variety of song in Karád, on the basis of which Kodály composed the *Karádi nóták*. Other early and decisive influences included Gregorian chant, Renaissance polyphony and his working experience as an orchestral player, conductor and composer for the stage. As a result of this last his music is always clearly composed and professionally crafted.

It is possible to divide Dávid's output into two main periods. The first, the 'folksong period', lasted until 1960; the most successful work of this phase is the Viola Concerto, though there are other important pieces, including the first two wind quintets, the Flute Sonata, the Piano Sonata and two choral-orchestral song cycles. These works are characterized by classical forms, a healthy combination of homophony and polyphony, and a diatonicism coloured by pentatonic and modal scales. The main change in the second-period compositions is that towards chromaticism and 12-note serialism, a transition well represented by the unaccompanied choral works of 1958-63. At the same time Dávid's structures became more concise, as shown in the scherzo of the Third Symphony and in the Sinfonietta. However, even in his 12-note works he has retained such typical features of his earlier music as classical forms, Hungarian melodies and the aim to make direct contact with his audience.

ANTAI HORONKAY

David, Hans T(theodor) (b Speyer, Palatinate, 8 July 1902, d Ann Arbor, Michigan, 30 Oct 1967) American musicologist of German birth. He studied at the Universities of Tübingen, Göttingen and Berlin; his teachers included Johannes Wolf and Friedrich Ludwig, and he took the doctorate at Berlin in 1928 with a dissertation on Schubert. By the age of 26 he had published work which established him as a leading Bach scholar. He left Germany in 1933 for Holland and in 1936 settled in the USA. In the following year he became music editor of the New York Public Library and he held appointments as lecturer at New York University (1939), professor and head of the department of musicology at Southern Methodist University in Dallas (1945) and professor of music history and theory at the University of Michigan (1950). He summed up his view of Bach in 'Bach: A Portrait in Outline', in *The Bach Reader* (1945), which he wrote with Arthur Mendel. His important editions of and commentaries on Bach's *Die Kunst der Fuge* and *Musicalisches Opfer* show his special interests in contrapuntal and canonic artifice and in cyclical works and unified collections. For the New York Public Library and with the aid of the American Philosophic Society he produced a series of editions of music by the early Moravian settlers in Pennsylvania; for other publishers he also edited numerous choral pieces by masters of the 16th century to the 18th. He was a leading figure in the second generation of American musicologists, bringing the experience of German scholarship to the development of American musicology.

ARTHUR MENDEL

David, Johann Nepomuk (b Eferding, Upper Austria, 30 Nov 1895, d Stuttgart, 22 Dec 1977) Austrian composer and teacher. He received his early music education at the Augustinian monastery of St Florian near Linz and at the Benedictine Gymnasium at Kremsmünster. For a short time before World War I he taught at a primary school, and he returned to teaching after his military service. From 1920 to 1923 he studied composition with Joseph Marx at the Vienna Academy of Music; he then worked in Wels (1924-34) as a primary school teacher, organist and choirmaster, while continuing his study of composition alone. In 1934 he was appointed to the staff of the Leipzig Landeskonservatorium (later Hochschule für Musik), where he was made director in 1942. He was director and composition teacher at the Salzburg Mozarteum from 1945 to 1948, following this he was professor of composition at the Stuttgart Hochschule für Musik (1948-63). Awards made to him include the Franz Liszt Prize of Thuringia (1949), the Prize of the City of Vienna (1951), the Buxtehude Prize of Lubeck (1953), the Austrian State Prize for Music (1953), the Bach Prize of Hamburg (1963), the Mozart Prize of the University of Innsbruck (1966), the Basle Goethe Foundation Prize (1966) and an honorary doctorate of the evangelical theological faculty of Mainz University (1970). David

received membership of the academies of arts in Berlin, Munich, Vienna and Hamburg.

The large quantity of music that David produced before 1927 – including more than 100 chamber pieces and songs, two symphonies, a symphonic prologue and a Concerto grosso on B-A-C-H – was for the most part destroyed by David himself, and those that he retained were lost in the 1943 bombing of Leipzig. Although he did not regret their disappearance, the loss of these early endeavours is unfortunate, not only because they touched genres to which David did not return (such as piano music, the string quartet and the song), but also because they would have afforded an opportunity to see how David developed the influences that were important to him in his student years: Debussy, Ravel, Skryabin and, particularly, Schoenberg, whom David regarded as his most decisively influential master after Marx, and within whose ambit he wrote a symphony that he later described as 'purely atonal'. That part of David's music which has survived manifests, in the main, debts in other directions, to music that he knew from his childhood and adolescence: Gregorian chant, Josquin, Bach and Bruckner, and also Reger, without whose example David's extensive organ output would not have been possible. Together with these influences there are parallels with middle-period Stravinsky and traces of jazz, and David is linked with his contemporary Hindemith by a love for old forms, an abundant use of German folk tunes of the late Middle Ages and Renaissance, and similar extensions to tonal harmony. There are further correspondences between David and Hindemith in the polyphonic foundation of their art and their emphasis on craftsmanship, combined in David with an unequivocal religious belief.

David employed harmonic materials of the 20th century – a broadened and polytonally spread tonality, an emphasis on the 4th in chord construction, and chains of cluster chords – with the ostinato principle, diverse variation techniques and, above all, the contrapuntal arts of imitation, mirror, stretto, augmentation, diminution and cancrizans. Polyphony was such a pervasive presence that, in David's own words, whatever he wrote 'turned into a fugue', signifying that counterpoint was always present in the essential creative idea. This gives his work a speculative aspect, often mystical and sometimes scholastic, but balanced by an intensity of expressiveness and, in the orchestral works, a fullness of individual colour.

The development of David's music shows a general trend from instrumental pieces to organ works, culminating in the years 1927–35, after which instrumental compositions and a *cappella* choral music became increasingly important in his production, but without completely suppressing the output of organ pieces. The 21 volumes of his *Choralwerk* for organ display the strength of his roots in the Lutheran chorale and faithfully mirror the evolution of David's procedures and ideas. Moreover, they constitute a compendium of polyphonic practice and organ technique from Reger onwards. David's major contribution to the renewal of German church music in his numerous liturgical vocal works places him close to Distler and Pepping, and this part of his work bears witness to an ecumenical spirit: alongside his Protestant chorales and motets there are settings of the mass and the requiem.

Polyphony totally imbues even David's orchestral music, with a mastery of counterpoint evident in the

smallest detail – often in the exposition of the thematic material. Movements are often artfully constructed in fugal manner, and the cyclic forms are characteristically monothematic – this is particularly true of the symphonies. However, the motivic kernel is not necessarily presented at the outset: the work may, as in the *Sinfonia breve*, grow towards it, using a technique that David learned from his analysis of Mozart's 'Jupiter' Symphony. Thematic inversion and reversal were important to David's outlook over many years; in as early a work as the Flute Concerto (1934), the main theme is written to be identical with its retrograde. Such a mode of thought in mirror shapes is only a superficial parallel with the procedures of the Second Viennese School, which David, in the latter half of the 1950s, began once again to approach. His music became increasingly permeated with chromatic elements, and his use of 12-note series in the Second Violin Concerto (1957) was a logical culmination. Nevertheless, even in this work David did not commit himself to Schoenberg's 12-note method, the construction of David's series around centres of tonal gravity and their functioning as principal motifs was openly evident, although there was a widening of harmonic thinking. Further, serial writing provided a particular stimulation for David's constantly receptive speculative leanings, as is shown in his works built from series derived from the magic quadrant in Dürer's engraving *Melancholia*, or from the witches' 'One times one' from Goethe's *Faust*. The orchestral waltz *Spiegelkabinett* is a playground for such numerical mirror constructions. David's chamber music moves on a lower level, it brings out his playful, musicianly side, his craftsmanlike perfection.

Over the span of three decades (1927–57) David's music generally aroused the impression of an art essentially directed to history, having strong connections with convention, though embodying modern elements. The later works counteract this view, with music of greater harmonic diversity and stronger, more disjunct melodic shaping, and yet there was no fundamental change of style. David achieved a masterly blending of transmitted tradition and novel musical thinking in a powerfully distinctive manner.

JOSEF HÄUSLER

David, Karl Heinrich (b St Gall, 30 Dec 1884; d Nervi, Italy, 17 May 1951). Swiss composer and critic. He studied the violin and composition at the Cologne Conservatory (1902-4) and in Munich with Thuille. Thereafter he worked as a conductor in minor theatres, taught theory and solfège at the Basle Conservatory (1910-14) and spent periods in Berlin and Cologne. From 1918 he lived in Zurich, where he was editor of the *Schweizerische Musikzeitung* (1928-41) and music critic of the daily paper *Die Tat* (from 1944). He left a large and varied oeuvre, much of it unpublished.

PETER ROSS

David, Thomas Christian (b Wels, 22 Dec 1925) Austrian composer, conductor and teacher, son of Johann Nepomuk David. He attended the Thomasschule and the Hochschule für Musik in Leipzig, the Mozarteum in Salzburg, where he studied the flute, conducting and composition, and the University of Tübingen. From 1945 to 1948 he taught the flute at the Mozarteum. In 1952 he founded the South German Madrigal Choir and the South German Chamber Orchestra in Stuttgart; six years later he was made professor of score-reading, keyboard harmony and composition at the Vienna Academy. He then spent a period in Iran (1967-74) as professor of composition at the University of Teheran and conductor of the national television orchestra. As a flute and harpsichord soloist he has made numerous concert tours. In 1956 he received the prize of the city of Stuttgart for composition and in 1961 the Austrian State Prize. His music draws on the classical Austrian tradition in its formal aspect, but employs an expanded tonal vocabulary. The concerto holds a pre-eminent place in his oeuvre, while the use of concertante elements in general is characteristic of his approach to texture and sonority.

CHARLOTTE ERWIN

Daide, Giovanni (b Naples, 15 Oct 1790; d St Petersburg, 1864) Italian tenor. Son and pupil of the tenor Giacomo Davide, he appeared with his father at Siena in 1808 in Mayr's *Adelaide di Gueschino*. Engagements in Brescia, Padua and Turin followed, and in 1814 he sang Narciso in *Il turco in Italia* at La Scala, the first of many Rossini premières in which he took part. Two years later he went to Naples and sang in the first performances of *Otello* (as Roderigo), *Riccardo e Zoraide*, *Ermione*, *La donna del lago* and *Zelmira*. He also appeared in *Tancredi*, *La gazza ladra*, *Matilde di Shabran*, *Bianca e Faliero*, *Mosè in Egitto*, *Semiramide* and *Otello* (in the title role). In 1830 he appeared in Paris, and the following season in London, but by then his voice, notable for its extreme agility and amazing compass of three octaves up to *bb'*, was beginning to decay. After his retirement he went to St Petersburg to direct the Italian opera.

ELIZABETH FORBES

Davidenko, Alexander Alexandrovich (b Odessa, 13 April 1899; d Moscow, 1 May 1934) Soviet composer. He studied with Glière at the Moscow Conservatory. For a number of years he headed a *prokoll* (production collective) whose aim was to write music in the spirit of the new revolutionary era and to propagate it among the widest possible audiences. Most of his compositions are choral, all his work is closely bound up with the stormy atmosphere of the 1920s, when Soviet music was only beginning to emerge. His music has a vividly expressed folksong element, a poster quality, bold melodic outlines and polyphony which combines Russian folk with Western traditions, the harmony is fresh and inventive. Although dated in theme, his works have retained their value and have had a definite influence on the choral writing of Shostakovich, Sviridov and other Soviet composers.

GALINA GRIGORYEVA

Davidov, Karl Yul'yevich (b Goldingen, Courland [now Kuldiga, Latvia], 15 March 1838; d Moscow, 26 Feb 1889). Russian cellist, composer and administrator. The son of a Jewish doctor and amateur violinist (Davidhoff), he studied mathematics at Moscow University, graduating in June 1858. He then went to Leipzig to study composition with Moritz Hauptmann. Moscheles and Ferdinand David happened to hear him

play, and he was invited to perform his own B minor Concerto with the Gewandhaus Orchestra on 15 December. In the following year he succeeded Friedrich Grützmacher as principal cellist of the orchestra and cello professor at the conservatory; against his will, he was obliged to recognize his vocation as a cellist rather than as a composer. Despite his notorious distaste for intensive practising he was soon acclaimed as one of the greatest players of his day, superb as a soloist, perhaps even finer in chamber music.

Returning to Russia in 1862, Davidov succeeded his former teacher Carl Schubert as professor at the St Petersburg Conservatory in 1863, at the same time he became principal cellist of the Imperial Italian Opera and a member of the Russian Musical Society's Quartet, led after 1868 by Auer. In 1875 he began an opera *Poltava*, with a libretto by V. P. Burenin based on Pushkin's poem, but in 1876, on his appointment as director of the conservatory, he broke off the composition and in 1881 sent the libretto to Tchaikovsky, who used it with modifications for his *Mazeppa*. In January 1887 Davidov was manoeuvred out of the directorship to make way for Rubinstein's return. He settled in Moscow, and in the year before his death wrote the first part of a *Violoncell-Schule* (Leipzig, 1888) and made concert tours in the West and in Russia.

GERALD ABRAHAM

Davidov, Stepan Ivanovich (b 1777; d St Petersburg, 22 May 1825). Russian composer. He received his early musical education from Giuseppe Sarti in St Petersburg, and in 1800 succeeded Fomin at the St Petersburg Drama School; there he taught singing, acted as répétiteur and was required to compose music for stage productions. He left in 1804, was reappointed in 1806 and remained until 1810. In 1815 he was musical director to Count D. N. Sheremetev's private theatre on his estate, Ostankino, near Moscow, and later taught singing at the Moscow Drama School.

Davidov was one of the most important opera composers in Russia during the early years of the 19th century, and is now remembered principally for his contributions to a Russian adaptation of Kauer's highly successful Singspiel *Das Donauweibchen*. Kauer's own music, with some additional numbers by Davidov, was used for part 1 of the adaptation, entitled *Rusalka* and given in St Petersburg in 1803 with a Russian libretto recast from the original German by N. S. Krasnopol'sky. A second part, first performed in 1804, also uses Kauer's score, with some additions by Caterino Cavo. For parts 3 and 4 Davidov composed new

music, part 3, entitled *Lesta, dneprovskaya rusalka* ('Lesta, the Dnepr water nymph'), was performed in St Petersburg in 1805, and the final part (*Rusalka*) appeared two years later. In his music for the opera Davidov made substantial use of folk melodies and imbued his score with a distinctive Russian character. It was immediately successful, and remained popular for many years, part 4 was revived during the 1850s.

Davidov devoted much of his time to writing for the stage, but he also composed some church music, including a setting of the liturgy and 13 vocal concertos. Two early ballets, *Uvenchannaya blagost'* ('Virtue crowned', 1801) and *Zhertoprinosheniye blagodarnosti* ('Thank offering', 1802), were both choreographed by Walberg and probably formed part of the official celebrations for the accession of Alexander I. Davidov also composed incidental music and in 1817 wrote a cantata, *Apollon u Admeta* ('Apollo with Admetus'). Besides one other ballet, *Torzhestvo pobedi* ('The victory celebration', 1814 or 1815), Davidov concentrated on composing comical divertissements during the last ten years of his life. Of these there are five examples, based on subjects of Russian folklore and containing many folk melodies.

GEOFFREY NORRIS

Davidovsky, Mario (b Buenos Aires, 4 March 1934). American composer of Argentinian origin. He studied the violin as a child and began composing at the age of 13. Subsequently he studied composition, theory and history in Buenos Aires, where his principal teacher was Guillermo Graetzer; he also had lessons with Teodoro Fuchs, Erwin Leuchter and Ernesto Epstein. In 1960 he

moved to the USA. He has received many awards, among them two Guggenheim Fellowships, two Rockefeller Fellowships, a Koussevitzky Fellowship, an American Academy of Arts and Letters prize, a Brandeis University Creative Arts Award, a Naumburg Award and a Pulitzer Prize. Several of his works have been commissioned by major institutions. He has taught at the University of Michigan, the Di Tella Institute of Buenos Aires and Yale University, later being appointed associate director of the Columbia-Princeton Electronic Music Center and professor of music at City College of the City University of New York.

Davidovsky is best known for his compositions successfully combining live instrumental performance with recorded electronic sounds, and in particular for the *Synchronisms* nos 1, 3, 5 and 6, a group of lively, virtuoso dialogues. His technique, whether in composing for instruments or for tape, is to a large degree intuitive. For tape music he draws on the full range of 'classical' studio procedures, and he requires performers to match the inventiveness of his electronic composition by using an expanded spectrum of playing techniques. He has sought to obviate the problem of the fixedness of tape music by approaching the extremes of perception with regard to register, speed or textural complexity, so that in repeated hearings the listener will always find something new in the overload of information.

LESTER TRIMBLE

Davidson, George Henry (b ?1800 or 1801, d London, 4 July 1875). English music printer and publisher. He is first known as a general printer from about 1833. He began to publish both literary and musical works about 1844 and in 1847-8 he issued the two volumes of *Davidson's Universal Melodist*, a collection of popular and standard songs of the period. At the same time he republished a collection of Dibdin's songs, edited by George Howarth, which had originally been printed by a different George Davidson and issued by How & Parsons in 1842. From 1850 Davidson had an enormous trade in the issue of cheap editions of popular music. He published much sheet music in the *Musical Treasury* series, and from 1854 he issued *Davidson's Musical Opera Books*, a series of librettos with music of the principal airs. Some of his publications were subsequently transferred and issued with the imprint 'The Musical Bouquet Office'. From 1860 to 1881 the business continued as the Music Publishing Co.

Davidsson, Åke (b Örebro, 4 March 1913). Swedish musicologist, bibliographer and librarian. After working as an organist in Örebro (1931-9) he studied musicology with Moberg, art history and the history of science at Uppsala University (1939-43), and held appointments as assistant librarian (1946) and head of the music department (1957) at Uppsala University Library. He took the doctorate at Uppsala in 1957 with a dissertation on music printing in Sweden before 1750 and was a lecturer in musicology from 1957 to 1962 while continuing his work as librarian, subsequently he was appointed senior lecturer in library science (1963) and keeper of manuscripts (including music) at the university library (1965). Davidsson has published several extremely useful bibliographical works, especially the long-awaited completion of Mitjana's splendid catalogue (begun 40 years before) of the rich collection of music printed before 1700 in Uppsala University Library, the catalogue of the Gimo collection of Italian manuscript music, and some studies in the history of music printing.

Davies. See DAVIS family.

Davies, Ben(jamin Grey) (b Pontardawe, South Wales, 6 Jan 1858; d Bath, 28 March 1943). Welsh tenor. The son of an engineer, he sang as a boy in Caradoc's Choir on one of its visits to Crystal Palace, London (1873), and was brought up to read tonic sol-fa. But it was not until he had won first prize in a solo competition at the Swansea Eisteddfod (1877) that he was able to give up working in a store in Swansea to study under Fiori at the RAM (1878-80), where he quickly established himself as an exponent of impeccable bel canto style. His performances in RAM concerts led to oratorio engage-

ments in Dublin and an invitation to sing in Carl Rosa's opera company. Following his stage début, in Birmingham (Balfé's *Bohemian Girl*, 11 October 1881), he sang a number of minor roles before being engaged in 1887 as the lead tenor in Cellier's *Dorothy*, a role he filled for two years. Less successful, however, was Sullivan's *Ivanhoe* (1891), in which Ben Davies sang the lead at a reputed '£60 for three performances a week, or £80 for four'. In the same year he also appeared as Clément Marot in Messenger's *Basoche*. At the height of his powers in the 1890s, he began increasingly to sing in oratorio. He gave a command performance for Queen Victoria at Windsor on 14 July 1892, and was in demand throughout the country as well as in the USA where he first sang in 1893 at the Chicago World's Fair. The frequent performances he gave in Wales were eagerly awaited, and he appeared often with his well-known (though not related) contemporaries Mary Davies and David Ffrangcon Davies. He was invited regularly to sing at the National Eisteddfod of Wales, for example in Joseph Parry's oratorio *Saul of Tarsus* at Rhyl in 1892. He had a singing career of over 40 years, appearing successfully as late as 1920 in Wallford Davies's Harlech Festival and in the 1926 Handel Festival. He had a superb technique, an appealing and expressive voice, and was distinguished by the clarity of his diction.

OWAIN EDWARDS

Davies, Cecilia (b 1756; d London, 3 July 1836). English soprano. She and her sister Marianne (b 1743 or 1744, d c1818) were well-known performers, as children and adults. Marianne played the harpsichord and flute at London concerts from the age of seven, until 1762, when she began her career as a virtuoso on the glass harmonica. She toured with her parents and sister, going to Ireland, where Cecilia sang in November 1763, and, after both sisters had appeared at a London concert in 1767, to the Continent. When they were in Vienna the Mozart family heard the harmonica and Cecilia studied with Hasse, who wrote music for the sisters to perform. Cecilia became a favourite at court, where she taught the empress's daughters singing and acting. She appeared in Hasse's *Ruggiero* at Naples in 1772, and 'L'Inglesina' was acclaimed as a prima donna at other Italian opera houses. They returned to England; Cecilia sang in the 1773-4 and 1776-7 Italian opera seasons, when Burney heard her and admired her voice, and at the Three Choirs Festival in 1774. They later went back to the Continent and Mount-Edgumbe found them 'unengaged, and poor' in Florence in 1784-5. They returned to England, but after Cecilia had sung at a concert in 1787 and in the 1791 Handel oratorio season they faded into obscurity and poverty.

OLIVE BALDWIN, THELMA WILSON

Davies, David Ivor. See NOVELLO, IVOR.

Davies, Dennis Russell (b Toledo, Ohio, 16 April 1944). American conductor. He made his début as a pianist with the Toledo SO in 1961, going on to study with Robert Goldsand at the Juilliard School. He continued graduate conducting studies with Jean Morel and

Jorge Mester, and his début as a conductor was in 1968, directing the Juilliard Ensemble in New York and at the Spoleto Festival. The Juilliard Ensemble then re-formed itself as the Ensemble, which he continued to conduct, directing the 'New and Newer Music' series at Lincoln Center from 1969. In 1970 he conducted the première of Berio's *Opera* at Santa Fe, the same year he appeared at the Royan Festival. His successful début with the Los Angeles PO in 1972 coincided with his appointment as music director of the St Paul Chamber Orchestra. In 1973 he conducted *Pelléas et Mélisande* for the Netherlands Opera, and appeared at the Aspen and Alaska festivals. He made his Bayreuth début with *Der fliegende Holländer* in 1978, and that year his appointment as musical director of the Württemberg State Opera, Stuttgart, was announced. Davies made the St Paul Orchestra one of the most interesting chamber orchestras in the USA, with a repertory including both pre-Classical and contemporary works. He has given the first performances of works by Cage, Carter, Feldman, Berio, Patterson, Scherchen and Rzewski with the New York-based Ensemble. The precision and detail of his presentation of new works contrasts with his less incisive accounts of earlier music, but later concerts have shown a broadening and integration of these two stylistic approaches.

RICHARD BERNAS

Davies, Dorothy (b Wanganui, 24 Oct 1899). New Zealand pianist and teacher. She studied at the Sydney Conservatorium of Music, at the RCM, London, with Arthur Alexander, and later with Schnabel and Therese Behr. She returned to New Zealand in 1940 and performed extensively in broadcasts and in public concerts as a soloist and an accompanist, later she established master classes. Her taste lay with Bach and the 18th- and 19th-century repertory. Her forthright personality has made a great impact on New Zealand musical life.

FREDERICK PAGE

Davies, Fanny (b Guernsey, 27 June 1861, d London, 1 Sept 1934). English pianist. She spent a year (1882-3) at the Leipzig Conservatory and then two years with Clara Schumann at Frankfurt. Her London début was at the Crystal Palace on 17 October 1885 in Beethoven's Fourth Concerto, and during that season she made several appearances at chamber concerts with Joachim and Piatti. From 1887 she was frequently abroad, appearing in Berlin, Leipzig, Rome, Bonn (the Beethoven House Festival, 1893), Vienna, Bergamo (Donizetti Centenary Festival, 1897), and touring Germany with Gervase Elwes in 1907. In later years she collaborated frequently with Casals and with the Bohemian String Quartet. Late in life she suffered from poverty and ill-health, but was awarded a civil list pension of £90.

Davies was one of the last representatives of the Clara Schumann tradition. The music of Brahms (whom she knew) and of Beethoven and Schumann was featured most prominently in her programmes; she was also a pioneer of English virginal music. She introduced Brahms's opp. 116 and 117 to England, as well as his D minor sonata (with Joachim) and clarinet sonatas and Trio (with Mühlfeld). She was the first pianist to give a recital in Westminster Abbey (July 1921) and she gave recitals in other English cathedrals. Elgar dedicated his Concert Allegro op. 46 to her. A devoted artist, she was described by H. C. Colles (*Grove* 5) as one 'who sought the best in music wherever it might be found, and who

... put the ideal of serving the art before all personal considerations'.

FRANK DAWES

Davies, Harry Parr (b Briton Ferry, 24 May 1914; d London, 14 Oct 1955). Welsh songwriter and pianist. He was educated at Neath, received private music tuition from Walford Davies, and at 17 had had six songs published. He went to London, and at the age of 18 became pianist for Gracie Fields. For her and for George Formby he wrote many songs for the stage and films, including 'Sing as we go', 'Wish me luck (as you wave me goodbye)', 'The sweetest song in the world' and 'Smile when you say goodbye'. He composed scores for several successful revues and musical plays including *Black Velvet* (1939), *The Lisbon Story* (1943), *Dear Miss Phoebe* (1950) and *Blue for a Boy* (1950).

ANDREW LAMB

Davies, Hugh (i) (b c1580; d Hereford, 1644). English cathedral musician and composer. In 1605 he was appointed a vicar-choral of Hereford Cathedral, and may have succeeded William Ingloft as organist there in 1611, although the first reference to Davies as organist is dated 1630. *Awake, up my glory* is highly imitative and rather after the manner of Thomas Tomkins, but technically less assured.

Three verse anthems by an otherwise unknown Richard Davies [Davis] are copied into partbooks of Barnard's *First Book of Selected Church Musick* (1641) used in Hereford Cathedral in the 17th century and now in *GB-Och* (one is also in *GL*).

WORKS

8 anthems: *Awake, up my glory*, 7vv, *GB-GL*, *Lbm*, *US-Nyp*, Defend us Lord, 7vv, *GB-Och*, Have mercy upon me, O God, 7/vvv, *Lm*, *Och*; Lord from thy throne, 7/vvv, *GL*, *T*, Lord, in thy wrath, 7/vvv, *GL*; O sing unto the Lord, 7/vvv, *GL*, Rejoice in the Lord, O ye righteous, 5vv, *Lbm*, *Oh*, *Och*, *US-Nyp*, The peace of God, 7/vvv, *GB-GL*, *T*

By 'Davies': Preces and psalms xxiv, cxxxvi, *GB-GL*.

PETER LE HURAY

Davies, Hugh (Seymour) (ii) (b Exmouth, Devon, 23 April 1943). English composer, instrument inventor, performer and writer on music. After studying music at Oxford University (1961-4) he became Stockhausen's personal assistant and a member of his live electronic music group (1964-6). In 1967 he was appointed director of the electronic music studio at Goldsmiths' College, London. He has been active since 1968 in a number of groups specializing in improvisation and the realization of indeterminate scores. He has devised and constructed over 100 different instruments and sound sculptures, many of which incorporate 'found' objects and cast-off materials. His compositions include works for conventional forces, tape, live electronics and his own instruments.

DAVID ROBERTS

Davies, John Howard (b Moxley, Staffs., 7 Feb 1909; d London, 31 Aug 1972). English music librarian. After holding several posts in public libraries, he became BBC music librarian in 1946 and occupied this office until his death. He was responsible for a great expansion of the library, to serve the multifarious needs of broadcast music throughout the UK, and was editor-in-chief of the published catalogue, of which nine volumes appeared during his term of office. His book *Musicalia* (1966) embodies his wide practical experience of comprehensive reference work. Davies was an active and influential member of the International Association of Music Libraries, in 1971 he was elected president, having served as chairman of its Radio Libraries Commission since 1950.

ALEC HYATT KING

Davies, Marianne. English instrumentalist, sister of CECILIA DAVIES

Davies, Mary (i). See DAVIS, MARY.

Davies, Mary (ii) (b London, 27 Feb 1855; d London, 22 June 1930). Welsh mezzo-soprano. Her father, William Davies 'Mynorydd' (1826-1901), a sculptor in London and a gifted amateur singer, brought her up to perform in chapel and in Welsh Society concerts in which she came to early prominence. She was first taught by Brinley Richards and Megan Watts-Hughes, and was a member of the Welsh Choral Union under John Thomas. She made her professional début at Brinley Richards's concert of 12 June 1873 at the Hanover Square Rooms, and in the same year entered the RAM on a scholarship sponsored by the Welsh Choral Union initially for three years but extended to five in recognition of her outstanding progress. While still a student she began singing at the National Eisteddfod of Wales, the Harlech and Worcester festivals, and at the London Ballad Concerts, with all of which she was associated for many years. She appeared at festivals throughout the country, reaching her peak in the 1880s. She enjoyed particular success as an interpreter of Berlioz's music: in 1880 she sang Marguerite in the complete production of *Faust* under Hallé at Manchester, London and elsewhere, and in 1886 Mary in *L'enfance du Christ* at Crystal Palace. The poor health of her husband William Cadwaladr Davies, first

registrar of the University College of North Wales, Bangor, whom she married in 1888, caused her finally to give up her professional activities in the 1890s. Although she returned to London after her husband's death in 1905, she continued to show her commitment to Welsh music. She was a founder-member and president of the Welsh Folk Song Society in 1906, and was awarded the honorary MusD by the University of Wales in 1916 for her services to her nation's music. She had a clear, rather small voice with a range from *b* to *c'''* and a most attractive stage presence.

OWAIN EDWARDS

Davies, (Albert) Meredith (b Birkenhead, 30 July 1922). English conductor and organist. He was an organ scholar of Keble College, Oxford, and was appointed organist of St Albans Cathedral in 1947, then of Hereford Cathedral from 1949, where he was principal conductor of the Three Choirs Festivals in 1952 and 1955. He took the advanced conducting course under Previtali at the Accademia di S Cecilia, Rome, in 1954 and 1956, and in the latter year was appointed organist at New College, Oxford. He resigned in 1960 to concentrate on conducting, having become conductor of the City of Birmingham Choir from 1957 and associate conductor (later deputy musical director) of the City of Birmingham SO. His Birmingham performance of Britten's *Spring Symphony* won the composer's approval and led to his engagement to conduct *The Rape of Lucretia* and *A Midsummer Night's Dream* at successive Aldeburgh Festivals, 1960-61, and elsewhere, and he shared with Britten the conducting of the *War Requiem* première at Coventry Cathedral (1962) and of many subsequent performances. Davies continued to work with Britten as musical director of the English Opera Group, 1963-5, and conducted Peter Grimes both at Covent Garden and Sadler's Wells, where he also conducted Delius's *A Village Romeo and Juliet* in 1962. This was followed by the opera's first recording under his direction, and later of Delius's *Requiem* and Vaughan Williams's *Riders to the Sea*. He conducted the premières of several concert works by Bennett, Searle and others at successive Cheltenham Festivals during the 1960s, and the première of Berkeley's *Castaway* at the 1967 Aldeburgh Festival. He served as musical director of the Vancouver SO, 1964-71 (he gave the North American première of Britten's *A Midsummer Night's Dream* in 1961), and as conductor of the BBC Training Orchestra in Bristol, 1969-72. His appointment as conductor of the Royal Choral Society from 1972 recognized his special achievement in a tradition mainly of British music and choral music, and his assured handling of both professional and amateur performers. He expressed his views against 'pop' music in church in 'Contemporary Music and the Church', *English Church Music* 1963 (Croydon, 1963). In 1979 he was appointed principal of Trinity College of Music, London.

ARTHUR JACOBS

Davies, Peter Maxwell (b Manchester, 8 Sept 1934). English composer.

1. LIFE. He was educated at Leigh Grammar School, Lancashire, and then at the Royal Manchester College of Music (1952-6) and at Manchester University (1952-7). He was fortunate to be at the RMCM with

several other outstandingly gifted musicians, notably Birtwistle, Goehr and Ogdon. As New Music Manchester, these musicians took a then unfashionable interest in the European avant garde, and undertook performances of modern music from abroad, as well as their own. Later they came frequently to be known simply as the Manchester Group, although their music pursued divergent courses from the first. While at the RMCM Davies wrote his earliest acknowledged works, the Trumpet Sonata and the Five Piano Pieces, which Ogdon played for the first time in Liverpool in 1956.

In 1957 Davies won an Italian government scholarship to study with Petrassi. He spent one and a half years in Rome, and at the end of that time was awarded the Olivetti Prize for his orchestral work *Prolation*, which was performed at the ISCM Festival in Rome in 1959, at about the same time Davies's reputation in Britain was also growing, principally as a result of the performance of his *St Michael Sonata* at the Cheltenham Festival that year. Returning to England, he was appointed director of music at Cirencester Grammar School. He held this post until 1962, when he took up a Harkness Fellowship and went to Princeton to work with Sessions.

The Cirencester period was crucial to Davies's subsequent development, both as composer and performer. In particular it introduced him to the problems of the relationship between composer, performer and audience. Whereas at Manchester and in Rome his associates had been musically his peers, at Cirencester he was dealing with children: concessions were necessary on all fronts. They took three distinct forms, all of germinal importance. First, he began to write in a simpler, clearer style, second, he made special arrangements of works by other composers for the forces available in the school, third, he evolved a teaching method, closely bound up with performance, specifically of his own works. The simplification in style is apparent not only in works written for children (such as the carol sequence *O magnum mysterium*), but in concert works of this period, notably the Five Motets, his earliest acknowledged vocal work. His performing editions led not only (as in the case of Monteverdi's *Vespers*) to original works based on elaborations of material from scores concerned, but also to the habit of thinking in terms of performance when composing, to the formation and direction of performing groups, and to a liberal attitude towards transcription in general – and in particular to the extension of such arrangements into yet other original works. Finally his teaching method attracted publicity and helped bring Davies invitations to lecture and teach elsewhere. While it was certainly no new idea to teach children music by involving them in performance, Davies was by far the most 'advanced' composer with whom English children had ever been confronted in practice. It was convincingly shown that, with due concessions, children were far less resistant to the supposedly repellent features of modern music than were many of their elders.

Davies remained at Princeton from 1962 to 1964. His absence from Britain was framed by two important first performances: of the First Taverner Fantasia at the 1962 Proms (for which it was commissioned), and of the choral-orchestral *Veni Sancte Spiritus* at the 1964 Cheltenham Festival. In 1964 the First Taverner Fantasia was followed by a second, based on material from the first act of the opera which Davies had for

some time been writing on the life of John Taverner. The Second Taverner Fantasia is an even larger and more involved score than *Prolation*, and like the latter it led to both a simplification and a new direction in Davies's work. In 1965 he wrote *The Shepherd's Calendar* for the UNESCO Conference on Music in Education in Sydney and started *Revelation and Fall*, a setting of a Traktl prose poem, and the first of a long series of implicitly or explicitly theatrical works. The following year, 1966, Davies spent as composer-in-residence at the University of Adelaide. In 1967 he returned to live and work in Britain, and his close association with British concert life dates from the formation of the Pierrot Players in that year. This was a group founded with Birtwistle, and based on the forces needed to perform *Pierrot lunaire*, with percussion. Most of Davies's principal works were written for this group, in whole or part, until 1970, when it was disbanded and immediately reformed as the Fires of London, with Davies as sole musical director.

The regular concerts by these groups have provided both a focus and a platform for Davies's creative work. He has, however, also been active elsewhere. In 1969 an orchestral work, *St Thomas Wake*, was commissioned by the city of Dortmund and first performed there in June, and in July 1972 the opera *Taverner* was produced at Covent Garden, 16 years after Davies had first sketched the libretto. He also composed the music for two much publicized films, *The Devils* and *The Boy*

Friend, both directed by Russell, and wrote a ballet, *Nocturnal Dances*, for the Contemporary Ballet Trust.

Since 1970 Davies has done most of his work in Orkney. This is reflected in the long series of scores based on Orcadian or Scottish subject matter or music. Of particular importance have been the writings of George Mackay Brown, a number of which have provided texts for vocal works

2 WORKS Before considering the changes in Davies's music after 1955, one should note that some features have been present throughout. The most obvious is the use of material borrowed from earlier music. In the early works this process is little more than an extension of the serial technique found in the Trumpet Sonata and the Five Piano Pieces. It is as if a parallel were being drawn between the procedures of serialism and the still more rigorous and specialized techniques of medieval music: canon, isorhythm, *prolation* etc. Thus, while *Alma Redemptoris mater* is based on a Sarum plainchant (that used by Dunstable in his motet), the *St Michael Sonata* on Requiem plainchants and *Prolation* on the medieval proportional device whose name it bears, there is no question of any picturesque reference to medieval music as such. The music is rebarbative to a degree and its source material distorted beyond recognition. The first audible sign of medievalism came in the vocal works written for Cirencester, notably *O magnum mysterium*, a sequence including four carols written in a

1. A performance in 1972 of 'Eight Songs for a Mad King', with Judith Pearce (flute) and William Pearson (the King)

distorting mirror version of 15th-century style, and *Te lucis ante terminum*, which suggests psalm-antiphon form, with the *Te lucis* plainchant alternating with instrumental variations on it.

There followed three works based on material and decorative techniques from Monteverdi's *Vespers* (the String Quartet, *Leopardi Fragments* and *Sinfonia*), and then the series of works associated with Taverner's *In Nomine* – the two fantasias, the *Seven In Nomine* and the opera *Taverner* itself which, though not finished until some years later, was conceived at this period. The Second Taverner Fantasia and the suite-like *Shakespeare Music* closed this more or less abstract and cerebral phase in Davies's relationship with early music. Nevertheless, the more theatrical, gestural works that followed lean no less heavily on borrowed material, with the difference that the material is increasingly parodied, in the modern sense as well as the medieval, and parody is now an important associative device, as well as a compositional technique. Thus *Revelation and Fall* combines elaborate mensural canon with parody of Lehar and popular music of Trakl's day, *Antechrist* parodies (in both old and new senses) a 13th-century motet (*Deo confitemini, Domino*), *St Thomas Wake* is a 'foxtrot for orchestra on a pavan by John Bull' and *Vesali icones*, ostensibly a religious work, makes sardonic allusion to Victorian church and salon music and ends with a deliberately hideous jazz paste-up. From this period also date a number of transcriptions in which sharp parody occurs, the *Fantasia and Two Pavans* of Purcell, and Buxtehude's *Also hat Gott die Welt geliebet*.

To some extent the histrionic strain in Maxwell Davies's music since 1965 is a surface explosion, allowing an underlying continuity of style. *Revelation and Fall* certainly sounds quite different from the Second Taverner Fantasia, but its musical procedures are no less complex, and this continuity can be followed through to the works of the early 1970s – notably the *Hymn to St Magnus* – with a hiatus, at the time of *Eight Songs for a Mad King*, in which dramatic gesture informs the very substance of the music. However, this surface change is critical, not only because it gave the works of the late 1960s an extrovert quality that makes them more attractive to an audience, but also because its effects have worked down into the fabric of Davies's style, so that his later pieces, which are not parodistic, are nevertheless gesturally stronger and more dynamic than most of the pre-1965 works.

Revelation and Fall is, plainly, intended to shock. It introduced into Davies's work not only musical satire, but also the visual impedimenta which later became part of the stock-in-trade of the Pierrot Players and the Fires of London. The blood-red nun shrieking through a loud-hailer finds her parallel in later antitheses. In *Vesali icones*, for instance, a naked dancer (already a composite figure representing both the man in Vesalius's anatomical drawings and Christ in the Stations of the Cross) sits at an out-of-tune piano and plays a Victorian hymn, the same dancer gyrates around a cellist, who is chastely clad in flowing white. In *Missa super L'homme armé* a priest declaims St Luke's account of Judas's betrayal with consciously inapt venom while a 78 rpm record playing a sentimental Victorian hymn sticks in the groove. Yet characteristically this work began life as a studio completion of an anonymous 15th-century mass.

2 Peter Maxwell Davies in 1970

Intriguing though they are, these contradictions are not easy to justify as psychological truths. Similarly the musical intrusions often display more virtuosity than stylistic coherence. The strongest undercurrent is that of violence, physical violence, in the expressionist imagery of *Revelation and Fall*, stylistic violence in the Purcell arrangements, technical and musical violence in the agonizing tessitura of *Eight Songs for a Mad King* and the aggressive bravura of *Hymnos*. The effect in performance is of an accusation directed at the audience, a challenge, perhaps, to re-examine its system of values, both musical and ethical. Parody in Davies's music is generally accompanied by religious imagery of a blasphemous or sacrilegious nature, so that musical propriety is implicitly equated with faith and impropriety with betrayal, a central point in the earliest in conception of all the parody works, the opera *Taverner*. At bottom one senses Davies's own uncertainty over relative values, his search for a coherent belief and a coherent style through the conflict between opposed possibilities.

Between the Second Taverner Fantasia and the *Eight Songs for a Mad King* there was indeed a substantial breakdown of method. From an intensive unity of manner and matter, one passes to an extensive disunity, the interesting point being that the composer seems to endorse even design this breakdown by his choice of subject. However, the breakdown is accompanied by a great enrichment of means, not only idiomatic but technical and, not least, textural and colouristic. Plainly the composer was helped technically by the marvellous virtuosity of the Pierrot Players, a fact demonstrated by *Antechrist*, written for their first concert in 1967. Texturally a complete emancipation took place. In the Second Fantasia the polyphony, though well judged, is ruthlessly functional and still shows the influence of serial fragmentation. In subsequent works the growing importance of gesture lends increasing substance, independence and character to individual lines so that a new kind of polyphony is created, of great brilliance and plasticity. Colour achieves a new importance. Bell-sounds dominate *Antechrist* and *L'homme armé* (not to mention *Stedman Caters* and *Stedman Doubles*, which

performance as Lensky. He has a light, lyric tenor, sweetly and stylishly produced, and is an excellent actor. He married the mezzo-soprano Anne Howells in 1966.

ALAN BLYTH

Davies, Tudor (b Cymmer, Glam., 12 Nov 1892; d Penault, Mon., 2 April 1958). Welsh tenor. He studied first while working in the local coalmine, and later at the RCM, London, under Gustave Garcia. After touring in the USA and Canada, he joined the British National Opera Company, making his Covent Garden début on the first night of the 1921 season as Rodolfo in *La bohème*, a role he repeated, opposite Melba, the following year. He created the part of Hugh the Drover in Vaughan Williams's opera at His Majesty's Theatre in 1924, and in 1925 sang in the first performance, at Manchester, of Holst's *At the Boar's Head*. With the Sadler's Wells Company (1931–41) and later the Carl Rosa (1941–6) he sang a wide range of roles until his retirement from opera in 1946. His voice came under strain, but in his prime, as gramophone records show, he sang with ringing, incisive tone and lively temperament.

J. B. STEANE

Davies, Sir (Henry) Walford (b Oswestry, Shropshire, 6 Sept 1869; d Wrington, Somerset, 11 March 1941). English organist, composer and educationist. He began his musical training in the choir of St George's Chapel, Windsor, where for five years he was pupil assistant to Walter Parratt. In 1890 a composition scholarship took him to the Royal College of Music. There he studied with both Parry and Stanford and in 1895 joined the staff as a teacher of counterpoint. During those years he drew attention as a church organist, first at St Anne's, Soho, then at Christ Church, Hampstead, and in 1898 became organist and choirmaster at the Temple Church, a post he held with much distinction for 20 years. From 1903 to 1907 he was conductor of the Bach Choir and in 1917 was appointed director of music to the Royal Air Force: the march he wrote for the RAF is now his best-known composition. His engaging, outgoing personality and flair for the spoken word made him much in demand as a lecturer and adjudicator, and work in these fields took more and more of his time.

As a composer Davies was most active in the first ten years or so of the century. His oratorio *Everyman* (1904), based on the medieval morality play, was widely acclaimed, and he wrote a number of cantatas for the big choral festivals, notably Leeds, Birmingham and the Three Choirs. In point of style these are closely allied to the choral music of Parry and, though sensitively written, are confined within the taste of their period. There is also a good deal of church music, a considerable body of songs and partsongs and a small amount of chamber music. Apart from some of the church music and the organ version of *Solemn Melody* (originally for strings and organ, 1908), virtually nothing has continued to be performed.

Though he never gave up composing, Davies came to recognize that his natural bent lay in other directions. From 1919 to 1926 he was professor of music at the University of Wales. In 1924 he became Gresham Professor of Music and in the same year made his first

broadcast to schools. He also held the post of organist at St George's Chapel, Windsor (1927–32), and served in an advisory capacity at the BBC (1927–39). In 1922 he was knighted and on the death of Elgar (1934) became Master of the King's Musick. By then he was a familiar voice to a great many music-lovers; his popular radio series 'Music and the Ordinary Listener' had begun in 1926, and his gift for revealing the substance of music, analytically but painlessly, had gained him a devoted audience. Something of that gift can be glimpsed in his book *The Pursuit of Music* (London, 1935). No less important were his innumerable broadcasts to schools, for there too he was a pioneer.

H. C. Colles *Walford Davies: a Biography* (Oxford, 1942)

HUGH OTTAWAY

Davis [Davies]. Several musicians of this name were active in Dublin and London during the 18th century, usually no first name is given by which they may be identified. The following attempt to sort them out is based on the known facts and logical conjecture.

The earliest musician called Davis known to have been active in Dublin is John, a vicar-choral at St Patrick's Cathedral, Dublin, 1672: c1675.

A Mrs Davis or Davies (fl 1726–32), probably a pupil of J. C. Pepusch, who sang in his benefit performance at Lincoln's Inn Fields Theatre, London, in 1726–7, went to Dublin in 1729 with Thomas Elrington of the Smock Alley theatre, it may have been she who sang an Israelite in *Esther* and Eurilla in *Acis and Galatea* in Handel's company at the King's Theatre, London, in 1732.

A Mr Davis (fl 1735–48) was a harpsichord player and composer in Dublin, he took part in *Acis and Galatea* at the Aungier Street theatre in 1735, where there were 'dances between the acts composed by him'. He was married to Mrs Davis (fl 1730–48), née Clegg, sister of the violinist John Clegg and the singer Miss Clegg. She first appeared in December 1730 at Baily's Room, Dublin, under her maiden name, advertised as a pupil of Bononcini, in 1733 she sang at a benefit for her brother, and entered upon her main period of popularity as a singer. From 1742 until 1747, when she had an accident, she devoted much energy to the promotion of her daughter's career, and in 1745 sang at her daughter's London début at Hickford's Room. This daughter, known as Miss Davis (b Dublin, c1726), was a child prodigy harpsichordist, who made her début on 5 February 1743 at the age of six; she gave annual benefit concerts in Dublin up to 1750, including one where she sang Italian songs of her own composition. She later gave up harpsichord playing in public but continued to teach.

A different Mrs Davis sang in works by Arne at the Aungier Street theatre, 1743–6; Richard Davis (or Davies) was a flautist, 1739–40.

BRIAN BOYDELL

Davis, Andrew (Frank) (b Ashridge, Herts., 2 Feb 1944). English conductor. After organ studies with Peter Hurford and Piet Kee from the age of 17, he was an organ scholar of King's College, Cambridge (1963–7), taking both the MA and MusB degrees; he then went to the Accademia di S Cecilia, Rome, to study conducting under Franco Ferrara. He took part in the Royal Liverpool PO's 1969 seminar for young British conduc-

tors, and in 1970 began a two-year engagement as associate conductor of the BBC Scottish SO. In October the same year he successfully took over, at five days' notice, a BBC SO London concert which included Janáček's *Glagolitic Mass*. In 1973 he became associate conductor of the New Philharmonia, and in 1975 music director of the Toronto SO. His opera début was at the 1973 Glyndebourne Festival in *Capriccio*, and the following year he toured the Far East with the English Chamber Orchestra and made his American début with the New York PO. He became principal guest conductor of the Royal Liverpool PO in 1974. Davis has been highly praised for his sense of deep expressive values in a steadily expanding repertoire, which includes a much admired recording of Shostakovich's Symphony no 10 with the LPO.

BERNARD JACOBSON

Davis, Sir Colin (Rex) (b Weybridge, 25 Sept 1927). English conductor. He studied the clarinet under Frederick Thurston at the Royal College of Music, and was a bandsman in the Household Cavalry. Unable to play the piano, he was barred from the RCM conducting class, but when a group of RCM players formed the Kalmar Orchestra Davis often conducted it. From that came the Chelsea Opera Group, whose Mozart performances of the early 1950s under Davis, in Oxford and Cambridge, impressed those who heard them for their brilliance, spirit and sensitivity. His inability to play the piano precluded an opera-house apprenticeship, after some lean years in odd jobs (coaching in Cambridge, conducting suburban choirs) he was appointed assistant conductor of the BBC Scottish Orchestra in 1957. He came to prominence at his Sadler's Wells début (*Die Entführung*, 1958), at an Edinburgh Festival concert the following year (Stravinsky's *Dances concertantes* and the Prague Symphony), and later in 1959 at the Festival Hall, taking over *Don Giovanni* from an ill Klemperer, when he met with critical acclaim. In 1960, at Glyndebourne, he conducted *Die Zauberflöte* when Beecham was ill, and in 1961 he was appointed musical director of Sadler's Wells Opera. There he excelled in *Idomeneo*, *The Rake's Progress* and *Oedipus Rex*, and *Fidelio*; his Wagner, Verdi and Puccini were less successful. He always rose to the challenge of a favourite work of his not yet established as a public favourite, he introduced Weill's *Mahagonny*, Pizzetti's *Assassino nella cattedrale* and Janáček's *The Cunning Little Vixen* to the British public, and conducted the première of Bennett's *The Munes of Sulphur* (1963).

In 1964 Davis left Sadler's Wells, and was increasingly in demand as a symphonic conductor, particularly with the LSO. In 1966 he made his Metropolitan Opera début, with *Peter Grimes*. From 1967 to 1971 he was principal conductor of the BBC SO; William Glock was controller of music, and it was an appointment in line with Glock's adventurous policy. Davis became a hero of the young Prom audience. In 1971 he conducted the Berlin PO with great success; in 1972 the Boston SO engaged him as principal guest conductor. He had made his Covent Garden début with the Royal Ballet in 1960 (*La valse* and *The Fairy's Kiss*) and with the opera company in 1965 (*Le nozze di Figaro*), and conducted there, among other works, new productions of *Les troysens* (1969) and of Tippett's *The Midsummer Marriage* (1970), and the première of Tippett's *The*

Colin Davis

Knot Garden (1971). He succeeded Solti as musical director in 1971, and began with a highly acclaimed new *Figaro*, followed by a strong *Don Giovanni*, and in 1974 by a triumphantly successful *La clemenza di Tito*. But his reception in other repertoires (*Nabucco*, *Tannhauser*, the controversial *Ring* cycle of 1974-6) was less than unanimously favourable. His début at the 1977 Bayreuth Festival conducting *Tannhauser* was the first time a British conductor had appeared there. He was made CBE in 1965 and was knighted in 1980.

Davis is a conductor of powerful enthusiasms rather than of steady all-round excellence, and from this come both his strengths and his failings. Mozart, Berlioz, Stravinsky and Tippett are the composers who have drawn from him the strongest response, and in his performances of their music instinct and technical finesse are usually combined. His work then is vivid, passionate, fresh and convincing. The same spirit informs his performances of *Messiah* and *The Seasons*, and of music by Gerhard. But in some works, particularly weightier ones of the Romantic repertoire, his determined buoyancy, his insistence upon advocacy, have defeated their own ends, and, at Covent Garden, it was some seasons before he acquired command of a long Verdian line or of the broader rhythms and sonorities of Wagner. The performances of the music director of an opera company cannot be divorced from their staging; and although at Covent Garden Davis has achieved his finest musical results in productions apt to the idiom of the operas concerned (e.g. *The Knot Garden*, *Figaro*, *Tito*), he has shown a preference for modish, anachronistic stagings, chiming with his expressed intention of jolting the public from any cosy acceptance of the familiar. He has made many gramophone records, including much Mozart, Stravinsky and Tippett, and all Berlioz's major works.

ANDREW PORTER

Davis, Gary ['Blind Gary'] (b Lawrence County, South Carolina, 30 April 1896; d Neutonville, NJ, 5 May 1972). Black American gospel and blues singer and guitarist. He was blinded as a child, but learnt the harmonica, banjo and guitar by the age of seven. His left wrist was broken and incorrectly set, and the distortion enabled him to play unorthodox chords. As a member of a country string band, Davis had a broad repertoire of rags, reels, carnival tunes and blues. His free-flowing blues technique, as in *I'm throwin' up my hand* (1935), had a great influence on other blues guitarists in the eastern USA. In 1933 Davis was ordained a minister in Washington, North Carolina, and afterwards played religious music almost exclusively. *Lord stand by me* (1935) is a rare recording of his preaching style. *Twelve Gates to the City* (1935), with its rolling rhythms, reveals his great speed and fluency on the guitar, alternating thumb and finger picking. In 1940 Davis moved to New York as a street singer in Harlem. *Blow Gabriel* and *If I had my way* (1956) show his outstanding guitar technique with its slides and syncopations, and the husky, somewhat high-pitched and strained voice, interspersed with cries and comments, with which he sang his 'holy blues'. His importance as a leading religious singer was widely recognized only in the late 1960s.

PAUL OLIVER

Davis, Gussie (Lord) (b Dayton, Ohio, 3 Dec 1863; d New York, 18 Oct 1899). Black American songwriter. He had no formal training in music, but picked up basic information about music theory while working as a janitor at the Cincinnati Conservatory. The moderate success of one of his early ballads, *The Lighthouse by the Sea* (Cincinnati, 1886), encouraged him to continue writing. In 1890 he moved to New York and within three years had become one of the top songwriters of Tin Pan Alley. More than a million copies of his most popular song, *In the Baggage Coach Ahead* (New York, 1896), were sold. Davis was the first black songwriter to win international acclaim for his ballads. His songs combined sweet lyrical melodies with heart-wrenching texts, avoiding the ragtime and minstrel song styles that were currently in vogue.

He wrote a large number of ballads, including *The Fatal Wedding* (1893), *Picture 84* (1894), *Down in Poverty Row* (1896) and *My Creole Sue* (1898), all published in New York.

EILEEN SOUTHERN

Davis, Ivan (b Electra, Texas, 4 Feb 1932). American pianist. A graduate of North Texas State University (BMus), he studied the piano with Silvio Scionti. He received a Fulbright Award and worked with Carlo Zecchi at the Accademia di S Cecilia, Rome (1955); on returning to the USA he was privately coached by Horowitz. He won the National Federation of Music Clubs Young Artists (1955), Casella (1958) and Liszt

(1960) competitions, and made his New York debut with a much-praised solo recital at Town Hall in 1959. He received the New York City Handel Medallion in 1961, and made his first appearance with the New York PO at Carnegie Hall the following year. From 1965 to 1971 he was a piano professor at Miami University, and was appointed to the same post at Indiana University, Bloomington, in 1971. He made his London debut in 1968 with a Queen Elizabeth Hall recital and a Festival Hall appearance with the LSO. Davis's recordings of concertos by Liszt, Rakhmaninov and Tchaikovsky display an unashamedly Romantic approach. His strong, metallic sound and brilliant technique are best heard in the most ebullient works of the late 19th-century repertoire.

RICHARD BERNAS

Davis [Davies, Davys], **Mary** [Moll] (b c1650; d after 1698). English soprano, dancer and actress. From her first appearance on the stage as a girl in the early 1660s Mary Davis was particularly praised, by Pepys and others, for her dancing. Late in 1667 her singing of *My lodging it is on the cold ground* so attracted Charles II that it 'Rais'd her from her Bed on the Cold Ground, to a Bed Royal'. As his mistress she sang and danced at court, appearing in Crowne's masque *Calisto* in 1675 and singing Venus in Blow's *Venus and Adonis*, in which her daughter by the king, Lady Mary Tudor, was Cupid. In 1686 she married the French-born composer and woodwind player James Paisible.

Davis, Miles (Dewey) (b Alton, Ill., 25 May 1926). Black American jazz trumpeter. After working with bands in the St Louis area, he travelled to New York and played intermittently with Charlie Parker in 1945. The next year he worked with Benny Carter and Billy Eckstine, but it was as a member of the Parker Quintet, which he joined in 1947, that he established himself as a distinctive though still immature soloist. After leaving Parker the next summer he assembled an orchestra of unconventional instrumentation using arrangements by Gil Evans among others, but this musically impressive venture proved short-lived. In 1949 he appeared at the Paris Jazz Fair with Tadd Dameron's band. The next five years were ones of relative obscurity, though he was active in collaboration with such important figures as Art Blakey and Sonny Rollins. Growing public awareness, typified by his warm reception at the 1955 Newport Jazz Festival, enabled him to form a quintet, and this group, which included John Coltrane, survived until early 1957. That year Davis renewed his partnership with Gil Evans in *Miles Ahead*, the first of a series of orchestral recordings, and visited Paris to improvise the music for Louis Malle's film *Ascenseur pour l'échafaud*. Throughout the 1960s and 1970s he led a series of small groups, being in considerable demand in the USA and at jazz festivals overseas.

Davis is unusual among the important figures of jazz in having remained at the forefront of the avant garde throughout his career, though he remained aloof from the 'free jazz' movement of the 1960s. The unique tonal and melodic characteristics of his essentially lyrical style were only with difficulty accommodated to the fast tempos and dense harmonic changes of bop, and the

Miles Davis

texturally richer settings of the *Birth of the Cool* recordings with Evans (1949) seemed more propitious for the growth of his music. Yet rather than follow that route, perhaps because of economic pressures, Davis concentrated on reconciling his own solo approach with the complexities of the Parker school, a course that may be traced through the pleasing angularities of his recordings made between 1951 and 1954. Working with a regular ensemble from 1955 enabled him to develop a distinctive, carefully organized group manner, showing a quest for refinement that was carried further in the orchestral collaborations with Evans and in the modal explorations of the sextet recording *Kind of Blue* (1959). In the late 1960s Davis changed his music again, at first espousing a fleet, occasionally aharmonic manner typified by *Miles Smiles* (1966), and later the ensemble methods of *Butches Brew* (1970), in which repetitive rhythms and electronically amplified melody instruments combine to create a finely detailed but passive musical fabric.

MICHAEL JAMES

Davison, Archibald Thompson (b Boston, Mass., 11 Oct 1883, d Brant Rock, Mass., 6 Feb 1961). American music educationist and choral conductor. He studied at Harvard University (AB 1906, AM 1907), where he gained his doctorate in 1908 with a dissertation on Debussy's harmony. Except for his studies with Widor in Paris (1908-9) he was associated with Harvard

throughout his career, as Austin Teaching Fellow (1909-10), organist and choirmaster (1910), lecturer (1912-17), assistant professor (1917-20), associate professor (1920-29), professor of choral music (1929-40) and James Edward Ditson Professor of Music (1940-54), he was also curator of the Isham Memorial Library (1941-55). As director of the Harvard Glee Club (1912-33) and the Radcliffe Choral Society (1913-28) he was responsible for introducing the repertory of serious music (including, in particular, Renaissance *a cappella* music) to American collegiate choral societies. Davison published important educational works on choral conducting and composition, and several historical studies of church music and music education. *The Historical Anthology of Music*, compiled in collaboration with Apel, is well known to students and teachers of music history, and his Concord Series of Educational Music was the most widely used in the USA before World War II. His compositions, written early in his career, include two comic operas, a musical, a symphonic poem *Hero and Leander* and a *Tragic Overture*. He was awarded honorary doctorates by Williams College (1933) and Oxford (1934), Harvard (1948), Washington (1953) and Temple (1955) universities, and was made a Fellow of the Royal College of Music in 1931.

JON NEWSOM

Davison, James William (b London, 5 Oct 1813; d Margate, 24 March 1885). English critic. He was the son of a successful actress, Maud Rebecca Duncan, who also sang Scottish ballads, from her Davison learned to sing and to play the piano. Giving up plans for a legal profession, he studied the piano with W. H. Holmes and composition with G. A. Macfarren. He wrote a number of songs and piano pieces, but turned from composition to criticism when in 1842 he founded the *Musical Examiner*. His influence as editor of this weekly paper was increased when he joined *The Times* in 1846. His first article for this paper was on a performance of *Elijah* in Birmingham, and he was music critic of *The Times* until 1879. *The History of 'The Times'* observes that 'he began a tendency in the paper's music criticism, noticeable ever since, to swim against the tide of popular favour', although his tastes were notoriously conser-

vative He also contributed extensively to the *Saturday Review*, the *Pall Mall Gazette* and *The Graphic*. In 1859 he married the pianist Arabella Goddard, who had been his pupil. The elder of their two sons compiled a book of memoirs, *From Mendelssohn to Wagner*

Davul. A large thong-braced, double-headed cylindrical drum of Turkey and many other countries of the Near and Middle East where it is known by related names, including *davul* (Greece), *daule* (Albania), *dohol* (Iran), *dool* (Soviet Armenia) and *tahıl turkı* (Arab countries). The Turkish *davul* is made by stitching together the ends of a large wooden plank (which is steamed or put through a wood-bending mangle) and fitting strengthening hoops internally at both ends of the cylinder. The two heads, one thicker than the other, are usually made from sheepskin or goatskin and are tensioned to each other by a variety of zigzag lacings around the cylinder. Two beaters are used, one large heavy crook- or club-shaped beater called *tokmak* ('mallet') or *çomak* ('stick') and another, smaller and lighter, called *çubuk* ('shoot' or 'twig'). When played the drum is suspended over the left shoulder and the heavier beater used on the thicker head, generally to mark the strong beat or beats. The *davul* is nearly always played with one or more *zurna* (shawms) for outdoor dancing and processional music hence the term *davul zurna*, standing for both the instrumental ensemble and its repertory (see TURKEY, §2(ii)). Sometimes *davul* alone is used to accompany the voice, it is also used as a signalling instrument, for example to announce the beginning and end of each period of fasting during Ramadan. Picken described and discussed Turkish types in detail and mentioned its ceremonial use at *cirit* (a traditional equestrian game), horse racing and wrestling – reminders of its historical association with Islamic chivalry. In discussing its origins he related *davul* to the 8th-century Akkadian term *tabālu*, but added that the main constructional features of the *davul* were known in south Asia 1500 years before the first records of its use in the eastern Mediterranean (14th century). He concluded that the type evolved some time after the earliest migration of Indo-European speakers into western Asia. Variants of the name are used for a variety of barrel-shaped double-headed laced drums in many parts of south Asia, including *dhol* (Afghanistan and Bangladesh), *dhul* or *duhal* (see PAKISTAN, §4) and *dholak* (in India, Pakistan, Trinidad and Surinam).

The Turkish *davul* also migrated westwards as far as Spain where it is known as *atabal* or *atabal turqués*.

Davy, Charles (b Norwich, c1722–3; d Onehouse, Suffolk, 8 April 1797). English divine and writer on miscellaneous subjects. He was educated at Caius College, Cambridge, and held appointments as rector in East Anglia. With Christopher Smear, a friend from Caius College, Davy wrote *An Essay upon the Principles and Powers of Vocal and Instrumental Music*, projected for publication in 1768 but never published. In 1769 he composed the text for two oratorios, *Balaam and Ruth*. Davy, who had studied music theory with a 'Mr S' (probably Benjamin Stillingfleet), hoped his teacher would set the texts. In 1772, while trying 'to gain a just idea of the Grecian music', Davy was led to compare the compass of the voice in song with the compass of the voice in speaking, the result was his *Conjectural Observations on the Origin and Progress of Alphabetic Writing* (London, 1772). His last published work, *Letters upon Subjects of Literature* (Bury St Edmunds, 1787), includes material devoted to music notably a method for tuning the harpsichord and translations from various Greek writings

JAMIE CROY KASSLER

Davy, Gloria (b New York, 29 March 1931). Black American soprano. She studied with Belle Julie Soudent at the Juilliard School, singing the Countess in the American première of *Capriccio* while a graduate student. In 1953 she scored a notable success in a world tour of *Porgy and Bess*. Her Town Hall, New York, début with the Little Orchestra Society followed a year later. She twice won the Marian Anderson Prize. In 1957 she made her European operatic début at Nice, as Aida – also the role of her Metropolitan Opera (1958), Vienna Staatsoper (1959) and Covent Garden (1960) débuts. In 1958 her success as Gluck's Armida in a Milan concert, and in recitals at the Brussels World Fair, established her European career. She is also a performer of contemporary works, notably in the première of Henze's *Nachstücke und Arien* at Donaueschingen (1957) and the 1972 version of Stockhausen's *Momente* (in concert and on record). The latter work especially demonstrates her dramatic authority, linguistic skills and infectious sense of humour

RICHARD BERNAS

Davy, John (b Upton Hellions, nr. Crediton, 23 Dec 1763, d London, 22 Feb 1824). English composer. He was illegitimate and was brought up by a Devonshire blacksmith who played the cello in the local church choir. By the age of 12 he was an articulated pupil of William Jackson, organist of Exeter Cathedral. When he moved to London and began playing the violin in the Covent Garden orchestra Davy made little mark; perhaps he was a timid character. About 1790 he published a set of glees as his op.1, and some simple songs fol-

lowed, but his natural bent was for instrumental music. The theatres were slow to encourage him. His first two theatrical scores were for Sadler's Wells, and neither survives. He was 37 before he got a chance to write an opera for a West End theatre, *What a Blunder!*; this was his most ambitious work. It had the usual spoken dialogue, and a heroine called Leonora in a Spanish setting, the songs and ensembles are unremarkable, but the overture is among the best of its time. The themes are interesting and tautly developed with adventurous modulations in the Viennese style (it survives only in piano arrangement). The overture to *Harlequin Quicksilver* is also of some interest, with a Polacca that looks like the finale of a violin concerto, presumably Davy played it himself.

Because of the vogue for the harp, Davy was able to find a publisher for some well-written divertimentos for harp and piano and an outstanding sonata for harp solo. In the outer movements the second subjects have unusual charm and the themes are developed with a power shown by no other English composer of the time. But Davy had to spend most of his creative energy collaborating with indifferent composers in a succession of trivial Covent Garden operas, ballets and pantomimes, and as he lost heart his own contribution lapsed into near-nonsense. Between 1808 and 1818 he composed hardly anything. His last theatre score, for Shakespeare's *The Tempest*, was no more than a pastiche. By this time Davy was drinking too much, and he died in poverty. Today he is remembered, if at all, for a fine sea-song, 'The Bay of Biscay', introduced in his opera *Spanish Dollars*. In fact the tune was that of a shanty sung to him by the tenor Charles Incledon, who had picked it up when he was a sailor in the 1780s.

WORKS

(all printed works published in London)

All performed in London, all operas have spoken dialogue except those marked *

- CG, Covent Garden SW, Sadler's Wells
 LT, Little Theatre, Haymarket
 A Pennyworth of Wit, or The Wife and the Mistress* (opera, I. Dibdin), SW, 18 April 1796, lost
 Alfred the Great, or The Danish Invasion* (ballet d'action, M. Lonsdale), SW, 4 June 1798, lost
 What a Blunder! (opera, I. G. Holman), LT, 14 Aug 1800, vocal score as op 5 (1800)
 [I.] a] Perouse, or The Desolate Island* (ballet d'action, J. Fawcett), CG, 28 Feb 1801, collab. J. Moorehead, 6 airs arr. pf/harp (1801)
 The Cabinet (opera, T. Dibdin), CG, 9 Feb 1802, collab. J. Braham, D. Corri, Moorehead and W. Reeve, vocal score (1802)
 The Brazen Mask, or Alberto and Rosabella* (ballet d'action, Dibdin and Fawcett), CG, 5 April 1802, collab. J. Mountain, songs (1802)
 The Calves, or Burned Alive (opera, E. Eyre), CG, 2 June 1802, lost
 Red Roy, or Oswyn and Helen* (ballet d'action), LT, 10 Aug 1803, ov. as op 7 (1803)
 The Miller's Maid (opera, F. Waldron), LT, 25 Aug 1804, lost
 Thirty Thousand, or Who's the Richest? (opera, I. Dibdin after M. Edgeworth), CG, 10 Dec 1804, collab. Braham and Reeve, vocal score (1805)
 Harlequin Quicksilver, or The Gnome and the Devil* (pantomime, Dibdin), CG, 26 Dec 1804, ov. and songs (1805)
 Spanish Dollars, or The Priest of the Parish (opera, A. Cherry), CG, 9 May 1805, vocal score (1805)
 Harlequin's Magnet, or The Scandinavian Sorcerer* (pantomime, Dibdin), CG, 30 Dec 1805, songs (1806)
 The Blind Boy (melodrama, W. B. Hewetson), CG, 1 Dec 1808, ov., background music and one song (1806)
 Rob Roy Macgregor, or Auld Lang Syne (opera, I. Pocock after Scott), CG, 12 March 1818, collab. H. R. Bishop, vocal score as op 15 (1819)
 The Fisherman's Hut (melodrama, J. Tobin), Drury Lane, 20 Oct 1819, collab. M. P. King, songs (1819)
 Women's Will - a Riddle (opera, E. L. Swift), CG, 20 July 1820; vocal score as op. 16 (c1820)

The Tempest (Shakespeare), CG, 15 May 1821, ov. and addl music to F. Reynolds's version, with other music by H. Purcell, T. Arne and T. Linley, vocal score (1821)

Songs in other stage works, many pubd singly, incl. Family Quarrels (T. Dibdin), CG, 18 Dec 1802, Harlequin's Habees, or The Hall of Spectres (T. Dibdin), CG, 27 Dec 1802, songs (1802), The Lord of the Manor (J. Burgoyne adds C. Dibdin, jr.), CG, 24 Oct 1812, The Farmer's Wife (C. Dibdin, jr.), CG, 1 Feb 1814, Guv. Manning, or The Gipsy's Prophecy (D. Terry and Scott), CG, 12 March 1816

OTHER VOCAL

- 6 Quartetts for Voices, op 1 (c1790)
 12 Favorite Songs, 1v, pf, op 2 (1792)
 3 Vocal Duets, 2vv, pf (1807)
 6 Madrigals (Shakespeare), 4vv, op 13 (c1814)
 Numerous songs pubd singly, incl. The Brunette, T. fls, vns, bc (c1790), and Just like Love is yonder Rose, 1v, pf (c1801)
 Lord, who shall dwell in thy Tabernacle, vers. anthem, 4/4vv, org., Ponder my words, O Lord, vers. anthem, 2/4vv, org. both 1811, autograph *GB-Lhm*
 2 double and 4 single chants (c1812, autograph *Lhm*)
 Ode for the Anniversary of Nelson's Victory and Death, CG, 21 Nov 1806, ?lost, cited in Loewenberg
 Ah, better far beneath the Spreading Shade, glee, 3vv, Why should the Lover, glee, 3vv, both autograph *Lhm*

INSTRUMENTAL

- A Favorite Duett for 2 Performers, pf/hpd (c1800)
 [4] Divertimentos, harp, pf, op 6 (c1803)
 Grand Sonata, harp (1805)
 Sonata, pf (1820)
 Cease your Funning, the Favorite air in the Beggar's Opera, arr. pf (n.d.)
 Numerous songs arr. pf/hpd, pubd singly

ROGER FISKE

Davy, Richard (b. c1465, d. ?Exeter, c1507) English composer. A Richard Davy was a scholar of Magdalen College, Oxford, from about 1483, and became joint *Informator choristarum* and organist with William Bernard in 1490-91; in the following year he was sole *Informator* and one of the organists. He is next heard of as a member of the college of vicars-choral at Exeter Cathedral from 1497 to 1506. His name is not on a list drawn up in 1509. It is almost certain that this man is the composer, and that he is not to be identified with the Davy who was chaplain to Sir William Boleyn and his son Sir Thomas Boleyn from 1501 to 1516.

Davy was one of the most accomplished English composers of the late 15th century. According to a note in the Eton Choirbook (*GB-WRec*, 178), he composed the antiphon *O Domini caeli terraeque* at Magdalen College in a single day. Although he only once ventured beyond live-part writing, his work has great fluency and consistency. Historically his most interesting achievement is his four-voice setting of the Passion according to St Matthew. This follows 15th-century precedent in setting the entire *Synagoga* part, and not merely the *voces turbarum* as in later compositions. The first 11 of its 42 choruses are now entirely missing (they have been supplied in Harrison's edition from the music of later sections), while of nos 12-23 only two parts are extant. Although its cuphonous polyphony is something of a barrier to dramatic expression, Davy's style comes into its own in such places as the final 'Vere Filius Dei erat iste' and in Pilate's disclaimer (in which a certain irony is perceptible. see ex. 1, p. 286).

Davys, Mary. See DAVIS, MARY.

Dawidha. A term for the Psalter in Assyrian Church music; see SYRIAN CHURCH MUSIC.

Dawson, Frederick (b Leeds, 16 July 1868; d Lymm, Cheshire, 23 Oct 1940). English pianist, teacher and conductor. He studied chiefly with his father, Hallé and Dannreuther. He was ten years old when his ability to play the whole of Bach's '48' from memory brought him to the notice of Hallé. A pianist in the large style, he made a great reputation, particularly in London, Berlin and Vienna. Dawson studied Grieg's Concerto with the composer and played it at the Grieg concert given by the Philharmonic Society in 1897. His enterprising repertory ranged from English virginal music to Debussy and included both Brahms's concertos, which he played in one programme at St James's Hall in 1898. In his later years his appearances were comparatively few owing to ill-health.

Dawson conducted the Huddersfield Philharmonic Society in the 1920s, was appointed to the teaching staff of the Royal Manchester College of Music at its founding in 1893 and also taught at the RCM, London. He published *The Pianoforte* (Glasgow, 1922), cadenzas to

Beethoven's concertos opp.37 and 58, and edited some posthumous pieces by William Baunes.

H C COILES, FRANK DAWES

Dawson, William Levi (b Anniston, Alabama, 23 Sept 1899) Black American composer and conductor. He graduated from Tuskegee Institute, then obtained degrees from the Horner Institute of Fine Arts, Kansas City (BMus), and the American Conservatory of Music, Chicago (MMus). He played the trombone in the Chicago Civic Orchestra and taught in several colleges before returning to Tuskegee as director of music. Dawson's Tuskegee Choir gave many concerts in the USA and in Europe, establishing his reputation as a conductor. After he retired from Tuskegee in 1955 he was sent to Spain by the American Department of State to tour as a conductor. His music, written in a neo-Romantic style, consistently employs Negro folksong idioms.

His works include a well-known *Negro Folk Symphony* (1934), published by Shawnee Press, and numerous compositions for solo voice and for chorus, most of which are published by Kjos and Warner.

EILEEN SOUTHERN

Day, Alfred (b London, Jan 1810; d London, 11 Feb 1849). English music theorist. His father discouraged his musical interests in favour of medicine, which according to early biographical accounts he studied in London and Paris, receiving a diploma in homeopathic medicine from Heidelberg. Only his death certificate, which lists his profession as 'surgeon', indicates that he

actually practised medicine. His only music teacher was W. H. Kearns, but he associated with several talented musical contemporaries; the most important of them was Sir George Alexander Macfarren at whose insistence Day began the preparation of his controversial *Treatise on Harmony*. Work on the treatise was begun in 1840, the year in which Day became a critic of new music for the *Musical World*. The periodical's editor George Macfarren, his good friend's father, soon became dissatisfied with the 'laconical bitterness' of Day's unsigned reviews and appointed J. W. Davison as his replacement. The publication of Day's treatise (London, 1845, 2/1885 ed. G. A. Macfarren) was greeted with critical disdain, and for many years Macfarren was the only proponent of Day's theoretical views. When he was questioned about the efficacy of his teaching Day's hypotheses, Macfarren went so far as to resign his appointment at the Royal Academy of Music because he refused to 'succumb by teaching contrary to his convictions'.

Day believed that two styles of harmonic writing existed: the diatonic or strict style, in which all dissonances needed careful preparation, and the chromatic or free style, in which dissonances might be used freely and 'notes foreign to the diatonic scales [could be introduced] without the key being changed'. He advocated a new system of figured bass symbols in which letters placed below the bass line would show the precise relationship of the bass to the root of the chord - for example, the letter 'A' indicated that the root was in the bass, 'B' showed the presence of the third in the bass, and so on.

All chords in the key, in his view, were generated from one of three 'roots' or 'fundamentals': the tonic, dominant or supertonic. By superimposing as many as six 3rds on each of these notes, Day was able to explain the existence of other chords in a manner which, in many instances, differed markedly from conventionally accepted rationalizations. Only the simultaneities in ex 1 were indigenous to his theory of harmony. The resultant sonorities were virtually parallel, the notable exception being that an 11th chord could occur only on the dominant.

Many unnecessary intricacies resulted from the rather rigid and arbitrary construction of these fundamental combinations. For example, what is conventionally seen as a C major or minor subdominant chord (such as F-A(A \flat)-C) was interpreted by Day as a dominant chord containing a 7th, a major or minor 9th and an 11th, with the root, 3rd and 5th omitted. The same construction with the 5th superimposed would be explained as an added 6th (such as F-A-C-D). The augmented 6th, however, was derived from two roots. The interval A \flat -F \sharp in Day's system contains the minor 9th of the fundamental G and the major 3rd of the root D. Day also perceived an augmented triad as the root, 3rd and minor 13th of a fundamental sonority (e.g. C-E-A \flat -G \sharp); consequently, he believed that composers generally spelt augmented chords incorrectly. He described a minor key as the result of arbitrary, not natural, changes of the 3rd and 6th degrees of the major scale;

for consistency, he then advocated the exclusive use of the harmonic form of the minor scale.

Although Day's theories, in many respects, cloud rather than clarify the essential principles of harmony, they exercised a profound influence on musical pedagogy in England through the subsequent writings of Macfarren, Ouseley and the early works of Ebenezer Prout.

PATRICIA COLLINS JONES

Day, John (b Dunwich, Suffolk, 1522; d Walden, Essex, 23 July 1584) English printer, father of Richard Day. He was one of the most successful printers of his generation, but his music printing was almost entirely limited to *The Whole Booke of Psalmes, Collected into English Metre* by T. Sternhold, I. Hopkins & Others . . . with *Apit Notes to Synge them withal*, known as the Sternhold-Hopkins psalter. Day first published it in 1562, under the terms of a monopoly granted to him by the crown in 1559 that gave him sole right to print the work, which became extremely popular. He had the patent of monopoly renewed in 1567 and 1577, the latter renewal extending the terms to include his son, RICHARD DAY, who had joined him that year. Day acquired several other printing monopolies on which he built a virtual printing empire, becoming master of the Stationers' Company in 1580. In 1583 he is reported as owning four presses, from which he produced 36 separate editions of the Sternhold-Hopkins psalter. Whether or not he played any part in the choice of the psalm tunes is difficult to determine, but there is ample evidence that he regarded the book as a business asset. His only secular music printing was Thomas Whythorne's *Songes for Three, Fouer and Five Voyces* (1571) which was a commercial failure. It is difficult to accept Whythorne's claim that the book failed because it had been 'very ill printed' as all the products of the Day press are of a high standard and he must have employed journeymen of great skill. His music books show a clean, crisp impression with spacious layout and accurate registration. He had two shops in London, one in Aldersgate and another in St Paul's Churchyard; his son succeeded him when he died.

MIRIAM MILLER

Day, Richard (b London, 21 Dec 1552; d before 1607). English music publisher, son of JOHN DAY. He was trained as a scholar, becoming a Fellow of King's

College, Cambridge, in 1574. Family pressures obliged him to return to his father's business in London, and he was admitted to the Stationers' Company in 1577. With his father he held several printing monopolies, including one that gave them sole right to print the Sternhold-Hopkins psalter, in which the metrical psalms were set to music. After his father's death in 1584 Day never printed this work himself, but assigned his rights to other printers; he authorized 46 separate printings, bringing the total printed under the monopoly to 82. The work was continually pirated and Day was involved in several legal actions. When Thomas Morley acquired a general music-printing monopoly from the queen in 1598, the terms conflicted with Day's. Morley published Richard Alison's *Psalmes of David in Metre* (1599), in which Alison had reset the old church tunes and added an instrumental accompaniment. Day regarded this as an infringement of his long-standing monopoly, and a dispute ensued between them which the Bishop of London attempted to settle. He did not succeed, and whether any settlement was reached is not known. In 1604 James I sold all the printing monopolies to the Stationers' Company, the psalter monopoly among them. Day's fate is obscure; he had taken holy orders in 1583, becoming vicar of Reigate, but left the following year.

MIRIAM MILLER

Daza [Daça], **Esteban** (fl. Valladolid, 1575). Spanish composer. On 29 June 1575 he was granted a royal printing privilege to publish *El Parnasso*, a book of tablature for the vihuela. The printing of the work was completed on 12 April 1576 (*RISM* 1578^a/R1978) and copies sold for 130 maravedis. As Daza held the copyright for ten years, he presumably paid the printing costs.

El Parnasso is divided into three books. The first contains fantasias, 14 in four parts, four in three parts and four consisting largely of passage work, 'to develop the hands'. Like other vihuelists, Daza named the *tono* (mode) of each fantasia and indicated the place (course and fret) on the instrument where the clef of *F* *faut* or of *C* *solfaut* is found – necessary information, for Daza and the other vihuelists intabulated their music without regard for a consistent association of mode and pitch. Daza's fantasias are elegant, reserved in manner, usually consisting of a series of points of imitation, each set off from the other by a full cadence. Unlike fantasias of earlier vihuelists, these are rather predictable, they lack the thematic variety, strong expressive contrasts and the cogent musical arguments characteristic of the works of such masters as Narváez and Fuenllana.

The second book of *El Parnasso* is devoted to intabulations of *motets* (by Crecquillon, Maillard, the Guerreros, Simon Boyleau and others). One of the intabulated *voice* parts, usually the tenor, is distinguished from the others by means of dots placed next to its tablature numbers; because it is meant to be sung as well as played by the vihuelist, the text is printed below the tablature 'staff'. Most of the pieces are little more than literal reductions; sometimes the opening phrase of a

motet has been elaborated.

The third book contains intabulations of secular songs: *sonetos*, *villanesecas*, *villancicos*, two *canciones francesas* and a *romance*. Most, if not all, are Daza's arrangements of partsongs by other composers and were not originally conceived as solo songs with vihuela accompaniment. Daza's work is a rather bland conclusion to the series of vihuela tablatures that began so brilliantly with Luis de Milán's in 1536 and that includes some of the finest 16th-century instrumental music.

De Amicis [De Amicis-Buonsollazzi], **Anna Lucia** (b. Naples, c.1733, d. Naples, 1816). Italian soprano. Taught by her father, she began performing in comic operas with her family (Pisa and Florence, 1754; Bologna, 1755; Paris, 1758; Brussels, 1759; Dublin, 1762). In 1762 at the King's Theatre, London 'she acted and sang for the whole family' (Burney). Making her debut there as a serious singer in J. C. Bach's *Orione* (19 February 1763), she left comic opera. As prima donna in Milan (1764-5), Venice (1764), Innsbruck (August 1765) and Naples (1766), De Amicis became involved in theatrical disputes and wished to retire. However, after her 1768 marriage to the Florentine physician Francesco Buonsollazzi she resumed her career, singing in seven productions in Venice (1768-9, 1770-71) and eight in Naples (1769-70, 1771-2) including Jommelli's *Armida abbandonata* and *Ifigenia in Tauride*. Mozart, who heard her in both cities, praised her highly. In Milan she ensured the success of Mozart's *Lucio Silla* (26 December 1772). Engagements in Naples (nine productions, 1773-6), Turin (four operas, 1776-9) and the Italian première of Gluck's *Alceste* (Bologna, 9 May 1778) concluded her brilliant career. She sang for at least ten years thereafter in private Neapolitan productions.

De Amicis amazed listeners with her vocal agility. Burney described her as the first to sing staccato divisions and the first to 'go up to E flat in altissimo, with true, clear, and powerful real voice'. She was equally impressive as an actress. Metastasio himself wrote that 'among the dramatic heroines . . . there was absolutely no one but the signora De Amicis suited to portray the character . . . with the fire, the boldness, the frankness and the expression necessary'.

KATHLEEN KUZMICK HANSELL

Dean, Stafford (Roderick) (b Kingswood, Surrey, 20 June 1937). English bass. He studied with Gordon Clinton at the Royal College of Music, thereafter privately with Howell Glynn and Otakar Kraus. After touring with Opera for All, he made his Glyndebourne début in 1964 (Lictor in *L'incoronazione di Poppea*). His first role at Sadler's Wells the same year was Zuniga (*Carmen*), followed by, among others, Daland, Sparafucile, Colline, and Pluto in Monteverdi's *Orfeo*. At Covent Garden he has played Masetto (début 1969) and an Ancient (*The Midsummer Marriage*); but the two parts that have most advanced an international career have been Leporello (at the Coliseum opening night in August 1968, Stuttgart and San Francisco) and Figaro (for Scottish Opera, widely in Europe and, in February 1976, at the Metropolitan). His good-humoured, sturdily conceived portrayals are lent individuality by the sonorous darkness of his tone, also well suited to oratorio and Monteverdi (whose *Orfeo* and *Il ballo dell'ingrate* are among his recordings).

MAX LOPPERT

Dean, Thomas. See DIANE, THOMAS

Dean, Winton (Basil) (b Birkenhead, 18 March 1916). English writer on music. A son of Basil Dean, the theatre producer, he was educated at Harrow and King's College, Cambridge, where he read classics and English (BA 1938, MA 1941), his music studies were private, helped and encouraged by Philip Radcliffe. At Cambridge he saw and participated in some of the Handel oratorio stagings of the 1930s, and these implanted a deep feeling for Handel as a dramatic composer. After World War II Dean began to become known as a writer on music and especially on 19th-century opera. His first book was a study of Bizet (1948) in the Master Musicians series, notable for its balanced criticism and its penetrating discussion of the composer's development as a musical dramatist (the book was later expanded to incorporate new documentary material). He became a regular contributor of articles and reviews to various periodicals, notably the *Musical Times* and *Opera* (four articles from the latter are reprinted in *The Opera Bedside Book*, 1965), his criticism of opera performances in the *Musical Times* over a long period is notable for its vigour and elegance of expression and its clear view of the nature of musical drama.

Dean's most important single work is his substantial study *Handel's Dramatic Oratorios and Masques* (1959), which, with its thorough examination of source material and its breadth of intellectual approach, set new standards in English musical scholarship and in Handel criticism. In it he argued persuasively that Handel's dramatic gifts found their fullest expression in the oratorios of his mature years, and that many of these works were apt for stage revival. Dean's book did much to stimulate interest in Britain and elsewhere in the staging of Handel's works, his operas as well as his oratorios; and when he was invited to spend a year (1965-6) at the University of California, Berkeley, as Ernest Bloch Professor, his lectures were on the style and dramatic method of Handel's operas (published in 1969 as *Handel and the Opera Seria*). Work on a substantial study of the operas, in collaboration with J. Merrill Knapp, was started in the late 1960s. Dean has prepared a number of editions, including (in collabora-

tion with Sarah Fuller) Handel's *Giulio Cesare in Egitto*. While Handel has remained at the centre of his studies, Dean has written with equal distinction on other topics, notably French opera in the post-Revolution period and Italian opera in the decades preceding Verdi. He is the contributor on early 19th-century opera to the *New Oxford History of Music*. viii

STANLEY SADIH

Deane, Basil (b Bangor, N. Ireland, 27 May 1928). British musicologist. From 1946 to 1951 he studied at the Queen's University, Belfast (BA 1949, BMus 1951), and he was appointed assistant lecturer at Glasgow University in 1953. In 1956 he became a full lecturer, and in 1959 (the year in which he took the doctorate at Glasgow University) he was appointed senior lecturer at Melbourne University. He returned to England in 1968 and was appointed James Rossiter Hoyle Professor of Music at Sheffield University. He became professor of music at Manchester University in 1975 and director of music of the Arts Council in 1980.

Deane's special interests range from Roussel, the subject of his dissertation and his first book, to German Baroque opera (he has prepared performing versions of works by Keiser); he has also particularly studied the period around 1800, notably Cherubini, the relationship between French and German music in the post-Revolution period, and Beethoven, on whose early development he has worked and whose symphonies he discussed in a perceptive essay in *The Beethoven Companion*.

DAVID SCOTT

Deane [Dean], **Thomas** (b 1686 or 1687). English musician. There were possibly at least two musicians of this name in the first half of the 18th century. A Thomas Deane took the Oxford degree of DMus on 9 July 1731, and on his matriculation the day before he described himself as aged 44, 'the son of William Deane of Notts, clericus'. Hawkins (*History*, II, p.768) identified this graduate as 'organist of Warwick and Coventry' and a contributor to *The Division Violin*.

Whether or not the Oxford DMus was the contributor of the 'Allmand by Mr Dean' found in *The Second Part of The Division Violin* (London, 1705), that contributor is doubtless the same 'Mr Dean' who took part in concerts in London as a violinist on 3 September and 30 November 1709 and 15 April 1710 (*RMARC*, I, 1961/R1968). The advertisement for the second of these made a point of stating that Dean and one Bulkley would play a solo (sic) by Corelli, which Burney (*History*, II, p.985) said was the earliest known advertisement of such a performance in England.

The Oxford DMus preceded Capel Bond as organist of St Michael's, Coventry (now Coventry Cathedral), from 1733 to 1749, and he was organist of Warwick Parish Church from 1719 to 1744, when he was dismissed.

A 'Thomas Deane of Worcester' wrote incidental instrumental music for Oldmixon's *The Governor of Cyprus* (1703) which was engraved in four instrumental parts. The Oxford DMus would have been only about 16 in 1703, but the composer of this music may be the same as the violinist mentioned above.

The one or more figures discussed here are in any event entirely different from the Thomas Deane who was organist of Bristol Cathedral from 1640 to 1668.

Eitner (*Quellen-Lexikon*) appears to have confused a Thomas Deane with a certain William Deane by whom there is a small amount of church music surviving in outline organ score (at *GB-Och*).

WATKINS SHAW

DeAngelis, Angelo ['Rivotorto'] (b Este; d ?Padua, c1825). Italian composer. Possibly a pupil of F. A. Vallotti or (according to Garbelotto) G. Saratelli, he became second organist at the Paduan basilica of S. Antonio about 1770. When Vallotti died in January 1780 and A. Ricci succeeded him on 26 April as the basilica's *maestro di cappella*, DeAngelis resigned his post as organist and competed for the position of *maestro di cappella* at Padua Cathedral, S. Maria Assunta; although DeAngelis received as many votes as his two competitors (according to cathedral documents of 9 December 1780), F. A. Marchetti was selected *maestro* on 12 May 1781. No known sources indicate subsequent employment in Padua except for a libretto of his sacred cantata *Davide* of 1787 describing him (apparently erroneously) as organist at the basilica of S. Antonio and *maestro* of the Nobile Collegio di Santa Croce.

In April 1828, a few years after his death, his brother Antonio gave manuscript copies of Angelo's sacred

music to the cathedral library on condition that it be performed there from time to time. The surprisingly large collection of scores shows DeAngelis as a skilled craftsman who often wrote demanding parts for solo voices and accompanying orchestral instruments.

WORKS

DRAMATIC

- Santa Barbara (sacred drama), Padua, Seminario, 1770.
 L'astratto per il lotto (dramma giocoso), Padua, Nuovo, May 1775.
 Davide (sacred drama), Padua, Collegio di Santa Croce, 18 July 1787.

SACRED VOCAL

(in *I-Pc* unless otherwise indicated, most with orch.)

- Mass, 3vv, 3 Kyrie Gloria-Credo groups, 2 for 3vv, 1 for 4vv, 8 Kyrie, 6 for 4vv, 2 for 5vv, 10 Gloria, 4vv (1 in *I-Vnm*), 4 Qui tollis, 1 for S solo, 3 for T solo, 2 Qui sedes, 1 for T solo, 1 for B solo, 3 Quoniam, 1 for T solo, 1 for B solo, 1 for 3vv, 8 Credo, 4vv.
 3 Requiems, 2 for 4vv, 1 for 5vv, Dies irae, 4vv, Libera me, 4vv.
 Antiphons of the BVM Alma Redemptoris, 4vv, 3 Ave regina, 1 for A solo, 1 for B solo, 1 for 8vv, 2 Regina coeli, 4vv, 6 Salve regina, 2 for S solo, 2 for A solo, 1 for 4vv, 1 for 8vv.
 Canticles: 3 Magnificat, 4vv, Nunc dimittis, 4vv.
 Hymns: 3 Ave maris stella, 1 for S solo, 1 for A solo, 1 for 4vv, 2 Iste confessor, 3vv, 13 Pange lingua, 8 for 3vv, 5 for 4vv, 21 Tantum ergo, 10 for S solo, 2 for A solo, 6 for T solo, 2 for B solo, 1 for 2vv, Te Deum, 4vv, 9 Te lucis, 2 for S solo, 2 for A solo, 2 for 1 solo, 2 for B solo, 1 for 8vv, Veni Creator Spiritus, 4vv, Vexilla, 4vv, Hymn for St Joseph, 4vv.
 Litany of the BVM, 4 for 3vv (1 in *I-Vnm*), 6 for 4vv [1 also arr. 3vv].
 Psalms: Beatus vir, 4vv, Confitebor, 2vv, 4 Cum invocarem, 3 for 4vv, 1 for 8vv, De profundis, 4vv, 6 Dixit Dominus, 1 for 2vv, 5 for 4vv, 5 Domine, 1 for T solo, 1 for B solo, 3 for 4vv, 6 Ecce nunc, 5 for 4vv, 1 for 8vv, In te Domine, 8vv, 2 Laudate pueri, 1 for 2vv, 1 for 3vv, Nisi Dominus, 2vv, Qui habitat, 8vv, Psalms for Terce (Ps. cxviii), 8vv, *I-Pc*, Psalms for Vespers, 8vv, *Pc*, Psalms for Compline with 4 antiphons, 8vv.
 Other sacred vocal: 3 responsories, Si quaeris, 1 for 4vv, 2 for 8vv, responsory, Domine Jesu Christe, 3vv, Motet sopra la Natività del Signore, A solo, motet, Suscipe me Domine, 4vv, 2 Gloria Patri, 1 for A solo, 1 for T solo.

SVEN HANSELL

De Angelis, Nazzareno (b Rome, 7 Nov 1881, d Rome, 16 Dec 1962). Italian bass. After singing as a boy in the Sistine and Julian chapel choirs in Rome, he studied with Ricci and Prati. He made his debut in 1903 at Aquila in *Linda di Chamounix*, and during the 1906-7 season appeared at La Scala in *La gioconda*, *Tristan und Isolde* and *Aida*, among other operas. He returned to La Scala nearly every year until 1914, and then occasionally between 1918 and 1933, taking part in important revivals of Spontini's *La vestale* (1908), *I vespri siciliani* (1909), Cherubini's *Medea* (1910) and *Nabucco* (1913), he scored great successes in *Norma* (1912), Montemezzi's *L'amore dei tre re* (the first performance, 1913), *Mosè* (1918), *Mefistofele* (1918) and *Die Walküre* (1924), which were all, with *Il barbiere di Siviglia* and *Don Carlos*, strong points of his repertory. Between 1909 and 1925 he appeared at the leading South American theatres and during the 1911-12 season at the Chicago Auditorium. He retired in 1938. De Angelis's voice was large in volume and range, with a rich timbre skilfully varied by inflection and shading. A vigorous actor and a master of broad and expressive phrasing, he was the finest Italian bass between 1910 and 1930.

RODOLFO CELLETTI

De Anglia, John. See BNET, JOHN.

Dearing, Richard. See DERING, RICHARD.

Dearnley, Christopher (Hugh) (b Wolverhampton, 11 Feb 1930). English organist. After studying under H K. Andrews and Edmund Rubbra at Worcester College, Oxford (where he was organ scholar from 1948 to 1952, and took the BMus degree), he was appointed assistant organist at Salisbury Cathedral and director of music at the choir school in 1954, and organist and master of the choristers in 1957. In 1968 he became organist of St Paul's Cathedral, where he widened the choral repertory, particularly by introducing more 20th-century music, and by performing in a liturgical context Viennese masses with orchestra. In performances outside the cathedral the choir made an outstanding impression at the 1972 Flanders Festival. He has also worked on a scheme to restore the organ.

His interest in English church music of the late 17th and early 18th centuries led to his editing volume iii, covering the period 1650-1760, of *Treasury of English Church Music* (1965) and writing *English Church Music, 1650-1750* (London, 1970). He served on the committee responsible for the new supplement to the English Hymnal, and with Allan Wicks was joint composer of the people's music for the Anglican Series 3 rite for Holy Communion. As chairman of the Friends of Cathedral Music, Dearnley has done much to promote deeper appreciation of and support for English cathedral music.

STANLEY WEBB

De Aspre, Johannes Symonis [Jehan Simon]. See HASPROIS, JOHANNES SYMONIS.

Debain, Alexandre François (b Paris, 1809, d Paris, 3 Dec 1877). French instrument maker. He was originally a foreman in a piano factory. In 1834 he established a factory of his own and distinguished himself by the invention of several musical instruments, among others the HARMONIUM, or *orgue expressif*, patented in 1842, the ANTIPHONEL (1846) and the harmonicorde (1851). His death caused the closure of the factory, but the manufacture of his instruments was continued by the firm of Chaperon, Paris.

MARIE-LOUISE PEREYRA/R

De Bellis, Giovanni Battista (b ?Itri, nr Formia, c1585-90, d ?Gaeta, between 1623 and 1637). Italian composer and organist. From Itri he went to Naples, where he was favoured by the Carafa family. He dedicated his first two books of five-part madrigals to two of its members. In 1619, when he signed the dedication of his first book of madrigals for four voices, he was living at Gaeta. A note to the reader in this print mentioned a forthcoming second collection of his sacred works, but neither this nor the first is extant. Della Valle mentioned that when he visited Gaeta in 1637 he was disappointed to find that De Bellis was no longer living. He described him as a choirmaster: he probably held this position at the cathedral there. Della Valle praised his canzonettas, which are also lost, and singled out his *Lamento di Orfeo* as having well-made recitatives. The madrigal books, however, are old-fashioned in their infrequent chromaticism, decided emphasis on imitation,

and stereotyped imitating motifs. These motifs use quick repeated notes or conjunct patterns within a narrow range. Entries are often crowded in strettos, which are thick with doubled 3rds or 10ths and are occasionally arranged in effects of piled 3rds. The second book is more chordal than the others, the third book a little more chromatic. The latter contains several works closer in style to contemporary Neapolitan madrigals, with more open textures and more clearly delineated, melodically cogent phrases.

WORKS

Il primo libro de [20] madrigali, 5vv (Naples, 1608) [incl. 1 canzonetta]

Il secondo libro de [21] madrigali, 5vv (Naples, 1614)

Il primo libro di [21] madrigali, 4vv (Naples, 1619)

L'armonia hydniana, libro secondo, 2-4vv (Naples, 1621), lost

Il terzo libro di [21] madrigali, 5vv (Naples, 1623)

Psalm, 4vv, in *Salmi delle complete*, ed. M. Magnetta (Naples, 1620)

Mottetti e frottole, 2-4vv, lost, mentioned in Pitoni

Canzonettas, *Lamento di Orfeo*, lost, mentioned in Della Valle

KEITH A. LARSON

Dębołęcki [Dembolęcki], **Wojciech** (b Konojady [now Konojad], Pomerania, 1585-6, d between Sept 1645 and Feb 1647). Polish composer. He entered the Franciscan order at Kraków in 1598, and in 1611 or 1612 he was ordained in Opole, where he lived from 1605. Between 1615 and 1617 he lived successively at Kalisz, Lwów, where he directed the music at the monastery church, and Chełm. During a period spent at Olomouc from 1619 he helped to found a society for the ransom of soldiers captured by the Turks. He served as a military chaplain in 1621 and 1622 and studied theology in Rome for two years, gaining a doctorate in 1625. He then returned home as provincial of the Franciscan order in Poland but later resigned to become general commissar for the release of prisoners held by the Turks, and provincial at Kameniec Podolski. He lived in Rome between 1630 and 1632 before returning again to Poland as priest at the monastery at Lwów. Two volumes of music by him survive. *Benedictio mensae cum gratiarum actione* for five voices (Toruń, 1616); and *Completorium romanum* for five voices and continuo, op. 3 (Venice, 1618). The first of these is still in the Renaissance contrapuntal style, but the second affords one of the earliest appearances in Poland of the Baroque style based on the continuo.

Debrnov, Josef. See SRB, JOSEF.

De Broda [De Rhoda], **Paulus** (fl. late 15th century). Composer. The Glogauer Liederbuch ascribes two textless compositions from the last third of the 15th century to 'Paulus de Broda'; one of them also appears anonymously in the Nikolaus Leopold manuscript (D-

Mhs Mus.3154). A 'Paulus de Rhoda' is cited in the somewhat later Apel manuscript (*D-LEu* Cod.1494) as the composer of a four-voice motet, and the chansonnier of the Biblioteca Casanatense in Rome, also from the late 15th century, contains a three-voice song with a Dutch text incipit ascribed to the same name. A certain 'meester Pauwels van Roede', also a composer, appears in the records of the Marian brotherhood at 's-Hertogenbosch from 1478 to 1514; Du Saar suggested that he was Paulus de Broda. Finscher claimed that the names 'Paulus de Broda' and 'Paulus de Rhoda' appearing in the music manuscripts almost certainly belonged to the same person. There is ample room for scepticism on this matter, however, considering the narrow grounds for the claim and the widely separated origins of the sources. None of the four compositions in question (two songs ed. in EDM, iv, 1936/R) is the work of a real master, they are all small, mediocre, late 15th-century pieces in a somewhat restless syncopated style, and are structurally rather uncontrolled.

Recent research (see Dauwe) has revealed the existence of a humanist scholar Paulus de Rota (*b* Dendermonde, c1415), a student and later professor and canon in Louvain, Brussels, Cambrai and Mechelen between 1436 and 1491. There is however no evidence to suggest an identification with Paulus de Broda.

MARTIN STAHELIN

Debtera. An alternative form for *dahtarā*, Ethiopian lay church singers and readers; see ETHIOPIAN RITE, MUSIC OF THE.

De Busne, Antoine. See BUSNOIS, ANTOINE.

De Busscher [de Buescher], **Henri** (*b* Brussels, 29 Oct 1880). Belgian oboist. He was the second, and most distinguished, of three brothers who began their musical lives as boy sopranos (the De Busscher Trio). All three studied the oboe under Guidé at the Brussels Conservatory. Albert, the youngest, became oboist at the Monte Carlo Opéra, and then first oboe with the New York SO until 1913. Henri's first engagements were with the Ysaÿe Orchestra, the Brussels Opera, and then in Paris. In 1904, having decided against conducting or singing as a career, he joined Henry Wood's Queen's Hall Orchestra, remaining there till 1913. He then succeeded his brother in New York, staying until 1920 when he moved to Los Angeles. There he remained until his retirement in 1948. During this period he taught both singing and the oboe, and founded the De Busscher Chamber Music Society. His preference for an instrument with automatic octave mechanism was undoubtedly influential in the western USA. Between 1948 and 1956 De Busscher (nominally retired) played first oboe in the Columbia Studio Orchestra, he continued to teach his impeccable style until 1970.

PHILIP BATH

De Bussy (/ ?Paris, 1553–83). French composer. The names Bussy and De Bussy were common in 16th-century France and appear frequently in Parisian

archives. Le Roy & Ballard attributed to De Bussy 27 chansons in anthologies printed between 1553 and 1583. The texts are mostly amorous *épigrammes* or rustic anecdotes in the style of the preceding generation, although two (in *RISM* 1553¹⁹ and 1554²⁷) are spiritual poems, one by Marguerite of Navarre. The generally suave homophonic style of the courtly pieces is akin to that of Sandrin's; indeed three (in 1553²², 1554²⁵ and 1559¹³) had already been ascribed to Sandrin and two others (in 1559¹¹ and 1567¹²) to Gentien. Although steady duple metre predominates, a few have short opening sections in triple metre and two use the compound metre and syllabic homophony favoured by the new *voix de ville* (e.g. by Arcadelt, Certon and Mornable). Mastery of syllabic counterpoint is illustrated in the longer narrative pieces with recurrent refrains and popular melodies (e.g. *Dieu te gard bergere*, 1575⁴). The five three-voice chansons are reworkings of four-voice models, three by De Bussy himself.

WORKS

27 chansons, 3, 4vv, 1553¹⁹, 1553²², 1554²², 1554²⁶, 1554²⁷, 1559¹³, 1561¹, 1561², 1561³, 1561⁴, 1567¹², 1573¹⁵, 1575⁵, 1578¹⁴, 1578¹⁵, 1583⁷, 1583⁸, 1 ed. in CMM, xlvii (1968), 1 ed. M. Cauchie, *15 chansons françaises du XV^e siècle* (Paris, 1926), 1 ed. F. Lesure, *Anthologie de la chanson parisienne* (Monaco, 1953).

FRANK DOBBINS

Debussy, (Achille-)Claude (*b* St Germain-en-Laye, 22 Aug 1862; *d* Paris, 25 March 1918). French composer. He produced a body of orchestral and piano works unusually independent of traditional norms in form, harmony and colouring; while in his songs and single opera he achieved a new psychological penetration through understatement. Few later composers have been uninfluenced by him.

1. Life 2. Vocal dramatic works 3. Orchestral and choral works 4. Chamber music 5. Songs 6. Piano works 7. Musical ideals 8. Debussy and the musical world

1. LIFE. When Debussy was born his parents were running a china shop; his father subsequently became a travelling salesman, a printer's assistant and later a clerk, while his mother worked for a time as a seamstress. Surprise at the emergence of a composer from such a background, unwittingly supported by the remarks of one of his biographers, has led some writers to doubt Debussy's legitimacy: this notion may finally be scotched by juxtaposing a sketch of him on his deathbed with a photograph of his paternal grandfather.

The unsettled life of the young Debussy reached a climax with the Commune of 1871, when his father was imprisoned for revolutionary activities. However, during this period Debussy was receiving piano lessons from Mme Mauté, the mother-in-law of Verlaine, who, even if she was never a pupil of Chopin as has been claimed, at least recognized the quality of the material in her hands. In October 1872 Debussy was accepted into the piano class of Marmontel and the theory class of Lavignac at the Paris Conservatoire, where his other teachers were to include Durand, Bazille, Guiraud and, for a brief unofficial spell, Franck. Already in 1874 he was playing Chopin's F minor Concerto and a career as a virtuoso was clearly in view, but in both 1878 and 1879 his efforts in the piano examinations went unrewarded and these dreams had to be abandoned. At the end of 1880 he joined the composition class of Guiraud and under his guidance won the second Prix de Rome in 1883 and the first Prix de Rome the following year with his cantata *L'enfant prodigue*.

Debussy had already travelled to Italy, Vienna and Russia in the company of Tchaikovsky's patron, Mme von Meck, but his enforced stay at the Villa Medici in Rome gave him no joy, he was separated from the woman he loved (Mme Vasnier, an amateur singer) and he was irked by the Villa's architecture, the pretensions of his fellow students and the necessity to produce a series of 'envois' for the Académie des Beaux Arts. He remained in Rome for the minimum permitted period of two years and returned to his parents' home in Paris in February 1887. In 1888 and 1889 he visited Bayreuth and in the latter year was enthralled by the Javanese gamelan at the World Exhibition in Paris. From about this time dates Debussy's liaison with Gabrielle Dupont with whom he lived in penury for the next nine years.

1 Madame von Meck's trio, 1880, (left to right) Damićhenko, Rakhul'sky and Debussy

He further marked his independence in 1890 by refusing to write the customary overture for the official performance of two of his 'envois', the *Fantaisie* for piano and orchestra and *La damoiselle élue*, as a result of which the whole concert was abandoned.

In 1892 Debussy became a close friend of Chausson, having completed *Fêtes galantes* (1891) on poems by Verlaine, and began the *Prélude à l'après-midi d'un faune* and a first version of the *Nocturnes*, but it was not until the performance of *La damoiselle élue* at the Société Nationale in April 1893 that his music came to the notice of the public. The next month he attended a performance of Maeterlinck's play *Pelléas et Mélisande*, and probably began to sketch his opera at once. In December the Ysaÿe Quartet gave the first performance of his String Quartet in G minor. Early in 1894 he became engaged to the singer Thérèse Roger, but the engagement was broken off in unpleasant circumstances which led to a permanent severance of Debussy's friendship with Chausson. The crowning achievement of these 'Bohemian years' was undoubtedly the performance of

Prélude à l'après-midi d'un faune in December 1894. By the spring of 1895 he had finished the first version of *Pelléas et Mélisande*, but no completed work appeared until the *Trois chansons de Bilitis* in the summer of 1897, a year in which Dupont (still his mistress) attempted suicide and which ushered in a period of despair in his own life.

On 19 October 1899 Debussy married Rosahe (Lily) Texier, a mannequin and a friend of Dupont, and in December he completed the *Nocturnes* for orchestra. In 1901 he became music critic of *La revue blanche* and in May of that year *Pelléas et Mélisande* was formally accepted for performance at the Opéra-Comique. It is a cruel irony that during rehearsals of this masterpiece in April 1902 Debussy should have been prosecuted for non-payment of debts; in spite of a stormy dress rehearsal, the first performance on 30 April was soon hailed as a landmark in French music. The opera received its 100th performance in Paris only ten years later.

The years 1904 and 1905 were especially prolific: new works written at this time included the second set of *Fêtes galantes*, the first set of *Images* for piano, *L'isle joyeuse* and *La mer*. The newly confident tone that critics have remarked in these works, especially in the last two, may partly be ascribed to the change in Debussy's domestic situation. In the autumn of 1903 he met Emma Bardac, the wife of a banker and an amateur singer to whom Fauré 11 years previously had dedicated his song cycle *La bonne chanson*. In June 1904 Debussy left his wife and in the autumn moved with Bardac into an apartment (bought with her money) in the Avenue du Bois de Boulogne, where he lived for the rest of his life. In October his wife attempted to commit suicide and in the resulting scandal a number of Debussy's friends broke off relations with him. A year later, on 30 October 1905, a fortnight after the first performance of *La mer*, a daughter was born to Debussy and Bardac and named Claude-Emma (Chou-Chou). The parents were married on 20 January 1908.

1906 was marked only by the first performance of the first set of *Images* for piano and the publication of one tiny piano piece, the next first performance of a major work did not take place until February 1908, when Viñes played the second set of *Images*. By this time Debussy had seen his hopes of material prosperity dashed, in 1907 Bardac's uncle, the financier Osiris, disinherited her, and over the next seven years Debussy was forced to undertake ten journeys to England, Belgium, Holland, Austria, Hungary, Italy and Russia, playing the piano and conducting his own works.

At the end of 1908 Debussy finished *Ibéria*, the second of three orchestral *Images*, and in 1909 he enjoyed a year of particular musical success: he was appointed a member of the advisory board of the Paris Conservatoire, he was in London for the triumphant British première of *Pelléas et Mélisande* (even if he had strong reservations about the production), the first French biography of him by Laloy was published and he began five of the first book of *Préludes* for piano. Early in the year, however, he began to be troubled by the rectal cancer that was to kill him, and had to take drugs to alleviate the pain. The following year *Ibéria* and *Rondes de printemps* were given their first performances and he received two commissions, both of which he seems to have accepted largely for financial reasons. The second of these, *Le martyre de St Sébastien*, on a text by D'Annunzio, achieved some notoriety, but little

success. On both commissions, *Khamma* and *Le martyre*, Debussy engaged the help of other musicians, Koechlin and Caplet respectively, and there is evidence that he was not clear about the way his style could develop. In 1913 he finished orchestrating *Jeux* given in the spring of that year by Dyagilev's company, a fortnight before the premiere of *The Rite of Spring*, which largely overshadowed it.

In 1914 Debussy made his last visit abroad, to London, although he continued to make plans for tours of the USA, England and Switzerland. Early in 1915 his publisher Jacques Durand commissioned him to produce an edition of the works of Chopin and from this labour of love sprang the 12 *Etudes* for piano. These were only part of his output during the months July to October which he spent at Pourville, in this final creative burst he also finished *En blanc et noir* and composed the first two of a projected set of six sonatas for various combinations of instruments. On his return to Paris he began to suffer acute pain and in December he had a colostomy. He wrote nothing the following year except the final version of the libretto of *La chute de la maison Usher*, based on a story by Poe, a project cherished probably for some 25 years but never completed. His last work, the Violin Sonata, received its first performance in May 1917 with the composer at the piano, it was the last music that he played in public, at St Jean-de-Luz in September. From the early days of 1918 he was confined to his room and he died on 25 March.

works before *Pelléas* nothing survives complete. Two fragments from *Hymnus*, his setting of Banville's *comédie-lyrique*, show a conventional sweetness of harmony and melody, with a little vocalise in honour of Mme Vasnier to whom it was dedicated. Far more interesting are the 29 surviving pages of *Diane au bois* (see fig.3). In tackling Banville's comedy Debussy recognized eventually that he had overreached himself, but the dream world of forests, lakes, of distant horns and seductive flutes had made its impression, and in a general sense the work may be regarded as a preparation for *L'après-midi*. The third unfinished work is the opera *Rodrigue et Chimène*, which Debussy undertook unwillingly in response to parental pressure and in the hope that association with its librettist, Mendès, would open doors for him at the Paris Opéra. After two years of work Debussy finally decided he could no longer stomach the work's epic nature and claimed that the manuscript had been destroyed in an accidental fire. Despite his distaste, he managed to include a number of features (spreading diatonic chords, throbbing offbeat accompaniments) which regularly appear in his mature work, and Act 2 begins prophetically 'dans une salle sombre et vaste dans le château de Bivar'.

The genesis of *Pelléas et Mélisande*, produced at the Opéra-Comique in 1902, was as early as 1889. Some of Debussy's conversations with his teacher Guiraud are on record: 'Music in opera is far too predominant', 'My idea is of a short libretto with mobile scenes', 'No discussion or argument between the characters, whom I see at the mercy of life or destiny'. Whether or not Debussy read Maeterlinck's play before seeing it on the

2 VOCAL DRAMATIC WORKS Of Debussy's dramatic

stage, it is clear enough why he was attracted to it as a libretto (he had already applied unsuccessfully in 1889 to Maeterlinck for permission to set *La princesse Malerne*). In finding music too predominant in opera Debussy was obviously thinking of Wagner. He adored *Tristan* above all Wagner's operas, but in setting a similar story of love, jealousy and revenge he realized that he had to find a new means of expression, and *Pelléas*'s stormy reception was due in part to its negative characteristics. It is in a superficial sense anti-Wagner, anti-Massenet and wholly anti-Leoncavallo. The fact that Debussy seriously considered a *Pelléas en travesti* demonstrates his view of this operatic hero as no Des Grieux, let alone a Siegfried. On the other hand the opera is not lacking in positive features: the primacy of text over music (Debussy made only a few cuts in Maeterlinck's original), a total respect for the inflections of the French language, and a revolutionary use of discreet orchestral colour and of silence. During the years 1893-5, when *Pelléas* was taking shape, Debussy got to know the vocal score of *Boris Godunov* and it is reasonable to suppose that it made its mark, in principle rather than in detail.

One of Debussy's main achievements in *Pelléas* was to prolong by his music the equivocal yet palpable atmosphere of the play. The story, set in the allegorical kingdom of Allemonde, is almost embarrassingly simple and Debussy turned this simplicity to advantage. The very lack of action allowed him time to capture the often unexpressed feelings of the characters so that without,

for the most part, any histrionics they come across the footlights as far more than cardboard figures. At the same time they lack the definition that a Verdi would have given them. Everything lies in the mode of suggestion to which the orchestra is dedicated and in the sparing (and often misunderstood) use of recurring themes. Debussy does not use these as material for any symphonic argument essential to the opera, still less as agents of what he called the 'visiting card' technique of the *Ring*. These themes refer not so much to individual characters as to states of mind. True, Golaud is often tormented in spirit, but it is simplistic to speak of 'Golaud's theme'. The uncertain progress of this motif, characterized by a dotted rhythm (ex.1), symbolizes not

Ex.1

so much Golaud himself as his struggle against fate, and this is a struggle in which Pelléas and Mélisande are also involved. We may compare this phrase with what has been called 'Arkel's motif' (ex.2) but which, in its rounded

Ex.2

contours, more nearly symbolizes the old man's acceptance of fate as the dominating factor of life.

The vocal score was probably finished by August 1895, and in 1901 Debussy was promised a production the following year by the director of the Opéra-Comique. Before that date the composer had firmly to refuse the giving of fragments of the work or the making of a symphonic suite, indeed, so precious to him was the image of the opera that the cold actuality of a full-scale production filled him with misgivings. In May 1901 he began the orchestration, then in November began again. From the start of 1902 difficulties mounted: countless mistakes in the orchestral parts, Maeterlinck's hostility caused partly by the rejection of his mistress for the part of Mélisande, and the discovery that interludes were needed to allow time for scene changes. After a noisy public dress rehearsal the première on 30 April 1902 was quieter, but hostility and incomprehension were if anything more widespread. The critics were divided. Among the opposition Théodore Dubois, the director of the Conservatoire, forbade his students to go to it, while even some supporters were puzzled: the critic Gustave Bret wrote 'This music overwhelms you, drives deep into your heart with a power of inspiration that I admire

but cannot fully understand'. Accusations were largely of formlessness (no arias), melodic and rhythmic monotony (no dances), lack of noise (sparing use of trombones) and unintelligible harmonic progressions (few perfect cadences). Possibly these criticisms might have been tempered by a perusal of the vocal score but this did not appear in print until ten days after the première and by that time positions were entrenched. The opera's supporters were mostly young and they made a vociferous defence of this work which for them opened a door to the 'new music': 'what will survive in *Pelléas* . . . is the human soul which there finds its expression; the work's humanity' (Fernand Gregh, quoted in Vallas, 1932). The symbolist movement, which reached its peak in Paris about 1890, had belatedly engendered an operatic masterpiece.

Debussy's career was littered with abandoned dramatic projects (see work-list), but the two to which he probably devoted most time were *Le diable dans le beffroi* and *La chute de la maison Usher*, both on tales of Poe. Only fragments survive of the music for this varied double bill. In *Le diable* Debussy was intent on finding a new style of choral writing to express the mingled sentiments of a crowd, neither the antiphonal groups of

4. Stage design by Jusseaume for the scene of the death of Pelléas in Debussy's '*Pelléas et Mélisande*', first performed Paris, 30 April 1902

Boris Godunov nor the organized army of *Die Meistersinger*. The part of the Devil himself was not to be sung but whistled. In contrast with this ironic fantasy *La chute* was a study of pathological melancholia. The grey stones of Usher's house, like the dungeons of Gollaud's castle, shadow the existence of the characters and it cannot be doubted that Debussy to some extent saw himself mirrored in the over-sensitive person of Roderick Usher. He absorbed himself in this opera as he had not done in anything since the composition of *Pelléas*; in 1908 he wrote to his editor: 'there are times when I lose contact with my surroundings and if Roderick Usher's sister were suddenly to appear I should not be all that surprised'.

Debussy's last vocal work for the stage was the incidental music to *Le martyre de St Sébastien* (1911), a synthesis of orchestral and vocal music, speech, mime and dancing on a text by D'Annunzio. In spite of the haste in which Debussy was forced to complete the music, he was not displeased with the result. The mixture of paganism and Christianity in the text may have evoked memories of the occultism in which he had dabbled in the 1890s, but it did not please the Archbishop of Paris, who forbade Catholics to attend. On the day of the ban Debussy declared to a journalist: 'I assure you, I have written the music as though it were commissioned for a church', and certainly it seems to have been widely admired. Less acceptable to the Church were the glorification of cruelty in D'Annunzio's text and the beautiful legs of Ida Rubinstein, who played the part of the saint. For all the money spent on it, *Le martyre* was a flop and has never again been staged in its original five-hour form. Debussy received considerable help with the scoring from his friend Caplet and the final chorus has been widely assumed to be wholly Caplet's work, it does have an unusually academic flavour but recent research supports the view that it is indeed by Debussy. Of the five 'mansions' into which the work is divided the fourth, 'Le laurier blessé', is of the highest inspiration throughout, while elsewhere individual passages, such as the saint's dance on the red-hot coals and the prelude to the second mansion, 'La chambre magique', show Debussy moving towards an orchestral texture that is at the same time evocative and hard as iron.

3 ORCHESTRAL AND CHORAL WORKS. A study of Debussy's orchestral works before his successful Prix de Rome cantata *L'enfant prodigue* (1884) is profitable only in showing first that Debussy was no infant Mozart and second that he was only comfortable when writing pastiche of the conventional French idiom of the period. Some undigested Russian influence may be noted in a work such as the B minor Symphony (1880) and some imaginative but ill-judged attempts at sinister trombone writing in *Le gladiateur* (1883), but only in *L'enfant prodigue* does the music flow with any conviction. Through the ten years 1884–94 he directed his efforts towards achieving a similar sense of conviction while using a more advanced musical language and pursuing ideas both radical and elusive.

Of the four 'envois' which Debussy was obliged to submit to the Académie only two were composed in Rome. *Zuleima* (now lost) and the symphonic suite *Printemps*, finished, apart from the orchestration, a month before his return to Paris in March 1887. This is the earliest of his orchestral works to find a place in the

modern repertory and in its two movements Debussy tried 'to express somehow the slow, agonizing birth of beings and of objects in nature, then the gradual blossoming, and finally an outburst of joy at being reborn to a new life'. It was to be a work 'of an individual colour' and 'without a programme'. The jury of the Académie censured its 'vague impressionism' (the first recorded use of this dangerous term to describe Debussy's music) while admitting that, whatever Debussy's faults, banality was not one. Unfortunately the original full score is lost, and the version made from a piano score in 1912 by Büsser, excluding as it does the female chorus, can give only a rough idea of it. Debussy himself wanted the piano duet included but it seems that his interest in this work of his youth was by that time financial rather than aesthetic. The most interesting features of the score are the pentatonic opening of unaccompanied melody and the amalgamation of the two main tunes to form the climax (see *Petite suite*). The first movement begins and ends in F# major in spite of (or perhaps because of) Saint-Saëns's objection to this key for the orchestra in *Zuleima*; there are Wagnerian echoes at the beginning of the second movement; and the 'outburst of joy' is rather brashly Lisztian.

A female chorus also plays an important part in the third 'envoi', *La damoiselle élue* (1887–8). In setting a French translation of *The Blessed Damozel* by Rossetti Debussy avoided the pitfalls of sentimentality, and the chastely syllabic chanting of the chorus is strangely impressive, more so than the solo vocal writing which is somewhat wooden, though the Damozel herself has some beautiful turns of phrase. Debussy clearly had *Parsifal* in mind when he wrote it, and he used a medium-sized orchestra with restraint. As in so many later works, flute, oboe and english horn have prominent parts, and strings and harp are frequently used for colouristic effects, such as the surprisingly syncopated passage portraying the angels playing their guitars and lutes, where the two main themes are again played simultaneously. The strings frequently divide; for the final C major chord into 18 parts. The material too is in many ways individual. Inside the basic C major, out of mind for much of the work, E minor–major becomes almost a subsidiary tonic, in accord with the often modally inspired harmony, and the blatant consecutive 5ths of the opening phrase indicate that Debussy was not one to let academic formulae restrain his 'plaisir'.

The final 'envoi' was the *Fantaisie* for piano and orchestra. This was never performed in Debussy's lifetime, but it is clear from his correspondence of the early 1890s that he was not at the time dissatisfied with the work. In fact he withdrew it before the intended first performance only because d'Indy wanted to perform the first movement alone; as it is a cyclic work and the three movements are played continuously, Debussy's attitude is understandable. It contains several imaginative passages, including some extended use of the whole-tone scale to build tension, but in general the orchestral writing looks to Liszt, the piano writing to Saint-Saëns and the result is not wholly satisfactory. Certainly it gives little warning of the stature of Debussy's next major orchestral work.

In the words of Boulez, 'just as modern poetry surely took root in certain of Baudelaire's poems, so one is justified in saying that modern music was awakened by *L'après-midi d'un faune*'. While few might disagree with

this judgment, few would agree about what makes *L'après-midi* such a revolutionary work. Like Mallarmé's poem the music works by suggestion, and in a sense any careful analysis is likely to be right, as far as it goes. At any rate it is not a straightforward piece of programme music; as the composer said, 'if the music were to follow more closely it would run out of breath, like a dray horse competing for the Grand Prix with a thoroughbred'. The unique sound of the work comes partly from the richness of the woodwind section (including three flutes, english horn and four horns) and the prominent roles which they play in the absence of trumpets, trombones and timpani. The only percussion instruments, unless one counts the two harps as such, are the two antique cymbals, to which Debussy entrusted a mere five notes apiece, a highly 'unprofessional' use of a commodity, justified beyond question by its effect. Texture apart, the trance-like quality of the score also stems from the nature of the opening theme, whose languorously syncopated outline and emphasis on the tritone (C# G) weaken the claims of the E major tonality. It is possible to analyse the whole work as a series of perpetual variations on this theme. Debussy used the sound of the flute as a symbol of the faun's dreaming, and, as in dreams, the same ideas recur but in different configurations, while the reedy timbres of oboe and clarinet act as modulators from one state to another. The friction between theme and distorted echo is taken up on another level by that between the contrary suggestions of melody and harmony, some chords producing rich 'frissons' simply by their context. Similarly, the total silence of the sixth bar is bursting with music. Even the central D \flat section, regretted by some critics, can be seen as a mirage of activity, an unattainable state as the returning flute theme soon shows; here too there is friction, between the 'real' and the 'ideal' (which is which?), here too a development from the chromatic tonal conflict of the opening bars.

For all its revolutionary character, *L'après-midi* was an instant success. Mallarmé wrote to Debussy that the music 'set up no dissonance with my text, except indeed to explore further the nostalgia and the atmosphere of light, delicately, disturbingly, deeply'. Not unexpectedly, Saint-Saëns saw this truth with other eyes: '[It] is pretty sound, but it contains not the slightest musical idea in the real sense of the word. It's as much a piece of music as the palette a painter has worked from is a painting'. Dyaglev produced it as a ballet in 1912 for which Nizhinsky danced the name part and provided the choreography. Although this production had its defenders, Debussy was not one of them. Contemporary accounts make it clear that the fluid construction of the music was belied by the architectural poses of the dancers and that the subtle suggestions of sexuality were made all too explicit.

It seems likely that the *Nocturnes* began life as *Trois scènes au crépuscule* in 1892 and went through other metamorphoses before reaching their final form (see worklist). The strings in *Nuages* are unusually predominant for Debussy, and are something more than a mere background to the chromatic line of the english horn, suggested to Debussy by the hooter of a 'bateau-mouche' on the Seine. Their textures are extraordinarily varied; the spare two-part counterpoint doubled at the octave, widespread divisions, and a blending of arco and pizzicato in which they throb like an enormous heart. In the central section the pentatonic tune and its scoring

are obviously suggested by the lie of the hands on the keyboard, whereas the masterly dissolution of the final bars is purely orchestral in inspiration, described by Debussy as a 'grey agony, gently tinged with white'. *Fêtes* is one of the most truly descriptive of all his works. The brass band of the Garde Républicaine moves through the festivities and its tune is just vulgar enough to set it apart from the surrounding music which has passed through the prism of Debussy's own insight; it also has the advantage of working with it to form a contrapuntal climax. Less clumsy than *Printemps*, less solid than the last movement of *La mer*, less raucous than *Ibéria*, this movement is unique in Debussy's music for the grace of its high spirits. In its unconstrained use of triads and major 9ths and in the entirely natural vacillation between triple, quadruple and quintuple metre, the rustic dream of the faun has been civilized and given substance in contemporary surroundings. The coda distils that sense of pleasurable exhaustion Debussy had already tapped in his song *Chevaux de bois* 15 years earlier. *Sirènes*, including a vocalising female chorus, is a study in 'sea-texture' before *La mer* but without that work's subtleties of construction. It is a rare chorus that surmounts the difficulties of intonation. Laloy, reviewing the first performance, claimed somewhat ironically to have found intellectual pleasure in the historically correct quarter-tones of these Greek mythological figures. On a more serious level, the controlled monotony and regular phrase lengths may be taken as a symbol of the sirens' power, dependent as it was on an appearance of unsophisticated charm.

Those enthusiasts who expected to find in *La mer* a repetition of *Sirènes* or of the grotto scene in *Pelléas* were disappointed, and admittedly the complex structure and the anti-melodic conception of certain passages were calculated to disturb the casual listener. At the opening of the first movement (up to fig.[3]) there is a bewildering succession of textures, ranging from themes to noises via arabesques and accompanimental figures. Themes, such as that played by the horns at fig.[3], and including the sharp 4th and flat 7th characteristic of this period, have to be fought for and are subject to interruptions from the surrounding materials; or rather, reinterpretations, because nearly all the material derives from the four superimposed 5ths, announced in a reordered form at the opening and subsequently presented both horizontally and vertically. For sheer complexity the passage at fig.[18] is a prime example. Seven different rhythms are sounding simultaneously and three different patterns of dynamics.
